The EPA's press office did not respond to a request for comment on how its effort to reconsider the standards is progressing.

Complex Process

But there is much to be done before then if the agency does plan on relaxing the automobile standards.

Janet McCabe, head of the EPA's air office during the Obama administration, said that when her team was making its decision to maintain the current standards it compiled voluminous data showing that car makers could achieve the target. If the current EPA wants to change the standards, it will need to compile equally compelling data that contradicts that determination, she told Bloomberg BNA.

"These are very detailed documents and reports and studies," McCabe said. "Technical staff at EPA would need to look at them. ... It's not a quick matter."

Additionally, the agency will need to budget time to allow the public to comment on its decision and then process and respond to those comments, all before the April 2018 deadline.

California

Then there's the matter of California.

Because the state began regulating air pollution before the EPA was even created, its authority to set fuel efficiency standards for cars was grandfathered in to the Clean Air Act. The auto industry had asked federal authorities to work with the state to set a single, harmonized standard—something they accomplished back in 2012 when the current standards were first agreed to.

However, with the Trump administration now indicating it may want to diverge from that 2012 agreement, California has drawn a line in the sand. Alberto Ayala, deputy executive officer of the California Air Resources Board, said California would be happy to sit down with the EPA and DOT to discuss setting standards for 2026 and beyond.

"We're more than interested in that," he told Bloomberg BNA. "[But] if it's all about rolling back the current standards, we're not interested in that."

Ayala said, aside from a letter Pruitt sent responding to the concerns of Gov. Jerry Brown (D), the EPA's political leadership has not reached out to his state on this issue in any way.

Grundler said that it wouldn't be in anyone's interest for the EPA, DOT and California to each go their own way on the vehicle standards.

"Chaos is not an option," Grundler said. "It's not good for business, not good for breathers."

CEOs, Politicians Unite on Paris Accord, Climate Change

Posted June 02, 2017, 10:36 A.M. ET

By Jessica Shankleman and Joe Ryan

Donald Trump's plan to scrap U.S. involvement in the world's broadest deal on global warming may actually have the opposite effect, galvanizing countries, businesses and even U.S. states, to double down on stopping pollution.

The U.S. president June 1 sided with the interests of coal miners, who dig up the dirtiest fossil fuel, as he sought to make good on his election campaign promise to quit the landmark Paris Agreement on climate change.

That put him at odds both with world leaders and chief executive officers of almost every industry on the planet, including oil majors Exxon Mobil Corp. and Total SA; airline owner Sir Richard Branson; and financiers led by BlackRock Inc.'s Laurence D. Fink and Goldman Sachs Group Inc.'s Lloyd Blankfein. With Trump working to boost fossil fuels, the rest said they're determined to keep investing in clean energy regardless of U.S. policies.

"The anger and concern over Trump's withdrawal could soon give way to global resolve," said Jonathan Pershing, a veteran climate negotiator who served as special envoy for climate change at the U.S. Department of State until Trump's election last November. "The goad of disagreement sometimes can drive coalitions more strongly."

Even as Trump branded the Paris deal "unfair," state governors took to social media to confirm their support for the accord. The mayor of Pittsburgh—a Pennsylvania city Trump highlighted as a beneficiary of his decision to turn his back on the global pact—vowed to abide by the Paris Agreement.

California Opposition

California Gov. Jerry Brown departs June 2 for China, where he will urge the world's most populous country and largest car market to take environmental cues from Sacramento instead of Washington. While the Trump administration is seeking to relax fuel-mileage standards for 2022–2025, California is maintaining stricter rules.

"California will resist," Brown said on a call with reporters. "This is an insane move by this president."

Even Russia's Energy Minister said he was confident Trump couldn't topple the Paris deal, which seeks to limit global warming well below 2 degrees Celsius (3.6 degrees Fahrenheit). Russia hasn't

yet ratified the Paris Agreement, and many in the government in Moscow view the deal as a threat to their oil and natural gas exports.

"Many countries have confirmed their commitment to the accord," Alexander Novak, Russia's energy minister, said June 2 at the St. Petersburg International Economic Forum. "Six G-7 countries maintain the commitment, and so does China. So I think in this case we don't see significant risks of other countries dropping their commitment in a domino effect."

Solar vs. Coal

While the Paris climate deal was seen as crucial to stopping catastrophic climate change, market forces play a key role in what technologies get new investment. Solar power is already cheaper than coal in some parts of the world. In less than a decade, it's likely to be the lowest cost option almost everywhere, according to Bloomberg New Energy Finance.

European oil majors BP and Total said the transition to lower carbon fuel is inevitable regardless of Trump's decision. Both called for a global carbon price to shift the world away from the dirtiest energy sources and are pursuing more investments in natural gas, which has lower carbon emissions than oil or coal.

"In 20 years, we will not be known as oil and gas companies, but as gas and oil companies," Total Chief Executive Officer Patrick Pouyanne said at the St. Petersburg forum June 2. "If we want to have the gas, despite the position of president Trump, we need to go to carbon pricing one way or another."

EU, China Show Common Climate Front After U.S. Shuns Global Pact

Posted June 02, 2017, 11:10 A.M. ET

By Jonathan Stearns

The European Union and China displayed a united front over the need to fight climate change while revealing nagging differences over the path to deeper trade and investment ties.

Jean-Claude Juncker, president of the European Commission, the EU's executive arm, said Europe and China must lead the global transition to clean-energy technologies after the U.S. decided to withdraw from the landmark climate-protection accord reached by almost 200 countries in Paris two years ago.

"There is no backsliding on the Paris agreement," Juncker told an EU-China business conference June 2 in Brussels. Chinese Premier Li Keqiang told the same audience that EU-China ties help to counter "the growing uncertainties in the world."

The two leaders spoke less than 24 hours after U.S. President Donald Trump provoked worldwide disappointment and anger by announcing plans to withdraw from the Paris pact, which curbs fossil-fuel production. Juncker said fighting climate change is "more important today than yesterday."

Second Chemicals Rule at White House Keeping EPA on Track

Posted June 02, 2017, 03:06 P.M. ET

By Pat Rizzuto

A final rule describing how the EPA will evaluate chemical risks is being reviewed by a White House office, positioning the agency to show it has done due diligence in trying to meet its statutory deadline.

The Environmental Protection Agency submitted its final rule to the Office of Management and Budget June 1.

The 2016 Toxic Substances Control Act amendments require the EPA to publish the chemical risk evaluation and two other implementation rules by June 22.

OMB has been reviewing a final rule describing the procedures the agency would use to select which chemicals would be high or low priorities for risk assessment since May 23.

The third rule would establish the process by which the EPA and chemical manufacturers would update the TSCA inventory. The amended law requires the agency to update that inventory so it distinguishes between chemicals that are active in commerce and those that used to be.

Keith Matthews, chairman of the American Bar Association's Pesticides, Chemical Regulation, and Right-to-Know Committee, previously told Bloomberg BNA that the EPA's efforts may enable it to meet the law's June 22 deadline or at least allow it to publish the rules so close to the deadline that it could demonstrate it has made a good-faith effort.

Rules for 37 New Chemicals Aim to Protect Workers, Environment

Posted June 02, 2017, 02:32 P.M. ET

By Pat Rizzuto

The Environmental Protection Agency will be issuing direct final new use rules for 37 chemicals with workplace controls imposed on at least four, and environmental protection provisions in others.

The agency posted online an advance copy of the 37 significant new use rules, also called SNURs, with a notice saying they will be published in the Federal Register.

This is the third package of new use rules the agency has published since the Toxic Substances Control Act was amended on June 22, 2016. As in the previous two packages, the agency had completed its reviews of all the chemicals prior to the statute's revision.

The agency issues new use rules for new chemicals it already has determined can enter commerce if manufactured or imported under conditions—workers' use of respirators, for example—with which the original manufacture agreed to comply. The original manufacturer or importer agreed to those conditions either through its new chemical notice, called a premanufacture notice (PMN), or through its PMN combined with a consent order it signed.

The new use rules impose those same conditions on any other company making or processing the same chemical. Any company wanting to make, import or process the new chemical in a different way must ask the agency whether it can do that at least 90 days before it intends to do so.

Exxon Citizen Suit With Record Penalty Difficult to Repeat

Posted June 02, 2017, 7:01 A.M. ET

By Renee Schoof

The $20 million fine recently levied against ExxonMobil Corp. is a record penalty for an air pollution lawsuit brought by a citizens' group, but attorneys say bringing other big cases like it will be difficult.

There are few targets as large as Exxon's Baytown Complex in Texas, one of the largest integrated refining and petrochemical facilities in the world. And environmental groups opposed to the Trump administration's policies are preparing to devote more of their time to defending Environmental Protection Agency regulations, sapping resources they might have used to sue industrial polluters.

While citizen suits in general are expected to increase, Clean Air Act cases like the Exxon suit are so complex that they stretch the bounds of what the groups can do, attorneys told Bloomberg BNA.

"We're not the federal government," Joshua Kratka, a senior attorney at the non-profit National Environmental Law Center who argued the case against the Baytown refinery, said. "There's no way we have those resources. There's really no substitute for a strong and effective EPA."

A U.S. District Court for the Southern District of Texas judge in April assessed penalties of more than $21 million for violations of Exxon's Clean Air Act permits based on self-reported "emissions events," or unauthorized pollution caused by equipment malfunctions or startup and shutdown. Since the company already had paid more than $1.4 million in state and local penalties, the net penalty was about $19.9 million. It appeared to be by far the largest citizen suit penalty based on records going back about 10 years, according to the Justice Department.

Exxon on May 24 filed a motion to alter the judgment, challenging the basis for the penalty and arguing that it should be eliminated. Kratka said plaintiffs would file a response arguing that Exxon's case was without merit.

Resource-Intensive Cases

The Clean Air Act allows citizens groups, such as environmental advocates, to bring enforcement challenges to industrial facilities believed to be violating federal air pollution standards. But the cases are expensive and time-consuming, attorneys said.

"There aren't that many Clean Air Act citizen suits in any given year," Eric Schaeffer, executive director of the Environmental Integrity Project and a former director of EPA's Office of Civil Enforcement, said. "They're difficult to bring."

Environmental groups will increasingly use their resources for suits against the federal government over rollbacks of environmental regulations on the fossil fuel industry, Kratka said. And "the more times citizen and environmental groups have to sue the government, the less capacity they have to sue the violators."

The Baytown lawsuit succeeded because the environmental attorneys did a careful job of researching the facts of the violations, attorneys said. They had a boost because air emissions reports must be made available online in Texas, and the groups used those reports as evidence that Exxon had violated federal pollution limits. They also got four people who lived near the complex to testify.

Environment Texas Citizen Lobby Inc. and the Sierra Club sued Exxon in 2010. The Sierra Club has received funding from Bloomberg Philanthropies, the charitable organization founded by Michael Bloomberg, founder of Bloomberg L.P. Bloomberg BNA is an affiliate of Bloomberg L.P.

The suit claimed there were unauthorized air emissions of benzene, sulfur dioxide and other pollutants from Exxon's Baytown refining and petrochemical complex between October 2005 and September 2013. It cited State of Texas Environmental Electronic Reporting System (STEERS) reports to the Texas Commission on Environmental Quality documenting emissions of pollutants.

'Too Big to Comply'

Despite the hefty fine, Seth D. Jaffe, a partner at Foley Hoag LLP in Boston and coordinator of the firm's environmental practice group, who was not involved in the case, said the decision could be viewed as a victory for Exxon because the penalty covered years of violations and was small in comparison to the roughly $500 million the company spends on maintenance every year.

The maximum penalty could have reached $500 million, Jaffe wrote in a blog. Moreover, the federal judge denied the plaintiffs' request for injunctive relief.

"I think it's a win for Exxon because the law does not make any exceptions for facilities that are too big to comply," Jaffe told Bloomberg BNA. "The fact that it's impossible to comply doesn't mean you don't have to pay something if you're in violation."

Exxon Already Fined by Texas Regulator

An ExxonMobil spokesman said Texas regulators handled the case when the Texas Commission on Environmental Quality imposed the $1.4 million penalty on the basis of an agreed upon order. The state regulator also ordered Exxon to take corrective actions to reduce emissions. Exxon and the TCEQ agreed on the enforcement order in February 2012, two years after the environmental groups sued.

The spokesman, Todd Spitler, told Bloomberg BNA that aggregating volumes from emissions events over time, as the environmental groups did, "does not appropriately or accurately reflect the nature of the events or indicate an underlying issue at our integrated Baytown complex."

That's because the company reports emissions to federal and state regulators in a timely and consistent manner, complies with "all laws, regulations and permits, and has a robust compliance assurance system that enables workers to identify and report potential deviations from the company's Clean Air Act permit requirements, Spitler said.

"Baytown personnel dedicate thousands of hours every year monitoring, validating and documenting our compliance to these regulations and our permits," he said.

Spitler also said the Baytown complex had spent more than $1.3 billion since 2003 on

environmental projects aimed at improving air quality and energy efficiency. Since 2005, the Baytown complex has reduced emissions from malfunctions and maintenance reported to the TCEQ by 90 percent, he said. Court records showed Exxon spent between $464 million and $685 million per year on maintenance of equipment at the complex.

Successful But Rare

The Baytown case is the third successful Clean Air Act citizen lawsuit filed by advocates against facilities in the Houston area over the past decade. During the trial, the Texas Oil & Gas Association raised fears that if the court validated the advocates' approach, it could lead to a "a cascade of citizen suits, seeking to relitigate years of past administrative enforcement."

But Environment Texas, one of the advocacy organizations involved in the Baytown litigation, can only handle one citizen lawsuit at a time, Luke Metzger, founding director of the group, told Bloomberg BNA.

Environment Texas is already involved in another Clean Air Act suit, this one against Pasadena Refining System Inc., which is owned by Petroleo Brasileiro S.A. (Petrobras). The lawsuit, filed in March, alleged the Houston-area refinery violated emissions limits thousands of times over the past five years.

Environment Texas and the Sierra Club filed two others since 2008—one against Chevron Phillips Chemical Co. and another against Shell Oil Co. Both were resolved with consent agreements. The groups said that the companies reduced emissions from their Gulf Coast plants by about 95 percent, or more than was required by their settlements.

Those cases, like the Exxon citizen suit, involved mainly "upset events," such as equipment breakdowns and malfunctions.

"The goal is to get plants to put money into maintenance and better design and training, so they don't break down and flare pollution into the community," Kratka said.

Texas has an affirmative defense for such upset emissions, meaning that if a company can prove that it satisfied conditions such as the events being unavoidable or not recurring, it has a defense against penalty.

Kratka, who argued the appeal before the Fifth Circuit, said that ExxonMobil said all the violations met those criteria.

"We challenged every one, and the judge this time said it was the defendant's burden to come up with proof," Kratka said.

N.Y. Says Exxon's Climate Change Proxy Costs May Be 'Sham'

Posted June 02, 2017, 12:27 P.M. ET

By Erik Larson

New York's top cop told a judge that his probe into Exxon Mobil Corp. uncovered "significant evidence" the oil giant may have misled investors about how it calculates the impact of climate change on assets and project decisions.

New York Attorney General Eric Schneiderman said in a court filing June 2 that the investigation into Exxon's public statements about climate change revealed that for the last decade it may not have been pricing in the future impact of greenhouse gas emissions as it claimed.

"That evidence suggests not only that Exxon's public statements about its risk management practices were false and misleading, but also that Exxon may still be in the midst of perpetrating an ongoing fraudulent scheme on investors and the public," Schneiderman said.

If true, the allegations risk inflaming investors who this week backed a non-binding resolution urging the Irving, Texas-based company to consider whether it can prosper under strict greenhouse gas limits. While Exxon opposed the vote, it has accepted climate-change science and opposed President Donald Trump's decision to pull the U.S. out of the 2015 Paris Climate Accord.

Alan Jeffers, an Exxon spokesman, didn't immediately return a call for comment before regular business hours June 2. A message left with the company's media line wasn't immediately returned.

Proxy Costs

The allegations center on Exxon's claim that it applies so-called proxy costs to greenhouse gas emissions, which the company says "reasonably approximates the range of potential future government actions with respect to climate change," according to the filing. The attorney general said Exxon regularly cites the proxy costs to "assure investors that none of Exxon's projects or assets will be materially affected by future climate change-related regulations."

That claim may be vastly exaggerated, Schneiderman said in his filing in state court in New York.

"Exxon has identified only a single, anomalous instance in which a proxy cost was actually applied," the attorney general said. "Exxon's documents reveal a widespread lack of awareness among employees of the proxy cost policy, or how it should be applied."

The use of proxy costs "may be a sham," and Exxon also has "secret internal versions of proxy costs," Schneiderman alleged. The company told an employee from its majority-owned Imperial Oil Ltd. not to apply it to its Canadian oil sands projects, according to the filing.

Exxon has refused to make the employee available to testify, "contending for the first time that it lacks control over its majority-owned subsidiary from which it has been producing documents for months," he said.

Exxon has repeatedly denied wrongdoing and claims the state probe was started in "bad faith" because the outcome had been predetermined based on ideological coordination with environmental groups and even former Vice President Al Gore, an outspoken opponent of climate change.

Schneiderman and his Massachusetts counterpart, Maura Healey, have been investigating since 2015 whether Exxon misled the public and investors by withholding information about how climate change could impact the company's finances. Exxon sued to block their subpoenas for millions of pages of documents, while Republicans in Washington have sought to derail the investigations from Capitol Hill.

Schneiderman also referenced for the first time the existence of a second alias email account that

was discovered in the course of the investigation, months after he accused Exxon of failing to disclose former Chief Executive Officer Rex Tillerson's secondary email account. He used the alias Wayne Tracker to discuss sensitive topics with the board.

The identity of the owner of the new alias account, which has the name "J.E. Gray," wasn't disclosed in the June 2 filing.

Sworn testimony of Exxon's lawyers suggested the company may have withheld the existence of the alias accounts as a "test of whether the Attorney General's office is reading the documents," according to Schneiderman.

Schneiderman filed the additional material in support of his May 8 subpoena to Exxon. The case was transferred to Manhattan by a federal judge in Dallas who said it belonged in New York, effectively restarting the litigation from scratch. Schneiderman has used the opportunity to make fresh allegations.

Trump's Paris Exit Leaves Him Isolated From C-Suites to Capitals

Posted June 02, 2017, 9:49 A.M. ET

By Jennifer A. Dlouhy

The response to President Donald Trump's announcement he was exiting the Paris climate accord and wanted to renegotiate on his terms was immediate: The leaders of France, Germany and Italy said no.

On Wall Street, corporate executives pilloried the businessman president. Goldman Sachs' CEO tweeted for the first time, calling the move a setback for the environment and U.S. leadership. Tesla Inc.'s Elon Musk and Bob Iger of Walt Disney Co. quit a White House advisory council in protest.

Even the mayor of Pittsburgh, Pennsylvania -- a city Trump highlighted as a beneficiary of his decision to turn his back on the global pact -- vowed to abide by the Paris agreement.

Trump's decision leaves him more alienated than ever, isolated on the world stage and increasingly embattled at home.

Coming against the backdrop of sprawling probes into ties between Russia and Trump's campaign, the backlash threatens to sap the president's power when he needs it most to advance domestic priorities such as tax reform and a health care overhaul while confronting an increasingly bellicose North Korea.

It's a dramatic change in fortunes for the president after just 133 days in office. Business leaders no longer seem to fear Trump's tweets; foreign leaders have moved from attempts to find rapport to direct confrontation.

Consider that in earlier days, a tweet about Ford Motor Co. shipping U.S. jobs to Mexico prompted the automaker to announce it was abandoning plans to build a $1.6 billion plant there.

Days after his election, Trump called the top executive of United Technologies Corp. and told him

not to move jobs from a Carrier factory in Indianapolis to Mexico. Carrier partially relented, agreeing to keep 1,100 jobs in the U.S. in exchange for $7 million in tax breaks and incentives from the state. Even so, 1,300 jobs are still going to Mexico.

And in her first visit with Trump in Washington, German Chancellor Angela Merkel gamely tried to shake Trump's hand during a photo opportunity, offering an optimistic assessment of the meeting despite the president's persistent criticisms of her country.

"I've always said it's much, much better to talk to one another and not about one another, and I think our conversation proved this," she said afterwards.

There is none of that fear and trembling now.

After Trump's announcement on Paris, Ford issued a statement asserting that "we believe climate change is real and remain deeply committed to reducing greenhouse gas emissions." Company chairman Bill Ford, the man Trump once described as "my friend," broke with the president over his executive order on immigration. And Ford still employs more than 7,000 workers in Mexico.

Although Carrier hasn't announced a change to its plans, other companies are moving production south. And foreign leaders now game out how to try to one-up the president.

In his first meeting with Trump, French President Emmanuel Macron squeezed Trump's hand so hard that the American's knuckles turned white. And when the two chatted before cameras, Macron spoke only French. He switched to English for his remarks with U.K. Prime Minister Theresa May.

After Trump's announcement on Paris, Macron tweeted, "Make our planet great again," and assured American scientists, engineers, entrepreneurs and "responsible citizens" they could find "a second homeland" in France.

Trump's first foreign trip as president left fellow members of the North Atlantic Treaty Organization unsettled and wary, as well. Trump omitted any clear commitment to the alliance's pledge of collective defense, leaving allies uncertain whether the U.S. would come to their aid if attacked.

Afterwards, unlike her White House visit, Merkel didn't extol the benefits of discussion.

She told a beer-hall rally in Munich that Europe "really must take our fate into our own hands," adding "this is what I have experienced in the last few days."

Former Defense Secretary Leon Panetta said the combined weight of Trump's NATO speech and his decision to leave the Paris agreement mark "the sad demise of a 70-year era of American global leadership."

"'America First' policies are threatening our strategic interests and eroding our moral standing in the world," Panetta said in a statement.

To be sure, the Republican voters that elected Trump to the White House have not turned away from the president. Among Republicans, 87 percent say they approve of the job Trump is doing, according to Gallup's most recent weekly poll. Trump's job approval has fallen just slightly, from 45 percent just after his inauguration to 41 percent.

And congressional leaders upon whom Trump depends to advance his agenda endorsed his action.

House Speaker Paul Ryan (R-Wis.) called the Paris agreement "a raw deal for America" and commended the decision. And Senate Majority Leader Mitch McConnell (R-Ky.) was more blunt: "I applaud President Trump and his administration for dealing yet another significant blow to the Obama administration's assault on domestic energy production and jobs."

The tone of Trump's Rose Garden speech Thursday was unapologetic, evoking the inaugural address in which the president angrily lashed out at other countries playing the U.S. for a fool and vowed that "from this day forward, it's going to be only America first."

"The Paris agreement handicaps the United States economy in order to win praise from the very foreign capitals and global activists that have long sought to gain wealth at our country's expense," Trump said. "We don't want other leaders and other countries laughing at us anymore."

Trump did make an offer to renegotiate the Paris accord, but that was quickly rejected. Merkel, Macron and Italian President Sergio Mattarella issued a statement insisting that the agreement was "irreversible" and "cannot be renegotiated."

And after the president said he was taking action to put the interests of Youngstown, Ohio; Detroit, Michigan; and Pittsburgh above those of Paris, Bill Peduto, Pittsburgh's mayor, shot back that the city needed no such help: "I can assure you that we will follow the guidelines of the Paris agreement for our people, our economy and future."

Japan Voices Paris Climate Pact Support Despite U.S. Stance

Posted June 02, 2017, 11:00 A.M. ET

By Chisaki Watanabe

Japan, one of the world's biggest polluters, resolved June 2 to remain committed to efforts to tackle global warming despite President Donald Trump's decision to pull the U.S. from the Paris Agreement on climate change.

"Japan believes the leadership of the developed countries to be of great importance, and the steady implementation of the Paris Agreement is critical in this regard," the Ministry of Foreign Affairs said in an emailed statement.

The nation's engagement with the rest of the world on climate change is critical, given Japan's contribution to carbon emissions. While China is the world's biggest polluter in terms of how much carbon dioxide it produces in absolute terms, Japan is the third-largest emitter on a per capita basis behind the U.S. and Russia.

"Climate change requires a concerted effort by the whole of the international community," the foreign ministry statement said.

Japan's environment minister, Koichi Yamamoto, extended support for the Paris accord even further, telling reporters at a morning briefing that the nation is "greatly disappointed" in Trump's decision and as the the world's third-biggest economy, it remains committed to Paris.

Trump's decision to leave Paris "is equal to turning our back on human wisdom after we have made so much progress," Yamamoto said. "On top of being disappointed, I am outraged."

Strong words from Yamamoto aside, environmental groups said Japan must still do its share to convince the world of its seriousness about climate change.

Though Japan is a signatory to the Paris accord, environmental groups and lobbyists said the country's commitments are weak. Japan also has come under criticism for its continued funding of coal projects, especially abroad in places like Indonesia and at home where a slew of new coal-fired power projects are being planned.

Coal Projects

"Japan is contradicting itself," Hisayo Takada, Greenpeace Japan's energy project leader, said by phone. "While the country tells the outside world it will work hard to reduce greenhouse gas emissions, the Japanese government is tolerating new coal projects."

The Paris Agreement, reached in December 2015, is broader than any previous climate accord. It calls for reducing carbon dioxide emissions in hopes of limiting global warming to 2 degrees Celsius (3.6 degrees Fahrenheit) above pre-industrial temperatures.

"Climate change measures taken by the U.S., the world's second-largest emitter, are very important," Sadayuki Sakakibara, chairman of business lobby Keidanren, said in a statement. "We would like the U.S. to keep fulfilling its responsibility in the international community. Japan should continue calling on the U.S. while keeping close cooperation with international society." ©2017 Bloomberg L.P. All rights reserved. Used with permission

Brazil Plots Steady Clean-Energy Course Amid Political Turmoil

Posted June 02, 2017, 11:24 A.M. ET

By Vanessa Dezem

Brazil is taking steps to promote new renewable-energy projects as the government seeks to reassure the industry that political turmoil won't threaten current power policies.

The country will organize at least one power auction for clean-energy projects this year, according to Eduardo Azevedo, secretary of energy planning and development at the Ministry of Mines and Energy. A second auction is also being considered that would be open to all energy sources.

The move reflects growing interest in clean energy as the country seeks to meet its commitments under the global Paris climate agreement signed in 2015. The plans also show that Brazil is seeking to move forward with its energy plans and assuage concerns that an expanding political crisis would crimp efforts to boost wind and solar energy.

"There is room for energy auctions this year," Azevedo said at an event in Sao Paulo June 1. Brazil's carbon emissions targets "make it clear the necessity of expanding renewables, which will represent two-thirds of the country's investments in the power sector over the next 10 years."

Brazilian stocks, bonds and currency all slumped last month after President Michel Temer was

accused of helping obstruct the ongoing Carwash corruption probe. Amid the turmoil, Minister for Energy and Mines Fernando Coelho said he has no plans to revisit his energy strategy and would not be stepping down, despite calls to do so from his party.

"We're moving forward with reforms and our policy like nothing else is happening," Azevedo said.

Canceled Auction

The ministry canceled in December what would have been 2016's only auction for wind and solar power, as the worst recession in decades drags down electricity demand. Some companies are exiting contracts they won in previous auctions.

That may clear the way for the next auction, which is expected by September. While there's little need for new power plants now, there may be in a few years when demand growth resumes, Azevedo said.

Wind and solar developers have signed no long-term supply contracts since November 2015. The lack of new projects is threatening the supply chain and has the potential to leave wind-turbine factories empty and drag down the country's nascent photovoltaic industry.

"It is important to have auctions planned and it is a good start," said Jean Claude Robert, wind power director for Latin America at General Electric Co. "But we need volume. Today, GE is executing four projects, but 2018 will be a hard year as the industry doesn't have more contracts."

Political Turmoil

Brazil's energy agencies have not been untouched by the political upheaval. Maria Silvia Bastos, president of the country's development bank BNDES, stepped down last week citing personal reasons, which was seen as a setback to Temer.

Banco Nacional de Desenvolvimento Economico & Social, as the development bank is formally known, is the world's biggest provider of funding for renewable energy. The agency is reviewing its lending strategy and negotiating with multilateral banks like International Finance Corp. and Inter-American Development Bank to take on some of the risk for financing renewable projects, according to Carla Primavera, BNDES's head of energy.

BNDES is seeking to scale back financing for some technologies while encouraging more borrowing from banks, an effort aimed at reducing developers' reliance on its low-cost financing. For others, such as renewables, it will continue to offer cheap loans, said Primavera.

"We have supported the expansion of wind energy in Brazil since the beginning," said Primavera. "We are figuring out new financing structures with multilateral banks and capital markets, and that demonstrates that the confidence in the sector has grown."

Germany Promises to Press Ahead on Climate Pact Despite U.S. Pullout

Posted June 02, 2017, 11:18 A.M. ET

By Arne Delfs and Rainer Buergin

German Chancellor Angela Merkel said she will rally Europe and the world behind the Paris climate accord, calling it "irreversible" even after President Donald Trump's pullout.

Merkel, who has signaled that she's losing faith in the U.S. as a dependable ally, vowed to press ahead "more decisively than ever" with combating climate change and praised Americans who support her cause.

"We need this Paris Agreement to protect creation," she told reporters June 2 in Berlin in her first public comments on Trump's decision. "Nothing can or will stop us."

The announcement by Trump, who said the climate pact favors other nations at the expense of American workers, is prompting dismay among European governments and prominent U.S. business leaders. For Merkel, a Lutheran pastor's daughter who holds a Ph.D. in physics, it also offers a chance to burnish her environmental credentials as she seeks a fourth term as chancellor in September.

Trump's suggestion that the almost 200-nation agreement could be renegotiated was rejected by the chancellor's chief of staff, Peter Altmaier.

"We were not just sad but disappointed that a very important partner on climate change would drop out with the stroke of a pen," Altmaier told German broadcaster ARD. "Personally, I believe that renegotiation is the wrong approach."

Merkel, who presided over an early United Nations global-warming conference in Berlin in 1995 when she was Helmut Kohl's environment minister, said she will keep fighting.

"There's no doubt that the road will be rocky—I've experienced that again and again since I entered politics," she said June 2. "But when I look back at the last 20 years, I'm also convinced that the path is irreversible."

Top Russian Oil Boss Scorns Tesla, Electric Cars as Overrated

Posted June 02, 2017, 11:28 A.M. ET

By Ksenia Galouchko and Stephen Bierman

The day after President Donald Trump said the U.S. will exit from the Paris climate deal, the Russian chief of the world's largest listed oil producer by output is taking on electric cars.

Igor Sechin, chief executive officer of Rosneft PJSC, called manufacturers including Elon Musk's Tesla Inc. overvalued and said electric cars are "not as popular as had been expected" in Europe's biggest economies. He challenged Tesla's valuation and business model in particular, citing "extremely aggressive" sales growth plans and criticizing the car maker's capital expenditures.

"The market's assessment of the prospects of electric car producers, in our view, is significantly overestimated," Sechin said in a June 2 speech at the St. Petersburg International Economic Forum. "The unconditional truth remains in the fact that the hydrocarbon power industry has been and will be in demand."

Major oil companies have been trimming their long-term forecasts for oil demand as electric cars start to compete with gasoline models on both price and performance.

Musk, a tech industry icon whose ventures also include space travel, said June 1 that he'd leave White House advisory councils after the U.S. president's decision to withdraw from the climate accord.

"Until the electric transport industry becomes as user-friendly and attractive for consumers as the cars with internal combustion engines, the prospects for electric vehicles remain largely uncertain," Sechin said.

Trump's Plan to Renegotiate Climate Deal Unlikely to Succeed

Posted June 02, 2017, 9:24 A.M. ET

By Eric J. Lyman

President Donald Trump's offer to renegotiate the U.S. re-entry into the Paris Agreement or to produce a "new transaction on terms fair to the United States" is probably a non-starter, according to key observers and parties to the Paris deal.

Major supporters of the Paris Agreement quickly indicated that they are not open to revisiting the landmark 2015 agreement reached by nearly 200 countries.

In an unusual move, the three largest continental European economies—France, Germany, and Italy—issued a joint statement in the wake of Trump's remarks saying, "We firmly believe that the Paris Agreement cannot be renegotiated since it is a vital instrument for our planet, societies, and economies."

According to a senior United Nations source, who asked not to be further identified, it makes little sense for the U.S. to withdraw from the Paris deal if its goal was simply to renegotiate U.S. obligations under the agreement.

"Each country's NDC [nationally determined contribution, or pledge for climate action that is part of the Paris Agreement] is established by that country, and a country has the right to adjust its emissions reduction target or its financial commitments," the U.N. source told Bloomberg BNA. "There is no need to withdraw from the Paris deal and then try to re-enter if that is the goal."

The source admitted that other countries would have been critical of any party looking to "backslide" on its Paris Agreement targets, "but that is nothing compared to how critical countries are now."

Formally, the secretariat for the U.N. Framework Convention on Climate Change said it is open to U.S. renegotiations, according to a statement issued following Trump's remarks.

"The secretariat notes the announced intention to renegotiate the modalities for the U.S. participation in the agreement," it said. "In this regard, it stands ready to engage in dialogue with the

United States government regarding the implications of this announcement."

But as a pact "signed by 194 countries and ratified by 147 countries," the Paris Agreement "cannot be renegotiated based on the request of a single party," the UNFCCC said.

Kyoto Comparison

"This idea that the U.S. will renegotiate some kind of alternative is really dead before it gets started," said Niklas Hohne, a founding partner of the NewClimate Institute, a group that scientifically analyzes climate data. "The Paris Agreement was a culmination of 20 years of negotiation and I doubt countries will be willing to undo that, and even if they did, I don't think Donald Trump is someone who could lead such a charge."

In 2001, when the U.S. announced that it would withdraw from the Kyoto Protocol—the smaller scale predecessor to the Paris Agreement—President George W. Bush also vowed to produce an alternative to the Kyoto document.

That plan never gained traction, and ultimately, it was reduced to a 2002 proposal, which was never implemented, for the U.S. to reduce greenhouse gas emissions per unit of gross domestic product. The U.S. remained the only party to the Kyoto Protocol not to ratify it.

"I think the same thing will happen with the Trump idea of creating a something new or renegotiating the Paris deal," Hohne said.

The senior U.N. source agreed: "I suspect the talk about renegotiating the Paris deal or creating a new alternative is probably a small concession to the White House figures who had been pushing Trump to stay in" the Paris Agreement, the source said.

Trump's June 1 remarks about renegotiating what he called "a deal that is fair" illustrated that his own commitment to that strategy might be limited. "If we can, that's great," the president said. "And if we can't, that's fine."

Subject: Pruitt: Advance notice for Clean Power Plan replacement coming 'very soon'

By Alex Guillén

11/17/2017 12:06 PM EDT

EPA Administrator Scott Pruitt said today that the advance rulemaking to create a replacement for the Clean Power Plan will be released "very, very soon."

Pruitt, speaking at a gathering of the conservative Federalist Society, did not elaborate further on that timeline. EPA is currently taking comment on its separate proposal to repeal the Clean Power Plan.

Two protesters interrupted Pruitt at the beginning of his appearance, although they were immediately drowned out by the booing crowd and escorted from the room by security. It was unclear what specific issues they were protesting.

"This is a little bit of an example of what we deal with here," Pruitt said in response, drawing laughter and clapping from the audience.

Subject: BREAKING NEWS: Senate rejects Obamacare repeal-and-replace measure

The Senate decisively voted down the Republican proposal to repeal and replace Obamacare, a bill that has been under development in the Senate for two months but was set aside last week when it became clear there wouldn't be 50 GOP votes.

Nine Republicans - a handful of conservatives and moderates - joined Democrats to oppose the procedural measure on the bill Tuesday evening. The vote is one of what is expected to be several amendments in the Obamacare repeal effort.

See http://www.politico.com/story/2017/07/25/obamacare-repeal-vote-senate-republicans-240926 for complete coverage.

Subject: POLITICO's Morning Energy, presented by Growth Energy: EPA alters how information's gathered — Slew of energy bills hit the House floor — EDF Action launches push against EPA cuts

By Anthony Adragna | 07/17/2017 10:00 AM EDT

With help from Darius Dixon

EPA WANTS TO ENFORCE SMARTER, NOT HARDER: In a move that former EPA officials worry could hamper enforcement of environmental rules, the agency's regional offices must now get approval from EPA headquarters before sending many types of requests for information to a company, Pro's Eric Wolff reports . Regions have traditionally had autonomy in requesting information, but now many of those, especially ones applying to companies and facilities with no history of violations, will have to be reviewed in EPA's Washington headquarters under the policy established in the spring. "EPA is working to ... eliminating overly broad and unduly burdensome requests for information," EPA spokeswoman Amy Graham told Eric in a statement. "These changes will enable the agency to efficiently and consistently gather the information it needs to assure compliance with environmental laws."

It's a move long-sought by Sen. Jim Inhofe, the former chair of the Environment and Public Works Committee whose past staffers are sprinkled throughout the agency. Inhofe has said he thinks the agency engages in too many "fishing expeditions."

Critics fear the policy is designed to curb enforcement of environmental laws. "A policy to aggregate all information requests for headquarters approval is more likely to diminish enforcement because you're going to end up with bottlenecks," said Doug Parker, EPA's former head of criminal enforcement and a 27-year veteran of the the agency. Headquarters staff will track information requests in a new database.

HEADED TO A HOUSE FLOOR NEAR YOU! House lawmakers are poised to take up a slew of energy-related measures this week after they clear the Rules Committee. First up is the Ozone Standards Implementation Act H.R. 806 (115), which would delay implementation of the stricter 2015 ozone standard through 2025 and lengthen the period of time between EPA's normal review of the standard from five years to 10. Rep. Pete Olson's bill gets its day before the Rules Committee today at 5 p.m.

Also on the agenda is a bill H.R. 218 (115) that would authorize the transfer of federal land to Alaska to build the state's long-sought (and contentious) road between the isolated southwestern Alaska village of King Cove and a neighboring community with an all-weather airport. There's also legislation H.R. 2883 (115) overhauling the presidential permitting process for electric, natural gas and oil projects that would shift the authority to review cross-border oil pipelines to FERC from the State Department. And there's a separate measure H.R. 2910 (115) aimed at streamlining approvals for interstate natural gas pipelines. The Rules Committee considers the bills Tuesday at 3 p.m.

WELCOME TO MONDAY! I'm your host Anthony Adragna, and State's Jennifer Schaming was first up to identify Holtsville, N.Y. as the holder of the nation's lowest zip code (00501). For today: What's the highest zip code in the U.S. and where is it? Send your tips, energy gossip and comments to aadragna@politico.com, or follow us on Twitter @AnthonyAdragna, @Morning_Energy, and @POLITICOPro .

GOTTA LOOK AT THE DATE: A draft version of the grid study sought by Energy Secretary Rick Perry says that renewable power doesn't threaten the power network's reliability, Bloomberg reported Friday evening. Perry called for the study in April, and has said he wanted to see if Washington's policies or federal tax policy were pushing baseload power generation - like coal-fired plants - in retirement prematurely. Renewable power advocates have feared that Perry would slant the report and use it to justify efforts to support coal plants. "The power system is more reliable today due to better planning, market discipline, and better operating rules and standards," the July draft says.

But a DOE spokeswoman said a draft of the study is outdated, and none of the phrases that Bloomberg cited were in the current version. Those draft findings are now under review by DOE leadership and the final product may come out as soon as this week.

MOVING MORE SPENDING PACKAGES: Congress takes another crack at advancing spending measures this week with the full House Appropriations Committee marking up its Interior and EPA package Tuesday at 10:30 a.m. Across the way, a Senate Appropriations subpanel inks up its Energy and Water package Tuesday at 2:30 p.m. ahead of full committee consideration Thursday at 10:30 a.m.

CAP AND TRADE'S CRUCIAL DAY IN CALI: Lawmakers in California are slated today to cast their votes on whether to extend California's cap and trade program through 2030. The Business Council for Sustainable Energy sent a letter Friday endorsing the extension and urging the legislature to "swiftly act" on the measure. But a number of major environmental advocates voiced opposition, arguing the measure gave too many concessions to the oil industry. "California can do better," Masada Disenhouse with 350.org said in a statement. "This plan has Big Oil's fingerprints all over it and doesn't do enough to protect vulnerable communities or to achieve California's ambitious targets for reducing carbon pollution." The Los Angeles Times has a good look at the state-of-play on the bill here.

FORMER SUZUKI EMPLOYEE GUILTY OF MISLEADING EPA: Wayne Powell, a former Suzuki analyst, pled guilty to submitting false reports on vehicle emissions to EPA and therefore enabling thousands of violations of the Clean Air Act on model year 2012 motorcycles, DOJ announced. He faces up to two years in prison and a maximum fine of $250,000.

ZINKE VISITS ANOTHER MONUMENT: After taking two monuments off his review list, Interior Secretary Ryan Zinke headed to Oregon on a beautiful Saturday to look at the Cascade Siskiyou National Monument. He hiked with BLM employees and met with advocates of keeping the monument, huddled with snowmobile industry peeps and talked with timber industry representatives. Energy and Commerce Committee Chairman Greg Walden hosted. Both of the state's Democratic senators - Ron Wyden and Jeff Merkley - have staunchly opposed altering the

monument. On Sunday, Zinke's Twitter feed included posts about meeting with Oregon Gov. Kate Brown and references to his "delish burrito" for lunch.

EDF ADS HIT PRUITT! EDF Action is launching a million dollar ad campaign targeting House GOP lawmakers for not combating deep cuts to EPA's budget. Targets include: Martha McSally, Mike Coffman, Jason Lewis, Barbara Comstock, David Valadao, Mark Amodei, Ann Wagner, Mario Diaz-Balart, Tom Rooney and Ken Calvert. Watch the ads here and here.

WHO KNOWS! French President Emmanuel Macron told a French newspaper Sunday he thinks he may have swayed Trump into returning to the Paris accord in the months ahead, according to Reuters . "(Trump) told me that he would try to find a solution in the coming months," Macron told Le Journal du Dimanche. "We spoke in detail about the things that could make him come back to the Paris accord." But Trump's Homeland Security Adviser Tom Bossert said the topic of climate change was not a major topic of conversation or awkward subject. "We didn't discuss any climate issues in the extended bilateral conversation that I attended," Bossert told reporters on Air Force One. "And the topic didn't chill or affect or any way come up verbally or through nonverbal cues in our conversations."

ILLINOIS JUDGE SIDES WITH NUCLEAR: The nuclear power industry racked up a legal win on Friday when a district court judge in Illinois agreed to dismiss a lawsuit against the state's zero-emissions credit program lawmakers passed last year. The program - estimated to cost consumers $235 million a year over ten years - was created to prop up two money-losing nuclear plants Exelon Corp. threatened to close, which drew multifaceted challenges from consumers and non-nuclear electricity generators in the region. But District Judge Manish Shah said that it wasn't the judiciary's role to instruct state regulators how to tailor their program for state-federal balance, and left the matter in the hands of FERC, despite its lack of a leadership quorum. Shah noted that complaints about the program were filed with FERC several months ago but, in a footnote, stated "FERC's current paralysis does not change the structural limitations on judicial power." Given how big a threat other power generators view the program, expect this to go up to the 7th Circuit Court of Appeals.

** **A message from Growth Energy:** Americans deserve cleaner, more consistent fuel choices at the pump, and Growth Energy is leading efforts to make that a reality. The Consumer and Fuel Retailer Choice Act is a simple fix that will improve air quality, lower prices at the pump, and spur innovations in biofuels. Learn more. **

WHAT'S NEXT FOR METHANE RULE? After federal appeals judges placed a stay of EPA's methane rule back on for two weeks, the agency has a couple of options, Pro's Alex Guillén reports in Energy Regulation Watch. It could seek a rehearing before the original three judges, though at least one judge would have to change their mind, or the agency could try for an en banc review, but that process takes a while.

Arguably more important is what the court's decision signals for other efforts to roll back Obama-era rules. Each case has slightly different legal arguments depending on the statute and how exactly the agency is going about a delay, but the D.C. Circuit's ruling is warning sign to Pruitt that he won't coast by in court challenges to their actions.

MAIL CALL! GROUP OUTLINE TAX REFORM PRIORITIES: The Hearth, Patio & Barbecue Association released Friday a brief letter to the Senate Finance Committee outlining their priorities as tax reform advances. Link here.

REPORT: HOW TO ADJUST TO A BRAVE NEW GRID: Former FERC Commissioner Tony Clark is out with a white paper this morning with how suggestions for states in various electricity markets can adjust to new goals many states have including fuel diversity, security, green energy and job creation. "To the degree policy makers and elected officials have moved the goal posts, it is time to consider the rational pathways forward," the paper notes.

COMING TO TOWN! Members of the American Public Power Association's Policy Makers Council are in town today through Wednesday for meetings on Capitol Hill. Among the topics they'll discuss is maintaining access for public power companies to bonds, building partnerships for grid resiliency and upcoming changes to environmental regulations.

MOVER, SHAKER! William Murray joins R Street Institute as federal energy policy manager; he comes from RealClearPolitics, where he was editor of the site's energy page for two years.

LOOKING GOOD: The Senate Environment and Public Works Committee unveiled a snazzy new, website befitting the 21st century late last week. Take a glance here.

Subject: Morning Energy: Sizing up Trump's options as Paris decision looms — Former Trump official heads new carbon tax push — Fossil giants face shareholder climate challenges

By Anthony Adragna | 05/31/2017 05:43 AM EDT

With help from Mary Lee, Esther Whieldon and Alex Guillén

CONFUSION AS TRUMP NEARS PARIS VERDICT: Advisers to President Donald Trump have sent wildly diverging messages about whether the U.S. is open to remaining part of the international Paris climate change agreement, Pro's Andrew Restuccia reports . Before last week's G-7 summit in Italy, U.S. officials seemed to suggest in private conversations with foreign diplomats that Trump would be willing to stick around, before backing away in the end and declining to endorse a joint statement backing the deal, two sources told Andrew. But the president has just a few real options. The issue has divided Trump's advisers, but administration officials on both sides are increasingly convinced that Trump will withdraw, though they stressed late Tuesday that the decision is not yet final. "I've stopped trying to figure it out," said one longtime climate negotiator.

Options include: remaining in the pact, even as Trump reverses most Obama-era climate policies; using the threat of leaving to extract concessions benefiting fossil fuel interests; attempting to renegotiate the agreement (though that's exceptionally unlikely to work) or doing nothing.

U.N. chief: Forge ahead if U.S. leaves: United Nations Secretary-General Antonio Guterres urged Trump to stick with the climate agreement but said the rest of the world must continue its implementation even if the planet's second-largest greenhouse gas emitter leaves. "The message is simple: The sustainability train has left the station. Get on board or get left behind," Guterres said, adding he would hold a 2019 meeting to look at the deal's implementation. "Climate action is gathering momentum not just because it is a necessity but also because it presents an opportunity — to forge a peaceful and sustainable future on a healthy planet," he said.

The White House is trying to sell Trump's approach on issues like Paris — which has aggravated close European allies — as an attempt to strengthen close relationships further by holding frank conversations, POLITICO's Nahal Toosi reports. And there are signs European officials are already preparing for what it considers a worst-case climate scenario, looking increasingly to Canada and China as partners on the issue.

Last-minute push: Citizens for Responsible Energy Solutions Forum released a TV ad today urging Trump to stick with the Paris agreement but renegotiate a "better deal" for the U.S. It cites the support of ten major CEOs, including JP Morgan's Jamie Dimon, Disney's Bob Iger, GE's Jeffrey Immelt and CitiGroup's Michael Corbat.

EYEBROWS UP: EPA Administrator Scott Pruitt will no longer be traveling to the 2017 Kentucky Association of Manufacturers Conference & Trade Show today as originally planned,

a spokeswoman for the conference tells ME. That comes on the heels of his highly-publicized meeting with Trump Tuesday on the future of the Paris accord.

WELCOME TO WEDNESDAY! I'm your host Anthony Adragna, and Optony's Jonathan Whelan was first to pick out "Pork Barrel John" Langley as the congressman who resigned for illegally selling alcohol during Prohibition. For today: How many non-voting members are there in the House? Send your tips, energy gossip and comments to aadragna@politico.com, or follow us on Twitter @AnthonyAdragna, @Morning_Energy, and @POLITICOPro.

SCOOP — FORMER TRUMP 'SHERPA' LEADS NEW CARBON TAX COALITION: A former member of Trump's transition team is pushing a carbon tax as a conservative solution to climate change. The Alliance for Market Solutions launched today with the goal of reshaping how Republicans approach the issue, says Alex Flint, the group's new executive director. Flint previously served as a "Sherpa " to help smooth the confirmation of Trump's Interior Department nominee, and before that he was senior vice president of governmental affairs at Nuclear Energy Institute. The mission of the Alliance for Market Solutions is "to see carbon regulations repealed, a carbon tax implemented that offsets other taxes ... and policies that appeal to the next generation of Republican voters — that's our goal," he told ME. The new alliance — armed with an Ernst & Young study written by AEI economist Alex Brill — says a revenue-neutral carbon tax would boost the economy. The E&Y study finds the tax - when using its revenues to finance a reduction in the corporate income tax rate — could increase GDP in the long-run by as much as 2.1 percent.

The players: The board of directors includes Chairman Jeffrey Williams, former investment banker at Morgan Stanley. And advisers include former FERC Commissioner Vicky Bailey, Former Florida Sen. Mel Martinez and John Rowe, chairman emeritus of Exelon.

GOVS CAUTION ZINKE ON SAGE GROUSE PLANS: A bipartisan pair of governors are warning Interior Secretary Ryan Zinke about some major changes he is considering to managing sage grouse populations in the West. Govs. Matthew Mead (R-Wyo.) and John Hickenlooper (D-Colo.) said they are "concerned" that replacing the Obama administration's approach, which was based on protecting habitat, with one based on hitting population targets for the birds "is not the right decision." When Zinke previewed some of his sage grouse plans in March, he said he was confident states would be able to hit a population target. The governors also cautioned against major changes to BLM land-use plans that were amended to address sage grouse. "Wholesale changes to the land use plans are likely not necessary at this time," wrote the governors, who co-chair the state-led Sage Grouse Task Force, in a Friday letter obtained by ME. Mead and Hickenlooper urged Zinke to work with them before making any changes.

Zinke could issue a secretarial order on sage grouse management as early as this week, directing BLM to review existing plans to identify burdens they place on resource development, among other steps, a source tracking the process tells ME. Interior spokeswoman Heather Swift in a text message said that was "not accurate" but declined to elaborate further.

CLIMATE SHOWDOWN TODAY IN TEXAS: Shareholders descend on Texas today for the annual meetings of Exxon Mobil and Chevron, and activist investors intend to force votes on a

host of climate change-related proposals. Perhaps the most-watched resolution would force Exxon to publish annual reports examining how its business would be affected by global efforts to address climate change, including the scenario limiting temperature increases to 2 degrees Celsius. A similar resolution received backing from more than 38 percent of Exxon shareholders last year — at the time a record — but it's thought to be close to securing majority support despite opposition from the company itself, which argues it already releases sufficient information in that area. Another proposal, from As You Sow, calls for the company to publish an annual report on "actions beyond regulatory requirements" to minimize methane emissions, especially leakage, from its operations. It's the first meeting since Darren Woods took over as Exxon CEO from now-Secretary of State Rex Tillerson. A full list of items under consideration is available here.

While most attention (and protests) are being directed Exxon, Chevron is expected to have its own climate confrontations at its annual meeting today. Investors opted to withdraw a climate "stress test" resolution similar to the one Exxon faces earlier this month, but are expected to vote on another calling for a report on "the feasibility of altering the company's energy mix by separating or selling off its highest carbon-risk assets." A full itinerary for their meeting is available here.

The votes are part of a broader trend of fossil fuel companies facing increased pressure over whether they are prepared to deal with climate change. Earlier in May, 67 percent of investors in Occidental Petroleum backed a resolution calling for the company to annually analyze and disclose its risks associated with climate change, a first for a U.S. oil and gas company. That move came despite the company's board opposing the measure.

TRUMP EPA 'MAY' SOON TAKE ACTION ON CLEAN POWER PLAN: EPA played coy Tuesday in a court filing about its ongoing review of the Clean Power Plan, saying in the brief status report to the D.C. Circuit Court of Appeals that it "may" soon propose something. "EPA continues to review the Rule, as required under the Executive Order, and may be prepared to begin the interagency review process of a resulting proposed regulatory action in the near future," the filing said. "We will update the Court as EPA takes further steps." The D.C. Circuit's 60-day hold is up in about a month, and the court is currently weighing whether to extend that hold indefinitely or simply send the CPP back to EPA. In a separate filing, EPA said basically the same thing about its review of the 111(b) rule for future power plants, which unlike the CPP remains in effect.

INTERIOR OFFICIAL KEPT AGRICULTURE STOCKS: Aurelia Skipwith, Zinke's hire for deputy assistant secretary for fish, wildlife and parks, has kept between $50,001 and $100,000 in stocks in the agricultural consulting firm she founded, AVC Global, according to a public financial disclosure report obtained by ME. She also has between $1,001 and $15,000 in stocks with agriculture company Monsanto.

ZINKE'S ALASKA TOUR ROLLS ON: Zinke is in Anchorage, Alaska again today where he'll deliver remarks at the Alaska Oil and Gas Association annual conference at the Dena'ina Convention Center around 12:15 p.m. He'll then tour the Arctic Valley Nike Site Summit, a Cold War-era missile site.

In conjunction with his trip, the Wilderness Society is releasing a short, two-page chapter of a broader forthcoming report highlighting what it says are the unacceptable risks posed by drilling in the Arctic Refuge.

CLIMATE HAWK McCAIN REEMERGES? Sen. John McCain delivered his strongest comments on climate change in years during an appearance Tuesday in Australia, urging Trump to stick with the Paris agreement. "I would like to see us ... either accept the agreements as were made by the Obama administration or suggest modifications which would make it palatable for us and acceptable to us to join," McCain said, according to The Guardian . "If we don't address this issue, I am very much afraid about what the world is going to look like for our children and grandchildren." The former presidential candidate added that "one of the great tragedies of our lives is the Great Barrier Reef dying [and] the environmental consequences of that."

MAIL CALL! REPS: TREAD CAREFULLY WITH NAFTA RENEGOTIATION: Nearly 60 House members are urging U.S. Trade Representative Robert Lighthizer to be aware of potentially disruptive energy sector impacts while renegotiating NAFTA. "We ask that you consider the importance of maintaining and where feasible upgrading, policies regarding the free flow of raw and refined products from oil and natural gas, the absence of tariffs on energy products, protections for U.S. intellectual property, as well as access to Canadian and Mexican markets," the lawmakers, led by Tom Reed (R-N.Y.) and Terri Sewell (D-Ala.), wrote in a letter Tuesday. ME notes it's pretty darn unusual to have Bobby Rush (D-Ill.) and Louie Gohmert (R-Texas) on the same letter.

HERE'S AN IDEA: Rep. Tom Graves (R-Ga.) proposed throwing all the appropriations bills together this year and passing the massive omnibus before August recess during a closed-door GOP meeting last week, Pro's Budget & Appropriations Brief's Sarah Ferris and Jennifer Scholtes report. "It's a Herculean task," Graves said, adding that fellow appropriators have promised to work weekends. But a reality check: House lawmakers haven't passed all 12 bills on time in more than a decade — let alone a month early.

HOUSE ENERGY COALITION OUTLINES TAX REFORM WISH LIST: The 50-Democrat House Sustainable Energy and Environment Coalition, in a recent letter , urged House Ways and Means leadership to curb tax breaks for the oil and gas industry but extend or expand a myriad of clean energy tax incentives as part of the committee's overall tax reform efforts. In addition to wanting a carbon tax, the coalition asks for extended tax credits for a number of small technologies left out of a 2015 deal, expansion of the investment tax credit to include stand-alone energy storage and an exception for offshore wind to the planned phase out of the ITC.

MOVERS, SHAKERS: Jenner & Block has formed an energy practice with the addition of three former top FERC officials. Suedeen Kelly, a former commissioner, will co-chair the practice as a partner along with Randy Mehrberg. Max J. Minzner, former general counsel with the agency, also joins as partner. And Jeffery S. Dennis, former director of FERC Division of Policy Development, joins as special counsel.

Steve Wackowski has been named as Zinke's senior advisor for Alaska affairs. Wackowski

managed Sen. Lisa Murkowski's latest reelection campaign, was press secretary for Sen. Ted Stevens and has experience tracking and mapping polar bear den locations for oil and gas companies on Alaska's North Slope. Wackowski is a Major in the Air Force Reserve and his new position will be based in Anchorage.

Jeff Kerridge has been appointed senior vice president of business development for AECOM within its nuclear and environment division; he has 31 years of experience within the nuclear energy industry, including stints with the Department of Energy and the United Kingdom's Ministry of Defense.

Frank Benenati is starting a new job in Chicago at United Airlines as director of corporate communications. He previously served as the director of public affairs for the EPA and also was as a White House spokesperson and assistant press secretary (h/t Playbook).

Trump's climate conundrum nears a verdict Back

By Andrew Restuccia | 05/30/2017 07:24 PM EDT

Donald Trump's advisers have sent wildly different messages to U.S. allies about the president's willingness to remain in the Paris climate agreement — adding to the confusion as he appears set to render a verdict this week.

Shortly before the G-7 summit in Italy last week, U.S. officials had private conversations with foreign diplomats that seemed to suggest Trump was open to staying in the landmark 2015 pact, two people briefed on the discussions told POLITICO. But then, to their frustration, the U.S. backed away, instead becoming the lone holdout from a declaration expressing "strong commitment" to the agreement.

The administration's public statements have been no less mixed. National Economic Council Director Gary Cohn, who supports staying in the agreement, told reporters last week that Trump's "views are evolving." But allies of EPA chief Scott Pruitt, who wants the U.S. to leave, made it known that Trump privately agrees with them. Administration officials on both sides of the issue are increasingly convinced that he will withdraw, though they stressed late Tuesday that the decision is not yet final.

For all the mystery, though, Trump has only a few main options for dealing with the non-binding climate deal, one of former President Barack Obama's proudest diplomatic achievements.

He can stick with the deal, while unwinding most of Obama's climate policies and pledges for reducing greenhouse gas pollution. He can use the threat of leaving to push other countries for concessions that benefit U.S. fossil fuels. He can even try to renegotiate the agreement — highly implausible, given that nearly 200 governments took part in crafting it.

Or he can do nothing.

This is POLITICO's breakdown of the possibilities:

Withdraw

Trump vowed during the presidential campaign to "cancel" the Paris agreement, portraying it as a threat to U.S. jobs and energy production, and conservatives are convinced he'll make good on that promise.

Pruitt and White House chief strategist Steve Bannon have emerged in recent months as the administration's biggest opponents of the Paris agreement, and both men have made their case

for withdrawal directly to Trump.

Pruitt and Trump discussed the issue again on Tuesday, a possible indication that he's preparing to withdraw. Sources confirmed that Trump indicated in recent conversations with Pruitt that he was leaning toward pulling out of the agreement, as Axios reported last weekend.

But the climate discussions at the G-7, paired with a lobbying campaign from Pope Francis and other leaders, could have changed Trump's mind. Other U.S. officials were convinced as recently as last week that Trump would remain in Paris.

Others are just uncertain. "I've stopped trying to figure it out," said one longtime climate negotiator.

A withdrawal would strain U.S. relations with countries in Europe and elsewhere, and it could destabilize the foundation of the Paris deal. Such considerations have helped persuade even Trump's secretary of state, Rex Tillerson, to support staying — as well as GOP lawmakers like North Dakota Rep. Kevin Cramer, an energy adviser to the the president.

If Trump decides to pull out, though, the text of the deal would prevent a U.S. exit from formally taking effect until at least Nov. 4, 2020 — a little over two months before the end of his first term. But Trump's public disavowal of the pact would certainly have an immediate impact on the global effort to tackle climate change.

In addition, Trump would have one speedier option for pulling out: He could withdraw the U.S. from the 1992 United Nations Framework Convention on Climate Change, the treaty that undergirds the entire regime of international climate negotiations. According to the Paris text: "Any party that withdraws from the convention shall be considered as also having withdrawn from this agreement."

Remain, but win concessions

Administration officials who support remaining in the agreement have been working for months to try to flesh out a middle ground.

One option that has won support from some the White House aides: weakening Obama's pledges for cutting U.S. carbon emissions, and persuading world leaders to offer greater support for technologies to reduce pollution from fossil fuels like coal.

The first part is entirely within Trump's power: Obama's pledges were nonbinding, and the current administration would be free to substitute its own, less-ambitious promises if it chooses to — even as Trump seeks to undo Obama's domestic climate regulations and slash EPA's budget. Winning concessions from other countries would require some high-stakes dealmaking, however.

Before the summit in Italy, U.S. officials discussed those options with representatives from other G-7 countries, in conversations that gave diplomats hope that the Trump was open to staying in

the agreement if he could be reassured the U.S. has flexibility, according to two people briefed on the issue. But the U.S. ultimately backed away from pro-Paris language in the G-7's closing joint communique, breaking with the six other countries that participated in the meeting.

Energy Secretary Rick Perry attempted a similar gambit during an April meeting of G-7 energy ministers in April. But the other countries rebuffed his attempt to place stronger pro-coal, pro-nuclear language into a proposed joint statement on energy policy, which wound up being scuttled.

If Trump decides to remain in the agreement, he'd probably cast the decision as a sign of his dealmaking prowess, and a wholesale repudiation of Obama's climate pledge.

But it comes with political risks: Conservative groups would probably bash Trump if he decides to stay in the Paris deal, even if many people who voted for him probably don't view the issue as a top priority.

Renegotiate the agreement — but that's unlikely

Some in Trump's orbit have urged the president to renegotiate the agreement, an option that is seen as all but impossible among international climate negotiators.

The 2015 Paris talks were the culmination of years of preparations, and it's unlikely that Trump could convince negotiators from nearly 200 nations to reopen the underlying text.

Some closely tracking the issue suspect that "renegotiate" is just shorthand for ensuring that the U.S. gets a better deal in future discussions arising from Paris. That could be accomplished through bilateral and multilateral negotiations with individual countries, or by influencing the discussions at subsequent climate conferences over how to implement the agreement.

Do nothing

Trump could also delay a decision for months or even years, avoiding the political fallout of withdrawing or remaining.

Instead of issuing a firm verdict this week, the president could announce he'll tentatively remain in the agreement, but continue to review his options and reserve the right to withdraw at a future date.

Some who follow the issue think that could be his most politically savvy option.

"What good does it do to announce your intention to leave 2½ years early?" asked one longtime climate negotiator. "You've given up all your leverage."

White House to Europe: Trump picks on you because he likes you Back

By Nahal Toosi | 05/30/2017 06:37 PM EDT

President Donald Trump may be aggravating Germany, France and other U.S. allies in Europe with his tirades and qualms about trade imbalances, NATO spending and the Paris climate change deal.

But the White House is casting Trump's approach as one designed to strengthen the U.S.-European relationship — not kill it.

After all, Trump aides insist, real friends tell each other hard truths.

Trump "views not just Germany but the rest of Europe as an important American ally," White House press secretary Sean Spicer said Tuesday, adding that the Republican president's demands during his first official visit to Europe last week that other NATO countries spend more on defense were "getting results."

"That is a good thing for them, it's a good thing for NATO, and it's a good thing for America," Spicer said.

To others, however, the Europe-U.S. tensions over defense spending, trade deals and climate change are real, growing and could ultimately lead to shifts in alliances if Trump does not temper his tone. European leaders, some of whom face elections at home, do not want voters to see them as weak next to Trump.

While it's unlikely the United States and Europe would flat-out abandon each other, smaller rifts could be exploited by rivals such as Russia, lead to new partnerships with emerging forces such as China, or threaten cooperation on joint endeavors such as stabilizing Afghanistan.

"Europeans really are asking themselves, 'How can we try and proceed and construct a positive way forward with someone who won't even meet us halfway?'" said Julianne Smith, who advised former Vice President Joe Biden on national security. "Sure, there's not going to be a total break in the relationship. But it could really inhibit cooperation at the highest levels, and that's where the toughest problems get solved."

During meetings in Europe last week, Trump devoted much of his public remarks to chiding NATO members he insists are freeloading on the United States by not meeting their commitment to spend at least 2 percent of their GDP on defense. Trump did not directly endorse Article 5, the principle at the heart of NATO that says members will treat an attack on one as an attack on all. He also would not sign on to a statement committing the United States to honoring the Paris climate change agreement.

German Chancellor Angela Merkel, at a campaign event over the weekend ahead of elections

this fall, indicated that she no longer considered the United States a reliable ally.

"The times in which we could rely fully on others — they are somewhat over," said Merkel, strong comments from the highly influential but usually measured leader. On Tuesday, she told a closed-door meeting of her parliamentary group that while she remained committed to the trans-Atlantic alliance, she would not pretend there weren't substantive differences with Trump, especially on climate change.

German Foreign Minister Sigmar Gabriel was blunter. "The short-sighted policies of the American government stand against the interests of the European Union," Gabriel said Monday. "The West has become smaller; at least, it has become weaker."

Trump and his team were in no mood to walk anything back.

The president shot back Tuesday on Twitter: "We have a MASSIVE trade deficit with Germany, plus they pay FAR LESS than they should on NATO & military. Very bad for U.S. This will change."

In the past, Trump's aides have engaged in clean-up efforts after he clashed with foreign allies, but there was no confirmation of such behind-the-scenes work this time. A Pentagon spokesman said he was unaware of any outreach by Defense Secretary James Mattis to European counterparts, while the State Department refused to say whether Secretary of State Rex Tillerson had had any conversations.

Spicer used Tuesday's daily White House press briefing to insist that the Trump administration is fully committed to NATO and other European alliances but that it would not back down on its demands.

"During his conversations at NATO and at the G-7, the president reaffirmed the need to deepen and improve our trans-Atlantic relationship," Spicer insisted.

Another administration spokesman, Michael Short, put it this way: "The good thing about strong alliances, like the one we have with Germany, is that you can have frank discussions."

Trump's predecessors, Republican and Democratic, also voiced frustration that so few NATO members meet the commitment to spend at least 2 percent of GDP on defense. But those presidents couched their criticisms in reassurances of America's commitment to NATO, including promises that it would aid any NATO member that was attacked.

Trump's failure to take that two-pronged approach is why so many Europeans are alarmed, said Charles Kupchan, who served as senior director for European affairs on the staff of the National Security Council in the Obama administration.

"This is the real Trump, this is where he's landed, and I think that's the message that Europeans have come away with," Kupchan said.

A State Department official said that Trump's departure from past administrations' approaches deeply concerned U.S. diplomats but that, so far, they are taking comfort in the fact that it's not much more than rhetoric.

However, if Trump decides to abandon the Paris climate agreement or to reverse the U.S. diplomatic opening to Cuba brought about by former President Barack Obama, many European officials would be furious, the State Department official said. Both decisions could come in the next few days.

On climate, there are signs that Europe is preparing for what it considers a worst-case scenario. European officials have for months looked to Canada and China as partners on climate change, increasingly aware that the United States is no longer fully in their corner on the issue, EU sources told POLITICO.

Trump's critics have already accused him of emboldening China, saying his decision to yank the United States out of the massive trade deal known as the Trans-Pacific Partnership will allow China to take the lead on trade in the Asia-Pacific region.

The political climate in Europe is playing into how closely leaders align with or distance themselves from Trump.

British Prime Minister Theresa May, who is overseeing her country's plans to leave the European Union, has tried to get close to Trump, to the point where she's been accused of not doing enough to push him to stick to the Paris climate deal.

In Germany, where Merkel is running for re-election, no party wants to be seen as soft on Trump, who is widely disliked by Germans. The Merkel-Trump divide isn't unprecedented. The relationship between Merkel's predecessor, Gerhard Schröder, and then-President George W. Bush essentially broke down over Berlin's refusal to back the 2003 U.S. invasion of Iraq.

Newly minted French President Emmanuel Macron, free of the burdens of campaigning, has made several moves that indicate he won't kowtow to Trump. In Brussels, Belgium, last week, he shook Trump's hand with such a strong grip that the U.S. president's knuckles turned white. Macron later declared the handshake was "not innocent" and symbolized his unwillingness to make concessions.

During another encounter, Macron walked toward Trump but swerved at the last minute to greet Merkel first; later he published a photo of the mingling G-7 leaders that noticeably did not include Trump.

But Macron aides say their new leader's ultimate goal is to draw the American president in, not push him away. "The greater the distance is, the more you have to go toward the other ... sulkers don't win," a senior aide to Macron said, adding that the French president wants "to remind Trump that he is part of the future of Europe."

Trump's 'sherpas' lay confirmation groundwork Back

By Andrew Restuccia and Nancy Cook | 12/09/2016 10:00 AM EDT

Donald Trump's transition operation has assembled a team of advisers to help his Cabinet nominees get confirmed — a signal the president-elect is taking no chances even though most of his picks are expected to easily clear the Republican-controlled Senate.

Often called "sherpas" after the expert Himalayan climbers that help tourists scale Mount Everest, the guides are part advance team, part coaches, part crisis managers, working closely with nominees to set up meetings with senators, answer questions from key committees and prepare for confirmation hearings.

The previously unreported team of sherpas underscores Trump's emphasis on personnel, which is the primary focus for his top advisers even as transition staff in Washington warn their policy proposals are being largely ignored.

The sherpas must have strong relationships on Capitol Hill, said Kenneth Duberstein, Ronald Reagan's former chief of staff and a sherpa to several past Supreme Court and Cabinet nominees.

"You need to have knowledge of the confirmation process, knowledge of the hot-button issues of the various senators involved in the committees of jurisdiction and you have to make sure that you have good connections with the staff," he said.

He added that they shouldn't focus simply on winning over Republicans.

"You need certainly to understand that while you have the majority in the Senate, you need to figure out where the other votes are," he said. "If you can come out of the committee not just on a partisan vote, that buttresses the nominee significantly."

The sherpas who are already working with Trump's Cabinet picks, according to interviews with people close to the transition, include:

Townsend McNitt, a former George W. Bush Education Department official, is advising Betsy DeVos, Trump's pick for Education secretary;

Alex Flint, the former staff director of the Senate Energy and Natural Resources Committee and a former executive at the Nuclear Energy Institute, is advising Trump's yet-to-be-named Interior secretary pick. Flint has been spotted holding meetings with energy committee staff in recent

days, sources said;

Drew Maloney, vice president of global government affairs and public policy at the oil company Hess, is the sherpa for Andrew Puzder, who Trump is expected to tap as Labor secretary;

Mary Waters, who was an assistant secretary for congressional relations in George W. Bush's Agriculture Department is the sherpa for Steven Mnuchin, Trump's pick for Treasury secretary. Waters was spotted with Mnuchin in the Capitol this week;

Earl Comstock, a long-time former Senate Commerce Committee staffer, is the guide for Trump's choice for Commerce secretary, Wilbur Ross;

Keith Appell, a long-time conservative public relations executive, is leading the nomination process for Sen. Jeff Sessions, the pick for attorney general. Appell is a senior vice president at CRC Public Relations and also led the communication efforts for the coalition to confirm Supreme Court justices John Roberts and Samuel Alito;

DJ Nordquist, a well-known chief-of-staff and communications director in the economic studies program at the Brookings Institution, is helping Ben Carson through the confirmation process for secretary of Housing and Urban Development. She previously served as the assistant secretary for public affairs at HUD and as the deputy chief of staff at the FDIC;

Cynthia Berry —managing director at the Association Management Group, former staffer to former Sen. Jon Kyl of Arizona and Washington counsel for the American Medical Association — is acting as the guide for Rep. Tom Price (R-Ga.), Trump's choice to lead HHS.

A former Price staffer thought he would have little problem with his confirmation. "I imagine he'll experience an intense grilling from the other side on his policy positions, but I would not expect any issues to pop up in his vetting," the ex-staffer said. "He's a 'by-the-book' person."

The Trump transition team did not respond to a request for comment. The sherpas declined to comment or did not respond to requests for comment.

Former sherpas said one of the most important parts of the job is preparing for Senate confirmation hearings by setting up mock question-and-answer sessions, often called "murder boards."

"Lots of these nominees don't know D.C., or the senators they'll be in front of, or conversely, feel like they know everything already and so don't need to kiss the rings, or do any serious prep," said Trudy Vincent, the sherpa for Ken Salazar, who went on to become Obama's first Interior secretary.

Another big part of the job is anticipating and trying to get out ahead of Democrats' potential talking points about nominees — and then batting them down quickly.

Appell, for instance, sends out frequent emails to reporters titled the "Sessions Brief" that

highlight bright spots from Sessions' record, like his support from past drug czars, law enforcement officials and past attorneys general.

The Trump transition team is also eager, in the case of Sessions, to highlight his support among some in the African-American community as a way to combat past allegations of racism, according to a transition team member. Back in 1986, Session's bid for a federal judgeship was upended when an African-American assistant U.S. attorney, who worked for Sessions, told the Senate Judiciary Committee that Sessions had called him "boy" and had joked about the Ku Klux Klan.

Trump's lobbying ban, which requires that people working on the transition deregister as lobbyists, has limited the pool of sherpa candidates since many former Senate committee staffers are registered lobbyists.

"When you get a Cabinet secretary, you want someone who knows that committee to be introducing them to members," one Republican lobbyist said of the lobbying restrictions. "Tell me a legislative affairs guy who's going to sign up for that."

Lorraine Woellert, Isaac Arnsdorf and Caitlin Emma contributed to this story.

DOI to launch new sage grouse management plan Back

By Jenny Hopkinson | 03/28/2017 01:46 PM EDT

The Interior Department is preparing to soon release a new plan for managing sage grouse in Western states, Secretary Ryan Zinke told ranchers today, adding that the measure will be state-focused and friendly to farmers.

"You'll be happy with the decision that comes with sage grouse," Zinke told the Public Lands Council's Legislative Conference in Washington, D.C., this afternoon.

"I think if you are a rancher, a traditional Western guy, you are going to see a lot more power with the states. ... We are going to manage on number, not on habitat," Zinke said.

In September 2015, the Obama administration released a sage grouse management plan to protect the species across its 11-state range. The plan came as part of a deal with ranchers, energy developers and other land owners to avoid the strict land-use restrictions that would have resulted from putting the bird on the Endangered Species List.

However, the plan is unpopular among ranchers and other Western interests because it gives a lot of power to the federal government to tell states how to manage the bird's habitat and measures

success on the maintenance of designated habitat zones as opposed to the size of the sage grouse population.

Zinke's plan will tell states how large the sage grouse population in their jurisdictions should be. He added that those numbers would take into account weather conditions, predators and other natural factors.

"I think the state is very capable of coming up with a plan that can meet those numbers," the secretary said.

Trump EPA urges court to keep climate rule lawsuit on hold Back

By Alex Guillén | 05/15/2017 05:02 PM EDT

The Trump administration and the states and companies seeking to quash the Obama EPA's Clean Power Plan told a federal court Monday they want to keep the lawsuit over that landmark climate rule on hold indefinitely.

They argue a freeze would be preferable to a court decision to send the rule back to EPA without deciding on the whether the power plant carbon regulations violated the Clean Air Act. And they say that remanding the rule to the agency to review would just lead to headache-inducing quagmires for EPA and the court.

If the court remands the rule, its opponents might file new lawsuits to preserve their legal claims, while environmentalists could challenge any EPA attempt to set new compliance deadlines.

Keeping the case on hold would also allow EPA to finish its review of the rule more quickly because it would not have to divert resources to addressing those new legal issues, the administration added.

"These consequences can be — and manifestly should be — avoided by continuing to hold this litigation in abeyance," EPA wrote in its brief.

EPA received back-up from the Clean Power Plan's opponents, who made similar arguments in their own brief.

When the D.C. Circuit Court of Appeals issued its 60-day stay last month, the judges asked all sides to weigh in on whether to keep the case on ice indefinitely — which could be a long time given the years that are likely needed to repeal the Clean Power Plan and resolve subsequent litigation — or send the rule back to EPA right now, without rendering a decision on its legality.

The rule's supporters, however, would prefer a third path.

Environmentalists, states that support the Clean Power Plan, clean energy groups and several utilities noted their first choice would actually be for the court to issue its ruling.

Those groups were likely buoyed by EPA's strong showing at oral arguments last year. After watching seven hours or arguments, many observers predicted EPA would prevail on most of the legal issues, though a win for the Clean Power Plan was not guaranteed.

Plus, green groups argue, there are several major legal questions the courts likely will need to answer at some point no matter what the Trump administration does now. That includes whether EPA can achieve emissions reductions through "fuel switching," also known as EPA's "beyond the fence line" approach. The court could also weigh in on the so-called 112 Exclusion, which the rule's challengers argued should prevent EPA from regulating in this manner, no matter the details.

But the court's order seeking opinions on remand versus abeyance indicate that the judges are no longer interested in issuing a ruling.

In that case, environmental groups argued, keeping the Supreme Court stay in place would "convert temporary enforcement relief pending judicial review into a long-term suspension of the Clean Power Plan, without any court having issued a decision on its legal merits and without following the administrative steps necessary to amend, suspend or withdraw a regulation."

Meanwhile, EPA and its challengers made similar arguments urging the court to maintain its hold on lawsuits over the Clean Power Plan's sister regulation that sets emissions limits for future power plants, also known as the 111(b) rule or the new source performance standard.

That case was on a slower judicial track than the CPP. All sides had completed briefing, but last month the Trump administration convinced the court to delay arguments.

Meanwhile, environmental groups, supportive states and pro-rule utilities said they would like to see this case continued through arguments and a decision by the court, but that in lieu of that they have no preference over remand versus abeyance.

Although the Clean Power Plan was stayed, the future plant rule has been in effect since it was released in 2015, and neither option would hurt its "effectiveness during any period of review by the new administration," environmentalists argued.

The court has no strict deadline to decide what to do. It has paused the lawsuits challenging both rules through June 27, but is under no obligation to act before then.

Zinke taps two women for senior posts at Interior Back

By Esther Whieldon | 04/06/2017 12:16 PM EDT

Interior Secretary Ryan Zinke is appointing two women, including a President Donald Trump's beachhead team member, to official positions in his office.

Zinke will today name Katharine MacGregor as deputy assistant secretary for land and minerals management, an Interior spokesman told POLITICO. Zinke is also appointing Aurelia Skipwith, co-founder of agricultural consulting firm AVC Global, as deputy assistant secretary for fish, wildlife and parks.

MacGregor was a staffer on the House Natural Resources' Energy and Mineral Resources Subcommittee, where she worked on issues involving oil and gas development and royalties as well as offshore renewable energy development. She also previously served as a legislative director for former House Republican Majority Leader Eric Cantor and as a legislative assistant for former Republican Rep. Thelma Drake of Virginia.

Skipworth previously worked at the Bureau for Food Security at the United States Agency for International Development and is a former USDA research intern.

The White House has yet to nominate candidates for any of the top political positions at Interior or its nine bureaus, but Zinke appears to be moving ahead with appointing political staffers who do not require Senate confirmation.

Zinke in March appointed Mike Nedd as acting director of the Bureau of Land Management. Nedd had been assistant director for energy, minerals and realty management since 2007.

Ben Lefebvre contributed to this article.

Subject: POLITICO's Morning Score: EMILY's List endorses Rosen as Democrats try to head off Titus primary — Casey raises $2.6M, Bartos $1M in Pennsylvania — GOP challenger declares versus Bera in CA-07

By Elena Schneider | 07/07/2017 10:00 AM EDT

With Scott Bland, Kevin Robillard, Daniel Strauss and Maggie Severns

The following newsletter is an abridged version of Campaign Pro's Morning Score. For an earlier morning read on exponentially more races - and for a more comprehensive aggregation of the day's most important campaign news - sign up for Campaign Pro today. (http://www.politicopro.com/proinfo)

PRE-EMPTING THE PRIMARY - "Democrats try to head off Titus Senate bid," by Campaign Pro's Elena Schneider: "Democratic Rep. Dina Titus has defied Harry Reid before, and Democrats in Washington and Nevada spent Thursday trying to make sure it doesn't happen again. Within hours of Rep. Jacky Rosen launching her run for Senate, the biggest forces in Nevada and D.C. Democratic politics lined up behind her, hoping to avoid a contested primary before their opportunity next fall to face Republican Sen. Dean Heller - the only Senate Republican up for reelection in a state President Donald Trump lost last year. EMILY's List President Stephanie Schriock said in a statement, shared with POLITICO, that her group is "proud to endorse" Rosen 'right out of the gate.' The Democratic women's PAC has worked with Titus in the past, but it joined Sen. Catherine Cortez Masto, Rep. Ruben Kihuen and the Democratic Senatorial Campaign Committee, who endorsed Rosen in quick succession on Tuesday. ... It's a clear effort to discourage Titus, after she told Nevada Newsmakers that she still hadn't ruled out a bid against Heller. And the outpouring of support for Rosen has not dissuaded her yet." **Full story.**

Q2 FUNDRAISING - FIRST IN SCORE - Casey raises $2.6 million: Pennsylvania Sen. Bob Casey raised $2.6 million in the second quarter, essentially matching the $2.7 million he raised in the first three months of the year. He has $5.5 million on hand, an increase from $3.8 million at the end of March.

- Bartos raises $1 million: Pennsylvania Republican Senate candidate Jeff Bartos raised over $1,072,000 in the second quarter of 2017 and has over a million dollars on hand, according to figures obtained first by POLITICO.

- IN THE HOUSE - CA-39: Democrat Mai-Khanh Tran announced raising over $270,000 in the second quarter after jumping into the race for GOP Rep. Ed Royce's district in early June.

- CA-45: Democrat Katie Porter raised over $310,000 in the first three months of her campaign for Rep. Mimi Walters' seat.

- CA-49: Democrat Mike Levin raised approximately $333,000 in the second quarter, according

to a Thursday tweet touting his year-to-date fundraising in the race against GOP Rep. Darrell Issa.

- **CO-05:** Republican Owen Hill raised $225,000 for his primary challenge against GOP Rep. Doug Lamborn in the second quarter and has $195,000 on hand, Colorado Politics reported.

- **MI-11:** Democrat Haley Stevens raised $320,000. Stevens is running in the Democratic primary to unseat GOP Rep. David Trott.

- **PA-06:** Democrat Chrissy Houlahan raised over $432,000 and had over $383,000 on hand at the end of the second quarter, her campaign said. Houlahan is running against GOP Rep. Ryan Costello.

- **TX-32:** Democrat Ed Meier announced raising $345,000 for his campaign against GOP Rep. Pete Sessions, with $300,000 left on hand. Democrat Colin Allred announced raising $200,000 in the second quarter.

- **PACs: End Citizens United** raised $3.4 million in the second quarter, it announced Thursday. Its donors have also given $1.7 million to endorsed candidates, and the PAC announced 21 more endorsements, including: Democratic Sens. Bill Nelson of Florida and Joe Donnelly of Indiana, as well as Reps. Kyrsten Sinema (AZ-09), Ami Bera (CA-07) and Rick Nolan (MN-08).

- **Defending Main Street,** the moderate House Republican super PAC, took in its first big donation of 2017 in June - $100,000 from the LIUNA super PAC.

PITCH (NOT) PERFECT - "Senate GOP recruiting slow-going for 2018," by Campaign Pro's Kevin Robillard and Burgess Everett: "Republicans have a huge opportunity to gain seats in the Senate in 2018. They just need to find the candidates. Rep. Ann Wagner's decision not to challenge Democratic Sen. Claire McCaskill , a matchup Missouri political observers had anticipated for years, is the latest in a string of thanks-but-no-thanks moves from candidates Washington Republicans thought were locks to run for Senate next year. It's an unwelcome sign for the GOP despite staring down a tantalizing Senate map, with 10 Democrats up for reelection in states President Donald Trump carried last year and an opportunity to win eight states and a filibuster-proof majority." **Full story.**

CANDIDATE WATCH - "Republican business executive and Marine veteran challenges Rep. Ami Bera in Northern California race," by the Los Angeles Times' Phil Willon: "Business executive and Marine Corps veteran Andrew Grant is challenging Rep. Ami Bera (D-Elk Grove) for a Northern California congressional seat coveted by both parties. Grant, a Republican, is a newcomer to politics but has had a career steeped in defense, national security and foreign policy, including serving in the U.S. State Department after he left the military. ... Grant said he voted for President Trump last November and that while all the president's decisions have not been perfect, he has rightly focused on the concerns of working-class Americans. Grant said he still is formulating detailed positions on issues such as health care and immigration. But he said he generally supports a market-based approach for health care. He was skeptical about the need for a massive wall on the U.S.-Mexico border and expressed sympathy

for immigrants who seek a better life in the U.S." **Full story.**

Days until the 2017 election: 123.

Days until the 2018 election: 487.

CORRECTION - Yesterday's Morning Score incorrectly listed Democratic House challenger Phil Janowicz's district. He is running in CA-39.

FROM THE COMMISSION - "FEC appears unlikely to take action on Russia," by Campaign Pro's Maggie Severns: "The FEC appears poised to steer clear of probing possible Russian interference in the 2016 elections, despite a publicized push earlier this year. The commission's jurisdiction includes overseeing illegal foreign spending in U.S. elections, and Democratic Commissioner Ellen Weintraub released six proposals outlining potential actions the FEC could take, from asking for briefings from the Justice Department on ongoing probes to launching a new rulemaking addressing election spending by foreign-owned corporations. But the commission appears headed for partisan deadlock at its next meeting, slated for July 13, with the panel's Republicans expected to view the FEC's role as more limited than what Weintraub drew up." **Full story.**

- FEC draft opinion rejects replacing ad disclosures with Twitter handles: Full story.

TECH MONEY - "Even some of the tech industry's most prominent critics of President Donald Trump are opening their checkbooks and donating to Republican lawmakers, as Silicon Valley sets its sights on the 2018 midterm election," Recode's Tony Romm reports. "... At the end of March, for example, [Elon] Musk chipped in $50,000 to an organization run by House Majority Leader Kevin McCarthy that's meant to boost his GOP allies. Musk also donated roughly $34,000 to the Republican Party's official arm for electing lawmakers to the chamber, federal records show. ... GOP lawmakers got a boost earlier this year from Google's Schmidt, who donated $33,900 - the maximum contribution - to the National Republican Senatorial Committee, according to FEC records. Google's chief executive, Sundar Pichai, also wrote a $33,900 to the NRSC, federal disclosures show, but he contributed the same amount to a similar fund designed to boost Senate Democrats. ... Meanwhile, some of the earliest and most active Democratic donors include Sheryl Sandberg, the chief operating officer of Facebook." **Full story.**

2020 WATCH - "Senator, (Un)Interrupted: Kamala Harris's Rise Among Democrats," by The New York Times' Matt Flegenheimer: " ... Less than eight months later, California's very junior senator has emerged as the latest iteration of a bipartisan archetype: the Great Freshman Hope, a telegenic object of daydreaming projection - justified or not - for a party adrift and

removed from executive power. ... Like the Senate newcomers Barack Obama or Marco Rubio before her, Ms. Harris - a 52-year-old former prosecutor with a profane streak, a lawyerly aversion to "false choices" and an affection for the rapper Too Short - has insisted that national aspirations are far from her mind. Like those men, she has not exactly ruled out the possibility, either. Unlike those men, she is not a man, a fact that has figured prominently in her introduction to mass audiences in a recurring (and highly rated) television series: Senate Intelligence Committee Hearing Into Possible Trump Ties to Russia." **Full story.**

STAFFING UP - Chris Bolling stays at Virginia Democratic Party: The Virginia Democratic Party announced that Chris Bolling, who served as the deputy executive director in 2016, will now return as the group's executive director, per a statement from the party.

CODA - QUOTE OF THE DAY: "I just love to sit in my office and make up ways so they'll write these stupid stories because they are just so stupid, it's awful." - Maine Gov. Paul LePage, suggesting he makes up stories to mislead the press, via POLITICO.

Subject: EPA releases proposal to rescind 2015 WOTUS rule

By Alex Guillén

06/27/2017 03:44 PM EDT

EPA and the Army Corps of Engineers have released their proposal to rescind the 2015 Waters of the United States definition and "re-codify" the rules that existed prior to that definition.

Click here for a pre-publication copy of the joint proposed rule.

The agencies plan to issue a new version of WOTUS following a "substantive re-evaluation."

Subject: House bill would cut EPA budget, reduce state grants

By Alex Guillén and Annie Snider

07/11/2017 05:59 PM EDT

The House's EPA spending bill would shrink the embattled agency's fiscal 2018 funding by $528 million to the lowest level in a decade, but a far more modest cut than the one sought by the Trump administration.

The bill would provide EPA with $7.5 billion, according to the House Appropriations Committee, its lowest funding level since 2008.

The proposal would cut the State and Tribal Assistance Grants, which make up a major portion of EPA's budget and doles out money to states for implementing and enforcing environmental laws, as well as for specific projects.

STAG would get just under $3.3 billion, down from the $3.5 billion spent in 2017 but significantly more than the $2.9 billion requested by the White House. Many states, facing their own budget crunches, oppose serious cuts to those grants.

One category of STAG grants, however, would see funding held steady with current levels: the popular state revolving funds that support sewer and drinking water infrastructure projects level, which would receive a combined budget of $2 billion.

The bill would also raise funding for the new Water Infrastructure Finance and Innovation Act — a new funding mechanism that has yet to make its first awards — by $5 million to a total of $25 million.

The measure also offers a rebuke of the Trump administration's move to end funding for popular regional watershed programs across the country, providing $397 million for such cleanup efforts. Details on how the dollars are allocated, from the Great Lakes to the Chesapeake Bay, are included in the yet-to-be-released bill report.

Subject: NYT: Staff of DOE international climate office told to pack their bags

By Eric Wolff

06/15/2017 01:48 PM EDT

The Department of Energy will shutter its Office of International Climate and Technology, its staff was told this month, according to The New York Times, which cited current and former DOE employees.

The department has been in the cross-hairs since it was marked for elimination in President Donald Trump's budget request. Its workers played an essential role in planning Energy Secretary Rick Perry's visit to Beijing last week as part of the Clean Energy Ministerial.

The office is the only unit at DOE to have climate in its name.

The office last made headlines in February when a supervisor told staff not to use the term "climate change," "Paris Agreement" or "emissions reduction" in written communications, as POLITICO reported at the time.

Subject: IG report largely clears EPA on Gold King spill response

By Alex Guillén

06/12/2017 11:57 AM EDT

EPA's inspector general today said the agency acted reasonably and lawfully before and after the 2015 Gold King mine spill that dumped 3 million gallons of polluted water into Colorado's Animas River.

The 40-page report, conducted following two congressional requests, concludes that on-site EPA officials and contractors were "qualified, experienced individuals with relevant expertise," and noted that while the release was harmful, that single mine already discharged the same amount of water every 10 days.

The report says that EPA's decision not to directly test the mine's water level was "reasonable" because of the safety risks and high costs, among other things. It said EPA properly assured the independence of the Bureau of Reclamation's technical review of the incident. And despite complaints from state and local agencies that it took too long for EPA to notify them of the spill, the IG concluded that EPA followed the legal requirements and that there were "no delays" in notifying other entities.

Investigators concluded that the Bureau's technical review, along with EPA's own internal investigation, had led to sufficient changes to limit the risk of such a spill happening again, and to boost response and notification plans.

WHAT'S NEXT: Various lawsuits over the spill are playing out in federal courts. The Gold King site and various other mines in the surrounding area were added last year to the Superfund priority list.

Subject: Sources: EPA expected to trim biofuel levels for 2018

By Eric Wolff

07/05/2017 11:56 AM EDT

EPA will lower the amount of biofuel that must be used in the U.S. next year, marking the first ever reduction in volumes under the Renewable Fuel Standard, according to industry sources.

The proposal, which is expected to be released as soon as today, will call for 19.24 billion gallons of biofuel for 2018, slightly below the 19.28 billion gallons EPA had mandated for this year, ethanol and oil industry sources tell POLITICO.

The volume mandate of conventional biofuels like ethanol will remain at 15 billion gallons, equal to the level set by the Obama administration for 2017 and the maximum allowed under the law.

However, sources say EPA will submit a requirement for advanced biofuels that is less than the 4.28 billion gallons required in 2017. Advanced biofuels have lower life-cycle carbon emissions than corn ethanol, and the requirement is generally filled by biogas, advanced biodiesel, cellulosic ethanol, and imported Brazilian sugar ethanol.

Three weeks ago, when several industry sources had expected volumes to be released, advanced biofuel volumes were expected to increase to 4.38 billion gallons, up 100 million gallons from 2017. The reduction is an attempt to reduce the use of imports to meet RFS requirements and to boost U.S. producers, according to the sources.

WHAT'S NEXT: Once the rule is released, EPA will take comment on its volumes and calculations. It has a final deadline of Nov. 30 to issue a final rule.

Subject: Morning Energy, presented by Chevron: Zinke's mixing politics with business draws scrutiny — Report: Perry took charter flight last week — Federal judge reinstates parts of methane waste rule

By Anthony Adragna | 10/05/2017 05:41 AM EDT

With help from Ben Lefebvre and Darius Dixon

Morning Energy will not publish on Monday Oct. 9. Our next Morning Energy newsletter will publish on Tuesday Oct. 10. Please continue to follow PRO Energy issues here.

MIXING PUBLIC LANDS AND POLITICS: Over the course of his first months in office, Interior Secretary Ryan Zinke has met with big donors or political groups more than a half-dozen times while on official travel, raising questions about the appropriateness of those habits even if they don't cross any legal red lines, Pro's Ben Lefebvre and Esther Whieldon report . GOP donors shelled out up to $5,000 per couple for a photo with him during a nearly two-hour Virgin Islands Republican Party fundraiser during a stop on an official trip related to the Interior Department's role overseeing the U.S. territory. Tickets for the fundraiser, which was attended by local party members and elected officials, ranged from $75 per person to as much as $5,000 per couple.

Though ethics watchdogs said Zinke's appearance was legal, they said attending a fundraiser during his first month as secretary is not in line with past administrations' conduct. "It happens on occasion with other Cabinet secretaries, perhaps even a little more often as you get near the election, but it is not a very common practice for Cabinet members to be hopping around from campaign event to campaign event like we're seeing with Zinke," said Craig Holman, government affairs specialist for government watchdog Public Citizen. An Interior spokeswoman said Zinke always follows the law but declined to answer specific questions about his appearance at the Virgin Islands fundraiser, nor would say if he planned to continue raising funds.

Zinke's not alone: Obama administration officials had their own struggles mixing official business with politics. A watchdog group requested a probe of whether then-Secretary Ken Salazar had violated the Hatch Act while taking an Obama re-election campaign RV tour of Colorado. The Office of Special Counsel found HHS Secretary Kathleen Sebelius violated the Hatch Act in 2012, saying she had made "extemporaneous partisan remarks" in North Carolina. Former Interior chief Sally Jewell said she thought Zinke was within his rights, noting she once appeared at a fundraiser for Democratic Sen. Maria Cantwell that she paid her own way to. "If he had legitimate business while he's on the island, to do a political thing on the side I don't think that is that unusual," Jewell said.

But some see Zinke's activity as trying to maintain political contacts so can keep his options available for what to do after he leaves the Trump administration. "I think he's definitely got political aspirations, that that's one of the reasons why he is where he is at right now," said Land Tawney, executive director of Backcountry Hunters and Anglers. "You don't go from being a Montana legislator to a first-term congressman to [Interior] secretary without having ambition."

He's widely seen an attractive candidate for Montana's open-seat governor's race in 2020.

Quotes that keep coming back to ME: "Put another way, just because something is legal doesn't make it right," OMB director Mick Mulvaney wrote last week. "So much of what happens around here is based on appearances. If it just appears wrong, don't do it," Senate Energy Chairman Lisa Murkowski told reporters last week.

REPORT: PERRY TOOK CHARTER TOO — LAST WEEK: Energy Secretary Rick Perry took a chartered flight last week from Hazleton Regional Airport in Pennsylvania to the Greater Portsmouth Regional Airport in Ohio one day before HHS Secretary Tom Price resigned last week, Reuters reports, citing "PMH Aviation, the company that runs the Portsmouth airport." Information about the cost of the flight were not available and the agency did not respond to requests for comment. PMH declined to confirm the flight when contacted by ME Wednesday night. But FlightAware has details of a Sept. 28 trip that appears to match Perry's itinerary that day; his tour of a uranium facility started at 8:30 the following morning. After the tour, Perry tweeted that he was headed to the Cincinnati/Northern Kentucky International Airport.

SPEAKING OF TRAVEL: The Western Values Project told ME it plans to file a complaint in federal court today complaining Interior has not responded to FOIA requests it filed in June asking the extent that Zinke's wife has accompanied him on official work business. Lola Zinke has accompanied her husband on some official trips, either ceremonial events to which she had been officially invited or on trips on which she has paid her way, Interior spokeswoman Heather Swift told ME. And CNN reports Interior's inspector general expanded its existing probe on Zinke's non-commercial travel to also include a summer visit to the Vegas Golden Knights hockey team.

WELCOME TO THURSDAY EVERYBODY! I'm your host Anthony Adragna, and DOE's Diane Meck was first up to identify Rep. Sala Burton as the lawmaker Nancy Pelosi replaced in Congress. Send your tips, energy gossip and comments to aadragna@politico.com, or follow us on Twitter @AnthonyAdragna, @Morning_Energy, and @POLITICOPro.

"I DID NOT SIGN UP TO GO BLOW UP THE MARKETS": Recently minted FERC Commissioner Robert Powelson didn't hold back Wednesday making it clear that he's not going to be a rubber stamp on the Energy Department's grid pricing proposal, and warned against politicizing FERC. According to SNL , the audience gathered for a meeting of the Organization of PJM States broke into a standing ovation when the former longtime Pennsylvania regulator declared, "We will not destroy the marketplace." Powelson, a Republican, reportedly said he wouldn't support a rule that undoes the power markets FERC oversees. "When that happens, we're done. I'm done; I don't need this job," he said, according to SNL. "FERC does not do politics. We don't do energy politics," he also said. "I did not sign up to go blow up the markets."

Something to keep in mind: Organization of PJM States includes state regulators spanning Illinois to New Jersey and down to North Carolina, and its meetings include not only officials from PJM, the nation's largest power market, but consumer counsels from those states and plenty of power companies. PJM is also the market that would be the most affected by DOE's proposed

rule. This is Powelson's crowd.

We need lots of information: Late Wednesday, FERC posted 53 questions and other requests for information as it dives into DOE controversial resiliency pricing proposal, Pro's Darius Dixon reports. The six-page document splits those questions into categories looking for feedback on rates, the 90-day on-site fuel requirement envisioned by DOE, and how pricing changes would be implemented, among other issues.

METHANE RULE LIVES — FOR NOW: A federal court in California ruled Wednesday that BLM unlawfully postponed key compliance dates for a methane waste rule in June, effectively putting the rule back on the books for now. Pro's Alex Guillén reports . Magistrate Judge Elizabeth Laporte said the agency was too late to delay components of the regulation because its effective date had already passed and therefore should have gone through a round of notice-and-comment rulemaking before suspending any part of the rule. Her decision came the same day Interior proposed an 18-month delay of the methane waste rule as it works to rewrite it. BLM will accept comments on that proposal for 30 days.

** **A message from Chevron**: When an endangered butterfly was found near a Chevron refinery, we protected the habitat and still plant the only thing they eat—buckwheat. Watch the video: http://politi.co/2fVfOTm **

EPA STRATEGIC PLAN DROPS CLIMATE FOCUS: EPA's priorities for the next four years would no longer make reference to climate change or rules to reduce carbon emissions under a draft strategic plan, Pro's Alex Guillén reports. The document, which went out to EPA employees Wednesday, instead defines the agency's "core mission" as ensuring clean air, water and land, calls for more "cooperative federalism" and touts the "rule of law and process." Accompanying graphic that went to employees here.

DEMOCRATS OFFERING CLIMATE METRIC BILL: Led by Sen. Michael Bennet, eight Senate Democrats today are introducing a bill — the Transparent Pollution Accounting Act — that would standardize the metric used across the federal government to quantify the cost of climate pollution. The Trump administration suspended use of the existing social cost of carbon earlier this year, prompting the need for a codified value, the Democrats argue.

WATCH THAT WRAP UP TODAY: Murkowski wants to have Kevin McIntyre, Trump's pick to chair FERC, and Rich Glick, who serves as general counsel to energy committee Democrats, onto the commission before the chamber adjourns for the Columbus Day recess, Pro's Darius Dixon reports.

Barrasso: Baran's renom needs a big offset: If Democrats want to secure a full five-year term for Nuclear Regulatory Commission member Jeff Baran, they're going to have to agree to "a fairly significant, robust [nomination] package for me to agree to allow him through," Sen. John Barrasso told ME. Democrats have insisted that Baran, a former aide to ex-Rep. Henry Waxman who has been on the commission since 2014, get a new term alongside the confirmations of GOP commission nominees Annie Caputo and David Wright, who were approved by EPW in July.

Barrasso's comments suggest that Democratic support for Caputo and Wright likely isn't enough to get him to go along with Baran, especially considering his frustration with objections to EPA enforcement nominee Susan Bodine. Still, there's not much to hang over the Democrats in the near term: It's a Republican administration with plenty of EPA nominees they don't like, and Baran's seat doesn't expire until June.

ADMINISTRATION SENDS OVER DISASTER FUNDING REQUEST: Officials formally sent over a request for nearly $30 billion in disaster relief Wednesday that included $12.8 billion for FEMA's disaster relief fund, $16 billion for the National Flood Insurance Program and $576.5 million for the forest service's firefighting fund, Pro Budget and Appropriations Brief's Sarah Ferris reports. That came as San Juan's mayor blasted Trump on Wednesday as the "miscommunicator in chief" and called his visit to the island "insulting."

Murkowski's focused on immediate relief: Murkowski expressed concern about the "slow" federal response to Hurricane Maria and said building a more resilient Puerto Rican grid was secondary to getting the lights back on. "When you think about the extent of a disaster like this, we all want to say, 'Okay, let's improve, let's improve the grid here, let's build the Puerto Rican grid of the future,' but first and foremost—we've just gotta try and clean up," she told reporters. An aide said Murkowski planned to visit the island with other lawmakers next week but that those details are still being finalized.

PHMSA, NOAA PICKS ADVANCE: The Senate Commerce Committee advanced the nominations of Howard Elliott to run PHMSA and Timothy Gallaudet to be No. 2 at NOAA by voice vote Wednesday. Add them to the ever-increasing backlog of nominees waiting for a Senate floor vote.

DEMOCRATS SEEK PROBE OF PRUITT'S SPENDING: Two senior House Transportation Democrats — Peter DeFazio and Grace Napolitano — asked EPA's inspector general in a letter to probe "wasteful" spending by Pruitt on round-the-clock security and a $25,000 soundproof phone booth. "This culture, which is reflected in travel and lifestyle choices from the president on down, seems to embolden senior, politically appointed officials of the Trump administration to undertake lavish spending of taxpayer dollars for their sole and personal benefit, and not for the benefit of the Americans paying the tab," they write.

Udall considering private plane rider: Sen. Tom Udall, top Democrat on Appropriations subcommittee responsible for EPA spending, told ME he was "exploring" some sort of rider barring officials from private plane travel. "What I end up seeing is there's some very wasteful things going on," he said.

SENIOR E&C MEMBER MURPHY TO RETIRE: Rep. Tim Murphy, who chairs the Energy and Commerce Subcommittee on Oversight, announced late Wednesday he'll retire at the end of his current term, POLITICO's Rachael Bade, Elena Schneider and John Bresnahan report. The staunchly pro-life Murphy allegedly suggested a mistress get an abortion.

MINE SAFETY PICK ACKNOWLEDGES FAULTS: David Zatezalo, Trump's mine safety pick, told a Senate panel Wednesday he was "not proud of the fact" the coal company Rhino

Resources he used to run got notices of safety violations, Pro Labor's Ian Kullgren reports. He also said he'd have no trouble working with career staff that issued the notices in 2010 and 2011.

ZINKE HEADS TO FLORIDA: Today, the Interior secretary will get a briefing on "infrastructure upgrades and Everglades restoration at Lake Okeechobee." He'll also visit National Park Service sites Friday impacted by recent hurricanes.

CONSERVATIVES FOR CLEAN ENERGY: Hundreds are expected to gather today at the Hyatt Regency for the Conservative Clean Energy Summit. Multiple lawmakers are expected to address the gathering, including Sens. Mike Rounds, Rob Portman and Lindsey Graham, as well as Rep. Scott W. Taylor. More information here .

Milestone for House climate caucus: There are now 60 members of the House Climate Solutions Caucus with the additions of Reps. Pete Aguilar and Mimi Walters.

PERRY AIDE ADDS MORE CLIENTS: Jeff Miller, a former adviser to Energy Secretary Rick Perry during his second presidential run, has signed three new clients — including Pacific Gas and Electric, the massive California utility. Miller reported lobbying DOE in the second quarter on behalf of six clients, including AECOM, Lucid Motors (as a subcontractor to Hobart Hallaway & Quayle), the Nuclear Energy Institute, Occidental Petroleum, Southern Company and Valero Energy. He's signed 15 clients since he started lobbying in Washington this year and Perry became DOE chief (h/t POLITICO Influence).

END OF A (SHORT) ERA: The Rogue EPA Twitter account is going on hiatus, it announced Wednesday. "We started this account to be sure the public knew what was happening at EPA. Now, the world sees...It may be time to take a step back and let others carry the torch for a while. Those of us at the helm, here, are tired," a couple of tweets said.

Stories from POLITICO Pro

Interior secretary draws flak for mixing politics, official travel Back

By Ben Lefebvre and Esther Whieldon | 10/04/2017 07:31 PM EDT

Republican donors paid up to $5,000 per couple for a photo with Interior Secretary Ryan Zinke at a fundraiser held during a taxpayer-funded trip to the U.S. Virgin Islands, according to documents reviewed by POLITICO — raising questions about his habit of mixing official government business with political activism.

The new details about Zinke's March trip to the Caribbean, including the previously undisclosed invitation to the Virgin Islands Republican Party fundraiser, emerged after weeks of scrutiny of the former Montana GOP congressman's travels. The nearly two-hour event was one of more

than a half-dozen times Zinke has met with big donors or political groups while on department-paid trips, Interior travel records and other documents show.

Ethics watchdogs say Zinke is combining politics with his Interior duties so frequently that he risks tripping over the prohibitions against using government resources for partisan activity, even though his appearance at the Virgin Islands event seems to have been legal. Democrats have also seized on the issue, including 26 House members who wrote in a letter Tuesday that Zinke's travels "give the appearance that you are mixing political gatherings and personal destinations with official business."

Zinke has said all his actions have obeyed the law, dismissing concerns about his travel as "a little B.S."

But some ethics advocates say Zinke's attendance at a fundraiser during his first month as secretary is not in line with past administrations' conduct, even if he crossed no legal red lines.

"It happens on occasion with other Cabinet secretaries, perhaps even a little more often as you get near the election, but it is not a very common practice for Cabinet members to be hopping around from campaign event to campaign event like we're seeing with Zinke," said Craig Holman, government affairs specialist for government watchdog Public Citizen.

The secretary is already under investigation by his department's inspector general over his use of taxpayer-funded private planes for some of the trips, and the Justice Department's Office of Special Counsel is looking into an activist group's allegations that he violated the Hatch Act, the law limiting political activism by federal employees. The White House has cracked down on Cabinet members' travel habits following former HHS Secretary Tom Price's resignation on Friday, which occurred after POLITICO reported on his own expensive flights.

Zinke visited the Virgin Islands from March 30 to April 1 on an official trip related to the Interior Department's role overseeing the U.S. territory. On his first day, following a "veterans meet and greet" and a reception with Gov. Kenneth Mapp, he appeared in his personal capacity at a March fundraiser for the local Republican Party at the patio bar of the Club Comanche Hotel St. Croix, department records show.

Tickets for the fundraiser ranged from $75 per person to as much as $5,000 per couple to be an event "Patron," according to Zinke's official calendar and a copy of the invitation. Patrons and members of the host committee, who paid $1,500 per couple, could get a photo with Zinke at the start of the event, which was attended by local party members and elected officials.

The following day, Zinke took a $3,150 flight on a private plane, paid for by the department, from St. Croix to official functions on St. Thomas and returned later that evening. Interior Department officials said there was no other way to accommodate his schedule, which included official events on both islands commemorating the 100th anniversary of the Dutch government transferring control of the islands to the United States.

Zinke is allowed to engage in partisan political activity in a "purely personal (not official)

capacity," so long as he does not use government resources, according to Interior Department guidelines on the Hatch Act and other federal laws. The invitation to the GOP fundraiser did not identify Zinke by his official title and included a disclaimer that the money is being solicited by the local party and "not by any federal official."

All told, Zinke has spent around $20,000 for three charter flights as secretary, nowhere near the $1 million tab Price racked up on non-commercial trips. But he has on numerous occasions attended political receptions, spoken to influential conservative groups or appeared alongside past campaign donors during trips he takes outside of Washington, D.C., for official department business.

In one instance, Zinke gave a motivational speech for a professional hockey team owned by a major campaign contributor that he said was official business — and which required him to charter a $12,000 flight to Montana for an appearance at the Western Governors Association the next day.

In another case, during a speech to the Western Conservative Summit in Denver, he was introduced via a recorded voice as the Interior secretary and Zinke proceeded to talk about the agency's priorities. The summit was organized by the Centennial Institute, which bills itself as Colorado Christian University's think tank and is a part of the State Policy Network of organizations that collectively push for conservative state-level legislation.

An Interior spokeswoman said Zinke always follows the law but declined to answer specific questions about his appearance at the Virgin Islands fundraiser, nor say whether he would keep raising political money. The agency also has yet to post Zinke's trip expenses involving any of the political events.

"The Interior Department under the Trump Administration has always and will always work to ensure all officials follow appropriate rules and regulations when traveling, including seeking commercial options at all times appropriate and feasible, to ensure the efficient use of government resources," spokeswoman Heather Swift said in a statement.

Swift did not respond to questions about whether the department had gotten reimbursement for the political portion of Zinke's three-day Virgin Islands trip, as the head of one watchdog group says it should have.

"Some of this travel is clearly political and that part of the travel should have been paid for by the RNC, NRCC, state political parties, a campaign committee or Zinke personally," said Daniel Stevens, executive director of the Campaign for Accountability.

No payments to the department are listed in the Virgin Islands Republican Party's FEC records.

Zinke is not the first Interior secretary, or Cabinet member, to have his activities questioned.

In 2012, a watchdog group called Cause of Action urged the Office of Special Counsel to investigate whether President Barack Obama's then-Secretary Ken Salazar had violated the

Hatch Act while taking an Obama reelection campaign RV tour of Colorado with a couple of lawmakers and the state lieutenant governor. Local organizers of one stop on that tour had billed Salazar on its online events calendar as attending the political rally in his official role. OSC would not say whether its investigation uncovered any problems, but travel records Interior has posted show that one of Salazar's aides had told the tour's coordinator the schedule "should not refer to (Salazar as) 'secretary.'" Salazar did not respond to a request for comment.

A former Salazar aide, who was not authorized to speak on the record, said the Obama administration generally tried to avoid scheduling political events that coincided with official travel because it was difficult to divvy up what expenses should be reimbursed by a campaign.

The special counsel's office found Obama HHS Secretary Kathleen Sebelius in violation of the Hatch Act in 2012, saying she had made "extemporaneous partisan remarks" by endorsing a candidate for North Carolina governor during a speech she made in her official capacity. Sebelius tried to scrub the violation by reclassifying the appearance as political and reimbursing the Treasury Department for costs associated with the trip.

Sally Jewell, who was Interior secretary during Obama's second term, said Zinke was within his rights to appear at the fundraiser in the Virgin Islands. Jewell said she once appeared at a fundraiser for Democratic Sen. Maria Cantwell while in Obama's Cabinet, though she paid her own way to Washington state and was not identified by her official title.

"If he had legitimate business while he's on the island, to do a political thing on the side, I don't think that is that unusual," Jewell said in an interview.

EPA Administrator Scott Pruitt canceled his scheduled appearance at a fundraiser for the Oklahoma Republican Party in April because an invitation had identified him by his official title and said he would discuss his work at the agency. EPA ethics officials said he would have been cleared to attend the event if not for that language on the invitation.

Watchdog groups say Zinke's behavior fits a pattern for Trump's Cabinet.

"These government resources have been abused by this administration," said Virginia Canter, an executive branch ethics counsel for Citizens for Responsibility and Ethics in Washington who previously worked as an ethics official for Presidents George H.W. Bush, George W. Bush and Obama. "To the extent that some of that supports their political ambitions is inconsistent with the intent of this authority."

The Campaign for Accountability called on Interior's inspector general and the Office of Special Counsel to investigate whether Zinke violated the Hatch Act or department ethics rules with his speech to the hockey team, which the group said appeared to be a favor for a donor. Interior's IG office announced its investigation earlier this week, and OSC told the Campaign for Accountability that it was looking into the group's complaint, according to an email shared with POLITICO. The OSC declined to comment.

Reps. Raúl Grijalva (D-Ariz.) and Donald McEachin (D-Va.) have asked Interior's IG to also

look into any trips on which the secretary was accompanied by his wife, Lola Zinke, who is chairing the campaign of Montana Republican Troy Downing, a candidate to unseat Democratic Sen. Jon Tester next year. Swift said Lola Zinke was not in the Virgin Islands and has paid her own way whenever she has traveled with her husband on official trips.

Many who know him see Zinke's travels as an attempt to keep in touch with political contacts as he contemplates what he will do after leaving the Trump administration. Back home, the 55-year-old former Montana congressman is seen as an attractive candidate for the open-seat governor's race in 2020, when Democratic Gov. Steve Bullock will have to step down because of term limits.

"I think he's definitely got political aspirations, that's one of the reasons why he is where he is at right now," said Land Tawney, executive director of Backcountry Hunters and Anglers, a Montana-based sportsman group that supported Zinke's bid for Interior secretary. "You don't go from being a Montana legislator to a first-term congressman to [Interior] secretary without having ambition."

The Virgin Islands trip was Zinke's first interaction with big donors or influential conservative groups during his travel as Interior secretary.

A weeklong trip in May that took Zinke through Montana, Utah and California also offered a chance to squeeze in some political events.

Zinke delivered the keynote speech at the RNC spring meeting on May 11 in Coronado, Calif. Zinke had flown to California the previous night, after several days touring monuments in Utah, and the RNC speech was his only event in the state aside from a meeting earlier that afternoon with Rep. Amata Radewagen, the Republican delegate from American Samoa, and members of the American Tunaboat Association.

The next day, Zinke flew back to Montana where he joined Sen. Steve Daines (R-Mont.) and Vice President Mike Pence to tour a coal mine on the Crow Indian reservation operated by the Westmoreland Coal Co.

The trip offered Zinke and Pence an opportunity to tout the Trump administration's work to promote new coal mining on federal lands — and it allowed them to make a brief detour to promote Zinke's congressional replacement. That Friday night, Zinke, Pence and Daines attended a political rally for GOP candidate Greg Gianforte, and Zinke attended a get-out-the vote event for the Montana GOP the next day.

Zinke apparently paid for his return trip to Washington out of his own pocket — it was marked "personal travel" on his calendar, a designation not applied to the other flights on that trip.

Gianforte, whose wife is a major political donor in Montana, won the May 25 special election to take over Zinke's House seat.

Greg and Susan Gianforte donated more than $10,000 to Zinke's 2016 congressional campaign

and another $10,000 to joint Zinke-Daines PAC, according to federal records. The couple donated $5,000 for his earlier run for Congress.

Zinke met with big influencers and donors in June as well.

On June 25, he flew from D.C. to Reno, Nev., where his only scheduled event was a meeting of the Rule of Law Defense Fund, a group of Republican attorneys general that has been linked to the Koch brothers, where he spoke and took questions for about 30 minutes, according to his schedule.

After his remarks, he sat at a dinner table with Montana's attorney general, the government relations specialist for the Venetian Resort Hotel Casino and Las Vegas Sands, and Koch Industries lobbyist Allen Richardson, Interior documents show.

The next day, Zinke flew to Las Vegas for an event on public lands in nearby Pahrump, Nev., and a speech that night to the National Hockey League's Vegas Golden Knights. Bill Foley, the team owner and chairman of Fidelity, introduced Zinke. Foley donated $7,800 to Zinke's 2014 campaign, while employees and PACs associated with Fidelity and related companies gave another $180,000. Interior officials said the speech to the NHL team was part of Zinke's official duties, and they pointed to scheduling conflicts it created to justify his use of a $12,000 private plane to get to a Western Governors Association meeting in Montana the next day.

In July, Zinke spoke to several conservative groups in Colorado during a three-day trip that also included tours of Interior Department facilities in the state. He flew into Denver on July 20 so he could appear that evening at a closed-door reception for the American Legislative Exchange Council, a group of conservative state legislators, lobbyists and industry groups that has pushed for more state control over federal lands.

And over the next two days, he was a featured speaker at a Republican committee roundtable and attended the Western Conservative Summit in Denver.

Report: Sebelius violated Hatch Act Back

By Jennifer Haberkorn | 09/12/2012 03:13 PM EDT

HHS Secretary Kathleen Sebelius violated the Hatch Act, which prohibits certain political activity, when she made "extemporaneous partisan remarks" during a speech in her official capacity earlier this year, the U.S. Office of Special Counsel said Wednesday.

The office sent an official report outlining the rare Hatch Act violation and Sebelius's response to President Barack Obama.

The special counsel's office said it "found no evidence that Secretary Sebelius made any other political statements in her official capacity."

During a speech to the Human Rights Campaign Gala in North Carolina in February, Sebelius said North Carolina Lt. Gov. Walter Dalton "needs to be the next governor of North Carolina." She also outlined the Obama administration's accomplishments so far and said, "One of the imperatives is to make sure that we not only come together here in Charlotte to present the nomination to the president, but we make sure that in November he continues to be president for another four years."

The Office of Special Counsel said she made the political remarks in her capacity as a federal employee and thus violated the Hatch Act. If Sebelius had made those remarks in her personal capacity, they would have been acceptable.

After that appearance, Sebelius had the event reclassified from official to political, and done in her personal capacity, in an attempt to avoid a Hatch Act violation. She and HHS also reimbursed the Treasury Department for all the costs associated with the trip. At least some of the cost was picked by the Democratic National Committee, according to the OSC.

But the OSC said the reclassification doesn't mean the violation didn't occur, particularly because the gala was advertised using Sebelius's HHS title.

"OSC concluded that Secretary Sebelius violated the Hatch Act by making extemporaneous political remarks," OSC Special Counsel Carolyn N. Lerner wrote in a letter to President Barack Obama. "As the upcoming elections approach, this report offers an opportunity to remind federal employees of the complex Hatch Act restrictions."

Hatch Act violations against sitting Cabinet secretaries are relatively rare.

"This particular type of violation, where you have a Cabinet secretary speaking at an event, is pretty uncommon," said Scott Coffina, a former associate counsel in President George W. Bush's White House and a partner at Drinker Biddle & Reath. He said there are "a lot of very garden-variety violations," citing federal employees who forward political emails or put up campaign photos.

Republicans immediately criticized Sebelius, and conservative groups called for her dismissal.

But Sebelius told the OSC that the endorsements of Obama and the government were unscripted and a "mistake." OSC quoted her as saying that she "got a little caught up in the notion that the gains which had been made would clearly not continue without the president's reelection."

Sebelius, in her response, said the ruling was "somewhat unfair" and the use of her title amounted to a "technical and minor" violation. She said that OSC should have concluded that the

violation was "corrected" when the event was reclassified as political.

OSC said that by reimbursing the Treasury, she didn't violate rules prohibiting government-funded political events, but it didn't correct the prohibition on making political statements in an official role.

"It is my understanding that the Hatch Act permits Cabinet members to engage in political activities, without regard to location and duty hours, due to the 24-hour nature of our jobs," Sebelius wrote. "I believe that you should have concluded that the consequence of my going 'off script' at an official event was to change the nature of my appearance for cost reimbursement purposes only.

"Keeping the roles straight can be a difficult task, particularly on mixed trips that involve both campaign and official stops on the same day," Sebelius wrote.

Republicans were quick to pounce on Sebelius's violation.

"That the secretary violated federal law in this manner is disturbing, but hardly a surprise," said Antonia Ferrier, spokeswoman for Sen. Orrin Hatch (R-Utah). (The law was named after a different Sen. Hatch: Sen. Carl Hatch of New Mexico.)

"Since almost day one, this administration has had a singular focus on politicking — not governing — that's borne out by the secretary ignoring a strict prohibition on electioneering while working for federal taxpayers," Ferrier said.

House Oversight Committee Chairman Darrell Issa said Obama should carefully consider how to respond to the report.

"As he decides the appropriate consequences for Secretary Sebelius, the president should consider the important leadership role of Cabinet secretaries and the example they must set for the entire executive branch," he said in a statement.

Conservative advocacy groups said the violation warranted her departure.

"This is the most high-profile example of a Hatch Act violation since the act was passed in 1939," said Dan Epstein, executive director of Cause of Action. "Never before has a member of the president's Cabinet been found to have committed a Hatch Act violation. President Obama should immediately fire HHS Secretary Sebelius for her violation of federal law."

Maureen Ferguson and Ashley McGuire of The Catholic Association said most of Sebelius's actions "have advanced the president's political interests" throughout her tenure. "We already know she is willing to violate the First Amendment rights of Americans for political purposes, so why should we be surprised when she bends other laws to score political points?"

White House to Cabinet: No private air travel without Kelly's approval Back

By Matthew Nussbaum | 09/29/2017 06:57 PM EDT

The White House cracked down on Cabinet officials' use of private planes Friday, telling them chief of staff John Kelly must approve almost all travel on "government-owned, rented, leased, or chartered aircraft," after Health and Human Services Secretary Tom Price resigned over his own taxpayer-funded flights.

Mick Mulvaney, the director of the Office of Management and Budget, sent out the memo soon after Price's resignation was made public. His exit came after a series of POLITICO reports about his frequent use of private planes to conduct government — and sometimes personal — business.

"In light of recent events, the President has asked me to remind the heads of all executive departments and agencies of Administration policies on travel," Mulvaney wrote.

He reminded the department and agency heads that, by regulation, "Government-owned, rented, leased, or chartered aircraft should not be used for travel by Government employees except with specific justification."

"However, beyond the law and formal policy, departments and agencies should recognize that we are public servants," Mulvaney wrote. "Every penny we spend comes from the taxpayer. We thus owe it to the taxpayer to work as hard managing that money wisely as the taxpayer must do to earn it in the first place."

Mulvaney added: "Put another way, just because something is legal doesn't make it right."

Officials should stick to commercial travel "with few exceptions," he wrote.

In the wake of the controversy, other administration officials' travels have come under scrutiny. Interior Secretary Ryan Zinke has used military planes for some trips, POLITICO reported, while EPA Administrator Scott Pruitt and Treasury Secretary Steven Mnuchin have also raised eyebrows with their travel itineraries.

President Donald Trump was livid over the Price scandal and accepted his resignation on Friday.

"We have great secretaries, and we have some that actually own their own planes, so that solves that," Trump told reporters earlier on Friday.

FERC floats dozens of questions on DOE pricing proposal Back

By Darius Dixon | 10/04/2017 06:52 PM EDT

FERC opened the floodgates tonight for comments on the Energy Department's controversial resiliency pricing proposal, posting 53 questions and other requests for information about the rulemaking.

The six-page document signed by FERC's director for energy policy and innovation, groups the questions into broader categories looking for feedback on rates, the 90-day on-site fuel requirement envisioned by DOE, and how pricing changes would be implemented, among other issues.

But many of the questions, which are open to anyone seeking to comment before FERC's initial comment deadline of Oct. 23, are directed at the foundation of DOE's proposal.

For example, DOE's 19-page proposal leans heavily on the grid stresses that occurred during the "polar vortex" to press for new regulatory action. But, FERC doesn't treat the premise as a given. "The proposed rule references the events of the 2014 Polar Vortex, citing the event as an example of the need for the proposed reform. Do commenters agree?"

There are also questions directed at how on-site fuel would address power outages triggered by damage to the electric transmission and distribution system, and several questions seeking to define ostensibly basic information about how the 90-day fuel supply concept should be applied.

WHAT'S NEXT: FERC's initial comment deadline is Oct. 23, with reply comments due Nov. 7.

Judge says Interior delay of methane waste rule was illegal Back

By Alex Guillén | 10/04/2017 07:32 PM EDT

A federal judge ruled today that the Bureau of Land Management's June postponement of key compliance dates for the methane waste rule was unlawful.

BLM relied on Section 705 of the Administrative Procedure Act to justify the delay. But Magistrate Judge Elizabeth Laporte of the U.S. District Court for Northern California said it was too late because the rule's effective date had already passed. That means BLM should have gone

through a round of notice-and-comment rulemaking before suspending any part of the rule, she said.

Coincidentally, the ruling came on the same day that Interior proposed an 18-month delay of the methane waste rule as it works to rewrite it.

Laporte's ruling acknowledges the pending rulemaking but said it could be months before it is finalized and takes effect, and may not survive its own legal challenge, giving her no reason to pause now.

She vacated the delay and ordered the requirements reinstated. She rejected BLM's arguments that the delay should be kept in place, saying that doing so would create "a free pass for agencies to exceed their statutory authority and ignore their legal obligations under the APA, making a mockery of the statute." And Laporte said any company that misses upcoming January deadlines because of Interior's delay is in "a problem to some extent of their own making."

Laporte previously used similar legal reasoning to strike down Interior's delay of a resource valuation rule.

WHAT'S NEXT: BLM will take public comment for 30 days on its new proposal to delay the methane waste rule.

BLM proposes 18-month delay to methane rule Back

By Ben Lefebvre | 10/04/2017 09:59 AM EDT

The Interior Department proposed to suspend enforcement of an Obama-era rule on methane emissions for 18 months as it plans to rewrite it, according to a document to be filed tomorrow in the Federal Register.

"The BLM is currently reviewing the 2016 final rule and wants to avoid imposing temporary or permanent compliance costs on operators for requirements that may be rescinded or significantly revised in the near future," the agency said in the document.

The agency said it is concerned that the final rule analysis "may have underestimated costs and overestimated benefits, and [BLM] is therefore presently reviewing that analysis for potential inaccuracies."

The 2016 rule was intended to require oil and gas developers on federal lands to capture more of the methane that leaked during their operations. The rule went into effect in January 2017 and survived an effort by Congressional Republicans to repeal it.

WHAT'S NEXT: BLM will accept public comments on the proposal for 30 days.

Draft EPA strategic plan drops all reference to climate change Back

By Alex Guillén | 10/04/2017 04:26 PM EDT

The Trump administration has dropped all mention of climate change or rules to reduce carbon emissions from a strategic plan outlining EPA's priorities for the next four years, according to a draft obtained by POLITICO.

The draft was circulated around EPA for comment earlier today along with an accompanying one-page graphic.

The document creates a new framework for EPA's mission that reflects the management style of Administrator Scott Pruitt. It defines EPA's "core mission" as ensuring clean air, water and land. It calls for more "cooperative federalism" to empower state governments. And it touts the "rule of law and process," which is meant to "refocus the Agency on its statutory obligations under the law."

The draft was released to EPA employees just days after Pruitt missed a key statutory deadline to implement the 2015 ozone standard. EPA has offered no update on that issue.

"I believe this draft Plan provides the foundation for a more efficient and effective agency, enabling us to accelerate progress and deliver real, tangible results for the American people," Pruitt wrote in an email to EPA staff today.

The previous strategic plan released by the Obama administration in 2014 listed climate change as "goal one," along with broader air quality issues. The new draft plan makes no mention of climate change, though it does address non-climate air issues, as well as a litany of other regulatory, permitting and administrative goals for EPA.

WHAT'S NEXT: EPA will publish the draft plan in Thursday's Federal Register and take comments through Oct. 31.

Lorraine Woellert contributed to this report.

Murkowski pressing to have FERC nominees approved this week Back

By Darius Dixon | 10/04/2017 04:17 PM EDT

Sen. Lisa Murkowski is aiming to have President Donald Trump's two pending FERC nominees confirmed before the Senate flies off for its recess at the end of the week.

"I was talking with our leadership today about it. I want to try to get it shook loose before we take a break," the Alaska Republican, who chairs the Senate Energy and Natural Resources Committee, said of the nominees. The Senate is not scheduled to be in session next week.

Kevin McIntyre, Trump's pick to chair the agency, and Rich Glick, who serves as general counsel to energy committee Democrats, were approved by Murkowski's committee on a voice vote last month to become FERC members.

Sen. Maria Cantwell, the top Democrat on the energy committee, has said she was "favorably impressed" by McIntyre who, when confirmed by the full Senate with Glick, will bring FERC's leadership board back to full strength for the first time since late 2015.

WHAT'S NEXT: The Senate is scheduled to be on recess for the week of Columbus Day and is rarely in session on Friday, suggesting that the FERC nominees could be confirmed in the next day or so.

White House seeks nearly $30B in disaster aid package Back

By Sarah Ferris | 10/04/2017 06:13 PM EDT

The White House this afternoon formally requested nearly $30 billion in emergency funding for its ongoing recovery efforts in hurricane-battered regions like Puerto Rico, Florida and Texas.

In a letter to congressional leaders, the Trump administration asked for $12.8 billion for FEMA's disaster relief fund, $16 billion for the National Flood Insurance Program and $576.5 million for the forest service's firefighting fund.

"We need the help of Congress to stabilize the affected communities and replenish dwindling and depleted funds," Office of Management and Budget chief Mick Mulvaney wrote. He said the money should be classified as "emergency spending," meaning it would not require spending offsets.

House and Senate appropriators immediately released statements in support of the White House's request and pledged to act quickly. House Appropriations Chairman Rodney Frelinghuysen (R-N.J.) said he would "put legislation forward as soon as possible."

Rep. Nita Lowey, his Democratic counterpart on the panel, said she supported Trump's request for FEMA, but added it needed to go further.

"Congress should add to this request by appropriating funding for flexible Community

Development Block Grants; rebuilding coastlines, roads, transit systems, airports, ports, and other infrastructure; small business loans; and repairs to military installations and other federal facilities damaged in the storms," said Lowey, of New York.

The White House's request had previously been reported by POLITICO.

Embattled GOP Rep. Tim Murphy to retire Back

By Rachael Bade, Elena Schneider and John Bresnahan | 10/04/2017 02:44 PM EDT

Rep. Tim Murphy of Pennsylvania announced Wednesday that he will retire at the end of his term, after allegations that the married Republican lawmaker, who opposes abortion rights, asked his mistress to terminate a pregnancy.

Murphy admitted several weeks ago to an affair with forensic psychologist Shannon Edwards — news that came to light during the woman's divorce proceedings with her husband.

"After discussions with my family and staff, I have come to the decision that I will not seek reelection to Congress at the end of my current term," Murphy said in his statement. "I plan to spend my remaining months in office continuing my work as the national leader on mental health care reform, as well as issues affecting working families in southwestern Pennsylvania."

Murphy added: "In the coming weeks I will take personal time to seek help as my family and I continue to work through our personal difficulties and seek healing. I ask you to respect our privacy during this time."

Murphy met privately with Speaker Paul Ryan (R-Wis.) before his retirement announcement, as well as with Pennsylvania GOP Reps. Bill Shuster and Charlie Dent.

A number of top Republicans have said privately that Murphy should retire or resign in light of the scandal.

The Pittsburgh Post-Gazette reported Tuesday that Murphy suggested Edwards get an abortion during a pregnancy scare, citing leaked text messages between the two.

"And you have zero issue posting your pro-life stance all over the place when you had no issue asking me to abort our unborn child just last week when we thought that was one of the options," Edwards texted to Murphy in late January, according to the Post-Gazette.

Edwards was responding to a Facebook post by Murphy touting his anti-abortion position in Congress. Murphy is a member of the House Pro-Life Caucus and voted Tuesday for legislation

to ban abortions after 20 weeks.

The story also highlighted a toxic work environment in Murphy's office, citing a June 8 memo in which his chief of staff, Susan Mosychuk, warned Murphy about mistreating staff. The document, titled "Office Conduct and Behavior: Harassment/Legal Compliance," suggests there was a "pattern of sustained inappropriate behavior."

Mosychuk wrote that the office has experienced 100 percent staff turnover over the past several years and attributed it to the congressman's behavior. She said he often worked staff through the weekends, only to berate them for failing to meet expectations.

Murphy's district leans heavily Republican, backing Donald Trump by almost 20 points in 2016 and Mitt Romney by nearly 17 points in 2012. It is likely to remain in Republican hands.

Indeed, national Democrats scoffed at the idea that Democrats might be able to retake the seat — even if Murphy, crippled from scandal, were to run again. One Democratic consultant called it "completely unwinnable" as an open seat.

"[Murphy] is certainly weaker today than he was yesterday, but it'd be a stretch to say this is a Democratic pickup opportunity," another national Democratic strategist said.

The chairman of the National Republican Congressional Committee, Rep. Steve Stivers of Ohio, likewise said in a statement late Wednesday evening that he was "confident" the district would stay in GOP hands next year.

"While I am extremely disappointed in the circumstances surrounding Congressman Murphy's retirement, I remain confident that PA-18 will remain under Republican control next year," Stivers said. "I look forward to working with the eventual Republican nominee to ensure the district's conservative values are represented in Congress."

Still, Democrats on the ground are more hopeful, pointing to competitive down-ballot results in the district.

"It's a tough district, no doubt about it, but Democrats have been able to keep it close in other races," said Mike Mikus, a longtime Democratic operative in the state. "I think you'll see more Democrats taking a look at this and considering jumping in now."

A handful of Democrats are already in the race, including Pam Iovino, a Navy veteran and former Veterans Affairs official; Mike Crossey, a former member of the Allegheny County Council; and Bob Solomon, a physician.

But former Rep. Jason Altmire — a centrist Democrat who represented Western Pennsylvania and lost his seat, partially due to redistricting, in 2012 — said "it would have to be the right kind of Democrat" to put the seat in play.

"If you had a social conservative Democrat, it's been proven that a Democrat like that and who

fits that mold can win," Altmire said.

MSHA nominee: 'I was not proud' of violations notice Back

By Ian Kullgren | 10/04/2017 05:55 PM EDT

President Donald Trump's nominee for assistant secretary of Labor for Mine Safety & Health told a Senate committee today that his coal company ignored safety conditions at one of its mines.

David Zatezalo was chairman of Rhino Resources when it received pattern of violation notices in 2010 and 2011, the Charleston Gazette-Mail previously reported. The company was later fined when a wall collapsed, killing a worker.

When questioned by Sen. Tim Kaine (D-Va.) about the notice, Zatezalo blamed the mine manager.

"The management of that particular group and that particular site was not doing what they should have been doing," Zatezalo said. "I was not proud of the fact that we got designated as a [potential pattern of violations] mine. I did not try to lawyer up and stop anything from happening."

"I replaced that management," he added, "because I wasn't too happy with their performance and hadn't been for sometime."

Zatezalo appeared before the Senate HELP Committee for a confirmation hearing with Cheryl Stanton and Peter Robb, Trump's nominees for Wage and Hour Division administrator and NLRB general counsel, respectively. Few senators showed up to the hearing, though, and Patty Murray (D-Wash.) complained that the Senate's busy schedule didn't leave enough time to probe as deeply as she would have liked.

Zatezalo assured Kaine that he wouldn't have a problem working with career staff at MSHA who issued the notice to his company.

"They did what they were supposed to do," he said.

Summaries

AIR
Texas SIP/Mobile Source Incentive Programs
AIR

Direct final rule of the EPA amends regulations under 40 CFR 52.2270 to approve revisions to the Texas SIP regarding mobile source incentive programs. The revisions update the diesel emissions reduction program for on-road and nonroad vehicles to remove the maximum cost-effectiveness limit of $15,000 per ton of emissions of nitrogen oxides reduced for a project, allow the Texas Commission on Environmental Quality to set cost-effectiveness limits for projects, and add Wise County to the list of counties eligible for the program. The revisions also address the extension of the Texas Clean School Bus Program to Aug. 31, 2019, update the Texas Clean Fleet Program to provide eligibility for certain projects related to agricultural product transportation, and add a new maximum grant amount for vehicle replacement. In addition, the revisions add the Drayage Truck Incentive Program, that provides financial incentives for replacement of drayage trucks with pre-2007 model engines. The rule is effective Sept. 7, 2017, unless adverse comments are received by July 10, 2017. Contact: Randy Pitre; EPA Region 6; 214-665-7299; pitre.randy@epa.gov

Regulatory Update

GENERAL ENVIRONMENT AND SAFETY
Minnesota/Superior National Forest Hi Lo Project
GENERAL ENVIRONMENT AND SAFETY

Notice announces the intention of the U.S. Forest Service to prepare an environmental impact statement concerning the Hi Lo Project in the Kawishiwi Ranger District of the Superior National Forest in Minnesota. The project involves moving the area towards vegetation and landscape ecosystem conditions that were described in the 2004 Superior National Forest Land and Resource Management Plan. Proposed activities include management of forest vegetation composition, structure, and spatial patterns; prescribed burning; and modifications to the transportation system associated with such activities. Comments are due July 10, 2017. Contact:

WATER

DOE Energy-Water Nexus State Policy Database

WATER

Notice of the Department of Energy announces the withdrawal of a June 5, 2017, request for information (82 FR 25783) on the draft version of the DOE Energy-Water Nexus State Policy Database of state-level water policies that affect energy systems. The prior notice specified that the draft database includes over 1,700 state policies under categories including surface and groundwater rights; discharge requirements for power plant cooling water effluent, stormwater, and wastewater from oil and gas production; underground injection control; state water plans; regional watershed commissions; reservoir and river operations; and integrated energy and water policies. The prior notice also specified that the database is intended to facilitate improved policy analysis, modeling, visualization, and communication by states, industry, utilities, academia, federal agencies, and other stakeholders. The DOE is further reviewing the draft database to determine whether to reissue the request for information. The withdrawal is effective June 9, 2017. Subject: FERC, DOE, Interior nominees respond to Senate committee questions

By Darius Dixon and Annie Snider

06/02/2017 03:18 PM EDT

President Donald Trump's nominees for FERC and the departments of Energy and Interior have provided the Senate Energy and Natural Resources Committee with more than 200 pages in response to lawmaker questions, according to records obtained by POLITICO.

Responses submitted by Neil Chatterjee, a nominee for FERC commissioner, can be found here.

Responses submitted by Robert Powelson, another nominee for FERC commissioner, can be found here.

Responses submitted by Dan Brouillette, Trump's pick for deputy Energy secretary, can be found here.

Responses submitted by David Bernhardt, who has been tapped for DOI's No. 2 job, can be found here.

WHAT'S NEXT: The energy committee is scheduled to vote on all four nominations Tuesday at 9:30 a.m. in Dirksen 366.

Subject: POLITICO's Morning Energy, presented by POET: Will climate change pop up as Trump, Pope meet? — Fiat sued in latest emissions cheating scandal — Trump taps another for DOE role

By Anthony Adragna | 05/24/2017 10:00 AM EDT

With help from Anca Gurzu and Esther Whieldon

ON THE ROAD TO ... ST. PETER'S: Pope Francis presented President Donald Trump with a copy of his encyclical on climate change and the environment - Laudato Si' - as part of several books he gifted during their first meeting this morning. Trump said after receiving the gifts, "Well I'll be reading them" and later added of the pope "He is something. We had a fantastic meeting." Of course, the two hold starkly different views is climate change - Francis has urged action to confront the problem while Trump has dismissed it as a Chinese hoax. Archbishop Marcelo Sánchez Sorondo, chancellor of the Pontifical Academy of Sciences, told an Italian news agency last week he thought the pope might be able to influence Trump on the issue. "This president has already changed about several things, so perhaps on this as well," he said. The pope, for his part, said before the meeting he didn't have a strategy to sway Trump on any political issue: "We'll talk, each of us will say what he thinks. Each of us will listen to the other," Francis said on May 13, according to Bloomberg.

ME FIRST - Democrats urge Trump to stick with Paris: Forty Senate Democrats, led by Senate Minority Leader Chuck Schumer, are sending a letter to Trump this morning urging him not to abandon the 2015 Paris agreement on climate change. "Backing out of the Paris Agreement now, after the years of painstaking negotiations and strong U.S. leadership it took to get the world to this point, would be a self-inflicted injury to America's credibility and influence on the world stage," they wrote. Schumer, as well as Democratic Sens. Tom Carper, Maria Cantwell, Ben Cardin, Sheldon Whitehouse, Brian Schatz, and Ed Markey, will hold a press conference in the Capitol at 10 a.m.

Meanwhile, the European Union, China and Canada have agreed to co-host a global ministerial gathering in September to move the Paris agreement foward, Climate Action and Energy Commissioner Miguel Arias Cañete tweeted Tuesday evening. "The three parties agree on the need for urgent climate action and are ready to lead the way," he said in a statement. "No one should be left behind but our message today is very clear: we are moving ahead."

U.S. allies are frustrated by Trump's vague stances on climate change and trade in the days preceding the G-7 summit in Taormina, Italy on Friday and Saturday this week, POLITICO's Tara Palmeri reports. The lack of clarity on those matters is holding up the crafting of the formal statement usually released at the end of the conferences. "Trade and climate are holding up the communique," a senior French official said.

BUDGET URGES EVEN CHEAPER ENERGY: Don't expect many oil, natural gas and power producers to jump aboard the Trump budget's calls for even lower energy costs as they continue to struggle with the soft prices for their products and as the U.S. energy burden for most

households is at its lowest level in decades, Pro's Ben Lefebvre and Darius Dixon report . Tuesday's document explicitly makes the call "for strengthening our national security, lowering the price of electricity and transportation fuels, and driving down the cost of consumer goods so that every American individual and business has more money to save and invest."

But oil producers are just regaining their footing after prices rebounded from lows in the mid-$20s per barrel early last year. "Closing your eyes and keeping your fingers crossed that the market will always move in one direction with fossil fuels - which, in essence, is what the Trump administration proposes with this budget - is not what any smart business person or political leader would pin their future economic hopes to," Josh Freed, Third Way's vice president for clean energy, said. Not to mention that if oil price do sink, sustained low prices could stall the deployment of new technologies, such as electric cars, potentially putting the U.S. at risk of falling behind the rest of the world.

WELCOME TO WEDNESDAY! I'm your host Anthony Adragna, and the Nuclear Energy Institute's Robert Powers was first to identify Rep. Darrell Issa as the wealthiest current member of Congress. For today: Just two U.S. vice presidents have ever resigned. Who are they? Send your tips, energy gossip and comments to aadragna@politico.com, or follow us on Twitter @AnthonyAdragna, @Morning_Energy, and @POLITICOPro.

NON VA BENE: Fiat Chrysler faces potentially billions of dollars in fines after DOJ accused the company of selling almost 104,000 diesel vehicles equipped with software designed to cheat on emissions testing, Pro's Alex Guillén reports. Fiat Chrysler faces fines of $37,500 to $45,268 per vehicle sold, along with further penalties for each undisclosed software device and reporting violations.

The automaker flatly denied the accusations. "The company intends to defend itself with strength especially against the accusations that it has deliberately planned to install manipulative technology to apply to U.S. emission tests," Fiat said in a statement. As POLITICO Europe's Joshua Posaner reports, Fiat said it has cooperated with an ongoing investigation by EPA and the California Air Resources Board.

TRUMP TAPS ANOTHER FOR DOE POST: David Jonas, a partner at the Virginia law firm Fluet, Huber and Hoang since 2016, has been tapped by the Trump administration to be general counsel at DOE, Pro's Alex Guillén reports . He was previously general counsel for the National Nuclear Security Administration, DOE's nuclear security arm, from 2001 to 2010, and then general counsel for the Defense Nuclear Facilities Safety Board, an independent agency that advises DOE on nuclear defense facilities, from 2012 to 2014. Expect a confirmation hearing in the Senate Energy and Natural Resources Committee sometime after the Memorial Day recess.

** **A message from POET - one of the world's largest ethanol producers:** With scientists and engineers, POET operates 30 biofuel facilities & America's first cellulosic biofuel plant. We produce a cleaner fuel for millions of drivers, every day. We're POET and we're driving innovation, from the ground up. Learn more here. **

PRUITT SPEAKS: Look for EPA Administrator Scott Pruitt to deliver keynote remarks today

at noon during an energy symposium hosted by Faegre Baker Daniels Consulting. Also worth flagging: Pruitt's expected No. 2 EPA pick, Andrew Wheeler, is slated to deliver closing remarks at 3 p.m., after FERC Commissioner Tony Clark speaks on a panel entitled "The Future of the Electric Grid" at 2 p.m.

This is weird: Pruitt tweeted he met with Rep. Fred Upton, chairman of the Energy and Commerce Energy Subcommittee, about "the importance of protecting the Great Lakes" during a Wednesday meeting. That came after Trump's budget zeroed out the $300 million program cleaning up the Great Lakes. In addition to Upton, Pruitt also mentioned meetings with California Democrat Rep. Jim Costa and the Congressional Western Caucus.

TOP DEMOCRAT PUSHES FOR ETHICS WAIVERS: Schumer said on Tuesday he pressed OMB Director Mick Mulvaney to releases copies of waivers the Trump administration granted to former lobbyists to get around their ethics pledge. That came after the White House sent a letter to Walter Shaub Jr., the head of the Office of Government Ethics, asking him to withdraw a request for those waivers. "There is absolutely no excuse for the Administration to keep these waivers from the OGE or the American people," Schumer said in a statement. "[Mulvaney] assured me that he would take my concerns under consideration - I hope they make this change for the good of our country."

PESTICIDES BILL ON THE FLOOR: Expect House floor action today on legislation - the Reducing Regulatory Burdens Act (H.R. 953) - that would exempt pesticide applicators from needing a Clean Water Act permit for spraying over water. It's broadly opposed by most Democrats as well as the environmental and public health communities. Similar legislation cleared the House in May 2016.

ZINKE TEES UP INTERIOR REORG: Look for proposals in the next couple of months aimed at reorganizing the Interior Department, Secretary Ryan Zinke said Tuesday. As Pro's Esther Whieldon and Annie Snider report, he hopes to increase coordination on issues like wildlife corridors, watersheds and trail systems that span multiple federal agencies, as well as state and local ones. "I view this as a century reorganization to look at how best to manage, protect, use our public lands in the next 100 years given that we have a number of challenges," Zinke said during a conference call.

ANOTHER PUBLIC KEYSTONE MEETING SCHEDULED: The Nebraska Public Service Commission announced Tuesday it would hold an additional public meeting on June 7 on the Keystone pipeline's proposed route through the state. That meeting will be held in O'Neill, Neb., from 1 to 8 p.m. "We recognize the emotion and conviction surrounding this application," Jeff Pursley, executive director of the commission, said in a statement. The notice said even more meetings are possible and a public hearing on the application will be held sometime during the week of Aug. 7-11 at the Lincoln Marriott Cornhusker Hotel.

TAKING AIM AT SUE AND SETTLE: Two House Oversight subcommittees today receive testimony on "sue and settle" agreements, in which federal agencies agree to regulatory actions as part of settlement deals with outside groups. Republicans have long contended that Democrats and greens engaged in the practice, which they say imposes significant economic burdens on

regulated industries without giving them an opportunity to participate in the process. The hearing gavels in today at 2 p.m. in Rayburn 2154.

PANEL EXAMINES NATURAL RESOURCES LAWS: The House Natural Resources Subcommittee on Oversight and Investigations holds a hearing this morning on the implementation of the Indian Reorganization Act of 1934, the Wilderness Act of 1964, and the Federal Land Policy and Management Act, paying special attention to "instances where federal agencies' application of these three federal laws has strayed beyond their original purposes and intent." Chairman Raul Labrador kicks things off today at 9 a.m. in Longworth 1324.

SOLAR PANEL TRADE PROBE LAUNCHED: The U.S. International Trade Commission announced Tuesday it would take the first step in investigating U.S.-based solar cell manufacturer Suniva's request for trade tariffs to protect the manufacturing sector, Pro's Esther Whieldon reports . Suniva argues a flood of cheap solar panel modules and cells, mainly from Chinese companies, are severely harming its business. In a statement, the Solar Energy Industries Association pledged to "remain at the forefront of the opposition to Suniva's requested remedies."

INTERIOR REVIEWING PAST MOUs: The Interior Department late Monday ordered assistant secretaries to have their agencies report by June 2 on any memorandum of understanding or memorandum of agreement they signed last year and until Trump's January inauguration that "are high level and national or regional and represent a commitment of resources or memorialize policy direction," according to a copy of the email obtained by ME. Zinke has ordered a full review of the agency's actions under the last administration. Among those that could be targeted are Interior's MOU with Mexico on resource management, its MOU with California to coordinate on renewables and a multi-agency MOU creating a wildland fire leadership council.

FERC LOOKS FOR MORE INPUT ON MARKET DESIGN: FERC staff is asking for additional comments following up on an early May technical conference on how the agency should design long-term solutions to problems facing the three Eastern power markets. FERC will be accepting comments for 30 days.

LAWSUIT SEEKS CLIMATE CENSORSHIP RECORDS: The Center for Biological Diversity filed another lawsuit against the Trump administration Tuesday seeking public records showing federal employees at DOE, EPA, Interior and State have been barred from using climate change-related terms in official communications. "Just as censorship won't change climate science, foot-dragging and cover-ups won't be tolerated under the public records law," CBD's Taylor McKinnon said in a statement.

MAIL CALL! SENATORS URGE CAREFUL MONUMENT REVIEW: Twenty-three Republican senators urged Zinke to "keep all remedies on the table as you consider how to correct past abuses of the Antiquities Act" and ensure a "more measured approach" is taking moving forward with monument designations. Meanwhile, Sen. Cory Gardner and Rep. Scott Tipton urged Zinke in their own letter not to make any changes to the designation of the Canyons of the Ancients National Monument in Southwest Colorado.

RELEASE THE FUNDS: Fifty-eight Democratic congressmen, led by Don Beyer, Paul Tonko and Anna Eshoo, sent a letter to Energy Secretary Rick Perry Wednesday seeking the immediate release of funds for previously approved ARPA-E projects and more information on existing procedures for approving and funding grants. "Agencies may not thwart the intent of Congress by withholding or impounding funds directed for a specific purpose," they wrote.

REPORT: GOVERNMENT GIVING BILLIONS IN DRILLING SUBSIDIES: A collection of environmental groups led by Oil Change International today released a report finding the government provides at least $7 billion per year in subsidies to support fossil fuel production on federally held lands and offshore waters. It argues the fossil fuel leasing program on public lands should be phased out, among other recommendations.

REPORT: CLIMATE LITIGATION ON THE RISE: The number of countries with active litigation over climate change has tripled since 2014 and there are three times as many cases involving the issue in the U.S. than the rest of the world combined, according to a report out Tuesday from the United Nations Environment Programme and Columbia Law School's Sabin Center for Climate Change Law. "Judicial decisions around the world show that many courts have the authority, and the willingness, to hold governments to account for climate change," Michael Burger, executive director of the Sabin Center, said in a statement.

MOVER, SHAKER: Andrew Malcolm has become a manager of public advocacy at Exelon; he was previously with Rep. Greg Walden for seven years.

SEEN AROUND TOWN: At the Hall of States for the Large Public Power Council's 30th Anniversary reception Monday: Sen. Cory Gardner (R-Colo.); acting FERC Chairman Cheryl LaFleur; former Sen. Mary Landrieu (D-La.); former Rep. Norm Dicks (D-Wash.); Tom Kuhn, president of Edison Electric Institute; Sue Kelly; president and CEO of the American Public Power Association; and John Di Stasio, president of the LPPC (h/t POLITICO Influence).

Subject: Federal Insider: Foreign Service leadership being 'decapitated' and 'depleted at a dizzying speed'

Foreign Service leadership being 'decapitated' and 'depleted at a dizzying speed'

By Joe Davidson

Secretary of State Rex Tillerson. Alex Brandon/AFP/Getty Images

ADVERTISEMENT

When President Trump reported on his trip to Asia, he heaped praise on himself and said the nation's "standing in the world has never been stronger than it is right now."

Using "I" 42 times in his 23-minute speech Wednesday, he declared "NATO, believe me, is very happy with Donald Trump and what I did," as he touted previous accomplishments.

Trump's unmatched self-adulation might cloud his view of the hard work by foreign service staffers and their increased difficulties because of his administration's hiring freeze.

Noting a recent Time magazine cover "with its graphic of wrecking balls and warning of 'dismantling government as we know it,' " American Foreign Service Association President Barbara Stephenson is cautioning against "mounting threats to our institution — and to the global leadership that

Contrary to America becoming stronger internationally, as Trump suggested, the senators said, "These factors lead us to conclude that America's diplomatic power is being weakened internally as complex, global crises are growing externally."

Stephenson said the "ranks of Career Ministers, our three-star equivalents, are down from 33 in June 2016 to 19. The ranks of our two-star Minister Counselors have fallen from 431 to 369 and our one-star Counselors from 431 to 369 during the same time period."

If the military had similar cuts, "we would be on the border of being defenseless militarily," said retired ambassador Thomas Boyatt. "We are on the same threshold diplomatically right now."

At the same time, Stephenson expects about 100 new Foreign Service Officers to join State in 2018, compared to 366 in 2016.

"These numbers are hard to square with the stated agenda of making State and the Foreign Service stronger," she said, calling the cuts "a decapitation of its leadership ranks."

Secretary of State Rex Tillerson, as my colleague Carol Morello reported, said "questionable management practices at the Department of State, including shortfalls in the Administration's top talent, but also talent that cannot be replicated overnight. The capabilities of our senior officers has serious, immediate, and tangible effects on the capacity of the United States to shape world events."

Such diplomacy becoming less effective paint a disturbing picture."

State pushed back, saying the Foreign Service is not being gutted and "all hiring freezes are temporary." State data indicate there are 13,873 Foreign Service employees today, compared to 13,980 in 2016 and 2,300 exemptions to the hiring freeze as of late October.

"The Department is making sure we have the staff we need," the statement said. "The Secretary has repeatedly said [his] highest priority for the Department is making sure our indispensable career diplomats must have the tools they need to do their jobs for decades to come. The State Department has never had a comprehensive, employee-led review of its functions, and there's no better time than now to see how we can improve them."

Reflecting declining spirits at State, one longtime foreign service officer decided to quit because she no longer feels appreciated, let alone indispensable. She's still on the payroll, so she spoke only if not identified.

ADVERTISEMENT

With more_than two dozen years serving around the world, she's had a "great, brilliant, fun career." But "when your expertise is not being viewed as valuable," she said, it's time to go.

She described a "tight circle of appointees" who leave career people feeling devalued, "very much on the other side of that divide." The morale in the Foggy Bottom headquarters is "pretty grim … palatable bad."

That's just the opposite of what Tillerson said he wants.

During a September meeting with U.S. Embassy staffers and their families in London, he claimed "the most important thing I can do is to enable this organization to be more effective, more efficient and for all of you to take greater satisfaction in what you do day in and day out."

Tillerson hasn't accomplished his "most important thing" yet. In fact, he's going backward.

Subject: POLITICO's Morning Energy, presented by Exelon: Trump's energy speech short on bold action — Clean coal backers unfazed by Kemper collapse — Bishop open to another energy bill push

By Anthony Adragna | 06/30/2017 10:00 AM EDT

With help from Eric Wolff, Alex Guillén, Darius Dixon and Esther Whieldon

PROGRAMMING NOTE - Due to the July 4 holiday, Morning Energy will not publish on Monday, July 3 and Tuesday, July 4. Our next Morning Energy will publish on Wednesday, July 5.

ACTIONS CAP ENERGY WEEK: It was a speech heavy on rhetorical flair about U.S. "energy dominance" for President Donald Trump on Thursday, but the six initiatives he touted were decidedly more modest in practice.

1.**'A complete review' of nuclear policy.** Trump said he wants to revive and expand the nuclear energy through a "complete review of U.S. nuclear energy policy." It's not exactly clear what this will entail and the president said he await results of that examination before moving additional policy.

2. **First step toward new offshore drilling plan.** Following through on Interior Secretary Ryan Zinke's May directive, BOEM plans to publish a request for information on the new five-year offshore drilling plan on Monday. Comments will then be accepted for 45 days, and Zinke has said he expects the entire plan writing process will take two or three years. Pro's Esther Whieldon with more here.

3. **Find an opening for overseas coal financing.** Trump vowed his Treasury Department would "address barriers" to financing overseas coal plants, though didn't specify exactly what that would entail. The Obama administration issued guidance back in 2013 in an effort to pressure multilateral development banks like the World Bank not to fund those sorts of projects, though it wouldn't require much to simply withdraw it.

4. **More LNG exports authorized.** DOE approved two LNG export applications from the Lake Charles LNG facility, a joint venture between Shell and Energy Transfer Equity in Louisiana, to boost deliveries. It authorized an additional 0.33 billion cubic feet per day on top of the 2 Bcf/d in previously approved exports.

5. **Modest Mexican pipeline approved.** The State Department approved permits for the New Burgos Pipeline, which will cross the border near Peñitas, Texas, and can deliver up to 108,000 barrels per day of refined petroleum products. Pro's Nick Juliano with more here. "It'll go right under the wall," Trump said.

6. **Sempra LNG negotiations highlighted.** With the South Korean president in town, Trump highlighted a formal beginning of negotiations with Sempra Energy's to sell U.S. liquefied

natural gas to South Korea.

Not mentioned: Climate change, all-of-the-above, Southern Company's decision to abandon its clean coal efforts at the Kemper plant in Mississippi, solar panels on his border wall, renewable energies, calls to shut down other pipelines - Access Northeast and Enbridge Inc.'s Line 5 (more on that below).

International wish list: Trump's top economic adviser said world leaders such as Indian Prime Minister Narendra Modi are desperate for more U.S. liquefied natural gas exports, Pro's Darius Dixon reports. "It's not because our LNG is cheaper than Russian gas - Russian gas is actually cheaper," National Economic Council Director Gary Cohn said. "But our LNG is guaranteed to show up once you enter into a contract." Cohn said LNG exports would be high on Trump's agenda next week as he stops in Poland before the G-20 summit in Germany.

Quotable: Trump after spotting coal magnate Bob Murray in the room: "He's in great shape, right? You in good shape, Bob? Right from the beginning. Good. You just take care of yourself, all right?" Remember Murray's lawsuit against comedian John Oliver claimed he was dependent on an oxygen tank and "does not expect to see the end of this case."

Fact check: Trump erroneously claimed that after he set in motion the approval of the Dakota Access and Keystone pipelines, "I didn't take any heat. I approved them and that was it. I figured we'd have all sorts of protests. We didn't have anything." In point of fact, hundreds of thousands of people have protested Trump's actions on the pipelines and other environmental matters at multiple marches since he took office. More than 200,000 people alone protested the Trump administration's environmental actions at the Peoples Climate March in late April.

Lawmakers shrug it off: Despite efforts from the White House to build up Energy Week buzz, the impact among senior Hill lawmakers seems minimal. House Energy and Commerce Environment subcommittee Chairman John Shimkus and House Natural Resources Chairman Rob Bishop both said they really hadn't been paying much attention to it, while Senate Energy Chairman Lisa Murkowski - with some exasperation in her voice - quipped to reporters: "The fact that it's actually Energy Week seems to me it might be worth some news coverage." (Murkowski has been getting more questions about health care lately than on the bipartisan energy bill she and Sen. Maria Cantwell just reintroduced.)

WELCOME TO FRIDAY! I'm your host Anthony Adragna, and Duke Energy's Michael Sewell was the first of many of you to identify Strom Thurmond as our nation's oldest serving senator. For today: What two U.S. state capitals have no vowels in common but yet rhyme? Send your tips, energy gossip and comments to aadragna@politico.com, or follow us on Twitter @AnthonyAdragna, @Morning_Energy, and @POLITICOPro .

CCS FANS SOLDIER ON AFTER KEMPER COLLAPSE: Southern Company's decision to burn natural gas and abandon its dreams of gasified coal and carbon capture at its power plant in Kemper County, Miss., doesn't seem to worry fans of the technology too much. Sen. Heidi Heitkamp told ME Southern Company "had to make an economic decision for their shareholders," but she wasn't worried about the technology. Sen. Sheldon Whitehouse said he

still plans to introduce a bipartisan bill expanding CCS tax credits, but he thinks, in the long run, carbon technologies "only make economic sense if there's a price on carbon." Sen. Joe Manchin did express some concern over the project's failure and promised to explore the matter over recess. "I'd like to find out what happened," he said.

Apropos of Kemper: A senior aide to Rep. David McKinley said Kemper "wouldn't change the equation" for carbon capture technology. While President Donald Trump's budget calls for major cuts to DOE's Office of Fossil Energy, where CCS research is funded, the recent appropriation bill introduced would restore most of the office's funding. Energy Secretary Rick Perry has praised Petra Nova, a carbon capture project in his home state, and he will soon visit the Morgantown National Lab, which conducts carbon capture research.

A little history: SoCo's decision would have been a much bigger deal a year ago, when top EPA officials were desperately trying to persuade a skeptical Congress carbon capture was a realistic technology for new coal plants to use to meet limits under a rule limiting CO2 emissions from new power plants. Former Administrator Gina McCarthy repeatedly argued Kemper and a tiny power plant in Canada were living proof that CCS was a viable technology. The new source rule is still there, but no one is building coal power, so the point is kind of moot.

Big Green win: Sierra Club has been fighting the Kemper project for years, calling it "dirty, expensive and unnecessary." Louie Miller, Sierra Club's Mississippi director, said shareholders will bear most if not all of the cost of the gasification and CCS elements, while the NGCC plant will go to ratepayers. "The commission made the right decision here, and it appears from what happened yesterday that the idea of what Kemper was design to do, be a clean coal project, has just had a stake driven through its heart."

REPUBLICAN AG SEEKS ENBRIDGE PIPELINE CLOSURE: Michigan Attorney General Bill Schuette on Thursday called for a "specific and definite timetable to close" Enbridge's Line 5 dual pipelines that run along the bottom of the Straits of Mackinac. The pipelines, which became operational in 1953, carry light crude oil and natural gas liquids through the waters where Lakes Huron and Michigan meet. Schuette, who is widely expected to run for governor, made his comments after the release of a consultant's report that suggested the pipelines could operate indefinitely, though the attorney general said he "strongly disagreed" with that view.

John Gauderman, Enbridge's director of operations for the Great Lakes region, defended the pipeline's health, according to the Associated Press. "After more than 60 years in service, Line 5 is in outstanding operating condition because the rigorous maintenance done through the decades...We intend to keep it that way." In a client note, ClearView Energy Partners said continued operation of Line 5 "looks stable for now" and "clarity regarding the line's future prospects may be a year away, if not longer."

** **A message from Exelon:** Innovation always begins with the spirit of discovery-the search for new ideas and answers to our biggest questions. As America's largest clean energy provider, what happens when 34,000 Exelon engineers, analysts, and innovators put their heads together to tackle the energy industry's biggest challenges? Find out here: http://bit.ly/2szvZN4 **

IT'S BEEN AN HONOR: Today is Colette Honorable's last day as a FERC commissioner, ending her two-and-a-half year run at the agency. Her departure leaves acting FERC Chairwoman Cheryl LaFleur as the last person standing at a commission with five leadership seats although the place may filling up after next week's recess. The White House announced plans earlier this week to nominate Rich Glick to succeed Honorable and take a seat at FERC that could keep him there into 2022. But Honorable isn't going far. She plans to stay in the D.C. area but hasn't said what she'll be up to yet.

SENATE STAFF HUDDLE ON DOCUMENT REQUESTS: Staffers with the top Republican and Democrat on the Environment and Public Works Committee huddled with EPA staff, including Chief of Staff Ryan Jackson, this week for a "constructive" meeting about responding to oversight requests, Ranking Member Tom Carper tells ME. "We'll build on that," he said. A Republican EPW aide confirmed the meeting took place.

Nothing's up: Carper also told ME not to read anything into EPW's decision to postpone a host of votes on nominees for a second time on Thursday. He said Chairman John Barrasso's staff opted to delay the votes on two NRC nominees and an EPA pick until July 12 because they "thought there was too much going on."

NOW TAKING BETS: Count Bishop as open to another crack at passing a broad energy bill this year amid Murkowski and Cantwell's renewed push at broad Senate legislation unveiled this week. "Pass it and send it over," the Utah Republican told ME. "I'd be happy to look at it." ICYMI: Here's the text of the new Senate bill and Murkowski's comments on securing floor time.

CAN I HITCH A RIDE? Sen. Tim Scott tells ME that he is still eyeing the must-pass FAA re-authorization legislation as one possible vehicle for his bill that would extend tax credits for nuclear projects. Lawmakers are hoping to get the FAA bill through next month but are running into scheduling complications thanks to ongoing healthcare reform efforts. Asked what his current plans are for advancing his legislation, S. 666 , Scott told ME: "Prayer." He went on to say "you know, there's only a couple of vehicles at this point, FAA is one of them, the tax extenders at the end of the year, the tax reform package as well. We're trying to hotline it but I don't think Schumer is allowing us to hotline anything." The House passed a companion version of the nuclear tax bill earlier this month.

TWO NAMES FORMALLY SENT: The White House formally sent the Senate the nominations of Brenda Burman to be commissioner of the Bureau of Reclamation and Douglas Domenech to be an assistant Interior secretary for insular areas Thursday.

MAIL CALL! INFO SOUGHT ON 'SUE AND SETTLE' CHANGES: Five senior House Judiciary and Energy and Commerce Republicans sent a letter to EPA Administrator Scott Pruitt and Attorney General Jeff Sessions requesting a briefing about recent agency changes curtailing the use of "sue and settle" policies. "During the previous administration, EPA entered numerous settlements or consent decrees, a practice known as 'sue and settle,' committing the agency to undertake significant new rulemakings subject to timelines or schedules," the lawmakers wrote.

"We appreciate this change in policy, hope that Attorney General Sessions shares Administrator Pruitt's views, and urge EPA and the Justice Department to develop conforming written guidelines as soon as possible." Reps. Greg Walden, Bob Goodlatte, Tim Murphy, Tom Marino and John Shimkus signed the letter.

THIS TIME WE'RE SERIOUS: Attorneys general from 14 states and D.C. say they plan to sue EPA for not regulating methane emissions from existing oil and gas wells and other industry sources. The agency issued a rule last year covering new wells under Section 111(b) of the Clean Air Act, which in turn triggered a requirement that it write a rule for existing sources too. The Trump administration has paused major portions of that new source rule, and ended an information request that was a first step toward regulating existing wells.

MASSACHUSETTS MOVES FORWARD ON OFFSHORE WIND: The Massachusetts Department of Energy Resources on Thursday issued a request for proposals between 400 megawatts and 800 megawatts of offshore wind projects. This is the DPU's first move under a law passed last year to arrange for utilities to buy 1,600 megawatts of offshore wind power by 2027. Would-be developers have until July 26 to indicate that they plan to bid for a contract and until Dec. 20 to make their pitch. The team managing the process expects to send negotiated contracts for the DPU's approval by July 31, 2018.

NOW IN TIME FOR ENERGY WEEK! Sen. Claire McCaskill, Homeland Security and Governmental Reform ranking member, sent a letter Thursday requesting a briefing from DOE on why two companies with past waste and fraud issues - Bechtel National, Inc. and AECOM - were able to form a subsidiary to clean up the Hanford nuclear Waste Treatment Plant. She said the arrangement "raises questions about DOE's ability to conduct oversight" and added she has additional "questions about the impact of this subcontract on performance and costs."

MOVER, SHAKER: Former Kansas Rep. Tim Huelskamp has been named the next president of the Heartland Institute, the libertarian group that argues against the scientific consensus on climate change; he'll succeed long-time president Joseph Bast, who co-founded the organization in 1984.

Subject: POLITICO's Morning Score: Flake challengers meeting with White House — Senate fundraising numbers in Alabama, Indiana, Ohio — NRSC hits 'Trump state Democrats' — Kaine hires 2018 senior staff

By Daniel Strauss | 07/17/2017 10:00 AM EDT

With Maggie Severns, Kevin Robillard and Scott Bland

The following newsletter is an abridged version of Campaign Pro's Morning Score. For an earlier morning read on exponentially more races - and for a more comprehensive aggregation of the day's most important campaign news - sign up for Campaign Pro today. (http://www.politicopro.com/proinfo)

PRIMARY POLITICS - "White House squeezes Jeff Flake," by POLITICO's Alex Isenstadt: "The White House has met with at least three actual or prospective primary challengers to Arizona Sen. Jeff Flake in recent weeks, a reflection of Donald Trump's strained relations with the senator and the latest sign of the president's willingness to play hardball with lawmakers who cross him - even Republican incumbents. ... Since taking office, Trump has spoken with Arizona state Treasurer Jeff DeWit, a top official on his 2016 campaign, on at least two occasions, according to two sources familiar with the talks. More recently, since June, White House officials have also had discussions with former state Sen. Kelli Ward, who has announced her bid, and former Arizona GOP Chairman Robert Graham, who like DeWit is exploring a campaign. At a Republican National Committee meeting outside of San Diego in May, David Bossie, Trump's deputy campaign manager and the president of the influential conservative outside group Citizens United, told Graham that either he or DeWit would likely get substantial backing from conservatives should either enter the contest, according to three people familiar with the conversation." **Full story.**

FOUR WEEKS OUT - Brooks raised $298,000 for Alabama Senate primary in second quarter: The Republican congressman spent nearly $105,000 and finished the quarter with $1.2 million on hand, according to his FEC filing. Brooks' biggest disbursements were for consulting by Precision Campaign Group and ad-making from Steinborn Films.

- MORE SENATE FUNDRAISING - Messer raises half a million dollars in Indiana: Republican Rep. Luke Messer, a top contender for the Indiana Republican Senate nomination, raised over $578,000 from April through June, according to a campaign disclosure posted over the weekend. Messer's fundraising haul was significantly smaller than that of possible Republican contender Rep. Todd Rokita, who raised $1.04 million during the second quarter of the year. After starting to raise funds aggressively this spring as he reportedly considered a Senate bid, Rokita finished the first six months of the year slightly ahead of Messer in the money race: He had $2.35 million cash on hand to Messer's $2.02 million.

- Gibbons raises $690,000 in Ohio, per a press release from Mike Gibbons for Senate: "Republican candidate for United States Senate Mike Gibbons (R-OH) announced that his

campaign raised nearly $700,000 since his initial announcement just 4-weeks before the end of the 2nd Quarter fundraising period. All told, Gibbons raised $690,000 during the 2nd Quarter, of which just $200,000 was a personal loan to the campaign. Gibbons would end the quarter with approximately $615,000 cash-on-hand."

REDISTRICTING WATCH - "At tail end of Texas redistricting trial, judges skeptical of state's defense," by the Texas Tribune's Jim Malewitz: "The state of Texas faced a healthy dose of judicial skepticism on Saturday as its lawyers laid out final arguments in a trial over whether lawmakers intentionally discriminated against minority voters in enacting current Texas House and Congressional district maps. ... Over the course of the week, minority rights groups and the state tussled over whether - and how - the state's political maps should change to fix possible voting rights act violations ahead of the 2018 elections. But the trial also probed a question that's more consequential in the long term: Whether the 2013 Legislature intentionally minimized the political clout of Latino and black Texans in enacting the maps. Federal courts have already scolded Texas for intentional discrimination in three rulings this year. Another such finding would boost the odds that judges put Texas back onto a list states that need the federal government's permission to enact any new voting legislation." **Full story.**

- GOP Rep. Will Hurd "defended the rationality of the boundaries of District 23, one of a relatively few genuine 'swing' districts in the nation," the San Antonio Express-News' Jeremy Gerlach reported. "'If more districts were like mine, we'd have better caliber people in Washington,' Hurd said. 'My district is competitive, and that's a good thing ... because it forces people to talk to a broader sense of the community.' Attorney Luis Vera, representing one of the plaintiffs, the League of United Latin American Citizens, or LULAC, said Hurd's appearance was more of a 'stump speech' designed to distract the judges from the real arguments over racial discrimination at hand in the case." **Full story.**

- Texas' 2018 primaries are scheduled for March 6.

- "Judges criticize Maryland's congressional redistricting map," via the Associated Press: "Federal judges reviewing Maryland's congressional redistricting map say there is convincing evidence the state's Democratic leaders drew the districts to gain a seat for their party. A three-judge panel heard arguments Friday as part of a lawsuit. The panel was divided about whether the 2011 redistricting plan directly caused former Republican Rep. Roscoe Bartlett to lose his seat and whether the map should be changed. ... The judges didn't indicate when they would rule." **Full story.**

Days until the 2017 election: 113.

Days until the 2018 election: 477.

OBAMACARE WARS - NRSC frames "Trump state Dems" as accountable for broken promises. According to the NRSC release announcing the new digital ad: "Back when they were trying to sell Obamacare to the American people, Democrats promised their constituents that their bill would make premiums and health care costs drop, and that if they liked their health care plan they could keep it. But while premiums soar and millions have been dropped from their insurance, Senate Democrats are still refusing to confront the reality that Obamacare has failed...Back when they were trying to sell Obamacare to the American people, Democrats promised their constituents that their bill would make premiums and health care costs drop, and that if they liked their health care plan they could keep it. But while premiums soar and millions have been dropped from their insurance, Senate Democrats are still refusing to confront the reality that Obamacare has failed." Watch the ad here.

LET'S GET IT STARTED -The Republican Party of Wisconsin is continuing to aggressively attack in Wisconsin governor's race, with mailers attacking two Democrats: businessman Andy Gronik ("He can't be trusted. ... Con Artist Andy Gronik") and state Rep. Dana Wachs ("Trial Attorney Dana Wachs Exploits The System For His Own Gain.") Gronik announced a run against GOP Gov. Scott Walker earlier this week, while Wachs is still considering a run. The mailers are accompanied by similar statewide digital ads and are aimed at specific demographics.

- Democratic oppo research organization American Bridge is launching a new website and online ad campaign painting Virginia Republican gubernatorial nominee Ed Gillespie as a "Swamp Creature." The digital ad and site focus on Gillespie's lobbying career, including hits on Social Security privatization and the environment.

ENVIRO ADS - EDF Action ads push House Republicans to oppose EPA budget cuts: EDF Action is spending $1 million on TV, radio and digital ads (see ad 1 and ad 2) in 10 GOP-held House districts, some battlegrounds and some not, criticizing proposed budget cuts to the EPA. The targeted districts: AZ-02 (incumbent Martha McSally), CA-21 (David Valadao), CA-42 (Ken Calvert), CO-06 (Mike Coffman), FL-17 (Tom Rooney), FL-25 (Mario Diaz-Balart), MN-02 (Jason Lewis), MO-02 (Ann Wagner), NV-02 (Mark Amodei), and VA-10 (Barbara Comstock).

STAFFING UP - Kaine hires reelection staff: Virginia Sen. Tim Kaine has brought on a number of senior staffers for his 2018 reelection. Keren Dongo, former deputy state director for Hillary Clinton's 2016 campaign, will be campaign manager. Ian Sams will serve as communications director. Jenny Nadicksbernd will serve as finance director. Jess Reid will be digital director and Megan Apper will be research director.

ADMINISTRATION SPEED READ - "Pence will join GOP leaders for fundraiser benefiting his PAC," by POLITICO's Alex Isenstadt: "Vice President Mike Pence will join congressional GOP leaders later this month for a fundraising reception benefiting a newly formed, Pence-overseen political action committee. Senate Majority Leader Mitch McConnell, House Speaker Paul Ryan and House Majority Leader Kevin McCarthy are slated to headline a July 25 fundraiser for Pence's Great America Committee. The event is to take place in

Washington, according to an invitation, and attendees are being asked to pony up $5,000 apiece." **Full story.**

- "How the White House and Republicans underestimated Obamacare repeal," by POLITICO's Nancy Cook and Burgess Everett: "The longer Republican efforts to repeal Obamacare flounder, the clearer it becomes that President Donald Trump's team and many in Congress dramatically underestimated the challenge of rolling back former President Barack Obama's signature achievement. The Trump transition team and other Republican leaders presumed that Congress would scrap Obamacare by President's Day weekend in late February, according to three former Republican congressional aides and two current ones familiar with the administration's efforts...The failure of the plan to quickly repeal Obamacare earlier this year forced Republican leaders to start over and attempt the daunting task of crafting a more comprehensive health care plan that would unite all sides of a squabbling conference. And the Trump administration's lack of sufficient staff and planning for that early effort helped lay the groundwork for the legislative chaos the GOP's agenda is mired in today." **Full story.**

CODA - QUOTE OF THE DAY: "Whether we will be able to get the Russian nationals to come over and testify is an open question." - Sen. Mark Warner, saying he wants to hear from everyone involved in the meeting between Donald Trump Jr.and a Russian lawyer.

Subject: POLITICO's Morning Energy, presented by ExxonMobil: U.S., G-20 near détente over climate language — Perry's economics gaffe sets Internet afire — Pruitt takes the Southeast

By Anthony Adragna | 07/07/2017 10:00 AM EDT

With help from Eric Wolff, Tim Starks and Kalina Oroschakoff

U.S., G-20 NEAR COMPROMISE ON CLIMATE: Two days of contentious meetings between the G-20 nations kick off today in Hamburg, Germany, but the U.S. and the rest of the nations are nearing a compromise agreement - or at least agreeing to disagree - on one of the thorniest issues facing world leaders: climate change, POLITICO's Andrew Restuccia reports . A senior diplomat involved with the talks tells Andrew there's increasing optimism countries can settle on language in which the U.S. underscores its intent to withdraw from the Paris climate agreement while the other nations emphasize their support for the pact. "It seems that the G-19 is all on board," the diplomat said.

There had been concern that some fossil fuel-dependent countries in the G-20 might hesitate to forcefully back the Paris agreement, but the current draft would be a significant win for German Chancellor Angela Merkel and other leaders who support action to tackle climate change. And the draft language leaves room for the U.S. to write a new domestic emissions reduction plan and then announce plans to stay in the agreement under those new terms, something President Donald Trump could frame as a victory while pleasing allies. But a word of caution: The text remains fluid and could be renegotiated depending on how the next 48 hours go.

Speaking of the U.S., California Gov. Jerry Brown announced Thursday his state would host the Global Climate Action Summit in San Francisco in September 2018. "President Trump is trying to get out of the Paris Agreement, but he doesn't speak for the rest of America," Brown said in video remarks to the Global Citizen Festival in Germany. "We in California and in states all across America believe it's time to act." The California governor has ramped up his already aggressive climate efforts in the aftermath of Trump's decision to leave the Paris accord, traveling to China to reinforce his state's commitment to action, and now can boast that the summit will be the first international climate event hosted by a state.

Another big ask: Some of Europe's largest lenders and insurers - grouped together as the European Financial Services Round Table - want G-20 leaders to push for the "timely and homogenous implementation" of the corporate disclosure recommendations, POLITICO Europe's Bjarke Smith-Meyer reports. The industry heavyweights also want leaders to introduce other measures to promote the energy and investment shift, including carbon pricing and a phase out of fossil fuel subsidies.

THAT'S ... NOT HOW THAT WORKS: The internet exploded Thursday after Energy Secretary Rick Perry goofed on a basic economic principle during remarks at a West Virginia coal plant. "Here's a little economics lesson: supply and demand. You put the supply out there and the demand will follow," Perry said, according to Taylor Kuykendall, an S&P Global

reporter at the event. Seems more like the plot of "Field of Dreams" rather than sound economic policy to ME. Samples of media response here, here, here and here. Perry's trip continues today at the National Energy Technology Laboratory site in Pittsburgh, which he'll tour along with Rep. Tim Murphy.

WELCOME TO FRIDAY! I'm your host Anthony Adragna, and that's a shortened week almost in the books! DOE's Marty Dannenfelser was first to identify Lincoln, Neb., as the state capital that shares its name with a tunnel underneath the Hudson River, an American luxury automobile brand, and a D.C. restaurant. For today: How many state capitals have the word "city" in them? Send your tips, energy gossip and comments to aadragna@politico.com, or follow us on Twitter @AnthonyAdragna, @Morning_Energy, and @POLITICOPro.

YES, AGAIN, (MAYBE) RUSSIA: Two new reports are shedding light on recently revealed cyber attacks that have been infiltrating U.S. nuclear power stations. Bloomberg reported that Russia is the chief suspect, and that hackers have also infiltrated a company that makes control systems for the power industry, apparently a related attack. The New York Times first identified one of the companies attacked: the Wolf Creek Nuclear Nuclear Operating Corp., which runs a plant in Kansas.

The Homeland Security Department and FBI have reportedly been working to eject the hackers from the networks, and produced a joint alert. "The Department of Homeland Security and the Federal Bureau of Investigation are aware of a potential cyber intrusion affecting entities in the energy sector," the two agencies said in a joint statement late Thursday. "There is no indication of a threat to public safety, as any potential impact appears to be limited to administrative and business networks. In furtherance of public-private partnerships, the FBI and DHS routinely advise private industry of various cyber threat indicators in order to help systems administrators guard against the actions of persistent cyber criminals."

PRUITT'S SOUTHEAST SWING: EPA Administrator Scott Pruitt is in Georgia today with Agriculture Secretary Sonny Perdue for an event on using agency resources to promote stewardship. That comes after he toured several facilities in Alabama with Sen. Luther Strange, his former attorney general buddy-turned-senator. They toured the Plant Gaston in Wilsonville, Ala., where Pruitt discussed the Clean Power Plan with employees and saw the DOE-affiliated National Carbon Capture Center research facility, which experiments with carbon-capture technologies. After that, the federal officials stopped by Brentwood Farm in Mooresville, where they spoke with Alabama Farm Federation members about the Waters of the U.S. regulation, which EPA has begun the process of rescinding (pic with large bales of hay and tractor here).

Pruitt's takeaway: "It's not the EPA's job to say to people across the country, 'Don't touch that. Don't use that,'" he told an Alabama radio show. "It's our job to say as you develop and produce and generate electricity, this is the latest and greatest technology that should be used to achieve good emissions outcomes." Pruitt added his efforts to restore "a sense of focus" was already "making a difference" around the country.

KIGALI BACKERS PLAY IT COOL, BOY, REAL COOL: In January, while everyone was scrambling to figure out what the Trump administration would look like, backers of an

international agreement struck in Kigali, Rwanda to curb global warming-causing coolants had a plan: Lay low, avoid headlines, let the administration staff up, and see where things are in 2018. "I think our position basically remains stable," said Joe Trauger, VP for policy and government relations for the Air Conditioning, Heating and Refrigeration Institute. "We're engaged in education efforts."

AHRI wants the amendment to the Montreal Protocol ratified - its provisions will boost AHRI's members - but the group doesn't want the deal, which could hold back half a degree of warming, to get thrown out by the White House. To that end, it has avoided meeting with any administration officials, including Secretary of State Rex Tillerson or his chief of staff. The group is in touch with career staff while it waits for Trump to appoint some key assistant secretaries. "We're working with some folks at the State Department to make sure we're in touch with them and able to communicate at the right time," Trauger said.

Stay cool locally, stay real cool globally: Simultaneously boosting the energy efficiency of air conditioners and other cooling equipment while moving toward more climate-friendly alternative refrigerants would avoid an additional 100 billion tons of carbon dioxide, according to a report out today. Prepared by the Institute for Governance & Sustainable Development and written by researchers at Lawrence Berkeley National Laboratory, the report finds those additional reductions could come on top of the estimated 100 billion tons of carbon dioxide reductions stemming from the agreement to limit global warming-inducing coolants. "The HFC phase out creates an important opportunity for U.S. industry to expand markets, and efficiency gains can save consumers billions in AC electricity costs, all while reducing global emissions on a monumental scale," Paul Bledsoe, a lecturer at American University's Center for Environmental Policy, said in a statement.

** **Presented by ExxonMobil**: Biofuel refined from algae could transform how we power automobiles and jet planes. It's energy-rich and emits significantly less CO_2 than most transportation fuels. And it doesn't compete with food and fresh water supplies. We're actively researching this technology to move it from the petri dish to the fuel tank: EnergyFactor.com**

EPA TARGETS BIOFUEL IMPORTS AND BIODIESEL, HUH? EPA wants to cut imports of biofuels, but the biodiesel and advanced biofuels industries are mystified as to why it's getting into that arena, Pro's Eric Wolff reports . EPA cut back advanced biofuels, and it's inviting comment on cutting back advanced biodiesel, all in the interest of reducing imports from Argentina, Indonesia and Brazil. The National Biodiesel Board has a case against Argentina and Indonesia under investigation by the Commerce Department now, and biodiesel producers see that as a separate process from EPA. "It's not really their purview," said Gene Gebolys, CEO of biodiesel producer World Energy. "It's a strange logic - What makes one conclude that by holding volumes down, it will reduce imports? That makes a logic assumption that says the imports are the last in the door, and that's not the case."

Will it calm the RIN-sanity? Advanced biodiesel plays a critical role in meeting RFS targets, thanks to the system of "nesting" which allows refiners to buy biodiesel credits to comply with the conventional biofuel mandate. If victorious, duties on imported biodiesel will likely drive up prices for credits across the board, Neelesh Nerurkar a vice president at ClearView Energy

partners. However, EPA's reduction in the advanced and thus overall fuel requirement could relieve some of that pressure. "It helps mitigate some of the potential cost impact," he told ME.

NEW KEYSTONE CAMPAIGN LAUNCHED: Bold Nebraska, 350.org, Indigenous Environmental Network, CREDO, and Oil Change International launched a new push Thursday to install solar arrays along the route of the proposed Keystone XL pipeline in Nebraska. The groups hope to crowdsource funding for the installations ahead of the August public hearings Nebraska Public Service Commission about Keystone's proposed route through the state. "Putting solar panels in the path of Keystone XL is a local effort that mirrors the future we want to see at a massive scale," Sara Shor with 350.org said in a statement.

MAIL CALL! SENATORS PUSH FOR GAO PROBE OF PANELS! Ten Democratic senators, led by Sheldon Whitehouse, asked GAO in a Thursday letter to look at whether EPA is properly following procedures to ensure its scientific advisory panels are independent and balanced. In particular, the senators asked GAO to look at how EPA's procedures for selecting panel members compared to other agencies, how current compositions of the panels compare to previous ones and how previous administrations handled the reappointment and nomination process. EPA has declined to reappoint many current scientific advisers and suspended meetings of the Board of Scientific Counselors for the rest of the year while it decides whether to replace panel members.

GRIJALVA PRESSES ZINKE ON ENERGY DOMINANCE: House Natural Resources ranking member Raul Grijalva sent Interior Secretary Ryan Zinke a letter Thursday seeking information on how the administration's pursuit of "energy dominance" does not interfere with the Federal Land Policy and Management Act requirements to manage public lands "on the basis of multiple use and sustained yield." Grijalva also requested a definition of "energy dominance" and how the agency would measure when it has been achieved.

GREENS: WE NEED MORE TIME ON WOTUS: Nineteen environmental and public health groups asked Pruitt in a letter Thursday to extend the comment period on the proposed rule to rescind the Waters of the U.S. regulation to no less than six months. "Your planned 30-day comment period disregards the more than one million people who participated in the development of that rule and is a grossly inadequate amount of time for stakeholders to meaningfully engage in this rulemaking process," the groups, including the League of Conservation Voters, Clean Water Action and the Sierra Club, wrote.

STEELWORKERS NO FANS OF E15: The United Steelworkers fear Sen. Deb Fischer's bill to allow year-round sale of 15 percent ethanol fuel could allow more smog. The union sent a letter Thursday to all 100 senators arguing that the RFS needs a complete overhaul rather than the modification in Fischer's bill. The letter is a sign that lobbying on a bill to advance Fisher's bill out of committee is ramping up - Fischer and company need to convince six undecided EPW Democrats in order to advance the bill.

HANDS OFF THE ENDANGERED SPECIES ACT: Four hundred and twenty-five conservation groups sent a letter Thursday to House and Senate leadership urging them not to entertain any efforts to "modernize" or otherwise tweak the Endangered Species Act. "The

Endangered Species Act is a profoundly popular law that represents fundamental American principles," the letter, signed by groups like 350.org, Citizens' Climate Lobby and Greenpeace, says.

INTERESTING NEVADA TIDBIT: Buried deep in The Nevada Independent's announcement of Rep. Jacky Rosen's Senate bid against Dean Heller is that Rosen would have opposed Rick Perry's nomination to run DOE given his efforts to revive Yucca Mountain. Both Heller and Catherine Cortez Masto supported Perry's confirmation back in March. Rosen vowed to fight "tooth and nail" against Yucca, which Heller also vocally opposes.

FEDERAL EMPLOYEE GUILTY OF EMBEZZLEMENT: An employee with the Bureau of Indian Education, Wilma Garcia, fraudulently issued multiple checks - amounting to $24,031.99 - to various family members, an Interior IG report found. Garcia was "remorseful" for her actions and received five years' probation.

Those charges were far less salacious than other, ultimately "unfounded" allegations that the death of an USGS employee was due to "criminal negligence" by a trip leader during a research river trip in Grand Canyon National Park by ignoring signs of heat exhaustion. The investigation in that case found "no evidence of criminal conduct by the trip leader" or support for allegations federal agencies "conspired to alter facts when preparing their final reports" of the incident.

TROUBLED NUCLEAR GIANT HIRES BIG GUNS: Westinghouse Electric Co. has brought on Squire Patton Boggs for help "managing bankruptcy proceedings on Capitol Hill," according to disclosure documents posted this week. Among the lobbying giant's VIPs working on behalf of the nuclear company: former Senate Majority Leader Trent Lott; former Louisiana Sen. John Breaux and David Schnittger, former Speaker John Boehner's longtime deputy chief-of-staff.

MOVER, SHAKER: The National Rural Electric Cooperative is bringing on Bobby Hamill as a legislative affairs manager, working on generation and transmission issues. He was previously legislative director for Rep. Morgan Griffith (R-Va.) (h/t POLITICO Influence).

Ben Somberg has joined the Alliance to Save Energy as communications manager responsible for developing and executing communications strategies; he was previously press secretary for the American Association for Justice.

Subject: EPA memo details new political staffers

By Alex Guillén

06/27/2017 03:35 PM EDT

An internal agency-wide EPA memo sent today identifies at least eight previously unreported political appointees at the agency. The memo from chief of staff Ryan Jackson lists 45 political appointees across EPA's various offices.

Missing from the list is J.P. Freire, formerly the associate administrator for public affairs. That spot is filled on the list in an acting capacity by Liz Bowman, formerly Freire's deputy. Neither Freire nor EPA immediately returned questions about Freire's apparent departure.

Of the eight new names, the highest-ranking is Erik Baptist, the senior deputy general counsel. Baptist was an attorney with the American Petroleum Institute since 2011. Before that, he was an attorney for FERC for two years and an associate at the law firm McDermott Will & Emery, according to his LinkedIn profile.

Other previously unreported names on the list include:

— Veronica Darwin, senior adviser for Land and Emergency Management

— Preston Cory, special assistant to the deputy associate administrator for intergovernmental relations

— Christian Rodrick, special assistant to the deputy associate administrator for Congressional Relations

— Kristopher Green, special assistant for the Office of the Chief Financial Officer

— James Hewitt, special adviser for Public Affairs

— Will Lovell, policy assistant

— Madeline Morris, executive scheduler

Jackson's memo notes that EPA still must name a roster of assistant administrators, jobs that require Senate confirmation, as well as 10 regional administrators, which do not require confirmation. Administrator Scott Pruitt told lawmakers this morning that he hopes to have regional appointees in place soon.

Subject: BREAKING NEWS: Trump says 'deeply saddened' by shooting that wounded Scalise

President Donald Trump issued a statement on Wednesday saying he and Vice President Mike Pence are "deeply saddened" by the shooting at a Virginia baseball field in which House Majority Whip Steve Scalise was injured.

"The Vice President and I are aware of the shooting incident in Virginia and are monitoring developments closely. We are deeply saddened by this tragedy. Our thoughts and prayers are with the members of Congress, their staffs, Capitol Police, first responders, and all others affected," the president said.

Subject: BREAKING NEWS: Sessions to testify in open hearing before Senate Intelligence Committee

Attorney General Jeff Sessions will testify in an open hearing Tuesday before the Senate Intelligence Committee on his role in the unfolding Russia investigation, according to a congressional source.

Sessions informed Congress over the weekend that he will appear before the intelligence committee, rather than before previously scheduled hearings regarding funding for the Justice Department.

The attorney general is facing increased scrutiny from lawmakers after former FBI Director James Comey testified last week that he knew details about Sessions before his recusal from the Russia probe that would make his involvement in the investigation "problematic."

Subject: Pruitt Promotes Independence On EPA Science Boards

Pruitt: "The days of 'political science' are over at the agency."

Pruitt Promotes Independence On EPA Science Boards

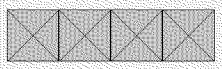
"It Just Is Not Right For The Agency To Be Issuing $77 Million In Grants And Then Asking These People To Be Providing Independent Counsel."
- EPA Administrator Scott Pruitt

THE WASHINGTON POST: "Scott Pruitt Blocks Scientists With EPA Funding From Serving As Agency Advisers." "'It is very, very important to ensure independence, to ensure that we're getting advice and counsel independent of the EPA,' Pruitt told reporters Tuesday. He estimated that the members of three different committees — Scientific Advisory Board, the Clean Air Science Advisory Committee and the Board of Scientific Counselors — had collectively accepted $77 million in EPA grants over the last three years. He noted that researchers will have the option of ending their grant or continuing to advise EPA, 'but they can't do both.'" (The Washington Post, 10/31/17)

THE WALL STREET JOURNAL: "EPA Bars Scientists It Funds From Advisory Roles." "The Environmental Protection Agency will no longer permit scientists receiving agency grants to serve on three of its independent advisory boards, a change the agency said was designed to foster greater independence and regional diversity for the panels, but which scientist groups and environmental advocates said would give polluting industries undue policy influence." (The Wall Street Journal, 10/31/17)

USA TODAY: "Pruitt Moves To Shake Up EPA Advisory Boards." "Scientists who receive grants from the Environmental Protection Agency will no longer be allowed to simultaneously serve on the agency's nearly two dozen advisory boards, an unprecedented directive EPA Administrator Scott Pruitt … 'We want to ensure that the American people have confidence ... in the process and that the advisers that we have in each of these respective capacities are providing independent, arms-length input to us as we make decisions.'" (USA Today, 10/31/17)

THE WASHINGTON FREE BEACON: "Members Of Scientific Boards Received $77 Million From EPA While Advising Agency." "Under the last three years of the Obama administration, members sitting on just three of the agency's scientific advisory boards received $77 million in EPA grants. Pruitt said individuals advising in policy and regulatory matters should be completely independent of the EPA." (The Washington Free Beacon, 10/31/17)



THE WASHINGTON EXAMINER: "Scott Pruitt Bars EPA Grant Recipients From Serving On Advisory Boards." "People receiving EPA grants who currently serve on the three boards will have to choose whether to keep the grant or continue their work on the boards. Most board members serve three-year terms. 'You have to choose, are you going to continue getting a grant or serve the agency,' Pruitt said. 'They can't do both.'" (The Washington Examiner, 10/31/17)

ABC NEWS: "EPA Blocks Some Scientists From Serving On Advisory Boards." "The

Environmental Protection Agency announced today that scientists who receive money from the agency will no longer be able to serve on its advisory boards, a move that critics contend will push independent science out of decisions about environmental policy. … The EPA argues that in addition to strengthening the independence of members on its boards, the move will further increase the diversity of the councils, with new members offering 'fresh perspectives.' The agency is further promoting participation from state, local and tribal governments." (ABC News, 10/31/17)

DAILY CALLER: "Trump's EPA Takes Steps To 'Ensure Independence' Among Science Advisers." "EPA will no longer allow researchers to serve on three scientific advisory boards if they also receive agency grants. The policy is to ensure science advisers are truly independent from EPA, Pruitt said, echoing concerns Republicans have voiced for years." (Daily Caller, 10/31/17)

Driving the Day

Good Sunday morning. THE PRESIDENT left the White House at 9:16 a.m. "in golf clothes (white shirt, white cap, dark slacks)," per pooler Alexis Simendinger. "Agents are dressed in their khakis and plaid, baggy, short-sleeved shirts--attire accessorized with ball caps. One was just practicing a pantomimed golf swing in the driveway." ... Trump pulled into Trump National Golf Club in Virginia at 9:51 a.m.

STATEMENT FROM PRESIDENT DONALD TRUMP (@realDonaldTrump) at **8 a.m.:** "Hillary Clinton colluded with the Democratic Party in order to beat Crazy Bernie Sanders. Is she allowed to so collude? Unfair to Bernie!"

-- NOTE: Hillary Clinton became the Democratic Party's nominee 334 days ago. Trump beat her 229 days ago.

MICHAEL KRUSE in POLITICO Magazine, "I Found Trump's Diary -- Hiding in Plain Sight: Legally risky, undiplomatic and sometimes wrong, Trump's Twitter feed is a document for the ages. And historians don't want to lose it": "In the presumed absence, then, of a more traditional version of the form, Trump's collected tweets comprise the closest thing to a diary this presidency will produce.

"And that is what makes the messages from @realDonaldTrump, almost 800 and counting since January 20, 2017, such a prize to those who care the most about lasting insight into the president and this administration. If @realDonaldTrump was to go dark, and Trump stopped tweeting to his more than 32 million followers, humans and bots alike, the loss from a historical standpoint would be acute." http://politi.co/2t9dyzX

TRUMP ON "FOX AND FRIENDS" SUNDAY MORNING -- PETE HEGSETH: "Who's been your biggest opponent? Has it been Democrats resisting? Has it been fake news media? Has it been deep state leaks? What's -- when you think about it, what holds it up the most? --" ... **TRUMP:** ... "One of the things that should be solved, but it probably won't be, is that the Republicans and Democrats don't get together. And I'm open arms; but, I don't see that happening. They fight each other. The level of hostility. In other words, this isn't just Trump, this has been like this for years. You've been doing this for a long time, it's been like that for a long time. But the level of hostility - as an example, the healthcare bill that you are reporting on and that everybody's reporting on."

-- TRUMP WAS TEED UP, BUT DECLINES TO BLAME OBAMA: HEGSETH: "How frustrating is it to have former President Obama there, out there leading the resistance?" **TRUMP:** "Well I think -- I don't think he's leading it. He actually just put out a small statement. I don't see that leading it. But other people are leading."

-- TRUMP HITS WARREN ... AGAIN: HEGSETH: "How do you overcome that when someone like Senator Warren - Elizabeth Warren literally says 'People are going to die because of President Trump's health-care bill'?" **TRUMP:** "Well I actually think she's a hopeless case. I call her Pocahontas, and that's an insult to Pocahontas. I actually think that she is just somebody that's got a lot of hatred, a lot of anger."

WHAT TO WATCH FOR THIS WEEK -- "Will Anthony Kennedy step down from the Supreme Court?" by AP's Mark Sherman: "The Supreme Court enters its final week of work before a long summer hiatus with action expected on the Trump administration's travel ban and a decision due in a separation of church and state case that arises from a Missouri church playground. The biggest news of all, though, would be if Justice Anthony Kennedy were to use the court's last public session on Monday to announce his retirement.

"To be sure, Kennedy has given no public sign that he will retire this year and give President Donald Trump his second high court pick in the first months of his administration. Kennedy's departure would allow conservatives to take firm control of the court. But Kennedy turns 81 next month and has been on the court for nearly 30 years. Several of his former law clerks have said they think he is contemplating stepping down in the next year or so. Kennedy and his clerks were gathering over the weekend for a reunion that was pushed up a year and helped spark talk he might be leaving the court." http://bit.ly/2t5rBWQ

-- KELLYANNE CONWAY on **ABC'S "THIS WEEK": CONWAY:** "I will never reveal a conversation between a sitting justice and the president or the White House, but we're paying very close attention to these last bit of decisions. And I can tell you one thing, just as the president did with Justice Neil Gorsuch, whenever there are vacancies, whenever that happens, he will look for somebody who has fidelity to the constitution, who doesn't make up the law as they go along, and somebody who has the judicial temperament and a record that's beyond reproach, as did Justice Gorsuch.

"We just hope the next time we can get more than a handful of Democratic senators to vote for our nominee to the Supreme Court and to the federal courts. We'd like a lot more cooperation from our Democratic friends. We know obstruction and resistance is their motto. It's not working. And it's not working for the American people, Supreme Court nominations and otherwise."

THE BIG PICTURE -- "The weakest defense in Washington? Saying 'I don't recall'," by Darren Samuelsohn: "Some of President Donald Trump's closest confidants seem to be suffering from an affliction common in high-stakes White House investigations: memory loss. In his recent testimony before the Senate Intelligence Committee concerning his role in the unfolding Russia saga, Attorney General Jeff Sessions answered questions with some variation of 'I do not recall' more than 20 times. Amnesia is often a favorite response from witnesses in criminal and congressional investigations, and it's often the most truthful reply-but people caught up in scandals can wind up facing perjury or other charges if prosecutors can later show they were intentionally trying to dodge tough questions." http://politi.co/2t5ihSQ

HOW TIMES CHANGE -- "Freedom Caucus holds fire on Senate Obamacare repeal bill," by Kyle Cheney and Rachael Bade: "The most hardline conservatives in the House are taking an unusually cautious approach to the Senate's Obamacare replacement, promising to keep an open mind about whatever their colleagues across the Capitol send back. It's a change in strategy for the House Freedom Caucus. When House leaders first released a health care bill in February, for instance, group members took to television talk shows to pan the plan as 'Obamacare lite,' furious that it didn't, in their eyes, do enough to unravel the 2010 health care law.

"They also threatened to withhold their support until changes were made, and later won concessions. For now, those hardball tactics have disappeared. As the Senate looks to pass its own health care legislation this week, those same House conservatives are taking a more measured approach -- even as several conservatives in the Senate are currently balking at the bill." http://politi.co/2u2UDDF

****** **A message from Starbucks:** One in eight Americans struggles to get enough to eat. Inspired by the commitment from our partners (employees), Starbucks is working with Feeding America to channel our unsold fresh food to feed the communities we serve. By 2020, as our FoodShare program grows, we'll donate 50 million meals each year: http://sbux.co/2sBiWeM ******

BUT, BUT, BUT ... "Senate health-care bill faces serious resistance from GOP moderates," by WaPo's Juliet Eilperin and Amy Goldstein: "A small group of moderate Republican senators, worried that their leaders' health-care bill could damage the nation's social safety net, may pose at least as significant an obstacle to the measure's passage as their colleagues on the right. The vast changes the legislation would make to Medicaid, the country's broadest source of public health insurance, would represent the largest single step the government has ever taken toward conservatives' long-held goal of reining in federal spending on health-care entitlement programs in favor of a free-

market system.

"That dramatic shift and the bill's bold redistribution of wealth - the billions of dollars taken from coverage for the poor would help fund tax cuts for the wealthy - is creating substantial anxiety for several Republican moderates whose states have especially benefited from the expansion of Medicaid that the Affordable Care Act has allowed since 2014." http://wapo.st/2sPOf36

-- WHO TO WATCH: Sens. Lisa Murkowski (R-Alaska), Shelley Moore Capito (R-W.Va.), Rob Portman (R-Ohio), Cory Gardner (R-Colo.) and Dean Heller (R-Nev.).

-- THE PROBLEM: Senate Majority Leader Mitch McConnell is going to have to cajole and lean on moderate and conservative senators to find enough votes. While he may be able to tweak the bill on the margins to bring some of the lawmakers on board -- and lawmakers will be able to add amendments to the underlying bill text -- it's unclear if he'll be able to thread the needle for passage next week. As we wrote earlier this week, McConnell is going to put this bill up for a vote no matter what -- he wants lawmakers on the record.

KOCH WATCH -- "Koch network ramps up political spending while trying to push Trump team," by Kevin Robillard in Colorado Springs, Colorado: "The leadership of the Koch brothers' network is brushing off its occasionally chilly attitude toward President Donald Trump, trying to nudge the administration in its direction as the group's annual summit began Saturday just after Charles Koch met with Vice President Mike Pence. The network of conservative donors announced Saturday it plans to spend between $300 million and $400 million on politics and policy during the 2018 cycle. ...

"The millions from the Koch network and its wealthy allies will boost the Trump administration on some key priorities, especially tax reform and rolling back regulations. It also will help push back against others - especially Attorney General Jeff Sessions' desire to implement tough-on-crime policies - and working to make Obamacare repeal efforts more conservative. And they could prove critical to Republican efforts to retain the House and expand a majority in the Senate." http://politi.co/2t9li4k

-- "Koch chief says health care bill insufficiently conservative," by AP's Steve Peoples: "Tim Phillips, who leads Americans For Prosperity, the Koch network's political arm, called the Senate's plans for Medicaid 'a slight nip and tuck' of President Barack Obama's health care law, a modest change he described as 'immoral.' 'This Senate bill needs to get better,' Phillips said. 'It has to get better.'" http://apne.ws/2sFaGts

FOR YOUR RADAR -- "Trump allies push White House to consider regime change in Tehran," by Michael Crowley: "As the White House formulates its official policy on Iran, senior officials and key Trump allies are calling for the new administration to take steps to topple Tehran's militant clerical government. Supporters of dislodging Iran's iron-fisted clerical leadership say it's the only way to halt Tehran's dangerous behavior, from its pursuit of nuclear weapons to its sponsorship of terrorism.

"Critics say that political meddling in Iran, where memories of a 1953 CIA-backed coup remain vivid, risks a popular backlash that would only empower hardliners. That's why President Barack Obama assured Iranians, in a 2013 speech at the United Nations, that 'we are not seeking regime change.' But influential Iran hawks want to change that under Trump. 'The policy of the United States should be regime change in Iran,' said Sen. Tom Cotton (R-Ark.), who speaks regularly with White House officials about foreign policy. 'I don't see how anyone can say America can be safe as long as you have in power a theocratic despotism,' he added." http://politi.co/2tINGIF

-- "Trump's Team Faces Reality in the Middle East," by the Times of Israel's Herb Keinon: "Washington is adopting a much different approach to peacemaking than the previous administration, a sign that it has learned from US President Barack Obama's mistakes. And the mother of all Obama's mistakes on the Israeli-Palestinian issue came when -- just a few months after being sworn into office -- he made a very clear demand for Israel to stop all settlement activity, everywhere ... The Trump administration is taking a different approach. It is making no public demands ... And, all the while, it is probing the sides to see what they are - and are not - willing to give, and then trying to see if there are ways to bridge the gaps. And it is doing this all very much behind closed doors, without megaphone diplomacy, without public threats of laying down an American blueprint, or dangling promises of high-profile summits." http://bit.ly/2u398Y5

COMING ATTRACTIONS -- "U.S. top court set to rule on religious rights; travel ban looms," by Reuters' Lawrence Hurley: "The U.S. Supreme Court is set to rule on Monday in a closely watched religious rights case involving limits on public funding for churches and other religious entities as the justices issue the final rulings of their current term. The nine justices are due to rule in six cases, not including their decision expected in the coming days on whether to take up President Donald Trump's bid to revive his ban on travelers from six predominantly Muslim countries in which an emergency appeal is pending. Of the remaining cases argued during the court's current term, which began in October, the most eagerly awaited one concerns a Missouri church backed by a conservative Christian legal group. The ruling potentially could narrow the separation of church and state." http://reut.rs/2s9V9yl

THE JUICE ....

-- SPOTTED AT STEVEN MNUCHIN and **LOUISE LINTON's WEDDING** last night at the Mellon Auditorium: President Donald Trump (in black tie) and First Lady Melania Trump, Vice President Mike Pence (who officiated) and Karen Pence, Jared Kushner and Ivanka Trump, Reince Priebus and Sally Priebus, DHS Secretary John Kelly, CIA director Mike Pompeo, Interior Secretary Mike Zinke, Transportation Secretary Elaine Chao, HUD Secretary Ben Carson and Candy Carson, Education Secretary Betsy DeVos, Commerce Secretary Wilbur Ross, EPA Administrator Scott Pruitt, Agriculture Secretary Sonny Perdue, U.S. Trade Representative Robert Lighthizer, National Security Advisor H.R. McMaster, White House Counsel Don McGahn and Shannon McGahn, deputy national security advisor Dina Powell and David McCormick ...

... Sean and Rebecca Spicer, Kellyanne Conway, Canadian Finance Minister Bill Morneau, John Paulson, Jim Donovan, Steve Roth, Eddie Lampert, Woody Johnson, Lee Eisenberg, Sen. Orrin Hatch (R-Utah), Tom Barrack, Eli and Jenna Miller, Stephen Miller, House Majority Whip Kevin McCarthy, C. Boyden Gray, Brad and Candice Parscale, Tommy Hicks, Reed Cordish, Rudy Giuliani, Richard and Karen LeFrak and Harrison LeFrak, Bill Paxon and Susan Molinari, Mike Shields and Katie Walsh, Ken Duberstein, Anthony Scaramucci. Seafood was served during cocktail hour, along with filet for dinner and a big white wedding cake. There was lots of beautiful flowers at the wedding, ballerinas performed, bagpipes and then a big band and many people hit the dance floor, according to attendees. ***Full report from Darren Samuelsohn, Rebecca Morin and Cristiano Lima*** http://politi.co/2t8w9MZ ... ***25 photos on one page*** http://dailym.ai/2sEIl6A

-- MNUCHIN was spotted with three agents at DCA early this morning -- he was dropping off one of his kids at the airport.

-- WE REPORTED YESTERDAY THAT REP. ADRIANO ESPAILLAT (D-N.Y.) filed a financial disclosure form that listed a checking account with between $5 million and $25 million. His office said he filed the report in error, and the account has between $1,000 and $15,000. The new report has not yet showed up on the clerk's website.

SUNDAY BEST -- GEORGE STEPHANOPOULOS speaks to **SENATE MINORITY LEADER CHUCK SCHUMER (D-N.Y.)** on **ABC'S "THIS WEEK" -- STEPHANOPOULOS:** "Are they going to pass this bill?" **SCHUMER:** "I think it's 50-50. First, Democrats, we are doing everything we can to fight this bill because it's so devastating for the middle class. I think they have, at best, a 50-50 chance of passing this bill. To get three senators to vote no, probably -- you can say yes, you can say no, probably 50-50."

-- BRIT HUME talks with **HHS SECRETARY TOM PRICE** on **"FOX NEWS SUNDAY" -- PRICE:** "What we're trying to do here, admittedly, is to thread a needle to make it so that, as the president says, every single American needs to be able to have access to the kind of coverage that they want," Price said, adding that conversations with Republican holdouts are ongoing. "That's the nature of the legislative process and that's what we'll be working through this week." ***More from Patrick Temple-West, whose birthday is today*** http://politi.co/2t5LvB6

-- DANA BASH speaks with **OHIO GOV. JOHN KASICH** on **CNN'S "STATE OF THE UNION" -- BASH -- HE'S OPPOSED TO THE SENATE GOP HEALTH CARE BILL:** "OK. So, given the problems that you just laid out, do you think that Senator Portman of Ohio should vote no?" **KASICH:** "Well, I -- I don't think the bill's adequate now. And unless it gets fixed, I would -- look, I'm against it. And I'm not against it just because I want to be against it. There's some things in these bill -- in these bills, in these -- in these provisions that are an improvement. My job, as I see my job as a governor of the state, not as a Republican governor, but the governor of this state, my job is to look not

just today, but in the out years, at the impact it's going to have on people who have -- who need help.

"Dana, I was at a restaurant on Friday . And I was at a Wendy's, actually. And I was -- there was a partition. And I looked over at the people that had gathered there. And there were about, I don't know, 25 kids. All of them were here in Columbus for Special Olympics. And I looked at them and I thought, are these people being served? Are they going to be served by this bill in the future? My conclusion right now is no."

-- CHUCK TODD speaks to **SEN. RON JOHNSON (R-WISC.)** on **NBC'S "MEET THE PRESS": JOHNSON -- ON HEALTH CARE:** "[W]hat I'd like to do is slow the process down, get the information, go through the problem-solving process, actually reduce these premiums that have been artificially driven up because of Obamacare mandates. So let's actually fix the problem. But in the end, I come from manufacturing base. I will look at whatever I'm forced to vote on, and I'll ask myself, 'Is this better tomorrow than where we are today? Is it continuous improvement?' And that's what will guide my decision."

Playbook Reads

PHOTO DU JOUR: President Donald Trump and first lady Melania Trump depart the White House on June 24 to attend Treasury Secretary Steve Mnuchin and Louise Linton's wedding. | Ron Sachs/Pool/Getty

DEEP DIVE -- WILLIAM D. COHAN in August's Vanity Fair, "The Untold Story of How Gary Cohn Fell for Donald Trump": "While [Lloyd] Blankfein was recuperating, Cohn seemed to delight in the attention and adulation he received when he filled in for his boss on earnings calls, industry presentations, and media events, such as The New York Times's DealBook Conference. That's when, some say, he became overconfident and decided to inquire of several of his fellow board members about becoming C.E.O., even as Blankfein was responding well to his chemotherapy treatments. 'Gary made a play to replace Lloyd,' according to a former Goldman partner. It didn't work. The board was 'noncommittal' to Cohn, he continues. 'There's a lot of loyalty to Lloyd on the board.' ...

"The timing was perfect for Jared Kushner, Trump's son-in-law, to pounce. He approached Cohn, supposedly at the suggestion of mutual friends. 'Jared Kushner has always been a little starstruck with Goldman Sachs people,' says a former Goldman partner who knows him well. 'He's always liked that sort of promotional edginess that Goldman Sachs has had, and he's always liked the reputation that Goldman Sachs has the best people, quote unquote, the smartest, savviest people. The idea, by the way, that Jared was suddenly in a position where he actually had the power to call on and hire and lure a number of people like that to the bench side, if you will, was a very, very intoxicating, enticing, and really kind of exciting thing to him,' the former partner

continues. 'This was an incredibly sort of convenient and opportune kind of thing that came along for Gary because-whether he was going to Washington or not-Gary was out.'" http://bit.ly/2u3jTd1

MATT VISER in the Boston Globe, "Jared Kushner got his start as Somerville landlord": "At 19, he was in the training-wheels stage of his career as a developer, learning as he went, making his share of mistakes, acquiring a landlord's tough edge and cool calculus -- traits he still manifests in the White House. Learning to fix up and flip clusters of low-end apartment buildings, he used Somerville as his own private laboratory. And he passed the first key test -- he made a profit. Of course, he had a headstart. Much as Trump began his career of deals with a multimillion-dollar boost from his father, Kushner started out with his wealthy father acting as senior partner and offering crucial assistance -- including helping secure $9 million in mortgage loans....

"And his efforts paid off -- the properties he bought for $8.3 million sold four years later for $13 million. But Kushner, who did not respond to requests for an interview to discuss his business record in Somerville, also made a number of rookie errors and left numerous angry tenants in his wake. His properties amassed 25 housing complaints over four years, including complaints about overflowing dumpsters, pests, and sewage odors, according to the Globe review. Tenants complained of what they called nonsensical financial dealings. Some renters say they went an entire winter without heat." http://bit.ly/2t5dGju

WHAT ERIC HOLDER IS READING -- "Analysis indicates partisan gerrymandering has benefited GOP," by AP's David Lieb: "The 2016 presidential contest was awash with charges that the fix was in: Republican Donald Trump repeatedly claimed that the election was rigged against him, while Democrats have accused the Russians of stacking the odds in Trump's favor. Less attention was paid to manipulation that occurred not during the presidential race, but before it - in the drawing of lines for hundreds of U.S. and state legislative seats. The result, according to an Associated Press analysis: Republicans had a real advantage.

"The AP scrutinized the outcomes of all 435 U.S. House races and about 4,700 state House and Assembly seats up for election last year using a new statistical method of calculating partisan advantage. It's designed to detect cases in which one party may have won, widened or retained its grip on power through political gerrymandering. The analysis found four times as many states with Republican-skewed state House or Assembly districts than Democratic ones. Among the two dozen most populated states that determine the vast majority of Congress, there were nearly three times as many with Republican-tilted U.S. House districts." http://apne.ws/2s5voE7

BUSINESS BURST -- "Facebook Is Going Hollywood, Seeking Scripted TV Programming," by WSJ's Joe Flint and Deepa Seetharaman: "Facebook to Hollywood: Let's do lunch. Social networking giant Facebook Inc. is moving its ambitions in TV-quality video to the front burner, taking meetings and making deals with an eye toward launching a slate of original programming by the end of summer, people familiar with the

matter said. In meetings with major talent agencies including Creative Artists Agency, United Talent Agency, William Morris Endeavor and International Creative Management Partners, Facebook has indicated it is willing to commit to production budgets as high as $3 million per episode, people familiar with the situation say." http://on.wsj.com/2rQ6Omz

BEYOND THE BELTWAY -- POLITICO Magazine's "America's 11 Most Interesting Mayors": Eric Garcetti, Los Angeles ... **Hillary Schieve**, Reno, Nev. ... **Kevin Faulconer**, San Diego ... **Greg Fischer**, Louisville, Ky. ... **Marty Walsh**, Boston ... **Michael Hancock**, Denver ... **Jennifer Roberts**, Charlotte, N.C. ...**Tomás Regalado**, Miami, Florida ... **Jackie Biskupski**, Salt Lake City, Utah ... **Bill Peduto**, Pittsburgh ... **Dan Gilbert**, the shadow mayor of Detroit. http://politi.co/2sEZm0w

BONUS GREAT WEEKEND READS, curated by Daniel Lippman, filing from Palm Beach, Florida:

-- "My Father's Fashion Tips," by Tom Junod in GQ: "In 1996, in a piece that was nominated for a National Magazine Award, Tom Junod wrote not only of his dad's impeccable style but also of the secrets -- and underwear rules -- of a lost generation." http://bit.ly/2szLZP8

-- "Deepest Dive Ever Under Antarctica Reveals a Shockingly Vibrant World," by Laurent Ballesta in July's NatGeo: "Our special report offers a rare look at life beneath the frozen continent -- where penguins, seals, and exotic creatures thrive."***With 15 pix on one page*** http://on.natgeo.com/2s2rV9e (h/t Blake Hounshell)

-- "Crimson Tidings: The primordial color gets its due," by Elizabeth Powers in the Weekly Standard: http://tws.io/2rLD4qR (h/t ALDaily.com)

-- "The Wages of War Without Strategy," by Robert Cassidy and Jacqueline Tame on the Strategy Bridge: "In its wars since 11 September 2001, the United States has arguably cultivated the best-equipped, most capable, and fully seasoned combat forces in remembered history. They attack, kill, capture, and win battles with great nimbleness and strength. But absent strategy, these victories are fleeting. Divorced from political objectives, successful tactics are without meaning." http://bit.ly/2szMg4p

-- "This Is How Big Oil Will Die," by Seth Miller in NewCo: "It's 2025, and 800,000 tons of used high strength steel is coming up for auction. The steel made up the Keystone XL pipeline ... [which at] its peak ... carried over 500,000 barrels a day for processing at refineries in Texas and Louisiana. But in 2025, no one wants the oil."

http://bit.ly/2szZhLp

-- "Supertasters Among the Dreaming Spires," by Dan Rosenheck in 1843 Magazine: "Every Oxford taster is a scientist in one form or another, ranging from endearingly geeky to absurdly so ... Cambridge [tasters] were methodical, precise and pragmatic - much like Cambridge. Whereas Oxford had people who grew up with wine. They'd just taste and say: Oh, that's obviously Bordeaux." http://bit.ly/2rLo5NI

-- "Camille Paglia: On Trump, Democrats, Transgenderism, and Islamist Terror," by The Weekly Standard's Jonathan V. Last: "Today's liberalism has become grotesquely mechanistic and authoritarian: It's all about reducing individuals to a group identity, defining that group in permanent victim terms, and denying others their democratic right to challenge that group and its ideology. Political correctness represents the fossilised institutionalisation of once-vital revolutionary ideas, which have become mere rote formulas." http://tws.io/2szPMfe (h/t TheBrowser.com)

-- "Confessions of a Cartel Hit Man," by Martin Corona in Men's Journal: http://mjm.ag/2tDcVvH

-- "Can We Blame the Mafia on Lemons?" by Cara Giaimo in Atlas Obscura: "Lemon trees need well-fertilised soil, steady water, and protection from wind and extreme temperature, which come at great cost. Trees need to be coddled for seven or eight years before they produce enough lemons to sell. When they do bear fruit, it's easy enough for people to steal it." http://bit.ly/2t0xjJl

-- "The 2017 Jefferson Lecture -- Powerlessness and the Politics of Blame" -- Martha C. Nussbaum at the Kennedy Center on May 1: "The Greeks and Romans saw a lot of anger around them. But they did not embrace or valorise anger. They did not define manliness in terms of anger, and tended to impute it to women, whom they saw as lacking rationality. However much they felt and expressed anger, they waged a cultural struggle against it, seeing it as destructive of human well-being and democratic institutions." http://bit.ly/2tDB5X4

-- "About Tomorrow," by Bruce Wexler in E-Flux: "Human beings differ from other animals with regard to ... post-natal neuroplasticity in two important ways. First, our brains are more immature at birth and susceptible to environmental shaping to a greater degree and for a longer time. Second, humans are the only animals that shape and reshape the environments that shapes their brain. This powerful combination is the basis of cultural evolution, and of most features of human minds, behavior and communities." http://bit.ly/2sL8uPw

Playbookers

SPOTTED: Former Vice President Joe Biden on Saturday, with a small Secret Service

detail, on the Acela out of New York. He got off in Wilmington, rocking a pair of sunglasses, one earbud in and carrying a briefcase -- "looking as relaxed and cool as ever," per our tipster.

OUT AND ABOUT -- Susan Glasser and Peter Baker hosted a farewell party last night at their house for Indira Lakshmanan and Dermot Tatlow, who are moving to St. Petersburg, Florida, next week as Indira takes up her post as Craig Newmark Chair in Journalism Ethics at The Poynter Institute for Media.

SPOTTED: German Amb. Peter Wittig and Huberta von Voss-Wittig, Afghan Amb. Hamdullah Mohib and Lael Mohib, Judy Woodruff and Al Hunt, Marty Baron, Andrea Mitchell, Nihal Krishan, Nancy Cook and Christopher Rowland, former Pakistani Amb. Husain Haqqani and Farahnaz Ispahani, Mike Oreskes and Geraldine Baum, former U.S. Ambs. Melanne and Phil Verveer, former U.S. Amb. Steve Sestanovich, Katharine Weymouth, Mark Landler, Julie Davis, David Sanger, Margaret Carlson, Juliet Eilperin, Laura Meckler, Ben Chang, Christina Sevilla and Steve Rochlin, Justin Kenny, Heidi Crebo-Rediker and Doug Rediker, Dana Thomas, Amanda Downes, David Rennie, Jonas Parello-Plesner, Bay Fang, Steve Heuser, Mary Louise Kelly, Manuel Roig-Franzia and Ceci Connolly, Nicole Raben, Denise Couture.

-- SPOTTED at a surprise birthday party last night for Ziad Ojakli at Kellari Taverna on K Street: Sumya Ojakli, Angela Flood, Alison Jones, Mercy and Matt Schlapp, David and Gretchen Hobbs, Bruce Andrews, Pam Thiessen, Nick Calio and Eric Ueland.

-- **SPOTTED** on the rooftop of The Brixton for a mini-reunion of alumni of the Obama administration NSC: Terry Szuplat, Eric Pelofsky, Dan Schneiderman, Jon Wolfsthal, Yael Lempert, Michael Sessums, Ben Chang, Salman Ahmed, Evan Medeiros, Bernadette Meehan, Meg Doherty, Stacey May, Andrew Scott, Matt Kaczmarek, Brian Nilsson.

SPOTTED at Ron and Sara Bonjean's annual "Good Pants Ranch Summer Party" yesterday in Purcellville, Va. (a camel made an appearance): Paul Kane, Jo Maney, John Scofield, Dana Bash, Anne Brady, Matt Dornic and Kyle Volpe, Doug Heye, Emily Miller, Fran Decker, Jared Allen and Jackie Kucinich, Kenny Day, Rebecca Haller, Sheldon and Shannon Bream, Matt Wolking, Tom Williams, David and Jenny Drucker, Chris Bond, Dan Ronayne, Tracey and Nick Lintott, Jim Richards and Brian Walsh.

--The RNC held their summer meeting this weekend at the Four Seasons Hotel in downtown Chicago, Illinois. **SPOTTED:** Vice President Mike and Mrs. Karen Pence, Speaker Paul Ryan, Sen. Tom Cotton (R-Ark.), Rep. Marsha Blackburn (R-Tenn.), Rep. Michael Burgess (R-Texas), RNC Chairwoman Ronna Romney McDaniel, RNC co-chairman Bob Paduchik, RNC chief of staff Sara Armstrong, Arkansas state chairman Doyle Webb, Ohio state chairwoman Jane Timken, Hunter Wallace and Suhail Khan.

WEEKEND WEDDINGS -- MICHELLE FIELDS married **JAMIE WEINSTEIN** in a ceremony yesterday at the Breakers in Palm Beach. Dinner and dancing was held in the

Mediterranean Ballroom overlooking the Atlantic Ocean. Fields is a Breitbart and HuffPo alum who now runs JMW Strategies with Weinstein, a commentator and host of "The Jamie Weinstein Show" podcast. They met as reporters at the Daily Caller. They served crab cakes, lobster tail medallions, sliced beef tenderloin, and citrus panko crusted sea bass along with huge ice-cream sundaes (there were also two tomato bars in a pre-dinner reception because Jamie is a big fan of tomatoes). Partiers hoisted Fields and Weinstein in the air during the hora. Colorful performers dancing on stilts also were a hit. The couple is flying out to Europe today on their honeymoon: they'll visit Italy and Morocco and take a river cruise from Budapest to Munich.

SPOTTED: Juleanna Glover hitting the dance floor early with Christopher Reiter, Benny Johnson shaking hands with Oliver Darcy (who had written critical pieces on IJR), bridesmaids Lauren Hagen, Betsy Woodruff, and Kathryn Lyons, Will Rahn, Taylor Lorenz, Ben Jacobs, Olivia Nuzzi, Asawin Suebsaeng and Liz Brown, Jonathan Swan, Vince and Alison Coglianese, Tim Lim, Josiah Ryan, Matt Lewis andErin DeLullo, Katelyn Rieley Johnson, Alex and Nancy Pappas, Jonathan and Anna Beth Strong, Mike Dunkle, Mitchell Sutherland, Guy Benson, Amber Smith.

-- Politico reporter (and author of Morning Energy) **Anthony Adragna** married longtime girlfriend **Meghan Cassidy** in a ceremony at the historic St. Francis Hall in Northeast D.C. on Saturday evening. Cassidy is a teacher at Gonzaga High School who just graduated from a master's program at Georgetown. The couple met in summer 2013, hit it off after being set up on a blind date by mutual friends and have been together ever since. Pool report: "The couple exchanged vows outdoors, surrounded by the lush greenery of the historic Renaissance-style hall, built in 1931. The lively reception featured everything from the Isley Brother's Shout to Taylor Swift's Shake It Off and had guests young and old on the dance floor all night long." ***Pics*** http://bit.ly/2t8YfHp ... http://bit.ly/2t9Pld0

SPOTTED: Heather Caygle and Aaron Lorenzo, Brian Fung and Ryan Kellett, Mikaela Lefrak, Dean Scott and Rachel Leven

--"Kristin Donnelly, Rick Bosh" -- N.Y. Times: "The bride, 36, is a White House producer in Washington for NBC News. She graduated from Syracuse. ... The groom, 36 and known as Rick, is a producer for 'Andrea Mitchell Reports' on MSNBC. He graduated from Southern Methodist University. ... The couple met in March 2010 when they worked as producers for day programming at MSNBC." ***With pic*** http://nyti.ms/2u2PMIS

--"**Pia Carusone, Leanne Pittsford":** "Ms. Carusone, 37, is a political consultant and a senior adviser to Americans for Responsible Solutions, a Washington-based gun violence prevention organization, founded by Gabrielle Gifford and Mark Kelly. Ms.

Carusone was until June 2012 the chief of staff to Ms. Giffords, then an Arizona congresswoman. Ms. Carusone is also a founder of Republic Restoratives Distillery, which is also in Washington and makes vodka, bourbon and rye whiskey. She graduated from Bard College and is now a governor of the school's alumni association. ... Ms. Pittsford, 36, is the chief executive of Start Somewhere, a company in Washington that operates Lesbians Who Tech and two other programs aiming to increase diversity in the technology sector. She graduated from California Polytechnic State University-San Luis Obispo, and received a master's degree in education with a concentration on equity and social justice from San Francisco State University." ***With pic*** http://nyti.ms/2t8yfvQ

BIRTHWEEK (was yesterday): Kirsten Hughes, chair of the MassGOP (hat tip: Natalie Boyse)

BIRTHDAYS: WSJ and POLITICO alum Patrick O'Connor, now with CGCN Group, is 41 ... CNN's Betsy Klein ... Josh Lahey, principal of the Podesta Group, who once hiked all 2,100 miles of the Appalachian Trail starting in Georgia and ending in Maine ... Justice Sonia Sotomayor is 63 ... civil rights activist James Meredith is 84 ... Anthony Bourdain is 61 ... Jeremy Bearer-Friend, Sen. Elizabeth Warren's tax policy maven, moving to NYC this fall to teach tax law at NYU (h/t Alex Levy) ... tech guru Laurent Crenshaw, YELP's director of public policy, is 37 --he celebrated Friday evening at a pop-up party inside of the National Union Building on 9th and F st NW with some of Capitol Hill's finest (h/t Stewart Verdery) ... Politico's Patrick Temple-West ... N.Y. Post's Reuven Fenton ... Rep. Leonard Lance (R-NJ) is 65 ... Dan Meyers, VP at DCI Group ... John Randall, VP of digital at CRAFT ... Robert Harvey ... Jackie Bradford, pres and GM of NBC4 in DC ... Danielle Doheny is 3-0 ... CBS and Reuters alum Corbett Daly, bro of Uncles Matthew and Brendan ... AP alum John Heilprin, now senior journalist and editor for the int'l service of the Swiss Broadcasting Corp. ... Ambassador Melanne Verveer ... Tita Freeman ... Alan McQuinn ... former Rep. Carolyn Kilpatrick (D-Mich.) is 72 ...

... **Scott Zumwalt** , senior director at Bully Pulpit Interactive, is 33 ... Alan McQuinn, ITIF's research analyst (h/t Samantha Greene) ... John Randolph Thornton, author of the novel "Beautiful Country," is 26 ... John Meyer ... Dan Spinelli ... Eric Litmer ... Taylor Haulsee ... Alberto "Beto" Cardenas of Vinson & Elkins ... Abbie Sorrendino of Senate Rules ...Gretchen Yelmini ... Bryan Bernys ... IAVA alum John Alexander Nicholson ... Mike Gehrke ... Jon Carson ... Summer Oesch ... Jason Stephany ... Martha Vukelich-Austin ... Marc Caplan ... Mora Segal ... Heidi Johnson (h/ts Teresa Vilmain) ... James Michael Thornberry ... Hank Greenwald, famed for his long run as the SF Giants baseball play-by-play man ... Ted Pease is 62 ... Carly Simon is 72 ... Phyllis George is 68 ... Ricky Gervais is 56 (h/ts AP)

Driving the Day

THE PRESIDENT CONTINUES TO PUBLICLY BERATE HIS ATTORNEY GENERAL -- at 6:03 a.m.: "Ukrainian efforts to sabotage Trump campaign - 'quietly working to boost Clinton.' So where is the investigation A.G. @seanhannity" ... **at 6:12 a.m.:** "Attorney General Jeff Sessions has taken a VERY weak position on Hillary Clinton crimes (where are E-mails & DNC server) & Intel leakers!" ... **at 6:21 a.m.:** "Problem is that the acting head of the FBI & the person in charge of the Hillary investigation, Andrew McCabe, got $700,000 from H for wife!"

JONATHAN LEMIRE and **JILL COLVIN: "AP sources: Trump speaks to advisers about firing Sessions"** : "President Donald Trump has spoken with advisers about firing Attorney General Jeff Sessions, as he continues to rage against Sessions' decision to recuse himself from all matters related to the Russia investigation. ... Privately, Trump has speculated aloud to allies in recent days about the potential consequences of firing Sessions, according to three people who have recently spoken to the president. They demanded anonymity to discuss private conversations." http://bit.ly/2vEHmTu

-- WHY AND HOW HE'D DO IT: "Trump leaves Sessions twisting in the wind while berating him publicly," by WaPo's Sari Horwitz, Matt Zapotosky and Bob Costa: "Replacing Sessions is seen by some Trump associates as potentially being part of a strategy to fire special counsel Robert S. Mueller III and end his investigation into whether the Trump campaign coordinated with the Kremlin to influence the 2016 election ... Trump could order Rosenstein -- and then Associate Attorney General Rachel Brand -- to fire Mueller. If they quit instead of doing so, he could appoint an acting attorney general who would. Trump could also appoint an acting attorney general

with them in place - effectively passing over Rosenstein and Brand - and order that person to remove the special counsel. ... Another scenario is that Trump could make a recess appointment, said University of Texas School of Law professor Steve Vladeck.

"Under that plan, Trump could choose an attorney general during the August recess who would serve until the end of the next Senate session, which could be early January. That person would have the same authority as someone who is confirmed by the Senate ... Among the names being floated as possible Sessions replacements are Sen. Ted Cruz (R-Tex.) and former New York City mayor Rudolph W. Giuliani, according to people familiar with the conversations. ... Trump, though, continues to let Sessions twist in the wind. One person close to Trump said the president asked him about how firing Sessions 'would play in the conservative media.' Trump also asked him whether it would help to replace Sessions 'with a major conservative,' the person said." http://wapo.st/2tVibKk

-- TED CRUZ has signaled he is not interested, and **RUDY GIULIANI** defended Sessions, and "swatted away a report" that he is in the running to replace him, according to CNN.

AND ON TO HEALTH CARE ... @realDonaldTrump at 6:27 a.m.: "Big day for HealthCare. After 7 years of talking, we will soon see whether or not Republicans are willing to step up to the plate!" ... **at 6:38 a.m.**: "ObamaCare is torturing the American People.The Democrats have fooled the people long enough. Repeal or Repeal & Replace! I have pen in hand."

Good Tuesday morning. BREAKING LAST NIGHT: SEN. JOHN MCCAIN (R-ARIZ.) is coming back to "continue working on important legislation, including health care reform, the National Defense Authorization Act, and new sanctions on Russia, Iran and North Korea."

THE QUESTION RIGHT NOW is whether 51 Republicans will vote for the motion to proceed -- a procedural question that allows the Senate to debate the health care bill.

BURGESS EVERETT, SEUNG MIN KIM and **JEN HABERKORN:** "McConnell spent the day cajoling his members and meeting with Vice President Mike Pence to plot strategy. The majority leader was still short of the votes to even open debate, and Republicans still don't know what they'd be voting to allow debate on if they agree to go along with McConnell on the procedural vote.

"If [McConnell] manages to round up the 50 votes, it would be a huge political victory. The office of Sen. John McCain (R-Ariz.) announced late Monday that he would return to the Senate, but the undecided positions of about a half-dozen senators have left McConnell with a tiny margin for error, and no one's quite sure what his end game is." http://politi.co/2tEuNdj

-- HERE IS A BRAIN DUMP ON THE STATE OF PLAY FROM ONE SENIOR GOP

STRATEGIST: "It has been abundantly clear that policy disagreements are not the ultimate barrier to moving forward. They've had months to work that out. There is a contingent of GOP senators who refuse to accommodate their concerns in negotiations in the hopes of avoiding a vote altogether. The only way to change that dynamic is to hold a vote that provides the opportunity to put every senator on record as to whether they are willing to debate Obamacare.

"A yes vote brings an open amendment process where every senator will have the opportunity to amend, improve, and ultimately decide whether the final product is worthy of their support. Conversely, if some Republicans are more comfortable dealing President Trump a loss than debating Obamacare, this vote will provide the opportunity to make that clear to their constituents since most have represented otherwise for the past seven years."

FROM A SENIOR SENATE GOP AIDE: "It's time to vote; it's time to get on the bill. We pulled back twice for different reasons but it's time. In fact it's past time. Republican Senators know the issue and the solutions. They've been discussing it for months. To fail not to get on the bill is not a resolution after four election cycles of promises. If we get on the bill, amendments can and will be offered. But that cannot happen unless we get on the bill."

WSJ EDITORIAL: "Can Republicans Govern? Some Senators want to talk forever about health care. Time for a vote": "Mitch McConnell is scheduling another showdown vote in the Senate-the third attempt-as early as Tuesday on a motion to proceed to debate on health reform. Succeed or fail, the Republican Majority Leader is right to demand this moment of political accountability. ... Members have been debating among themselves for weeks, they know or should know the bill's essential policy choices, and the bill isn't getting prettier with age. That's especially true on Medicaid reform and spending, which is the chief gripe of the so-called moderates led by Rob Portman of Ohio. They keep demanding more money. They keep getting it, but it's never enough." http://on.wsj.com/2uSR9rj

****** **A message from BP: We invest more in the U.S. than in any other country. And we reinvest every dollar we earn here right back into the American economy.** *See how our investment in America is at work in your state.* ******

THE OPEN QUESTIONS ...

-- THE UNDECIDEDS, per POLITICO Pro health-care guru Dan Diamond **(@ddiamond)** and Burgess, SMK and Jen: Sens. Mike Lee (R-Utah), Dean Heller (R-Nev.), Jerry Moran (R-Kan.), Shelley Moore Capito (R-W.Va.), Rob Portman (R-Ohio), Cory Gardner (R-Colo.) and Lisa Murkowski (R-Alaska). **PROBABLE NOS:** Sens. Susan Collins (R-Maine) and Rand Paul (R-Ky.).

-- ALSO KEEP IN MIND: The Senate, at this point, doesn't even know what it's voting on. The order of amendments has been an open -- and critical -- question. Burgess,

SMK and Jen: "Republicans are strongly considering a strategy that would tee up two separate votes -- one on the repeal only and another on the plan the Senate has been working on to repeal and replace Obamacare. If one fails, 'you set up a vote on the other one,' said Sen. John Thune (R-S.D.). The theory behind the strategy is that by making that assurance, Republicans could pick up votes to start debate from ardent conservatives as well as waffling moderates."

-- AND WHAT'S NEXT? If the Senate passes something, does Speaker Paul Ryan keep the House in to try to pass it? Or does he move to go into conference -- the formal negotiating process between the House and Senate that could force the conversation about health care for months. There would be tremendous pressure to do something.

VP MIKE PENCE met with McConnell last night, and his office is touting the outside groups supporting voting for the motion to proceed. ***The list*** http://politi.co/2vVrL13

THE PRESIDENT, LATE MONDAY NIGHT: @realDonaldTrump at **10:23 p.m.:** "The Amazon Washington Post fabricated the facts on my ending massive, dangerous, and wasteful payments to Syrian rebels fighting Assad....." ... **at 10:28 p.m.:** "So many stories about me in the @washingtonpost are Fake News. They are as bad as ratings challenged @CNN. Lobbyist for Amazon and taxes?" ... **at 10:36 p.m.:** "Is Fake News Washington Post being used as a lobbyist weapon against Congress to keep Politicians from looking into Amazon no-tax monopoly?"

-- FOR THE RECORD: Amazon doesn't own the Washington Post. We've never heard a Post reporter care one iota about promoting policies that benefit Amazon. ... **ALSO: @adamgoldman:** "Did @realDonaldTrump just declassify @CIA program in Syria?"

****** **A message from BP: Our U.S. wind farms can generate enough electricity to power all the homes in a city the size of Philadelphia.** *Learn more in our Economic Impact Report.* ******

BACK ON THE TRAIL ... -- "From 'fake media' to Clinton, Trump brings political attacks to the Scout Jamboree," by WaPo's John Wagner and Jenna Johnson: "Ahead of President Trump's appearance Monday at the National Scout Jamboree in West Virginia, the troops were offered some advice on the gathering's official blog: Fully hydrate. Be 'courteous' and 'kind.' And avoid the kind of divisive chants heard during the 2016 campaign such as 'build the wall' and 'lock her up.' But from the moment he took the stage, Trump - who was never a Scout himself but touted his role as the 'honorary president of the Boy Scouts of America' - started leading them down a very different path.

"Over the next 35 minutes, the president threatened to fire one of his Cabinet members, attacked former president Barack Obama, dissed his former rival Hillary Clinton, marveled at the size of the crowd, warned the boys about the 'fake media,' mocked pollsters and pundits, and said more people would say 'Merry Christmas' under his presidency. He also told a rambling tale about a famous, now-deceased home

builder that meandered from a Manhattan cocktail party to a yacht and then to places that the president would only allow the boys' imaginations to go." http://wapo.st/2tVYm5w

-- ACTUAL THING SAID BY THE PRESIDENT OF THE UNITED STATES TO BOY SCOUTS, telling the story of William Levitt, a failed developer: "He went personally bankrupt, and he was now much older. And I saw him at a cocktail party, and it was very sad because the hottest people in New York were at this party."

-- DID YOU EVER hear President Barack Obama talk about his victory over Mitt Romney eight months after the election? Did George W. Bush boast about beating John Kerry and Al Gore?

HOT ONLINE -- @TheDailyShow: "The Mooch did his homework" http://bit.ly/2uVevMw

THE SHAKEUP STORIES ...

-- "Trump shames Sessions amid shake-up speculation," by Josh Dawsey, Eliana Johnson, Nahal Toosi and Daniel Lippman: "Sessions was in the West Wing on Monday, though he didn't meet Trump, a White House spokeswoman said. New communications director Anthony Scaramucci told POLITICO the president remained upset. ... A George W. Bush administration National Security Council aide who remains in touch with the White House and a Trump transition aide separately said that, should he leave, [HR] McMaster would likely be replaced either by C.I.A. Director Mike Pompeo or by Bush's former United Nations Ambassador John Bolton. ... National Security Council staffers threw a surprise birthday party for McMaster early Monday evening on the balcony of the Eisenhower Executive Office Building.

"It was standing room only and paid for by the staffers ... Top aides Jared Kushner, Dina Powell and Tom Bossert attended the gathering, where there was singing and chocolate cake for the general, who turned 55 years old on Monday. ... One source familiar with conversations [Rex] Tillerson has had recently with associates said that Trump's top diplomat feels he is 'not being allowed to do his job' and is reconsidering how long he is willing to stay. Tillerson initially planned to stay for at least a year, the source said, but now 'he's no longer wedded to that idea.'" http://politi.co/2gZkuup

-- FOR WHAT IT'S WORTH: The buzz about Pompeo to the White House is widespread. But we hear he is very happy at the CIA and is not interested in a move. Could it happen? Sure. But people close to him see it as unlikely.

-- "New communications director moves toward possible staff purge at White House," by WaPo's Philip Rucker and Ashley Parker: "Anthony Scaramucci ... is exercising a broad mandate from the president and intends to follow through on threats to purge aides he believes are disloyal to Trump and leaking to the press, officials with knowledge of the fast-moving effort said Monday. Just four days into the job,

Scaramucci has moved into Trump's inner sanctum and is now described by some colleagues as almost family to the president -- in contrast to his predecessor, outgoing press secretary Sean Spicer, who was described more like the help. In consultation with confidants inside and outside the administration, Scaramucci has begun undertaking an audit of the White House's dozens of press and communications staffers.

"He is meeting one-on-one with aides in an effort to understand each person's contributions and weed out those he determines are not working hard enough to defend the president through the crises besieging the White House ... Scaramucci wants the communications shop focused on serving a single client -- the president -- and is looking outside of the White House to recruit new advisers with professional experience, especially on television. He is considering bringing on corporate communications specialists as well as people who have on-air experience ... Scaramucci has deep contacts at Fox News, where he was a paid contributor and hosted a weekly show on Fox Business Network. Wayne Berman, a longtime Republican operative whose name has been previously floated as a possible chief of staff, is scheduled to meet with Scaramucci on Tuesday at the White House." http://wapo.st/2eJHDRa

THE COUNTER NARRATIVE -- "Democrats sidestep social issues in new economic push," by Heather Caygle and Elana Schor in Berryville, Virginia: "Congressional Democratic leaders descended upon this rural Virginia town Monday to unveil a progressive economic package they say can win back working-class voters next November, even in red states. And noticeably missing, amid the talk of raising wages and reining in corporate interests, were the left-leaning stances on social issues that help form the backbone of the party, including immigration, abortion and LGBT rights.

"Senate Minority Leader Chuck Schumer (D-N.Y.) vowed that his party's red-state incumbents would largely embrace the new agenda - which, he acknowledged, purposefully avoids the social issues that have already opened a rift this year between the party's liberal base and centrist bloc. 'There is not that divide on economic issues,' Schumer told reporters as Massachusetts Sen. Elizabeth Warren, whose anti-corporate agenda influenced Democrats' new economic strategy, worked a small but adoring crowd in a county that went for Donald Trump by more than 55 percent last year. 'The focus starts on economic issues,' Schumer continued. 'That's where the American people are hurting. That's what we most felt was missing in the past in the last several elections.'" http://politi.co/2tV5Fdw

HOUSE DEMS FLEX MUSCLES -- "House Democrats stun GOP by sinking vets, intel bills," by Connor O'Brien: "House Democrats sank two key bills on the House floor Monday, embarrassing Republican leaders who were banking on the noncontroversial legislation sailing through - in a new sign of the opposition party's frustration with the majority's approach. Kicking off a busy week in the House, most Democrats and a handful of Republicans joined forces to deny GOP leaders big-enough majorities to pass an annual intelligence policy bill and legislation to restore funding for a key veterans health care program.

"Both bills came to the House floor Monday under suspension of the rules, an expedited process that allows for less than an hour of debate and no amendments but also requires a two-thirds majority for passage. The suspension process is typically used for noncontroversial bills that have broad bipartisan support. One suspension bill failing on the House floor is a rarity, but two back to back is extremely rare." http://politi.co/2tVsjm9

-- WORTH NOTING: Yes, this is just a short-term win for Democrats. Republicans will find another procedural way to move the legislation through the chamber. But, it is significant that Democrats banded together after House Minority Leader Nancy Pelosi sent a "Dear Colleague" letter to let force the intel bill to fail.

WHAT STEVE SCALISE TOLD HOUSE REPUBLICANS -- SCALISE is still in the hospital, but he dialed into the House Republican whip meeting. He told the crew that he's being well taken care of at Medstar Washington Hospital Center, and thanked Chief Deputy Whip Patrick McHenry (R-N.C.) for his hard work since the shooting.

TRUMP'S TUESDAY -- TRUMP has Lebanese Prime Minister Saad Hariri at the White House. They'll hold a press conference at 3 p.m. Trump and the first lady leave for Vienna, Ohio, at 4:25 p.m. and hold a political rally at 7:05 p.m. They return to the White House late tonight.

JOIN US IN DENVER! Anna and Jake are holding a special Playbook Exchange event in Denver with Colorado Gov. John Hickenlooper Aug. 1 at 5:30 p.m. MDT. ***RSVP:*** http://politi.co/2vElRC9

BIG IN JERUSALEM -- WSJ'S RORY JONES in Tel Aviv: **"Israel Removes Metal Detectors at Jerusalem Holy Site:** Dismantling of devices comes amid flurry of diplomacy by U.S. and Western officials after a weekend of violence": "Israel on Tuesday began removing metal detectors from one of Jerusalem's holiest sites, aiming to defuse tensions after their installation triggered widespread anger and protests among Palestinians and across the wider Arab world.

"The detectors were installed earlier this month after Arab gunmen shot dead two Israeli policeman at the site known to Jews as the Temple Mount compound and Muslims as the Noble Sanctuary. Their dismantling comes amid a flurry of diplomacy by U.S. and Western officials after a weekend of violence left three Israelis and at least three Palestinians dead. Israel said it would replace the detectors with sophisticated technology. The plan will be implemented in the coming months and include greater police presence around the entrance to the central Jerusalem site." http://on.wsj.com/2tVWGcp

-- AP at 3:58 a.m.: "JERUSALEM (AP) -- Senior cleric says Muslims asked to stay away

from Jerusalem shrine pending review of new Israeli security arrangements."

THE JUICE ...

-- GABRIEL SHERMAN TO JOIN VANITY FAIR - Per a Hadas Gold exclusive in Morning Media: "The tireless chronicler of Fox News and Roger Ailes is leaving his longtime home New York magazine to join Graydon Carter's domain at Condé Nast. Sherman will be a special correspondent, contributing regular features to the magazine while also writing for The Hive, Vanity Fair's business-focused digital site."

-- SPOTTED AT WWE MONDAY NIGHT RAW AT VERIZON CENTER: SBA Administrator Linda McMahon -- who was president and CEO of WWE -- and Andy Surabian, special assistant to the president and deputy to Steve Bannon. They were not seated together, but both were spotted near ringside. Surabian shook hands with D.C. rapper Wale.

-- JILL STEIN FOR PRESIDENT just filed a campaign finance report, which showed her campaign manager made $5,640 in June.

-- REP. ADAM SCHIFF (D-Calif.) is running promoted fundraising Tweets targeting Californians after Trump called him out on Twitter Monday morning by calling him "sleazy" and "totally biased." ***Screenshot*** http://bit.ly/2tyKO0j

-- FIRST IN PLAYBOOK: JOHN GANS, who was chief speechwriter to former Secretary of Defense Ash Carter and is now a lecturer at Johns Hopkins and a resident fellow at the German Marshall Fund, has signed a book deal with Liveright, a division of W.W. Norton, to publish a history of the White House NSC staff. Based on over 60 interviews including Dick Cheney, Zbigniew Brzezinski, Robert Gates and 10,000 original documents from nine presidential archives, "White House Warriors: How the National Security Council has Transformed the American Way of War" will be released next year.

Playbook Reads

PHOTO DU JOUR: President Donald J. Trump poses for photographs with an outgoing group of interns at the White House on July 24. | Chris Kleponis/Pool/Getty

WILLIAM D. COHAN in the NYT, "This Is Not the Mooch I Know": "Anthony has the skills to make a big difference in this White House. He is smart, generous and funny, open-minded and ambitious - but not in an obnoxious way. He cares about being able to disagree without being disagreeable. ... We have shared many beers at Bill's, on East 54th Street, debating our opposing political viewpoints and sharing our life experiences. ... But the Anthony Scaramucci I know and admire was not the Anthony Scaramucci

who stepped up to the lectern in the White House briefing room on Friday afternoon. Dressed to the nines in a navy blue power suit, he was sycophantic. He professed his 'love' for Mr. Trump over and over again -- six times, by one count. It was painful and embarrassing to watch." http://nyti.ms/2v2GA5o

-- ANDREW ROSS SORKIN: "Scaramucci on Trump: 'He's My Client'": "'I was left for dead on the street, and now I'm headed for Air Force One,' Mr. Scaramucci said by phone on Monday, literally on his way toward Air Force One for a quick trip with the president to Beaver, W.Va." http://nyti.ms/2eKuvuS

IN FOGGY BOTTOM -- "After Heated Clash With White House, Tillerson Eyes New Pick For Top Asia Envoy," by BuzzFeed's John Hudson: "Olin Wethington, a former Treasury Department official and a nonresident fellow at the Atlantic Council, is now a contender for the nomination of assistant secretary of state for East Asian and Pacific Affairs, four individuals familiar with the matter said. ... Tillerson originally wanted the job to go to Susan Thornton, a veteran diplomat who speaks Mandarin Chinese, two U.S. officials told BuzzFeed News. But White House officials opposed her due to concerns that her views were out of step with the president's agenda - a claim State Department officials deny." http://bzfd.it/2ut6EFA

BEHIND CLOSED DOORS -- "Source: Nunes likely to attend Kushner interview," by Kyle Cheney: "House intelligence committee chairman Devin Nunes - who stepped aside from the House's Russia probe amid partisan infighting - is expected to attend Tuesday's highly anticipated closed door interview of Jared Kushner, according to a GOP source. Nunes handed off leadership of the probe in April after the House Ethics Committee announced an inquiry into Nunes' handling of classified information, allegations Nunes said were a meritless ploy driven by liberal activists. Rep. Mike Conaway (R-Texas) has led the probe since then, aided by GOP Reps. Trey Gowdy (R-S.C) and Tom Rooney (R-Fla.)." http://politi.co/2vEmLP3

ISAAC DOVERE PODCAST -- The Terminator heads to the Supreme Court -- "Where is your machine?" Arnold Schwarzenegger asked Isaac Dovere, as they got ready to record Tuesday's Off Message podcast. "Go get your machine!" Once the machine was on, he explained how his political philosophy works, by way of how he came to be such a big afterschool program advocate. "There's the Austrian Arnold and the American Arnold. The American Arnold, the Republican, says, 'You've got to go. Don't help those kids. The parents should go home and they should do their job,'" he said. "So then it's the other Arnold, the Austrian Arnold that says, 'No, no. That's not the way we would do it over there.' ... They fight all the time. All the time, it's wild."

And for all his arguments with Trump, he said he hasn't given up hope. Trump has "really great potential, because I think that people still like him and I think that people want him to do well, especially his constituents." Trump can win over converts "by just making some adjustments," he said. The only politician he said he admires: Mike Bloomberg. Isaac suggested their work together was like a Twins sequel, and Schwarzenegger agreed, though "I didn't tell him that because otherwise, he feels like

he's the short guy and Michael Bloomberg doesn't like that." And will he be back? Only if California changes the state constitution to let him run for governor again. Drop the Senate run rumors forever, he said: "Why would I run for Senate? To be one of 100 here? That's not my style." http://politi.co/2uSQkyR

COMING ATTRACTIONS - "CBSN: On Assignment" premieres next Monday at 10 p.m. on CBS and CBSN. The episode will look at "how ISIS leaders turned a generation of kids into potential killers. The episode also will explore how Japan is using robots to repopulate and how foreign contractors are committing visa fraud to expand auto plants across the country." ***Video preview*** http://cbsn.ws/2vSxXqG

MEDIAWATCH -- NEW VARIETY COVER - "The Sinclair Scare: David Smith is building the biggest TV station business in America with an eye to innovating the entire industry. But his company has come under fire as a right-wing propaganda machine". http://bit.ly/2eKB6Wm ... ***The cover*** http://politi.co/2uSTl25

--JOE POMPEO's debut in Vanity Fair, "The Agony and the Anxiety of the New York Times": "As one editor put it, 'The mood at the paper is poisonous in a way I've never seen it in the past 15 years.' The ostensible reason is that the Times is undergoing yet another round of buyouts, set to be finalized on Thursday. ... [T]he Times's midtown Manhattan headquarters is itself being upended, shrinking by eight floors and leaving all but the highest of editors without private offices. ... At its core, the Times's internal transformation focuses on upending the paper's copy desk. ...

"For decades, the copy desk has been an all-seeing, all-powerful enforcer of Times standards and verbal peculiarities. As much as the reporters, writers, and editors, it's what makes the Times the Times. The traditional desk structure allowed for multiple eyes to be placed on every story-checking, tweaking, standardizing, changing 'dads' to 'fathers' and discouraging the use of 'launch' unless it involved a rocket, or perhaps a boat. ... In the reorganization, the copy desk is being eliminated as a freestanding entity. ... The Times's 109 copy editors were invited to re-apply for jobs under the new system, and those who didn't make the cut were encouraged to apply for buyout packages that also were offered to reporters and other editors."

--ANOTHER INTERESTING NUGGET FROM JOE'S STORY: "Insiders say the baton pass from longtime publisher Arthur Sulzberger Jr. to his 36-year-old son, A.G. Sulzberger, is beginning to feel imminent." http://bit.ly/2v2Lb82

Playbookers

SPOTTED: Anthony Scaramucci last night outside the Trump hotel - ***photo credit: David Bossie*** http://bit.ly/2eK16ko (h/t @leslieshedd) ... Sen. Al Franken last night leaving Senart's Oyster & Grill room in Eastern Market ... former Sen. Norm Coleman (R-Minn.) yesterday leaving Speaker Paul Ryan's office with RJC board delegation and

entering Senate Majority Leader Mitch McConnell's office in the Capitol. ***Pic*** http://bit.ly/2ty2lWA

TRANSITIONS -- Paul Brinkley, former deputy undersecretary of Defense in the Bush and Obama administration, is partnering with former Senate Armed Services senior staffer William Greenwalt on a new investment firm that will provide capital and expertise to tech companies that serve the aerospace and defense markets. ... **Robert Scher** has been named head of international affairs at BP America. He has most recently served as the assistant secretary of defense for strategy, plans, and capabilities. ... Express Scripts has promoted **Gary Kline** to VP of federal government affairs. ...

... **Dominique McKay** has been named press secretary for Sen. John Thune (R-S.D.) at the Senate Republican Conference. McKay previously was deputy press secretary at the House Committee on Education and the Workforce. ... **Adam Scheidler** has been named creative director for the Senate Republican Conference. He currently is digital communications director at the House Committee on Financial Services.

ENGAGED - Jason Weinstein, managing director at Targeted Victory, recently proposed to **Jen Harrington,** who runs Conservative Connector, a Nevada and Wisconsin campaign veteran and a Bush 43 WH alum. "Sam Osborne and Matthias Reynolds introduced us in 2015. I asked Sam to make sure she invited Jen to more group outings so we could hang out. We went on our first date in June 2015 and have been together ever since." **How he proposed:** [W]e were playing card games after dinner at our favorite restaurant Epic. As Jen flipped over cards she saw the message 'Will You Marry Me?'." ***Pics*** http://bit.ly/2ty40vc ... http://bit.ly/2eJY4gg

WEEKEND WEDDING -- Becket Adams and **Anneke Green** got married on Sunday at Christ Our Shepherd Church by the Rev. Stuart McAlpine followed by luncheon at Le Diplomate. The bride is senior director at the White House Writers Group, a columnist at RealClearPolitics, and a contributor to BBC News "who broke away from wedding festivities to offer commentary on Sean Spicer's resignation from the White House." The groom is a media critic and political commentary writer at the Washington Examiner "whose access to Twitter is being taken away for the duration of the honeymoon in Southeast Asia. ... Guests left with full bellies and favors of whole coffee beans by Washington, D.C. roastery Small Plains and 'Wedding Tea' by Harney and Sons." ***Pic*** http://bit.ly/2tW6qD8

WELCOME TO THE WORLD - OBAMA ALUMNI: Corey Then, who served for four years in the Obama Administration and is now associate general counsel at Edward Jones Investments, and **Lauren DeSantis-Then,** a partner at Polsinelli law firm, on Bastille Day, July 14, 2017, welcomed their second child, Francesa Lucia Then. "Francesca is pretty and perfect and Mom is doing well." Corey Then served as deputy associate counsel at the White House, special assistant to the President and deputy general counsel at the Department of Agriculture, and the family recently moved to St. Louis, Lauren's hometown. ***Pics*** http://politi.co/2vViarg ... http://politi.co/2uS9mp4

By Michael Calderone | 10/05/2017 05:40 AM EDT

"WE'RE THE NERDIEST TOURING BAND IN HISTORY," Tommy Vietor told me Wednesday while he, Jon Favreau and Jon Lovett were en route to Madison, Wisconsin. The Obama White House veterans and "Pod Save America" hosts are kicking off their 10-city tour in Madison tonight, a road trip Vietor hopes can help engage people around politics and register voters.

-- "We come from a progressive perspective, but we want to appeal to anyone who is interested in politics and doesn't want to hear the same canned bulls--t you hear on cable," Vietor said. The trio's frank approach to this chaotic political moment has helped propel "Pod Save America" to more than 100 million downloads since its January launch, according to the company.

-- Vietor chalked up the early success of their company, Crooked Media, to "a combination of luck, timing and good content," along with the low barrier to entry in the podcast game. That allowed them to quickly launch shows with journalist Ana Marie Cox and activist DeRay Mckesson. On Wednesday, the company announced its expansion with a new podcast, contributors network and website, Crooked.com.

-- Fellow Obama veterans Alyssa Mastromonaco, Ben Rhodes, and Dan Pfeiffer, who already serves as podcast co-host, are part of the contributors network, which also includes Daily Beast culture writer Ira Madison III, author Julissa Arce, and Republican strategist Tim Miller. New Republic senior editor Brian Beutler has joined as editor-in-chief of the site. Despite hiring a well-known political writer, Vietor said "they're not going to try to get into a big volume journalism game." They wanted Beutler's writing on the site, he said, because it "cuts to the heart" of issues.

-- Though Vietor joked that his touring group is the only one to request WiFi in its rider, the company does boast a business model closer to today's professional musicians than most media companies. In addition to podcast ads, Crooked Media's other two main sources of revenue are merchandise and live events.

Good morning and welcome to Morning Media. Now I'm thinking the newsletter should go on the road. For now, I'll remain tethered to a computer at mcalderone@politico.com and @mlcalderone. Morning Media is edited by Alex Weprin (@alexweprin), with assistance from Daniel Lippman (@dlippman) and Cristiano Lima (@ludacristiano). Archives. Subscribe.

ADAM ENTOUS TO THE NEW YORKER? I'm hearing that star Washington Post national security reporter Adam Entous is heading to The New Yorker as a staff writer. The award-winning journalist joined the Post a year ago from The Wall Street Journal. Entous declined to

comment.

"AN AUDIENCE OF TRUMP": Secretary of State Rex Tillerson made a rare appearance before reporters to push back against an NBC News report claiming he had been on the verge of resigning and that he once referred to Trump as a "moron." Tillerson notably didn't deny calling Trump a "moron," instead saying he didn't want to address "petty stuff." (CNN said it also confirmed the "moron" jab.)

-- "Tillerson basically called a news conference to praise Trump for an audience of Trump," POLITICO's Josh Dawsey noted. The president was indeed watching and jumped on Twitter immediately to claim that Tillerson "totally refuted" the NBC News report and the network "should issue an apology to AMERICA!"

-- Stephanie Ruhle, one of the reporters on the story, responded on MSNBC that Tillerson actually called the president a "f---ing moron," according to her sources. And Hallie Jackson said that it was "safe to say NBC News will not be issuing an apology to America."

SOUND BITE:

"Congrats to NBC News on surpassing CNN on the Trump most dishonest list. We had a good run atop the power rankings." [Andrew Kaczynski]

FOX & FRIENDS, NOW WITH MORE FRIENDS -- Alex Weprin writes: "Fox & Friends," the president's favorite morning show, is expanding to five hours per day, up from the four it currently airs. The new hour will be part of the "Fox & Friends First" franchise, and will start at 4 a.m. The regular edition of "Fox & Friends" starts at 6 a.m.

-- Heather Childers will host the 4 a.m. hour of the program, with Jillian Mele and Rob Schmitt anchoring from 5 to 6 a.m. The new show will start Monday, Oct. 9. When Fox News adds its new 11 p.m. hour hosted by Shannon Bream on Oct. 30, Fox News will have live programming 20 hours per day.

HOW POLITICO TRACKED PRICE'S PLANE -- Dan Diamond and Rachana Pradhan describe their reporting that led to Tom Price's resignation: "It was a tip and little else -- no times, no names of charter services and not even a schedule from a notoriously secretive cabinet secretary. So we embarked on a months-long effort to win the trust of sources, both in and outside of HHS, who were in a position to know about the secretary's travel. This required numerous meetings and phone calls, sometimes after hours, seeking to confirm what the original source acknowledged was just second-hand information. Neither of us had ever reported a story of this difficulty before."

-- "It's a victory...for very narrowly focused beat reporting," The Washington Post's Erik Wemple wrote of the Politico scoop. Columbia professor Bill Grueskin agreed: "Yes. A million times, yes."

FOUR JOURNALISTS ARRESTED COVERING ST. LOUIS PROTEST -- Cristiano Lima

writes: The Young Turks political reporter Jordan Chariton and his cameraman Ty Bayliss were detained overnight after covering protests over the September acquittal of Jason Stockley, a white former cop who fatally shot Anthony Lamar Smith, a black man. Two other members of the media were also detained.

-- "St. Louis PD are out of control and all eyes must be on them," Chariton tweeted. The reporter also said they had not yet been brought on formal charges and have since been released, and alluded to as many as seven other journalists potentially being held overnight, though the claim has not yet been verified. According to the U.S. Press Freedom Tracker, the charges would bring the total number of journalists facing legal action this year to 16.

LOS ANGELES TIMES TRYING TO UNIONIZE, reports NYT's Sydney Ember: "Several people involved in the organizing push, all of whom spoke on condition of anonymity because they feared losing their jobs if they were to speak publicly about the effort, put the number of those who had signed the union cards at roughly 200."

-- The Chandler family, the California paper's longtime stewards before The Tribune Company (and now Tronc), was notoriously anti-union. In retaliation, union activists even bombed the Times' building just over a century ago.

WILL JEFF ZUCKER SURVIVE THE AT&T TAKEOVER? AT&T CEO Randall Stephenson said Wednesday that he aims to keep management as is following the Time Warner merger, but didn't say anything definitive about CNN chief Jeff Zucker. Vanity Fair's Sarah Ellison previously reported that CNN insiders are concerned that Zucker could be ousted from the channel once the deal closes. "We're paying a premium to get Time Warner, and when you pay a big premium, the priority is to not screw it up," Stephenson said at Vanity Fair's New Establishment Summit. "CNN's doing quite well, and the priority is to keep management teams in place... there will invariably be changes, but the hope is to keep the team in place."

RUPERT MURDOCH BATTLES BIG TECH: Back when media prognosticators were saying "information wants to be free" and publishers were still hesitant to charge for journalism, Rupert Murdoch was walling off much of News Corp.'s online content. Once out of step, Murdoch's antagonism toward tech titans has now made him a "hero" in the news business, reports BuzzFeed's Steven Perlberg and Mark Di Stefano.

-- "Murdoch and his chief newspaper lieutenant, News Corp. CEO Robert Thomson, have taken a central role in the news industry's corporate war against Facebook and Google, technology leviathans that have eaten journalism's business model and forever changed how readers consume information," they write.

HARVEY WEINSTEIN PREPARING FOR LEGAL BATTLE: The film mogul is assembling a powerhouse team as The New York Times and The New Yorker ready pieces, according to The Hollywood Reporter: "In addition to his usual attorney David Boies, Weinstein also has engaged Lisa Bloom, a Woodland Hills, Calif.-based lawyer and television personality specializing in sexual harassment cases (and the daughter of Gloria Allred), as well as Charles Harder, the Beverly Hills-based litigator who represented Hulk Hogan in the invasion of privacy

trial that brought down the Gawker website. Other lawyers also are said to be advising the mogul."

LAS VEGAS CONSPIRACY VIDEOS SPREAD ON YOUTUBE -- BuzzFeed's Charlie Warzel: One possible explanation for the glut of conspiracy content in the aftermath of the shooting is that there was simply a lack of reliable information being uploaded - vetted news reports from trusted outlets often take longer. However, the problem persisted long after reliable reports were available: On Tuesday night - nearly 48 hours after the shooting began - YouTube was still surfacing conspiratorial content high in search results.

NEWSWEEK RETRACTS STORY ON SHOOTER'S GIRLFRIEND: The magazine noted: "The initial report was based on the marriage record of [Marilou] Danley, who was known under a different name when she married Geary Danley in Clark County, Nevada. Newsweek mistakenly matched that record to a second public record of a different person."

BEYOND LAS VEGAS: I wrote Tuesday on the "grim routine" of covering mass shootings. At The Columbia Journalism Review, Karen K. Ho and Alexandria Neason are urging news organizations to resist now all-too-common ways of framing such deadly events after finding patterns in coverage. "As mass shootings become an increasingly common fixture of American life, and subsequently of American news coverage," they write, "journalists are uniquely poised to help shake the public discourse as repeat traumas threaten to desensitize us."

REVOLVING DOOR:

Warren Bass, a senior editor at the Wall Street Journal's weekend Review section, is joining Penguin Press as executive editor. He previously worked at the Washington Post and the State Department and served on the staff of the 9/11 Commission.

EXTRAS:

-- Facebook and Twitter to testify before Congress on Russia and the 2016 election.

-- Breitbart's Steve Bannon is reportedly backing Michael Grimm, the former New York Congressman and convicted felon trying to take back his old seat. (Grimm also once threatened to break a NY1 reporter in half for asking questions he didn't like).

-- New York Times political reporter Jeremy Peters returns to St. Thomas -- where he once worked for the Virgin Islands Daily New -- to cover the aftermath of two hurricanes.

-- Malcolm Gladwell edited Car and Driver magazine's package on self-driving cars.

-- ESPN is developing late-night show off the "Pardon My Take" podcast.

KICKER

"One legitimate criticism of the political press over the last two decades has been the appearance

of coziness between people in the media and the political elite. It's a lot easier for me, say, as a sports fan to accept a personal fandom, whereas in politics, I'm not going to tell anybody whom I vote for, not even my kids, who ask me all the time, because their friends ask them." -- *NBC's Chuck Todd to the New York Times Magazine.*

Subject: Pruitt dodges questions about Trump's climate beliefs

By Alex Guillén

06/02/2017 02:35 PM EDT

EPA Administrator Scott Pruitt repeatedly declined to say whether President Donald Trump believes in the science of climate change, arguing instead that the administration's focus has been on the disadvantages of the Paris agreement.

Trump has repeatedly dismissed the overwhelming scientific consensus that human activity is causing climate change, calling it a hoax designed to disadvantage U.S. businesses. Trump has not disavowed that view, but the White House refuses to say if he still holds it.

"All the discussions we've had for the last several weeks have been focused on one singular issue: Is Paris good or not for this country? That's the discussions I've had with the president," Pruitt said today at the White House's daily briefing when asked about Trump's views.

"The focus remained on whether Paris put us at a disadvantage, and in fact it did; it put us at an economic disadvantage," he added.

Pruitt did not say whether or how Trump weighed the economic risks posed by climate change itself.

Asked about his personal views, Pruitt repeated his position that human activity's contributions to climate change are difficult to measure with precision, and suggested that his critics are "climate exaggerators."

"What the American people deserve is a debate, objective, transparent discussion about this issue," Pruitt said. "What Paris represents is an international agreement this put this country at a disadvantage with very little benefit environmentally across the globe."

Press Secretary Sean Spicer later declined to answer questions about Trump's position. "I have not had an opportunity to have that discussion," he said.

Subject: POLITICO's Morning Transportation: No, the infrastructure principles were 'among' the bushes — How 'bout that budget — At least one proposal would take a political toll

By Brianna Gurciullo and Tanya Snyder | 05/24/2017 10:01 AM EDT

With help from Kathryn A. Wolfe, Lauren Gardner and Stephanie Beasley

NO, IT WAS 'AMONG' THE BUSHES: For a plan touted as much as the administration's $1 trillion infrastructure vision has been, Tuesday's rollout was surprisingly quiet, posted with no notice alongside the fiscal 2018 budget as a "fact sheet." Is this the "statement of principles" Transportation Secretary Elaine Chao has been promising? (Peanut gallery: It does contain a section called "Key Principles.") On a call with reporters, Chao said the administration expects more details to be forthcoming, including a legislative package later this year, but described the fact sheet as "the main key principles." Lauren Gardner has more for Pros about the low-key bomb dropped with the budget on Tuesday.

THE NITTY GRITTY: So just what are these principles? Targeting federal investments to the "most transformative" projects; supporting states "moving toward a model of independence" from the feds; looking for opportunities to "divest ... certain functions" to the private sector; and leveraging private sector capital. The fact sheet also calls for overhauling the Inland Waterways Trust Fund; expanding the TIFIA program; lifting the cap on private activity bonds and expanding their eligibility; allowing more tolling on existing Interstates and rest area privatization; and, of course, more streamlining.

WE HAVE A WINNER: There are three winners, in fact. MT asked you all to guess when the Trump administration would unveil its infrastructure proposal, and we're counting the principles that were included with the budget release Tuesday. Patrick Wojahn, Bruce Upbin and Scott Harshman all guessed May 23, 2017.

THEIR PRIZE: Coffee and donuts with us.

IT'S WEDNESDAY: Thanks for tuning in to POLITICO's Morning Transportation, your daily tipsheet on all things trains, planes, automobiles and ports. We are your MT hosts today, so please send tips, feedback and lyrics to tsnyder@politico.com or @TSnyderDC and bgurciullo@politico.com or @brigurciullo.

"Let the taxes rise, we'll economize and cut our budget in two / We can trade the car in for a horse or a bicycle built for two."

Want to keep up with MT's song picks? Follow our Spotify playlist.

HOW 'BOUT THAT BUDGET: As expected, the fiscal 2018 budget request hewed to FAST Act-guaranteed levels ($11 billion for transit formula grants and $44 billion for highways, for instance), but the 13 percent in DOT discretionary cuts promised in the earlier "skinny" budget

did indeed materialize. That includes a $1 billion cut to New Starts transit grants and defunding the TIGER grant program, doing away with appropriations for the Essential Air Service (leaving it to rely only on overflight fees), and deep cuts to Amtrak.

Blame it on the train: The budget request would peg Amtrak's Northeast Corridor funding at $235 million, which, as Lauren reports, "the document suggests would be steady funding from fiscal 2017" - but that's the level authorized by the FAST Act; the recently enacted fiscal 2017 spending deal included $328 million for the NEC, which in fact means a cut. And that's as generous as the budget gets when it comes to Amtrak. It also slashes support for the national network by nearly 55 percent, essentially eliminating support for long-distance routes and funding only state-supported routes.

DEM TEMPERATURE: Courtesy of Senate Minority Leader Chuck Schumer (D-N.Y.): "President Trump's campaign promises on infrastructure are crumbling faster than our roads and bridges. The president's proposal to slash American infrastructure investments is a job-killing, 180 degree turn away from his repeated promise of a trillion dollar infrastructure plan. The fuzzy math and sleight of hand can't hide the fact that the president's $200 billion plan is more than wiped out by other cuts to key infrastructure programs."

JUST THE STARTING LINE: "In all the time that I've been here, I've never seen a single president's budget survive the appropriations process," said Sen. Susan Collins (R-Maine).

IT WOULD TAKE A (POLITICAL) TOLL: One of the more explicit - and expected - pieces of the infrastructure "vision" released Tuesday is easing restrictions on tolling existing Interstates - but that's a difficult political proposition (and one that House Transportation Committee Chairman Bill Shuster (R-Pa.) has shied away from in the past.) Why? Because constituents are likely to chafe at the idea of paying to travel on a highway after years of driving on it for free, as Lauren reports.

Dems already wary: Sen. Patty Murray (D-Wash.), a senior member of the Senate Appropriations THUD subcommittee, told MT that the idea is unlikely to gain traction. "If you just tell people, 'You're going to pay a lot more out of your pocket personally for your commute to work,' I don't think that's going to go very far." And the Senate Commerce Committee's top Democrat, Bill Nelson (D-Fla.) told MT that "at the end of the day, the public will not stand for every traffic problem to be solved with a toll."

More pitchforks: The American Trucking Associations executive vice president for advocacy, Bill Sullivan, responded to the tolling proposal by saying the group encourages lawmakers and the administration to "look for more efficient and sustainable funding mechanisms for this investment package," and noted that states like North Carolina and Virginia have deserted efforts to toll existing Interstates. The group that represents truck stop operators, the National Association of Truck Stop Operators, also came out against the tolling idea, as well as one related to rest stop privatization.

'CHRISTMAS MORNING' ALL OVER AGAIN? The administration used the budget as an opportunity to express support for separating air traffic control operations from the FAA - but

went a bit farther than before, explicitly praising Shuster's bill in a separate three-page fact sheet extolling the plan's virtues. The document calls Shuster's plan "an excellent starting point" and asserts it would maintain "this country's sterling aviation safety record." Shuster told reporters Tuesday that he got "smacked around" for saying last time that Trump's budget shout-out to separating air traffic control felt like "Christmas morning," but no doubt Shuster's pleased at the endorsement.

Smooth sailing ahead: The Trump administration also wants to overhaul the governance of the Inland Waterways Trust Fund and increase the user fee paid by commercial navigation. "In 1986, the Congress mandated that commercial traffic on the inland waterways be responsible for 50 percent of the capital costs of the locks, dams, and other features that make barge transportation possible on the inland waterways," the principles document says. "The additional revenue proposed in the budget will finance future capital investments in these waterways to support economic growth."

Everybody loves TIFIA: MAP-21 boosted the TIFIA loan program from about $100 million to $1 billion - but the FAST Act then cut it back down to $275 million for this fiscal year. The infrastructure fact sheet suggests the administration wants to go back to $1 billion a year for 10 years, an investment it says "could leverage up to $140 billion in credit assistance, and approximately $424 billion in total investment." It also says the administration supports expanded eligibility for TIFIA loans, but doesn't specify what requirements it'd like to relax - whether it be project size, creditworthiness or something else.

SIGNED, SEALED, DELIVERED: The CEO of Caltrain signed off on a $647 million full funding grant agreement with FTA at DOT headquarters Tuesday. Expect to hear more about DOT's fiscal 2018 recommendations for projects pending in the Capital Investment Grant program today.

Nothing new: Meanwhile, FTA quietly posted its fiscal 2018 Capital Investment Grant annual report online Tuesday night and, as expected, recommended no funding for any new full funding grant agreements for projects winding through the pipeline. The report proposes funding projects with existing deals at $1.1 billion, with nearly $112 million left over to cover both Caltrain and Maryland's Purple Line project if it's able to move forward.

MAY FLOWERS BRING JUNE FAA BILLS? Rep. Sam Graves (R-Mo.) told MT on Tuesday that he expects the House Transportation Committee to mark up an FAA bill sometime next month, though a timeline is still unclear as Shuster continues working on the measure. We caught up with Shuster off the House floor, too, but he wouldn't comment on a timeline for the bill or elaborate on any changes he's considering to a bill for this year.

NO BUDGING ON TSA CUTS: Besides wanting TSA to hire 382 new airport screeners, the White House doesn't seem to have changed its mind about downsizing the agency's staff since releasing a budget outline in March, our Stephanie Beasley reports. Trump's budget would cut TSA staff at airport exit lanes and reduce the number of bomb-sniffing dog teams from 31 to eight. That's a sharp contrast to Congress' approach. TSA also would be forced to hire at a reduced rate under Trump's plan, which calls for the agency to make only one hire for every two

vacancies.

Another crowd pleaser: Like the skinny budget, Trump's full budget calls for increasing the TSA airline passenger security fee from $5.60 per one-way trip to $6.60. A Department of Homeland Security official told reporters on a call Tuesday that revenues from the fee "would directly go to our ongoing efforts to mitigate current aviation threats."

MO FUNDING, MO FEES: The DHS budget would grow about 7 percent to $44 billion if Trump's proposal became law. Customs and immigrations fees would rise while spending would focus on increasing security along the border with Mexico, with $2.6 billion requested for that purpose. Trump also requested at least $300 million to boost hiring at Customs and Border Protection and Immigration and Customs Enforcement. But as Steph reports, it's remains unknown how much money would go toward hiring Customers offices at airports and seaports.

Cut off: In addition, the White House wants to get rid of BrandUSA. The travel industry has been quick to come to the defense of the U.S. travel advertising program. On Tuesday, the American Bus Association called Trump's proposal "short-sighted," and described BrandUSA as "one of the most successful public-private partnerships out there."

NO LOVE FOR USACE: Under Trump's budget, the Army Corps of Engineers would see its budget cut by more than 16 percent, as Pro Energy's Annie Snider reports. "The nation's builder of locks, dams, levees and ports would receive $5 billion under the Trump budget proposal, with $1.02 billion tagged for its all-important construction account, a cut of more than 50 percent from 2017, when additional disaster funds were appropriated," Annie writes.

PAPERWORK NUGGETS: DOT undersecretary for policy nominee Derek Kan said in his disclosure paperwork for the Senate Commerce Committee that he'll resign from his position on the Amtrak board of directors if he's confirmed by the Senate. And here's a fun fact we dug up from Adam Sullivan's disclosure: The prospective assistant secretary for government affairs donated $1,000 to Sen. Bill Nelson's campaign in 2007. The Florida Democrat is the ranking member of the Commerce Committee.

ON ALERT: Following the bombing earlier this week in Manchester, England, Rep. Michael McCaul (R-Texas), the chairman of the House Homeland Security Committee, said on Fox News on Tuesday that the government needs to take a closer look at people traveling to the United States through Europe. As Steph reports, McCaul's panel recently formed a task force that is studying loopholes in the Via Waiver Program, which lets visitors from some European nations come into the United States with no visa.

A NEW DIESELGATE? The federal government is suing Fiat Chrysler for allegedly selling nearly 104,000 diesel vehicles in which so-called defeat devices were installed. Pro Energy's Alex Guillén writes : "Those defeat devices, consisting of at least eight software features that were undisclosed to EPA during the company's certification process, boost performance under real-world driving conditions by increasing nitrogen oxide emissions, according to DOJ. Fiat Chrysler faces fines of $37,500 to $45,268 per vehicle sold, along with further penalties for each undisclosed software device and for reporting violations, which could add up to billions of

dollars."

2-for-1: 0, Plaintiffs: 1: A lawsuit from three public-interest organizations against Trump's two-for-one rule on regulations can go forward, POLITICO's Josh Gerstein and Alex Guillén report.

THE AUTOBAHN:

- "Bombing suspect is named, and Britain goes on high alert." The New York Times.

- "Trump advisers call for privatizing some public assets to build new infrastructure." The Washington Post.

- "New Jersey's Newark Airport reopens after plane engine fire." The Associated Press.

- "Christie, Cuomo plot out transit plans as 'summer of hell' looms." POLITICO New Jersey/New York.

- "Ryanair ready to step in if Alitalia goes bust." POLITICO Europe.

- "Drone, robot advocates push for automated package delivery." SF Gate.

- "Proposed rules would allow U.S. to track and destroy drones." The New York Times.

- "Uber shortchanged New York City drivers by millions of dollars." The Wall Street Journal.

THE COUNTDOWN: DOT appropriations run out in 130 days. The FAA reauthorization expires in 130 days. Highway and transit policy is up for renewal in 1,226 days.

From: InsideEPA/climate
Sent: Mon 6/5/2017 9:16:58 PM
Subject: Today on Climate Beat

June 5, 2017

Today on Climate Beat . . .

. . . we watched TV, reporting that EPA Administrator Scott Pruitt appeared on three of the Sunday talk shows to defend President Donald Trump's decision to exit the United Nations Paris Agreement on climate change, but many of his statements are being questioned or criticized.

Our daily news roundup also looked at the takeaways from Pruitt's publicity blast, while offering several don't-miss stories from the weekend.

Speaking of Paris, Secretary of State Rex Tillerson underscored the administration's politically awkward position on climate change, urging observers to keep the Paris deal rejection "in perspective" because "I don't think we're going to change our ongoing efforts to reduce [GHG] emissions in the future."

And in court, the Department of Justice is refusing to answer discovery-related questions from attorneys for youth plaintiffs pursuing a constitutional climate change case against the federal government.

Subject: POLITICO's Morning Score: Alabama donor forms anti-Strange PAC — RNC signs off on pro-Strange funding — House Democratic PAC launches research campaign on working-class white voters

By Elena Schneider | 06/30/2017 10:00 AM EDT

With Kevin Robillard and Scott Bland

The following newsletter is an abridged version of Campaign Pro's Morning Score. For an earlier morning read on exponentially more races - and for a more comprehensive aggregation of the day's most important campaign news - sign up for Campaign Pro today. (http://www.politicopro.com/proinfo)

PROGRAMMING NOTE - Due to the July Fourth holiday, Morning Score will not publish on Monday July 3 and Tuesday July 4. Our next Morning Score will publish on Wednesday July 5.

MAKE IT RAIN - "Alabama donor forms anti-Strange PAC," by Campaign Pro's Maggie Severns and Daniel Strauss: "A bombastic Alabama real estate developer has formed a new PAC devoted to defeating GOP Sen. Luther Strange in the upcoming Alabama Senate special election. Stan Pate, a Tuscaloosa Republican and longtime adversary of Strange, on Wednesday registered a PAC called the Swamp Drainers Foundation that he'll use to spend enthusiastically against Strange in the months ahead, Pate told POLITICO. Pate's decision to get involved in the race is the latest twist in an increasingly expensive contest. Strange, who was appointed to replace Attorney General Jeff Sessions in the Senate earlier this year, has the backing of Senate Majority Leader Mitch McConnell, the NRSC and Senate Leadership Fund, the McConnell-aligned super PAC which has already reserved $2 million in pro-Strange advertising. Strange is expected to have a big financial advantage over his opponents in the Aug. 15 GOP primary, including Rep. Mo Brooks and former state Supreme Court Chief Justice Roy Moore, but Pate's riches could rebalance the scales." **Full story.**

- "RNC signs off on funding for Alabama special election," by POLITICO's Alex Isenstadt: "The Republican National Committee has green-lighted funding for the upcoming Alabama special election - a long-delayed move that in recent days had become a point of contention between Senate Republicans and the White House. ... The approval, which was confirmed by three senior Republicans, is rooted in byzantine campaign finance rules - yet it involved weeks of closed-door talks, inflamed tensions between Senate GOP leaders and the administration, and touched on a central issue: how the insurgent-minded Trump White House will approach party primaries." **Full story.**

- DEMOCRATS HOLD OUT SLIVER OF HOPE - "A Democratic Senator in deep red Alabama? At Doug Jones rally, optimism flourishes," via AL.com. Full story.

SUMMER PROJECT - "House Democratic PAC launches research campaign on working-class white voters," by Campaign Pro's Scott Bland: "House Majority PAC, the main Democratic super PAC involved in House races, has launched a major project studying white

working-class voters ahead of the 2018 elections, looking to arrest Democratic losses with the key demographic. The research is a sequel to an effort the super PAC ran in 2016, when it combined focus group interviews and a large-scale series of polls examining the views of whites without college degrees in key congressional districts. ... The follow-up reflects growing recognition among Democrats that their party cannot win back political power in Washington or many states without many more votes from whites without college degrees. 'We have to make a broad economic appeal to working men and women across the country. HMP has been committed to this effort,' House Majority PAC executive director Charlie Kelly said. 'We have ability to make a real economic case this cycle, and our goal is to help focus back on economic issues that have traditionally been the hallmark of the Democratic Party.'" **Full story.**

- HOT DOC - Third Way is out with a new report arguing Democrats need to go beyond suburban districts to take back the house. Full report here.

2018 WATCH - "Uproar over Senate health bill puts Flake's re-election in focus," by The Arizona Republic's Dan Nowicki: State Rep. Randy Friese, "who is perhaps best known statewide for his role in saving the life of then-U.S. Rep. Gabrielle Giffords after a near-fatal 2011 assassination attempt, confirmed to The Arizona Republic he is taking a serious look at challenging Flake. ... Earlier in the week, Phoenix Mayor Greg Stanton, whose name also has started coming up as a possible Democratic Senate candidate, unloaded on the Republican legislation at another Arizona event expressing opposition to the Senate GOP health-care bill. Stanton denounced the bill for pushing back Medicaid funding ... The mayor is expected to make a decision about his 2018 intentions this summer." **Full story.**

- Paul Soglin 'preparing' to run for governor, via The Wisconsin State Journal: "Inching closer to a bid for the state's highest office, Madison Mayor Paul Soglin said he is 'preparing' to both seek re-election and the Democratic nomination for governor."

- GOP state Rep. Mike Miller announces FL-07 run, via the Orlando Sentinel's Steven Lemongello: "The move kicks off what should be a closely-watched race for the Republican nomination in District 7," currently represented by freshman Democratic Rep. Stephanie Murphy. "... State Sen. David Simmons, R-Altamonte Springs, has also said he is considering a run for Congress in District 7. State Rep. Bob Cortes, R-Longwood, said he's sitting this race out." **Full story.**

Days until the 2017 election: 130.

Days until the 2018 election: 494.

AD WATCH - Judicial Crisis Network spending $140K pushing Stabenow on appeals court

nominee: The ads focus on Michigan Supreme Court Justice Joan Larsen, a Trump nominee to the Sixth Circuit Court of Appeals. The Michigan ad asks "why aren't Senators Stabenow and [Gary] Peters supporting her nomination to the US Court of Appeals? Partisan politics," the narrator says. Stabenow is one of 10 Trump-state Democrats up for reelection in 2018.

IT'S ALWAYS 2016 SOMEWHERE - "Republicans Left Ron Johnson for Dead Last Year, Now He Could Kill Their Health Care Bill," by the Daily Beast's Betsy Woodruff: "Johnson's announcement last week-along with three other lawmakers-surprised Washington insiders. But, according to Wisconsin Republican insiders, it shouldn't have been. After all, less than a year ago, those same Washington insiders left him for dead. ... A person who has discussed the NRSC's move with Johnson after Election Day told The Daily Beast he believes the senator 'is still mega-pissed about what McConnell and Leadership did to him during the Senate race.' 'This has been a long-stewing simmer for him, and after they cut him loose he was like, 'Screw them, I owe them nothing,'" the source continued." **Full story.**

STAFF CHANGES - "Pence to replace his chief of staff," by the New York Times' Maggie Haberman: "Pence's chief of staff, Josh Pitcock, will be replaced by Nick Ayers, a veteran political operative from Georgia who has been working with the vice president for three years. Mr. Ayers was the chief political strategist for Mr. Pence, then the governor of Indiana, when President Trump chose the governor as his running mate. ... Ayers has been one of the leaders of an outside group supporting the White House, America First Policies, which had been preparing a series of ads criticizing Senator Dean Heller, Republican of Nevada, for his anticipated no vote on the Senate's bill to replace the Affordable Care Act, also known as Obamacare." **Full story.**

- LOCAL ANGLE - "Nick Ayers is not running for governor" of Georgia, by the Atlanta Journal Constitution's Greg Bluestein: "Ayers has long been floated as a possible contender for the job, and several influential allies of President Donald Trump encouraged him to run. But he's decided against joining the crowded field." **Full story.**

- "Turner replaces Weaver as Our Revolution president," by Campaign Pro's Daniel Strauss: "Former Ohio state Sen. Nina Turner is taking over as president of Our Revolution, the outside group started by Sen. Bernie Sanders after the 2016 presidential campaign. Turner, who was a top Sanders surrogate during the campaign, replaces Jeff Weaver, Sanders' former presidential campaign manager. Weaver is Sanders' most prominent longtime aide and had been Our Revolution's president since the summer of 2016." **Full story.**

- Perez meets with Democrats for Life: Democrats for Life board member Charles Camosy, a Fordham professor, has an optimistic (from his perspective) account of the meeting in Crux. **Full story.**

SECOND ACT - "After primary loss, Perriello will lead new PAC supporting Democratic candidates for Virginia House," by The Richmond Times Dispatch's Graham Moomaw: "He won't be leading the Democratic ticket as his party's candidate for governor, but Tom Perriello will spend the rest of the 2017 election cycle working on another political dream: taking over the GOP-dominated House of Delegates. After falling short in his whirlwind gubernatorial primary run against Lt. Gov. Ralph S. Northam, the former congressman will lead

a new political action committee, Win Virginia, that will provide financial and strategic support to Democratic House candidates. The PAC is expected to invest about $800,000 to help Democrats try to flip Republican-held seats." **Full story.**

- "Montana governor took too long to report state plane use during campaign, top political cop says," by the Associated Press: "Montana Gov. Steve Bullock's re-election campaign violated state law by failing to make timely reports on expenses stemming from his use of a state aircraft, the state's chief political watchdog reported Thursday. Political Practices Commissioner Jeff Mangan said he was forwarding a report to the Lewis and Clark County attorney for possible prosecution, but said litigation is unlikely. Mangan told The Associated Press that he and the governor's campaign committee, Friends of Steve Bullock, were working toward a financial settlement. 'We expect to settle this with the campaign fairly quickly,' Mangan said. Bullock's spokeswoman, Ronja Abel, called the late reports a 'paperwork error' but said the committee would pay whatever the commissioner deemed an appropriate fine." **Full story.**

ICYMI - "The Governor of Trump's America," by POLITICO Magazine's Tim Alberta: "...Iowa's new governor is talking about the day she bottomed out-August 23, 2000, when, according to court records, she was driving south of Des Moines with an open container of alcohol (Black Velvet whiskey, per one local report) and pulled over for operating while under the influence. It was her second drunk-driving arrest in 18 months, and Reynolds, the treasurer of Clarke County (population at the time: 9,133), felt her life spiraling out of control. Sitting in a jail cell that night, 'scared to death' because of alcoholism's grip on her psyche, Reynolds says she prayed: 'I can't do this on my own anymore. I need help.'" **Full story.**

PRIMARY A-BREWING - Tarkanian goes after Rosen: Republican Danny Tarkaninan, who told CNN he was considering a primary run against Nevada Sen. Dean Heller, released a press release Thursday night attacking Democratic Rep. Jacky Rosen, who's considering her own challenge to Heller. He said her vote against Kate's law "protect[s] violent illegal immigrants over the safety of all us residents." He goes on to accuse her of "court[ing] the Hispanic vote" and following "the marching orders of the far left and Nancy Pelosi."

WEB WARS - Gillespie launches digital buy attacking 'No Show Northam:' Virginia GOP gubernatorial candidate Ed Gillespie's campaign is out with a digital ad attacking Democratic Lt. Gov. Ralph Northam for missing economic development meetings and other panels. Watch the ad here.

DESSERT - "It's Amazing I Haven't Ruined Myself," Esquire profiles former Boston Red Sox pitcher Curt Schilling, who's flirted with a challenge to Sen. Elizabeth Warren: "My thought was, I could run for [the] Senate next year and then I would run for president after Trump's second term. I live in a country where I can say that. That's pretty fucking cool." **Full story.**

CODA - QUOTE OF THE DAY: "Ed, if you're listening to this: Nobody cares that your dad owned a grocery store." - Corey Stewart to his former primary opponent Ed Gillespie, who beat him in the Virginia Republican gubernatorial primary, The Washington Post reported. He also said he had no regrets about his controversial run, adding, "we deliberately were, at times, more

controversial in order to attract mainstream media, in order to attract earned media."

Subject: Morning Energy, presented by Growth Energy: EPA alters how information's gathered — Slew of energy bills hit the House floor — EDF Action launches push against EPA cuts

By Anthony Adragna | 07/17/2017 05:42 AM EDT

With help from Darius Dixon

EPA WANTS TO ENFORCE SMARTER, NOT HARDER: In a move that former EPA officials worry could hamper enforcement of environmental rules, the agency's regional offices must now get approval from EPA headquarters before sending many types of requests for information to a company, Pro's Eric Wolff reports . Regions have traditionally had autonomy in requesting information, but now many of those, especially ones applying to companies and facilities with no history of violations, will have to be reviewed in EPA's Washington headquarters under the policy established in the spring. "EPA is working to ... eliminating overly broad and unduly burdensome requests for information," EPA spokeswoman Amy Graham told Eric in a statement. "These changes will enable the agency to efficiently and consistently gather the information it needs to assure compliance with environmental laws."

It's a move long-sought by Sen. Jim Inhofe, the former chair of the Environment and Public Works Committee whose past staffers are sprinkled throughout the agency. Inhofe has said he thinks the agency engages in too many "fishing expeditions."

Critics fear the policy is designed to curb enforcement of environmental laws. "A policy to aggregate all information requests for headquarters approval is more likely to diminish enforcement because you're going to end up with bottlenecks," said Doug Parker, EPA's former head of criminal enforcement and a 27-year veteran of the the agency. Headquarters staff will track information requests in a new database.

HEADED TO A HOUSE FLOOR NEAR YOU! House lawmakers are poised to take up a slew of energy-related measures this week after they clear the Rules Committee. First up is the Ozone Standards Implementation Act H.R. 806 (115), which would delay implementation of the stricter 2015 ozone standard through 2025 and lengthen the period of time between EPA's normal review of the standard from five years to 10. Rep. Pete Olson's bill gets its day before the Rules Committee today at 5 p.m.

Also on the agenda is a bill H.R. 218 (115) that would authorize the transfer of federal land to Alaska to build the state's long-sought (and contentious) road between the isolated southwestern Alaska village of King Cove and a neighboring community with an all-weather airport. There's also legislation H.R. 2883 (115) overhauling the presidential permitting process for electric, natural gas and oil projects that would shift the authority to review cross-border oil pipelines to FERC from the State Department. And there's a separate measure H.R. 2910 (115) aimed at streamlining approvals for interstate natural gas pipelines. The Rules Committee considers the bills Tuesday at 3 p.m.

WELCOME TO MONDAY! I'm your host Anthony Adragna, and State's Jennifer Schaming was first up to identify Holtsville, N.Y. as the holder of the nation's lowest zip code (00501). For today: What's the highest zip code in the U.S. and where is it? Send your tips, energy gossip and comments to aadragna@politico.com, or follow us on Twitter @AnthonyAdragna, @Morning_Energy, and @POLITICOPro .

GOTTA LOOK AT THE DATE: A draft version of the grid study sought by Energy Secretary Rick Perry says that renewable power doesn't threaten the power network's reliability, Bloomberg reported Friday evening. Perry called for the study in April, and has said he wanted to see if Washington's policies or federal tax policy were pushing baseload power generation — like coal-fired plants — in retirement prematurely. Renewable power advocates have feared that Perry would slant the report and use it to justify efforts to support coal plants. "The power system is more reliable today due to better planning, market discipline, and better operating rules and standards," the July draft says.

But a DOE spokeswoman said a draft of the study is outdated, and none of the phrases that Bloomberg cited were in the current version. Those draft findings are now under review by DOE leadership and the final product may come out as soon as this week.

MOVING MORE SPENDING PACKAGES: Congress takes another crack at advancing spending measures this week with the full House Appropriations Committee marking up its Interior and EPA package Tuesday at 10:30 a.m. Across the way, a Senate Appropriations subpanel inks up its Energy and Water package Tuesday at 2:30 p.m. ahead of full committee consideration Thursday at 10:30 a.m.

CAP AND TRADE'S CRUCIAL DAY IN CALI: Lawmakers in California are slated today to cast their votes on whether to extend California's cap and trade program through 2030. The Business Council for Sustainable Energy sent a letter Friday endorsing the extension and urging the legislature to "swiftly act" on the measure. But a number of major environmental advocates voiced opposition, arguing the measure gave too many concessions to the oil industry. "California can do better," Masada Disenhouse with 350.org said in a statement. "This plan has Big Oil's fingerprints all over it and doesn't do enough to protect vulnerable communities or to achieve California's ambitious targets for reducing carbon pollution." The Los Angeles Times has a good look at the state-of-play on the bill here.

FORMER SUZUKI EMPLOYEE GUILTY OF MISLEADING EPA: Wayne Powell, a former Suzuki analyst, pled guilty to submitting false reports on vehicle emissions to EPA and therefore enabling thousands of violations of the Clean Air Act on model year 2012 motorcycles, DOJ announced. He faces up to two years in prison and a maximum fine of $250,000.

ZINKE VISITS ANOTHER MONUMENT: After taking two monuments off his review list, Interior Secretary Ryan Zinke headed to Oregon on a beautiful Saturday to look at the Cascade Siskiyou National Monument. He hiked with BLM employees and met with advocates of keeping the monument, huddled with snowmobile industry peeps and talked with timber industry representatives. Energy and Commerce Committee Chairman Greg Walden hosted. Both of the state's Democratic senators — Ron Wyden and Jeff Merkley — have staunchly opposed altering

the monument. On Sunday, Zinke's Twitter feed included posts about meeting with Oregon Gov. Kate Brown and references to his "delish burrito" for lunch.

EDF ADS HIT PRUITT! EDF Action is launching a million dollar ad campaign targeting House GOP lawmakers for not combating deep cuts to EPA's budget. Targets include: Martha McSally, Mike Coffman, Jason Lewis, Barbara Comstock, David Valadao, Mark Amodei, Ann Wagner, Mario Diaz-Balart, Tom Rooney and Ken Calvert. Watch the ads here and here.

WHO KNOWS! French President Emmanuel Macron told a French newspaper Sunday he thinks he may have swayed Trump into returning to the Paris accord in the months ahead, according to Reuters . "(Trump) told me that he would try to find a solution in the coming months," Macron told Le Journal du Dimanche. "We spoke in detail about the things that could make him come back to the Paris accord." But Trump's Homeland Security Adviser Tom Bossert said the topic of climate change was not a major topic of conversation or awkward subject. "We didn't discuss any climate issues in the extended bilateral conversation that I attended," Bossert told reporters on Air Force One. "And the topic didn't chill or affect or any way come up verbally or through nonverbal cues in our conversations."

ILLINOIS JUDGE SIDES WITH NUCLEAR: The nuclear power industry racked up a legal win on Friday when a district court judge in Illinois agreed to dismiss a lawsuit against the state's zero-emissions credit program lawmakers passed last year. The program — estimated to cost consumers $235 million a year over ten years — was created to prop up two money-losing nuclear plants Exelon Corp. threatened to close, which drew multifaceted challenges from consumers and non-nuclear electricity generators in the region. But District Judge Manish Shah said that it wasn't the judiciary's role to instruct state regulators how to tailor their program for state-federal balance, and left the matter in the hands of FERC, despite its lack of a leadership quorum. Shah noted that complaints about the program were filed with FERC several months ago but, in a footnote, stated "FERC's current paralysis does not change the structural limitations on judicial power." Given how big a threat other power generators view the program, expect this to go up to the 7th Circuit Court of Appeals.

** **A message from Growth Energy:** Americans deserve cleaner, more consistent fuel choices at the pump, and Growth Energy is leading efforts to make that a reality. The Consumer and Fuel Retailer Choice Act is a simple fix that will improve air quality, lower prices at the pump, and spur innovations in biofuels. Learn more. **

WHAT'S NEXT FOR METHANE RULE? After federal appeals judges placed a stay of EPA's methane rule back on for two weeks, the agency has a couple of options, Pro's Alex Guillén reports in Energy Regulation Watch. It could seek a rehearing before the original three judges, though at least one judge would have to change their mind, or the agency could try for an en banc review, but that process takes a while.

Arguably more important is what the court's decision signals for other efforts to roll back Obama-era rules. Each case has slightly different legal arguments depending on the statute and how exactly the agency is going about a delay, but the D.C. Circuit's ruling is warning sign to Pruitt that he won't coast by in court challenges to their actions.

MAIL CALL! GROUP OUTLINE TAX REFORM PRIORITIES: The Hearth, Patio & Barbecue Association released Friday a brief letter to the Senate Finance Committee outlining their priorities as tax reform advances. Link here.

REPORT: HOW TO ADJUST TO A BRAVE NEW GRID: Former FERC Commissioner Tony Clark is out with a white paper this morning with how suggestions for states in various electricity markets can adjust to new goals many states have including fuel diversity, security, green energy and job creation. "To the degree policy makers and elected officials have moved the goal posts, it is time to consider the rational pathways forward," the paper notes.

COMING TO TOWN! Members of the American Public Power Association's Policy Makers Council are in town today through Wednesday for meetings on Capitol Hill. Among the topics they'll discuss is maintaining access for public power companies to bonds, building partnerships for grid resiliency and upcoming changes to environmental regulations.

MOVER, SHAKER! William Murray joins R Street Institute as federal energy policy manager; he comes from RealClearPolitics, where he was editor of the site's energy page for two years.

LOOKING GOOD: The Senate Environment and Public Works Committee unveiled a snazzy new, website befitting the 21st century late last week. Take a glance here.

HAPPENING THIS WEEK

MONDAY

5:00 p.m. — Meeting on the "Ozone Standards Implementation Act of 2017," House Rules Committee, H-313

TUESDAY

10:00 a.m. — "Powering America: Examining the State of the Electric Industry through Market Participant Perspectives," House Energy and Commerce Energy Committee, Rayburn 2123

10:00 a.m. — "Examining Impacts of Federal Natural Resources Laws Gone Astray, Part II," House Natural Resources Oversight and Investigations Subcommittee, Longworth 1324

10:30 a.m. — Full committee markup of the FY2018 Interior Appropriations Bill, House Appropriations Committee, Rayburn 2359

10:30 a.m. — "Hearing to examine the status and outlook for U.S. and North American energy and resource security," Senate Energy and Natural Resources Committee, Dirksen 366

12:00 p.m. — "The Future of California's Cap-and-Trade Program: Policy Choices and Implications for Cross-Border Linkage," Resources for the Future, Webcast

12:00 p.m. — Sustainable City Solutions, Women's Council on Energy and the Environment, National Geographic Society, 1145 17th Street NW

2:00 p.m. — "Promoting Onshore Oil and Gas Development in Alaska," House Natural Resources Energy and Mineral Resources Subcommittee, Longworth 1324

WEDNESDAY

10:00 a.m. — Full committee hearing on five bills, House Natural Resources Committee, Longworth 1324

10:00 a.m. — Legislative hearing on the the Hunting Heritage and Environmental Legacy Preservation (HELP) for Wildlife Act, Senate Environment and Public Works Committee, Dirksen 406

10:00 a.m. — "Energy Innovation: Letting Technology Lead," House Science, Space and Technology Committee, Rayburn 2318

10:00 a.m. — Senate Energy and Natural Resources National Parks Subcommittee hears testimony on various bills, Dirksen 366

10:00 a.m. — "Clean Innovation: Why it Makes Business Sense," Microsoft and the Center for Climate and Energy Solutions, Microsoft Innovation & Policy Center, 901 K Street, NW, 11th Floor

10:00 a.m. — "An Update on the Renewable Fuel Standard," Center for Strategic and International Studies, 1616 Rhode Island Avenue, NW

12:00 p.m. — "Building a 21st Century Infrastructure for America: Implementation of the Water Resources Reform and Development Act of 2014 and the Water Resources Development Act of 2016," House Transportation and Infrastructure Subcommittee on Water Resources and

Environment, Rayburn 2167

2:00 p.m. — "Exploring the Successes and Challenges of the Magnuson-Stevens Act," House Natural Resources Water, Power and Oceans Subcommittee, Longworth 1324

THURSDAY

9:00 a.m. — "Seeking Innovative Solutions for the Future of Hardrock Mining," House Natural Resources Energy and Mineral Resources Subcommittee, Longworth 1324

9:30 a.m. — Executive Business Meeting to consider nominations, including Jeffrey Clark's, Senate Judiciary Committee, Dirksen 226

10:00 a.m. — Full committee hearing on various nominations, Senate Energy and Natural Resources Committee, Dirksen 366

10:00 a.m. — "Innovative Financing and Funding: Addressing America's Crumbling Water Infrastructure," Senate Environment and Public Works Subcommittee on Fisheries, Water, and Wildlife, Dirksen 406

FRIDAY

12:00 p.m. — 2017 BP Statistical Review of World Energy, National Capital Area Chapter of the U.S. Association for Energy Economics, Chinatown Garden, 618 H St. NW

THAT'S ALL FOR ME!

** **A message from Growth Energy:** The Consumer and Fuel Retailer Choice Act is a simple fix to existing, outdated Reid Vapor Pressure (RVP) limits that will improve air quality, lower prices at the pump, and spur innovation and investment in new biofuel technologies while decreasing dependence on oil. Congress can fix this outdated regulation - helping consumers, retailers & the environment - and build a better future for clean energy by supporting S. 517. Learn more about how Growth Energy is protecting fuel choices. **

Stories from POLITICO Pro

Alaska's long road war Back

By Andrew Restuccia | 04/04/2014 05:00 PM EDT

In the fall of 1998, Frank Murkowski took to the Senate floor to make an impassioned plea for the authority to build a one-lane gravel road from the isolated southwestern Alaska village of

King Cove to a neighboring community with an all-weather airport.

"This is a road to life for the residents of King Cove," he said.

More than 15 years later, his daughter, Republican Sen. Lisa Murkowski — along with the rest of the Alaska congressional delegation — is still fighting for the road, insisting it's the only viable way to ensure that King Cove's 965 largely native Alaskan residents have access to emergency medical care.

(Also on POLITICO: Full transportation and infrastructure policy coverage)

What seems like a simple request is anything but. The proposed road would cut through federally protected wilderness land in the Izembek National Wildlife Refuge, a 315,000-acre sanctuary near the tip of the Alaska Peninsula. And the Interior Department says the road would threaten vulnerable plants and animals that rely on the area's unique ecology.

The oftentimes ugly fight has pitted Alaska politicians against the federal government for decades, sowing mistrust and frustration. It has also reinforced the view of many in Alaska that policymakers in the Lower 48 are out of touch with their needs.

At the same time, the battle has laid bare tensions between Alaskan leaders and conservation groups, which argue that approving the road could set a dangerous national precedent in other protected wilderness areas.

Lisa Murkowski and Alaska Democratic Sen. Mark Begich, who faces a tight reelection fight, are vowing to do everything in their power to win approval for the road, even though the Interior Department rejected the proposal late last year after a four-year analysis.

(PHOTOS: 10 tough Senate races for Democrats)

Murkowski is using her position as the top Republican on the Senate Energy and Natural Resources Committee to elevate the issue, expressing her outrage at hearings and in floor speeches and holding a series of news conferences with King Cove residents. She has also lambasted Interior Secretary Sally Jewell, who announced the most recent rejection of the road just two days before Christmas.

"I am not willing to let a day go by without raising this as an issue," Murkowski said in an interview.

The road would give King Cove residents access to the larger airport in the nearby community of Cold Bay when extreme weather grounds flights at the smaller King Cove airport. King Cove has a medical clinic, but residents often have to travel to Anchorage for major procedures and emergencies.

The road, proponents argue, is the best solution to the transportation problems that have long plagued isolated King Cove.

Besides its small airport, the town has access by boat across the Izembek Lagoon, but foul weather can make air and boat travel difficult, residents say. Supporters of the road say at least 19 deaths over the years have resulted from plane crashes or an inability to obtain adequate medical care.

(Sign up for POLITICO's Morning Transportation tip sheet)

Della Trumble, a King Cove resident and longtime advocate for the road, said its approval is a matter of life and death.

"I just feel strongly that the human factor far outweighs the wildlife," she said. "We will protect the wildlife. It's who we are."

Trumble and other residents have made dozens of trips to Washington to make their case, telling stories of family and friends who have been hurt or killed trying to get out of the community during storms. Trumble said she watched as her niece was flown out for a medical emergency amid winds of 70 to 80 mph. She said another niece was born on the galley table of a crab boat during an evacuation attempt.

Just this week, an injured fisherman was flown out of King Cove by the Coast Guard, marking the fifth medical evacuation of the year, according to King Cove officials.

But opponents say the road would wreak havoc on the refuge and its wildlife. The refuge hosts more than 200 species, including caribou, grizzly bear and, in the fall, about 98 percent of the world's Pacific black brant. It also has one of the largest eelgrass beds on the planet and was one of the first areas in the U.S. to be designated as a wetland of international importance.

"You can't punch a road through there without doing serious damage," said Don Barry, who served as Interior's assistant secretary for fish, wildlife and parks during the Clinton administration.

In addition, the proposed road faces major legal hurdles. In 1980, Congress designated most of the refuge as wilderness, the highest level of public land protection.

Barry, now a senior official at the conservation group Defenders of Wildlife, said it would be unprecedented to allow a road through a wilderness area. Though the refuge has some old military roads, they were built before the conservation laws were enacted.

Several opponents raised concerns that approving the road would lead to a push for development in other protected areas.

"Once you carve a road of this kind right through the middle of a national wildlife refuge, where does it stop?" former Clinton administration Interior Secretary Bruce Babbitt asked.

Babbitt and other opponents have also suggested that the road could be used for commercial

purposes, noting that Peter Pan Seafoods has a cannery in King Cove. "But despite pledges and promises to the contrary, the real purpose for building the road is the same as it ever was: moving fish and workers to and from King Cove's canneries," Babbitt wrote in the Los Angeles Times last month.

Peter Pan has rejected those accusations, and Murkowski notes that her legislation calling for approval of the road specifically bars using it for commercial purposes.

The fight over the road burst into public view in the late 1990s, when then-Sen. Frank Murkowski pushed legislation that would allow for approval of the road as part of a land exchange. The bill passed the Senate in 1998 but never passed the House. President Bill Clinton threatened a veto amid concerns about the road's effect on wildlife.

Soon after, then-Sen. Ted Stevens launched into a tense series of negotiations with the Interior Department. The resulting compromise was a $37.5 million appropriation approved by Congress to improve the King Cove medical clinic and airport and make accommodations for a hovercraft to transport residents to Cold Bay. The hovercraft was used until 2011, but it is being sold because, operators said, it was too expensive to operate.

"Finally it was settled — and now it turns out it isn't," said Babbitt, who worked with Stevens to negotiate the deal and strongly opposed the road.

Within several years, the issue was back on the table. Lisa Murkowski included a provision in a 2009 bill calling on the Interior Department to analyze the road and proposing another land exchange. In exchange for setting aside land in the refuge for the road, the federal government would receive more than 43,000 acres of Alaska state land and more than 13,000 acres of land owned by the King Cove Native Corp.

The provision set off a four-year analysis by Interior that culminated in December with the department's rejection of the road.

"While the proposed land exchange would bring many more acres of land into the Refuge System, the analysis indicates that the increased acreage could not compensate for the unique values of existing refuge lands, nor the anticipated effects that the proposed road would have on wildlife, habitat, subsistence resources and wilderness values of the Refuge," the department said in a statement at the time.

The decision infuriated the Alaska delegation and has strained Murkowski's relationship with Jewell.

After hearing about the decision, Murkowski said she told Jewell, "I cannot forgive the fact that you have delivered this, that you have dashed all hope for the people of King Cove, and the fact that you did this the week of Christmas is absolutely callous and cold-hearted."

Other Alaska lawmakers have similarly taken Jewell to task. "If someone dies out of King Cove, I want you to really think about it and be ashamed of yourself," Rep. Don Young told Jewell at a

hearing Thursday.

The road's opponents say viable alternatives exist — a notion that Murkowski and others reject. Opponents also argue that the road, which would snake through isolated land often battered by extreme weather, would pose its own dangers.

At a recent Senate hearing, Jewell said she is committed to working with King Cove residents to find alternatives. During a recent meeting with Begich, she said she will again listen to the community's concerns.

"Jewell committed to reviewing the information that the community plans to provide on the issue and to provide a response to the senators, State of Alaska and the community on their request to reconsider the final decision," Interior spokeswoman Jessica Kershaw said in an email.

Alaska lawmakers face major hurdles toward changing Interior's mind but say they're not giving up.

Begich said in a recent interview that he hopes to attach his bill approving the road to upcoming Interior appropriations legislation. Murkowski vowed to continue hammering away as well.

"This secretary has made a decision, and I think she thought the people of King Cove were tucked far enough away that nobody would be making a big deal about this," Murkowski said. "But I'm not forgetting them, and it's not just an idle threat."

CORRECTION: A previous version of this story offered an incorrect name for the city where King Cove residents sometimes have to travel for major medical procedures.

Subject: POLITICO's Morning Transportation, presented by Delta Air Lines: A tale of two chambers — Opening the Gate(way) — Laptops welcome

By Tanya Snyder and Lauren Gardner | 07/07/2017 10:00 AM EDT

A TALE OF TWO CHAMBERS: It's no secret that House Transportation Committee Chairman Bill Shuster's plan to separate the air traffic control system from the FAA has created deep divisions on Capitol Hill. And Rep. Sam Graves' (R-Mo.) decision to support the House bill (H.R. 2997) - after striking a deal with Shuster to eliminate user fees for general aviation and protect small pilots' access to the airspace - has left some daylight between him and the general aviation community of which he's long been member. That could get awkward later this month, when Graves will pilot World War II planes in the massive annual Oshkosh airshow, and this weekend when he presides over an aviation town hall at a fly-in at his home airport in Tarkio, Mo. As Tanya writes, he's likely to hear from groups that feel wounded by his change of heart on the air traffic control overhaul.

Get in formation: GA groups have kicked their organizing up a notch this week, taking advantage of lawmakers' public events in their home districts to mobilize members against the bill. Mark Baker, president and CEO of the Aircraft Owners and Pilots Association, said general aviation users "are not interested in negotiating this at all" and that Graves "was not representing the general aviation community" when he agreed to Shuster's plan. They worry that any plan to include special protections for their community was not drawn with them in mind. "The idea of giving control of this public asset to a board that is largely airline-centric is dangerous," Baker said.

'Fear of the unknown': For his part, Graves has been dismissive of GA's continued concerns, saying opponents are just "afraid of the unknown" and that "we've put in every protection possible" for general aviation.

DON'T YOU FORGET ABOUT ME: Even as the House bill draws the battle lines, the Senate's FAA legislation (S. 1405) is facing its own obstacles after the Commerce Committee adopted an amendment to give the agency leeway to expand the types of training that can be credited toward the federal 1,500-hour requirement for first officers. That mandate was spurred by the 2009 crash of a regional airliner near Buffalo, N.Y., that raised questions about pilots' training. Since then, those smaller airlines and some rural-state officials have argued that the rule has exacerbated a pilot shortage they blame for reducing air service to rural areas.

Room for movement? Senate Commerce Chairman John Thune (R-S.D.) forced the issue by pushing the amendment's adoption despite Democratic opposition - a major shift from the 2016 FAA debate, when Sen. Mike Rounds (R-S.D.) was the only lawmaker to openly advocate for an amendment related to pilot training during floor debate. At that time, Congress decided to call for a study of the issue instead, and the results were ultimately favorable to the regionals. But while Thune has indicated he's willing to compromise as long as lawmakers can assuage concerns about the pilot pipeline, it's unclear whether lawmakers aligned with the families of

those killed in the 2009 Colgan Air crash can agree to anything that changes the status quo, Lauren writes for Pros.

Real talk: The New York delegation in both chambers has strongly opposed easing the 1,500-hour mandate, and Senate Minority Leader Chuck Schumer (D-N.Y.) has promised to block the bill if there's no deal to his liking. "I'll continue to do everything I can to ensure that any effort to water down these rules never becomes law," he said through a spokesman after the Commerce markup. That unresolved issue, coupled with the dwindling number of legislative days, means getting long-term FAA authorization bills through both chambers before the August recess - and navigating a conference committee before the agency's authority expires Sept. 30 - will be no small feat.

IT'S FRIDAY: Thanks for tuning in to POLITICO's Morning Transportation, your daily tipsheet on all things trains, planes, automobiles and ports. Starting next week, Lauren will be driving the MT-mobile with transportation security reporter-extraordinaire Stephanie Beasley, so send your tips, feedback and lyrics to lgardner@politico.com or @Gardner_LM and sbeasley@politico.com or @Steph_Beasley.

"Bye, bye Miss American Pie / Drove my Chevy to the levee but the levee was dry / And them good ole boys were drinking whiskey and rye / Singin' this'll be the day that I die / This'll be the day that I die"

Want to keep up with MT's song picks? Our Spotify playlist has over 100 followers - you can get listening, too!

THIS IS THE BEST HOLIDAY WEEK EVER: Your MT team apologizes for failing Thursday to properly commemorate National Air Traffic Control Day, which we did not know existed until President Donald Trump sent out a statement thanking "the hard working men and women of the Federal Aviation Administration," which his administration hopes will soon be the hard working men and women of a private nonprofit entity. In his missive, Trump touted "his" (or really, Shuster's) plan to "modernize" and "transform" the system. The U.S. Bureau of Air Commerce established the air traffic control system 81 years ago Thursday, and Ronald Reagan made it a holiday in 1986 (five years after he fired all the air traffic controllers).

OPENING THE GATE(WAY): The federal government's latest estimate for a new Hudson River rail tunnel (plus repairs to the existing infrastructure) is nearly $13 billion, according to a draft environmental impact statement released Thursday. The higher cost (previous estimates put the effort in the $8 billion to $10 billion range) comes as Trump's DOT has tried to distance itself from the Obama administration's commitment to split the cost of the multibillion-dollar project with New York and New Jersey, most recently leaving the Gateway project's board of directors.

Definitely, maybe: "It will be the responsibility of the project sponsors to identify their funding sources and plan," DOT said in a news release. "The department notes that all projects that apply for federal funding must meet the appropriate criteria and that all projects will be individually evaluated on their merits, without prejudice against or partiality in favor of particular projects."

Mark your calendars: Page 3 of this handy fact sheet provides a project timeline that estimates the new tunnel could be completed by spring 2026. That would then allow for work to begin on rehabbing the existing tunnel, which would take another four years.

**** A message from Delta Air Lines:** Delta® partners with CLEAR® to offer SkyMiles® Members exclusive rates on CLEAR membership to enjoy a faster way through security at airports nationwide. CLEAR's biometric technology platform gets travelers through security with just the touch of a finger or blink of an eye. Enroll today at clearme.com/delta. **

LAPTOPS WELCOME: It's official: Qatar Airways confirmed rumors Thursday that DHS will allow passengers on its U.S.-bound flights from Hamad International Airport in Doha to carry personal electronic items on board after it implemented security enhancements.

Oh and also: In other Qatar Airways news, the airline said Thursday it would move ahead with plans to build a stake of up to 4.75 percent in American Airlines, despite the "categorical" opposition of American's management. Qatar Airways had previously indicated interest in buying up to 10 percent of the carrier's shares, but said it would not exceed 4.75 percent without the approval of American's board.

PRIVATE PILOT FOR AMTRAK FINALIZED: FRA will publish a final rule today outlining how private companies can apply for an opportunity to provide passenger rail service for existing Amtrak long-distance routes, so long as they can do it for less money than the feds currently have to pay for those services. The program, created by the FAST Act, allows the experiment for up to three routes for four-year periods (that the secretary can re-up for another four years), but which ones the third-party operators might try to tackle are still TBD.

GET IT TOGETHER, STATES: FHWA's inspector general's office is looking into the agency's oversight of state DOT cost estimates for projects that receive federal funding. "[U]nderestimating a project's costs could lead to delays in delivering a project because additional funding will have to be arranged," the IG said in the announcement of the audit Thursday. "Conversely, overestimating a project's cost causes inefficient use of funds that could be used for other projects."

SLICE OF PI: From our friends at POLITICO Influence : "Nearly every member of the Illinois congressional delegation sent a letter last week to Secretary of State Rex Tillerson, Secretary of Transportation Elaine Chao and Secretary of Commerce Wilbur Ross urging them to crack down on three Gulf airlines for violating Open Skies agreements. ... If the letter sounds like it could have been written by a United lobbyist, that's because it was. A draft copy of the letter obtained by POLITICO shows Adam Hepburn, a United lobbyist, as the author. The draft copy is almost identical to the final letter. Isaac Sancken, a spokesman for Rep. Dan Lipinski (D-Ill.), who took the lead in assembling support for the letter, confirmed that United wrote the letter and that American and Delta were involved as well."

SHIFTING GEARS: Curtis Tate on July 24 is joining the North Jersey Media Group to report on New Jersey Transit and the Port Authority of New York and New Jersey for The Record newspaper. He previously covered Kentucky and transportation at McClatchy Newspapers in

D.C.

THE AUTOBAHN:

- "New Jersey Transit Train Derails at Penn Station in New York." The New York Times.

- "Lac-Megantic residents marking 4th anniversary of rail tragedy." CTV.

- "Three injured on Delta flight after passenger tries to enter cockpit." CNN.

- "Investigation finds chaotic evacuation from fiery American flight." USA Today.

- "Millions Meant for Rail Tunnel Subsidize Ferry Rides for a Few." The New York Times.

- "New Amtrak CEO has Texas ties, but can he save state's Eagle route?" Fort Worth Star-Telegram.

- DOT awards $230 million in grants to 104 airports. FAA.

THE COUNTDOWN: DOT appropriations run out in 86 days. The FAA reauthorization expires in 86 days. Highway and transit policy is up for renewal in 1,182 days.

** **A message from Delta Air Lines:** Committed to bettering the travel experience, Delta has partnered with CLEAR®, the biometric identity platform. CLEAR allows SkyMiles® Members to use fingerprint and iris I.D. technology to speed through airport security by offering them exclusive Member-only rates on CLEAR membership. CLEAR is trusted by over one million travelers and by the U.S. Department of Homeland Security. CLEAR's three-step enrollment process takes less than five minutes - CLEAR digitally authenticates your driver's license or passport, confirms your identity, and then creates your biometric account. After enrollment, members can begin using the CLEAR Lanes immediately. Enroll today at clearme.com/delta. **

Subject: BREAKING NEWS: Trump invites all Republican senators to White House for health talks

President Donald Trump has invited all Senate Republicans to the White House for a meeting Tuesday afternoon as the GOP struggles to coalesce around its plan to repeal Obamacare.

Senate Majority Leader Mitch McConnell (R-Ky.) made the announcement during a closed-door party lunch on Tuesday. The senators-only meeting is scheduled for 4 p.m. at the White House.

HAZARDOUS WASTE MANAGEMENT

Underground Storage Tanks
Ohio HAZARDOUS WASTE MANAGEMENT

Notice of the Department of Commerce, Division of State Fire Marshal, announces changes to a May 22, 2017, proposed rule to amend regulations under OAC 1301:7-9-01 through -19 (nonconsecutive); rescind and readopt regulations under OAC 1301:7-9-05, -06, and -07; and rescind regulations under OAC 1301:7-9-09 and -14 to revise underground storage tanks (UST) standards and conform to a July 15, 2015, EPA final rule. The rule updates provisions concerning requirements for reporting hazardous substances, the list of hazardous substances, UST registration and permitting, and definitions. The rule also updates provisions concerning financial responsibility for petroleum USTs; design, construction, installation, operation, and maintenance requirements; release detection methods and requirements; and installer certification and training. In addition, the rule updates out-of-service, closure-in-place, permanent removal, change-in-service, and closure assessment requirements; delegations of authority for inspection; contaminated soil, sampling, and analysis of soil; delivery prohibitions; and operator training requirements. Finally, the rule deletes provisions concerning sensitive areas and voluntary corrective actions. The changes establish a fee for UST installer training offered by the State Fire Marshal and correct a statutory reference. OCCUPATIONAL SAFETY AND HEALTH
Bloodborne Pathogen Control
Texas OCCUPATIONAL SAFETY AND HEALTH

Final rule of the Department of State Health Services amends regulations under 25 TAC 96.101, .201, .202, .203, and .401 regarding bloodborne pathogen control. The rule adds hepatitis C to the list of bloodborne pathogens. The rule also revises the reporting period for each contaminated sharps injury to no later than 30 days after it occurs. In addition, the rule updates the resource for universal and standard precautions practices to the Guideline for Isolation Precautions: Preventing Transmission of Infectious Agents in Healthcare Settings. Finally, the rule adds acronyms, updates definitions, and updates other provisions for clarity and consistency. The rule is effective June 21, 2017. West Virginia

AIR

Control of Air Pollution from Municipal Solid Waste Landfills

West Virginia AIR

Proposed rule of the Department of Environmental Protection, Division of Air Quality, amends regulations under 45 WVCSR 23 regarding municipal solid waste landfills (MSLWs) to incorporate by reference Aug. 29, 2016, performance standards and emission guidelines for new and existing MSWLs under 40 CFR 60, Subparts XXX and Cf. The rule includes standards of performance, emission guidelines, and compliance times for the control of certain designated pollutants from MSLWs. The rule also sets forth definitions and recordkeeping and reporting requirements. A hearing is scheduled for July 11, 2017, in Charleston. Comments are due July 11, 2017. Contact: DEP, Public Information Office; 304-926-0440

Subject: President Trump to visit Texas on Tuesday

President Donald Trump will visit Texas, which continues to be pulverized by Hurricane Harvey, on Tuesday.

"The President will travel to Texas on Tuesday. We are coordinating logistics with state and local officials, and once details are finalized, we will let you know. We continue to keep all of those affected in our thoughts and prayers," the White House announced Sunday afternoon.

See http://www.politico.com/story/2017/08/27/hurricane-harvey-texas-abbott-fox-242072 for more coverage of Hurricane Harvey.

Subject: POLITICO's Morning Score: Wagner declines Missouri Senate race — Q2 FEC preview: Democrats who raised big money online in May — NRSC digital ads attack Dems on single-payer

By Daniel Strauss | 07/05/2017 10:00 AM EDT

With Scott Bland and Kevin Robillard

The following newsletter is an abridged version of Campaign Pro's Morning Score. For an earlier morning read on exponentially more races - and for a more comprehensive aggregation of the day's most important campaign news - sign up for Campaign Pro today. (http://www.politicopro.com/proinfo)

NO GO - "Wagner won't challenge McCaskill for Senate in Missouri," by Campaign Pro's Kevin Robillard: "Republican Rep. Ann Wagner has decided not to challenge Missouri Democratic Sen. Claire McCaskill in 2018, instead opting to stay in the House.Wagner had long been expected to run against McCaskill, the two-term incumbent, but said she wanted to focus on her family and her home district. ... Wagner, a prolific fundraiser, had been U.S. ambassador to Luxembourg under President George W. Bush, and was also a former co-chair of the Republican National Committee and chair of the Missouri GOP. She's served in Congress since 2012 and already had $2.7 million in her federal campaign account."

- **"But now, Republicans will turn their attention to other potential McCaskill challengers, including state Attorney General Josh Hawley and Reps. Blaine Luetkemeyer and Vicky Hartzler**. Hawley, in particular, had emerged as a potential primary challenger to Wagner before the congresswoman decided not to run for Senate." **Full story.**

FEC FILING PREVIEW - "Democratic campaigns raised big money online in May," by Campaign Pro's Scott Bland: "Seven Democratic Senate candidates raised $500,000 or more online in April and May, according to recent campaign finance disclosures - providing a first hint at what will be in second-quarter FEC reports when they come out later this month. The disclosures from ActBlue, the widely used Democratic online fundraising platform, also show more than $3 million raised into escrow accounts for Democratic nominees in GOP-held House districts around the country, as well as several individual House challengers poised to disclose large second-quarter fundraising hauls later this month. Sen. Kirsten Gillibrand 's (D-N.Y.) campaign raised over $1.6 million online in the first two months of the second quarter, including over $965,000 in May, according to aggregated earmarked contributions in ActBlue's FEC filings. Democratic Rep. Beto O'Rourke, who is running for Senate against GOP Sen. Ted Cruz in Texas, also raised over $1 million online via ActBlue in April and May, including $513,000 in May." **Full story.**

- **"Kaine raised $2.6M in second quarter, had $7.3M on hand," by Campaign Pro's Kevin Robillard:** "The 2016 Democratic vice presidential nominee has now raised $10.6 million over the course of his six-year election cycle. Republicans don't have a clear candidate to face Kaine in 2018, but Rep. Barbara Comstock, former presidential candidate Carly Fiorina, radio host

Laura Ingraham and Prince William County Board of Supervisors Chairman Corey Stewart have all been discussed as possible challengers." **Full story.**

CUTTING THE ANCHOR - "Lt. Gov. takes unusual dig at Christie over being on closed beach," by the Star-Ledger's Matt Arco: "Lt. Gov. Kim Guadagno, the second-in-command to Gov. Chris Christie and the Republican nominee to succeed the governor, blasted Christie on Monday over the controversial photo of him taking in the sun at the closed Island Beach State Park. 'It's beyond words. If I were governor, I sure wouldn't be sitting on the beach if taxpayers didn't have access to state beaches,' Guadagno said in a statement issued by her campaign. ... Guadagno is vying for the governorship against Democratic nominee Phil Murphy." **Full story.**

FIRST IN SCORE - NRSC launches digital ads hitting Democrats on single-payer: The National Republican Senatorial Committee is launching digital ads targeting all 10 Democrats up in states won by President Donald Trump next year linking them to Massachusetts Sen. Elizabeth Warren and the Democratic push for single-payer health care. The 15-second ads, which autoplay on users' Facebook feeds, feature Warren saying "single-payer" is the next step before noting how frequently a Senator votes with Warren before directing viewers to sign a petition against single-payer. The ads are backed by significant statewide buys, and will run throughout recess and the rest of July. "Socialized medicine would be disastrous for the economy and devastating for American families, yet Red State Democrats continually side with Elizabeth Warren," NRSC communications director Katie Martin said. "Red State Democrats need to own up to whether or not they'll follow their leader's extreme plan over the well-being of folks at home." **Watch the ads here.**

Days until the 2017 election: 125.

Days until the 2018 election: 489.

TICKET TROUBLE - "San Diego Mayor Kevin Faulconer says he won't run for governor," by the Los Angeles Times' Phil Willon and Seema Mehta: "Republican San Diego Mayor Kevin Faulconer, who has been lobbied intensely by GOP leaders to run for California governor, on Friday rejected the idea and vowed to serve out his second term at city hall. Both House Majority Leader Kevin McCarthy (R-Bakersfield) and state Republican Party Chairman Jim Brulte had urged Faulconer to run. A fiscal conservative and social moderate who has demonstrated crossover appeal by winning over Democrats, Faulconer has been seen as the GOP's strongest potential gubernatorial candidate, and one who could help Republicans in down-ballot races if he was at the top of the ticket in 2018. ... Faulconer's decision not to run could impact some hotly contested congressional races in California, and potentially affect Republican efforts to retain control of the House of Representatives." **Full story.**

HOUSE WATCH - Mark Harris files FEC papers to challenge Pittenger again: Harris, a pastor who ran for Senate in 2014 and came just 134 votes short of Rep. Robert Pittenger in the 2016 NC-09 Republican primary, has formed a committee to run for Congress again in 2018. The FEC paperwork was filed on July 4.

- **Former Democratic Rep. Pete Gallego** also formed a TX-23 exploratory committee on July 4, via the FEC. Gallego lost a rematch for his old seat to GOP Rep. Will Hurd last year and has said he could be interested in running again if the district lines shift (a federal court has ruled that several Texas districts, including this one, were illegally gerrymandered by race when they were drawn earlier this decade.)

DIGITAL DOINGS - "Trump campaign's Parscale moves political operation to Florida," by the San Antonio Express-News' Samantha Ehlinger: "Trump campaign adviser Brad Parscale is moving his firm's political data and marketing operation from San Antonio to Florida in pursuit of an airport with more direct flights. ... It's too difficult to get to the East Coast, namely Washington, D.C., and New York City, from San Antonio because of the lack of direct flights, Parscale said. It's also difficult to attract talent when a three-hour flight to New York takes seven hours and includes a layover or two, he said. ... The political operation will be based north of Miami, he said, to take advantage of the Miami and Fort Lauderdale airports. He's already found office space in north Miami, declining to disclose details." **Full story**.

- **"Kamala Harris maneuvers to help 2018 Democrats -- and build a national profile," by CNN's Eric Bradner:** "Harris is using her newfound progressive stardom to raise money for her Democratic colleagues -- and amplifying buzz about the California freshman as a prospect for the party's 2020 presidential nomination in the process. In the first six months of 2017, Harris has raised more than $600,000 for a dozen Senate colleagues -- including $365,000 from small-dollar online contributions, her aides said. The email list Harris has used to raise the bulk of that money is 10 times the size it was at this time last year, during her Senate campaign. She's used that list to raise money for incumbents up for re-election in the 2018 cycle, including Missouri Sen. Claire McCaskill, Montana Sen. Jon Tester and Massachusetts Sen. Elizabeth Warren. Harris is also planning a travel schedule in the fall to raise money for Democratic Senate incumbents as well as the challengers for seven Republican-held House seats in California that the party is targeting." **Full story.**

ADMINISTRATION SPEED READ - "Inside the White House's policy-making juggernaut," by POLITICO's Nancy Cook and Andrew Restuccia: "For decades, the National Economic Council has been a home for wonks who quietly helped grease the policy gears in the White House. But under director Gary Cohn, a former Goldman Sachs banker, the once-staid and process-oriented NEC has become a central force in the vicious policy battles playing out in President Donald Trump's White House ... In the run-up to this week's G-20 summit in Germany, Cohn has been among the White House aides trying to prevent Trump from imposing broad and strict trade restrictions on steel imports. Trump is warming to a more targeted approach, administration officials say - an outcome that would be a win for Cohn, and a setback for the nationalist wing of the White House, including White House National Trade Council director Peter Navarro." **Full story**.

- "Forty-four states have refused to give certain voter information to Trump commission," by CNN's Liz Stark and Grace Hauck: "Forty-four states have refused to provide certain types of voter information to the Trump administration's election integrity commission, according to a CNN inquiry to all 50 states.State leaders and voting boards across the country have responded to the letter with varying degrees of cooperation -- from altogether rejecting the request to expressing eagerness to supply information that is public. Kansas Secretary of State Kris Kobach, vice chairman of the Presidential Advisory Commission on Election Integrity, which President Donald Trump created by executive order in May, sent a letter to all 50 states last Wednesday requesting a bevy of voter data, which he notes will eventually be made available to the public...Just three states -- Colorado, Missouri and Tennessee - commended Kobach's attempt to investigate voter fraud in their respective statements." **Full story**.

CODA - QUOTE OF THE DAY: "If I start thinking about the future like that or engaging in that stuff ... I think it would make me a lesser of a senator." - Sen. Cory Booker to David Axelrod on possibly running for president in 2020, via The Hill.

Subject: Morning Media: Gabriel Sherman to join Vanity Fair -- The president's Washington Post tweet-storm deconstructed -- MSNBC's ratings win

By Hadas Gold | 07/25/2017 06:10 AM EDT

With Alex Weprin

EXCLUSIVE -- GABRIEL SHERMAN TO JOIN VANITY FAIR: The tireless chronicler of Fox News and Roger Ailes is leaving his longtime home New York magazine to join Graydon Carter's domain at Condé Nast. Sherman will be a special correspondent, contributing regular features to the magazine while also writing for The Hive, Vanity Fair's business-focused digital site.

-Carter says: "Gabe is one of the finest and gutsiest reporters at work today, and I've admired his achievements for years...We're thrilled to welcome him to Vanity Fair and the Hive." And Sherman says: "Having avidly read Vanity Fair for years, I'm beyond excited to be joining their talented roster of writers and reporters,"

PRESIDENT DONALD TRUMP ONCE AGAIN TOOK AIM AT THE WASHINGTON POST on Twitter last night. "The Amazon Washington Post fabricated the facts on my ending massive, dangerous, and wasteful payments to Syrian rebels fighting Assad.....So many stories about me in the @washingtonpost are Fake News. They are as bad as ratings challenged @CNN. Lobbyist for Amazon and taxes?... Is Fake News Washington Post being used as a lobbyist weapon against Congress to keep Politicians from looking into Amazon no-tax monopoly?"

Wow, that's a lot to digest, but here are a few takeaways:

-Many of people were confused as to why the president was tweeting about this subject. After a quick search for "Syria" in our TV tracker I landed on this segment from Tucker Carlson's show on Fox News on Monday night, where Carlson was talking about the Syria program ending and how that's a good thing, but that The Washington Post story from July 19 framed it as something Moscow wanted.

-It's possible the president confirmed on Twitter what was a supposed to be a secret, covert CIA operation. Now that he may have done so, reporters (like Vice's Jason Leopold) are scrambling to re-up FOIA's on the program because of the president's public disclosure of the program.

-The president is threatening a news organization and its owner, whose other company would be affected by tax policy. (FYI, Amazon does not own The Washington Post. Jeff Bezos, the founder and CEO of Amazon, does). "Certainly makes it sound like the Post's news coverage decisions could impact the admin's view on tax issues of interest to Amazon," tweeted my colleague Josh Gerstein.

The Post did not have a comment as of this morning.

Good morning and welcome to Morning Media! SOUNDBITE: "They're not supposed to do that ... Be quiet." [President Donald Trump to reporters shouting questions during a photo spray with White House interns]

A DAILY BEAST WRITER HAS APOLOGIZED after calling newly-appointed White House Press Secretary Sarah Huckabee Sanders a "butch queen." Ira Madison was widely slammed, including by White House Communications Director Anthony Scaramucci, after sending the tweet (which he subsequently deleted). Though the tweet was sent on Friday, it seemed to pick up steam on Monday when it was cited by the Media Research Center and Fox News. Madison tweeted an apology late Monday, writing "Apologies to Sarah H. Sanders for the ill-judged joke tweeted Fri, deleted this AM. I didn't mean to offend anyone & I'm sorry that I did!"

THE CAMERAS ARE BACK ON, per a Scaramucci tweet with corresponding emojis. He's referring to the on-camera press briefings, though the daily guidance sent by the White House on Monday evening gave the usual "The briefing schedule will be updated in the morning."

THE FOX NEWS-NY TIMES FIGHT CONTINUED INTO MONDAY AFTERNOON, with both sides sending out dueling statements . It got a little surreal as each accused the other of hypocrisy and at one point, of being unpatriotic. On Monday "Fox & Friends" updated their viewers by saying that the Pentagon never objected to the information the Times was about to publish. But the Times did not get the apology it sought, and said in a statement that the segment "wasn't an apology, nor did it begin to address the larger issues with the Fox & Friends Weekend segment, one of which was sheer hypocrisy. The host railed against The New York Times for covering a raid stating that the U.S. government 'would have had al-Baghdadi based on the intelligence that we had except someone leaked' to The New York Times when Fox News had covered the same raid three weeks earlier in a segment in which their correspondent said, 'The newly recovered intelligence may bring U.S. closer to Baghdadi's kill or capture,'" a Times spokesperson said. "According to the curious logic of the Fox & Friends host, Fox News itself was unpatriotic."

Fox then hit back through a spokesperson , saying that "Neither Fox News' report nor the subsequent on-air coverage was inaccurate." The channel then linked to a recent piece in the Times that explained why the newspaper decided to name a CIA operative in one of its recent stories, arguing that the Times was seeing an apology to distract from the article. "We find it beyond disappointing that the New York Times, in an attempt to distract from their recent debacle, decided to blame Fox News for comments made publicly by General Thomas during a widely viewed panel at the Aspen Security Forum. It might behoove the Times to actually check in with their reporter Eric Schmitt to see whether Gen. Thomas' comments have merit and whether Schmitt's reporting in 2015 revealed intelligence that allowed ISIS leader Abu Bakr al-

Baghdadi to slip away."

SINCLAIR IS FEATURED ON YET ANOTHER MAGAZINE COVER, the second in two weeks after last week's Bloomberg Businessweek feature! This time Sinclair is profiled by Variety , which interviewed Sinclair CEO Christopher Ripley, who says that Sinclair has no plans to launch a Fox News rival. "If there's an agenda near and dear to the hearts of Sinclair management, it's more technological than political. The company is aggressively pushing fellow TV station owners to adopt a bold new tech standard known as ATSC 3.0 (or Next Gen TV) that Ripley says is aimed at 'moving the broadcasting industry into the current century.'"

JOE POMPEO'S VANITY FAIR DEBUT: "The Agony and the Anxiety of the New York Times," where the great Morning Media and POLITICO alum writes that despite soaring successes in its reporting under Trump, "the glory is hollow" because of major changes hitting the paper.

-"Unlike past buyouts, though, the human toll is now only part of the sinking mood," Pompeo writes. "A major newsroom reorganization is upending a time-honored method of producing the Times's signature journalism while simultaneously making an entire class of employees feel obsolete. Additionally, the Times's midtown Manhattan headquarters is itself being upended, shrinking by eight floors and leaving all but the highest of editors without private offices. Open floor plans have long been increasingly popular among publishers, particularly given how important cross-desk collaboration has become in the social-media age, but this, too, amounts to a decisive and, for some, painful break with the news organization's past."

-And there's this piece of juicy gossip: "Insiders say the baton pass from longtime publisher Arthur Sulzberger Jr. to his 36-year-old son, A.G. Sulzberger, is beginning to feel imminent." Read the full piece here.

DOJ STARTS TALKING AT&T-TIME WARNER TIE-UP, by Alex Weprin: According to Bloomberg , AT&T is starting to talk with the Department of Justice about concessions that may be tied to its pending acquisition of Time Warner. The talks are unusual because the DOJ antitrust unit responsible for approving the merger is without a chief (the nominee, Makan Delrahim, is awaiting confirmation by the Senate), and because President Trump himself has expressed concern with the deal, and with Time Warner's subsidiary CNN. For now, however, Trump does not appear to be getting involved. "The White House is closely monitoring the deal because Trump is worried about media concentration, according to one official. At the moment, Trump is leaving the review in the hands of the Justice Department, the official said."

-Speaking of AT&T, the telecom company's CEO, Randall Stephenson, also serves as president of the Boy Scouts of America. He did not attend Trump's speech to the Boy Scout Jamboree Monday night.

MSNBC IS TOUTING A RATINGS VICTORY as the most-watched cable channel during weekday primetime last week for the first time in its 21 year history. The network averaged 2.34 million viewers from July 17-21 in primetime while Fox News averaged 2.25 million. More from The Wrap here, and keep an eye out for the final weekly ratings, which will be released today.

WHICH REPORTERS DO MEMBERS OF CONGRESS FOLLOW ON TWITTER? A fun analysis from the group Rational 360 catalogued which reporters and which outlets members of Congress follow. The Hill and POLITICO are the two most followed news outlets, while Fox News' Chad Pergram (who we noticed has no 'likes' on Twitter and tweets straight news bulletins and does not engage with others) and Axios' Mike Allen are the two most followed reporters. (POLITICO's Jake Sherman and Seung Min Kim are all in the top 20.) Check out the full rankings here.

SAVE SNOPES - One of the internet's original fact checking and fake news debunking websites says it is in danger of closing because of rising legal fees relating to a fight with a contractual vendor who is essentially holding the website "hostage," they say, meaning they can't touch their revenue streams. Read more, and donate if you'd like here.

REVOLVING DOOR:

-- David Halbfinger is the New York Times' next Jerusalem bureau chief. Halbfinger is currently deputy national editor and is a 20-year veteran of the Times.

-- Jean Yoon has been appointed executive editor, editorial strategy at Reuters. Yoon is currently Regional Editor, Asia and Global Editor, Strategic Centers for the wire service.

TIL: The sitting U.S. president is always honorary president of the Boy Scouts. [National Geographic]

EXTRAS:

-- First look at Meryl Streep as Katharine Graham for the movie The Post. [Town & Country]

-- The Democratic lawmakers trying to break through on Fox News. [Business Insider]

-- Splinter, the new Gizmodo/Fusion/Univision website, has officially launched. [Splinter]

-- McClatchy quarterly results and forecast show more stormy weather ahead for newspaper organizations. [Poynter]

-- The late (literally) scoop wars between the newspapers keep throwing off cable news' primetime shows. [AP]

TOXIC SUBSTANCES
Lead-Based Paint Activities
Iowa TOXIC SUBSTANCES

Final rule of the Department of Public Health amends regulations under 641 IAC 70.2, .3, .4, .5, .6, .7 and .10 regarding lead-based paint activities. The rule replaces the annual certification renewal cycle with a three-year renewal cycle. The rule also provides for transition to an online application database for individual and firm certification. In addition, the rule updates the definition for "high-efficiency particulate air vacuums," specifies that the department no longer provides curricula to training providers, and eliminates an obsolete reporting requirement. The rule is effective July 12, 2017. Contact: Kane Young; DPH; 515-242-6335; kane.young@idph.iowa.gov

Regulatory Update

SOLID WASTE
Special Waste/Coal Combustion Residuals Surface Impoundments
Kentucky SOLID WASTE

Final rule of the Department for Environmental Protection, Division of Water, adopts regulations under 401 KAR 4:070 to establish standards for coal combustion residuals (CCR) surface impoundments. The rule adds definitions for "coal combustion residuals surface impoundment" and "CCR surface impoundment" and incorporates by reference federal standards under 40 CFR 257 concerning structural integrity, hydrologic and hydraulic capacity, inspections, recordkeeping, and notifications. The rule is effective May 5, 2017. Contact: Carole Catalfo; DEP, Division of Water; 502-782-6914; water@ky.gov

Regulatory Update

SOLID WASTE
Special Waste/Permit-By-Rule
Kentucky SOLID WASTE

Final rule of the Department for Environmental Protection, Division of Waste Management, amends regulations under 401 KAR 45:060 regarding the permit-by-rule for special wastes. The rule excludes disposal of coal combustion residuals (CCRs) in mining operations from being a permit-by-rule. The rule also removes certain beneficial reuses of CCRs, including product ingredients such as cement, concrete, paint, plastics, antiskid material, highway base course, blasting grit, and roofing granules. In addition, the rule clarifies that generators are only required to report annually on coal combustion by-products. A concurrent final rule establishes a permit-by-rule for CCRs under 401 KAR 46. The rule is effective May 5, 2017. Contact: Louanna Aldridge; DEP; 502-782-6538; Louanna.Aldridge@ky.gov

—Administrative Register of Kentucky (06/01/2017)

Regulatory Update

WATER
Onsite Sewage Disposal Systems
Kentucky WATER

Final rule Cabinet for Health and Family Services, Department for Public Health, amends regulations under 902 KAR 10:085 regarding requirements for onsite sewage disposal systems. The rule updates the daily waste flow table to account for technological improvements in water-using fixtures and appliances and greywater systems that reduce water usage. The rule also provides for the use approved alternative systems for on-site sewage disposal and updates sizing requirements for drip treatment and disposal systems and residential greywater waste systems. In addition, the rule updates definitions and incorporates related forms. The rule is effective May 5, 2017. Contact: Tricia Omre; CHFS, Office of Legal Services; 502-564-7905; Tricia.Omre@ky.gov

Subject: POLITICO's Morning Score: Montana 'closer than it should be' on eve of special, Republicans say — New Handel TV ad, CLF radio ad, DCCC investment in Georgia — Democrats flip Northeastern state legislative seats

By Kevin Robillard | 05/24/2017 10:00 AM EDT

With Elena Schneider and Scott Bland

The following newsletter is an abridged version of Campaign Pro's Morning Score. For an earlier morning read on exponentially more races - and for a more comprehensive aggregation of the day's most important campaign news - sign up for Campaign Pro today. (http://www.politicopro.com/proinfo)

THE FINAL COUNTDOWN - "Republicans: Montana special election 'closer than it should be,'" by POLITICO's Elena Schneider and Gabriel Debenedetti: "It's a recurring nightmare of a pattern for Republicans around the country, as traditional GOP strongholds prove more difficult and expensive for the party to hold than it ever anticipated when President Donald Trump plucked House members like Ryan Zinke, the former Montana Republican now running the Interior Department, for his Cabinet. Gianforte is still favored to keep the seat red, but a state Trump carried by 20 percentage points last year became a battleground in the last few months. ... 'I remember talking to people when it first started who said this was a slam dunk, Gianforte's it. And it's not there anymore,' said Jim Larson, the Montana Democratic Party chairman. 'It is a lot closer than people ever thought it would be.' Gianforte has led consistently in polls of the special election, but Quist has narrowed that lead to single digits in recent weeks, according to private surveys." **Full story.**

- Updates: Quist has raised more than $6 million for his campaign as of yesterday, including $1 million in the past week. Meanwhile, Pence recorded a robo-call for Gianforte. "With Greg Gianforte's help, we will make America great again," he says on the call. **Full story here.**

AND IN GEORGIA - NEW THIS MORNING - On the heels of new Democratic investments, Handel adds a new TV ad: Republican Karen Handel is adding a new TV and digital ad that goes after Democrat Jon Ossoff on "to hide his lack of experience and misleading resume," per a statement from her campaign. "No experience, no record of success, so he intentionally misled us to get our vote," the ad's narrator says. "The problem is, he got caught. Now Jon Ossoff and his liberal allies have been caught lying about Karen Handel too." **Watch the ad here**.

- CLF releases new radio ad, grows field program in GA-06: The Congressional Leadership Fund is bringing on 45 new door-knockers, expanding its field program to 135 paid staffers on the ground. It also added a new goal of reaching an additional 100,000 doors. The Republican group is also out with a new radio ad that hits on the same themes as its TV ads: "San Francisco will have Nancy Pelosi as our Congresswoman and Jon Ossoff as our Congressman," the radio ad's narrator says. **Listen to the ad here**.

- The moves come after the DCCC announced they would be spending an additional $2 million in the district on Tuesday. Of the investment, $1.5 million would go to television ads, with the remaining half-million aimed at get-out-the-vote digital ads and African-American print and radio ads.

BETA NO MORE - The FEC's beta website is now just its new website. Feast your eyes, fellow campaign finance nerds: FEC.gov

WAY, WAY DOWNBALLOT - Democrats flip state legislative seats in New Hampshire, New York: Let's get the caveats out of the way first - the two Republican-to-Democrat special election flips on Tuesday featured approximately 10,000 voters between the two of them. But Democratic candidates did manage to pull off wins in consistently Republican territory, the type of special election result that is contributing to GOP anxiety ahead of the Montana House race despite the fact that Republican Greg Gianforte has led in every poll of the closely-watched race. In New Hampshire, Democrat Edie DesMarais won a special election and flipped a seat last night in Republican-leaning Wolfeboro, winning a district Trump won with 51 percent of the vote in November. In New York, labor-backed teacher Christine Pellegrino won a normally Republican Long Island seat (Trump won approximately 60 percent there) in the state Assembly. Democrats excitedly noted that they are the first seats to flip this year after a series of special election performances running ahead of the 2016 results but shy of wins. (Republicans, meanwhile, have already flipped a formerly Democratic-held state legislative seat in a Louisiana special earlier this year.)

Days until the 2017 election: 168.

Days until the 2018 election: 532.

WOMEN RULE PODCAST: Fran Townsend, the former homeland security adviser for President George W. Bush, confirms that the Trump administration has approached her about replacing ousted FBI Director James Comey. In this week's must-listen episode, we hear directly from Townsend about being thrust into the middle of the controversial job search and how her candidacy for the job is itself "history-making." Townsend joins two other prominent women from the Bush White House - Candi Wolff, Assistant for Legislative Affairs, and Julie Cram, Deputy Assistant and Director of the Public Liaison Office - to reflect on their stints in the executive branch and offer up advice for the current Republican administration. Listen and subscribe iTunes | Soundcloud | Stitcher

ROLL TIDE - Strange claims NRA endorsement: Speaking on radio station in Mobile on Tuesday, Alabama Sen. Luther Strange said the NRA informed him earlier in the day that they

are endorsing him in the state's contested special election to permanently replace Attorney General Jeff Sessions. "I just got a letter from the NRA today announcing they've endorsed my campaign for the Senate," Strange said.

TECH UPDATE - "Republicans want to leave you more voicemail - without ever ringing your cellphone," by Recode's Tony Romm: "The GOP's leading campaign and fundraising arm, the Republican National Committee, has quietly thrown its support behind a proposal at the Federal Communications Commission that would pave the way for marketers to auto-dial consumers' cellphones and leave them prerecorded voicemail messages - all without ever causing their devices to ring. Under current federal law, telemarketers and others, like political groups, aren't allowed to launch robocall campaigns targeting cellphones unless they first obtain a consumer's written consent. But businesses stress that it's a different story when it comes to 'ringless voicemail' - because it technically doesn't qualify as a phone call in the first place." **Full story.**

- "Top hacker conference to target voting machines," by POLITICO's Edward-Isaac Dovere: "Hackers will target American voting machines - as a public service, to prove how vulnerable they are. When over 25,000 of them descend on Caesar's Palace in Las Vegas at the end of July for DEFCON, the world's largest hacking conference, organizers are planning to have waiting what they call 'a village' of different opportunities to test how easily voting machines can be manipulated. Some will let people go after the network software remotely, some will be broken apart to let people dig into the hardware, and some will be set up to see how a prepared hacker could fiddle with individual machines on site in a polling place through a combination of physical and virtual attacks." **Full story.**

RANK IN THE TANK - "Maine Supreme Judicial Court rules ranked-choice voting unconstitutional," by the Bangor Daily News' Michael Shepherd: "Maine's high court said Tuesday that the state's first-in-the-nation ranked-choice voting system is unconstitutional, throwing the voter-approved law into jeopardy ahead of the key 2018 campaign when it was supposed to be implemented. In a unanimous, 44-page opinion issued Tuesday, the Maine Supreme Judicial Court's seven justices agreed with Attorney General Janet Mills, Secretary of State Matthew Dunlap and Republican legislators that the system violates a provision of the Maine Constitution that allows elections to be won by pluralities - and not necessarily majorities - of votes." **Full story.**

2018 WATCH - "A 'Draft Lynn' for governor campaign surfaces," by the Atlanta Journal-Constitution's Greg Bluestein: "'Georgia needs Lynn.' So ends a lengthy plea sent to droves of Georgia Republicans on Tuesday urging former U.S. Rep. Lynn Westmoreland to join the 2018 race for governor. One of the most colorful personalities in Georgia politics, the Coweta County Republican embarked on a 'reconnect tour' after his decision last year not to run for another term in Congress. But he hasn't yet jumped in the race - or ruled it out." **Full story.**

ADMINISTRATION SPEED READ - "Trump undermines Senate GOP's Medicaid backers," by POLITICO's Burgess Everett and Adam Cancryn: "By proposing hundreds of billions of dollars in Medicaid cuts in combination with the House-passed health care bill's more than $800 billion in Medicaid spending reductions, President Donald Trump is effectively

throwing in with fiscal conservatives looking to constrain the program's growth and wind down its coverage as quickly as possible. And that could be perilous for more than a dozen GOP senators who have been meeting for months over how to preserve the law's benefits." **Full story.**

- "Pence planning to hold rally in Louisiana," by POLITICO's Kyle Cheney: "Vice President Mike Pence on Wednesday has scheduled a free rally in Louisiana on Wednesday that is being promoted by the state's Republican Party. An advisory from the Louisiana GOP says that Pence is headlining the event at Cajun industries in Port Allen, just outside of Baton Rouge, where he's also slated to hold a roundtable with small business leaders." **Full story.**

- Pence will also hit the trail in GA-06 on June 9, per the Atlanta Journal Constitution.

CODA - QUOTE OF THE DAY: "I just wanted to congratulate you because I am hearing of the unbelievable job on the drug problem." - Trump to Phillipine President Rodrigo Duterte, according to a leaked transcript of their phone call obtained by The Intercept. Duterte has been widely criticized for human rights abuses in his war on drugs.

Subject: EPA moving ahead with 'red team' climate science review

By Alex Guillén

06/30/2017 09:58 AM EDT

EPA is preparing to create a "read team/blue team" exercise to review climate change science, an agency spokeswoman confirmed today.

"Climate science like other fields of science is constantly changing. A new, fresh, and transparent evaluation is something everyone should support doing," EPA spokeswoman Liz Bowman said in a statement.

Pruitt and other Trump administration officials in recent weeks have hinted at some kind of climate science review after Obama-era undersecretary of Energy Steve Koonin wrote in The Wall Street Journal that climate science could benefit from a "red team" review. Such a review program is now formally in the works, and likely will include the Energy Department.

The "red team" concept has been used in other fields as a sort of devil's advocate system meant to find flaws in a theory or plan.

But scientists have pushed back on applying the idea to climate change science, saying the adversarial nature of peer-reviewed science means climate change science has already faced decades of rigorous review — and that a "red team" review here would give out-sized weight to a small subset of scientists who do not agree with mainstream conclusions.

Critics of the climate science "red team" approach also noted that it could also be a first step toward an EPA review and repeal of its 2009 endangerment finding, the underlying scientific document that concluded climate change poses a threat to human health and welfare and created legal obligations for EPA to regulate carbon dioxide.

Climatewire first reported today that EPA is definitely moving ahead with a "red team" review.

WHAT'S NEXT: EPA will recruit individuals to provide input as part of the climate science review, but the full process is still being finalized.

Subject: House bill would eliminate ARPA-E, bar future DOE loan guarantees

By Nick Juliano

06/27/2017 01:26 PM EDT

House appropriators are calling to eliminate a popular late-stage research program and bar the Energy Department from issuing new loan guarantees while proposing to cut spending on energy efficiency and renewables nearly in half.

The cuts reflect House Republicans' preference for DOE's nuclear and fossil energy programs, which would receive much smaller reductions. The House plan would not cut most programs as steeply as President Donald Trump called for in his budget — but lawmakers made exceptions for the Advanced Research Projects Agency-Energy and the loan-guarantee program.

The energy and water spending bill House appropriators released today does not include any funding for ARPA-E, which the Trump administration also proposed zeroing-out in its budget request.

For the loan-guarantee program, the spending bill would rescind nearly $161 million in money available to underwrite loan guarantees as well as DOE's authority to issue any new loans after Oct. 1. The bill would provide $2 million for administrative costs to be drawn from fees DOE has collected, a 95 percent reduction from the equivalent sum this year.

DOE's Energy Efficiency and Renewable Energy office would receive about $1.1 billion in the House bill. That's down from nearly $2.1 billion the office received this year.

But the fossil and nuclear energy offices would not see anything close to that magnitude of cuts. The fossil office would receive about $635 million, down $33 million from this year, while nuclear would see $969 million, a $48 million reduction.

WHAT'S NEXT: The House Appropriations energy and water subcommittee will mark up its bill on Wednesday. Lawmakers on both sides of the aisle are likely to resist the call to cut ARPA-E as the appropriations bill moves through Congress in the coming months.

You can create a report customized by topic, jurisdiction, and date range by using the Regulatory Summaries Report Tool. The report can be generated in Excel, Word, or PDF.

Summaries

AIR
California SIP/Imperial County APCD New Source Review Permitting Program
AIR

Final rule of the EPA amends regulations under 40 CFR 52.220 to approve revisions to the Imperial County Air Pollution Control District portion of the California SIP regarding the new source review permitting program. The rule approves revisions concerning application requirements and processing of applications. The rule also approves a technical correction concerning exemptions. A June 12, 2017, proposed rule (82 FR 26883) addresses revisions concerning new and modified stationary source review and would grant conditional approval pending the district's commitment to submit a SIP revision that regulates ammonia as a fine particulate matter (PM-2.5) precursor. The rule is effective July 14, 2017. Contact: Thien Nguyen; EPA Region 9; 415-947-4120; nguyen.thien@epa.gov

82 FR 27125 (06/14/2017)

Regulatory Update

AIR
New Mexico SIP/Regional Haze
AIR

Final rule of the EPA amends regulations under 40 CFR 52.1620 to approve a revision to the New Mexico SIP. The revision includes a progress report concerning federal regional haze requirements and an adequacy determination for achieving reasonable progress goals regarding visibility improvement and emission reductions for Class I areas affected by sources in the state. The rule is effective July 14, 2017. Contact: James Grady; EPA Region 6; 214-665-6745; grady.james@epa.gov

82 FR 27127 (06/14/2017)

Regulatory Update

AIR
Oklahoma SIP/Infrastructure and Interstate Transport Requirements
AIR

Final rule of the EPA amends regulations under 40 CFR 52 to partially approve and partially disapprove revisions to the Oklahoma SIP concerning infrastructure and interstate transport requirements for the 2012 fine particulate matter (PM-2.5) NAAQS. The rule approves revisions related to interference with prevention of significant deterioration. The rule disapproves interstate transport provisions for visibility protection (prong 4). The rule takes no action regarding 2010 sulfur dioxide or the 2012 PM-2.5 NAAQS, which will be addressed at a later date. The rule is effective July 14, 2017. Contact: Wendy Jacques; EPA Region 6; 214-665-7395; jacques.wendy@epa.gov

82 FR 27121 (06/14/2017)

Regulatory Update

AIR
Risk Management Program/Accidental Release Prevention
AIR

Final rule of the EPA further delays the effective date of a Jan. 13, 2017, final rule (82 FR 4594) that amends regulations under 40 CFR 68.3 through 68.210 (nonconsecutive) and adopts regulations under 40 CFR 68.59, 68.80, 68.93, 68.96, and 68.205 to revise accidental release prevention requirements under the Risk Management Program (RMP). The rule requires all facilities with Program 2 or 3 processes to conduct a root cause analysis as part of an incident investigation of a catastrophic release or possible catastrophic release and to contract with an independent third-party to perform a compliance audit after a reportable release. The rule also requires owners or operators of Program 3 facilities in North American Industrial Classification System codes 322, 324, and 325 to conduct a safer technology and alternative analysis as part of their process hazard analysis and to evaluate the feasibility of any inherently safer technology (IST) identified. In addition, the rule requires owners or operators of Program 2 or 3 facilities to coordinate with the local emergency response agencies at least once per year, to conduct notification exercises annually, and to conduct a full field exercise at least once every five years and one tabletop exercise annually in the other years. Finally, the rule requires all facilities to provide basic chemical hazard information to the public; to provide local emergency response agencies with summaries of their activities on compliance audits, emergency response exercises, accident history and investigation reports, and any ISTs implemented at the facility; and to hold a public meeting for the local community within a specified time frame after an RMP reportable accident. The EPA previously delayed (82 FR 13968; 03/16/2017) the effective date of the final rule until June 19, 2017, and now further delays the effective date until Feb. 19, 2019. Petitions for judicial review are due Aug. 14, 2017. Contact: James Belke; EPA, Office of Land and Emergency Management; 202-564-8023; belke.jim@epa.gov

06/15/2017 01:00 PM EDT

By JAKE SHERMAN (sherman@politico.com; @JakeSherman), ANNA PALMER (anna@politico.com; @apalmerdc), DANIEL LIPPMAN (daniel@politico.com; @dlippman), ZACH MONTELLARO (zmontellaro@politico.com; @ZachMontellaro)

Good Thursday afternoon. NEWS -- JIM DEMINT is in the process of setting up a NEW conservative group that will be announced in the next few weeks. He and his allies have been talking around town about it in recent days. Wesley Denton, his spokesman, said: "We'll be announcing in a few weeks and we're excited to get started. Our goal isn't to replicate things other great organizations are doing, but rather to fill a void and advance the conservative movement in a meaningful way."

THE LATEST ON SCALISE -- "Scalise faces third surgery after being wounded in mass shooting," by Rachael Bade: "House Majority Whip Steve Scalise, shot Wednesday during a congressional baseball practice, was undergoing his third surgery Thursday morning as his colleagues gathered to discuss the horrific shooting and share cautiously optimistic statements about Scalise's recovery.

"The Louisiana Republican remained in critical condition early Thursday as doctors at MedStar Washington Hospital Center began a third operation. The bullet had fractured bones and torn through internal organs, according to a late Wednesday night hospital statement. And Scalise, who suffered severe blood loss, had been receiving multiple units of blood transfusion. According to sources familiar with Scalise's condition, the third surgery was routine for gunshot victims. Doctors went in to check on the work they performed the night before.

"On the Hill, lawmakers grappled with the severity of Scalise's condition, with some Republicans even speculating that Scalise could be out commission for some time. Speaker Paul Ryan (R-Wis.) and his leadership team called an emergency conference Thursday morning to give lawmakers an update. Scalise's chief deputy whip Patrick McHenry (R-N.C.), who's visited him in the hospital, gave a moving speech about faith in dark times - and about Scalise's strength as an individual. Sources in the room said people tried to stay optimistic, even as some members who witnessed the horrific shooting stood and told their stories. Lawmakers signed jumbo cards for Scalise and the other victims." http://politi.co/2ssSDXU

-- NOTE: Rachael and Jake were reporting through last night and early this morning and we've been told that the likelihood is Scalise will be out of commission for some time.

-- **"Pence visits Scalise in hospital as he recovers from shooting wound,"** by Nolan D. McCaskill: "A spokesman said Pence checked on Scalise and spoke to Crystal Griner, one of two Capitol Police officers who were wounded during the incident." http://politi.co/2tqqfme

PRESIDENT DONALD TRUMP said Scalise's situation has "been much more difficult than people even thought at the time," per pooler Jordan Fabian of The Hill. "Trump said 'he's in some trouble' but [added], 'he's going to be OK, we hope.'"

FINANCIAL DISCLOSURE SEASON ...

-- HOUSE MINORITY LEADER NANCY PELOSI'S husband lost at least $10 million on his investment in the United Football League and the Sacramento Mountain Lions team. But Pelosi and her husband remain very rich, with a net worth of between $32 million and $149 million.

-- HOUSE MAJORITY LEADER KEVIN MCCARTHY'S wife has picked up a job at the California Republican Party.

-- NEW YORK REP. CHRIS COLLINS disclosed between $25 million and $50 million in Innate Immunotheraputics, the company he has been advising other lawmakers to invest in. He had between $5 million and $25 million last year.

-- REP. DARRELL ISSA (R-CALIF.) has picked up a building right across from the Capitol. He now owns 25 D Street, SE through a limited partnership, according to his financial disclosure. He bought it in April 2016.

-- REP. CHARLIE CRIST (D-FLA.) took quite the pay cut to come to Congress. He made $604,596 from the law firm Morgan and Morgan in 2016.

WHITE HOUSE STATEMENTS -- from **@realDonaldTrump** at **6:55 a.m.**: "They made up a phony collusion with the Russians story, found zero proof, so now they go for obstruction of justice on the phony story. Nice" ... **at 7:57 a.m.:** "You are witnessing the single greatest WITCH HUNT in American political history - led by some very bad and conflicted people! #MAGA"

TRUMP'S CLIMATE POLICY -- "Energy Department Closes Office Working on Climate Change Abroad," by NYT's Brad Plumer: "The Energy Department is closing an office that works with other countries to develop clean energy technology, another sign of the Trump administration's retreat on climate-related activities after its withdrawal from the Paris agreement this month.

"The 11 staff members of the Office of International Climate and Technology were told this month that their positions were being eliminated, according to current and former agency employees. The office was formed in 2010 to help the United States provide

technical advice to other nations seeking to reduce greenhouse gas emissions. The small office also played a lead role preparing for the annual Clean Energy Ministerial, a forum in which the United States, China, India and other countries shared insights on how best to promote energy efficiency, electric vehicles and other solutions to climate change." http://nyti.ms/2ssOCTk

IN THE VALLEY -- "Tim Cook on Donald Trump, the HomePod, and the Legacy of Steve Jobs," by Bloomberg Businessweek editor Megan Murphy on the cover of the magazine: Cook on Trump: "I feel a great responsibility as an American, as a CEO, to try to influence things in areas where we have a level of expertise. I've pushed hard on immigration. We clearly have a very different view on things in that area. I've pushed on climate. We have a different view there. There are clearly areas where we're not nearly on the same page.

"We're dramatically different. I hope there's some areas where we're not. His focus on jobs is good. So we'll see. Pulling out of the Paris climate accord was very disappointing. I felt a responsibility to do every single thing I could for it not to happen. I think it's the wrong decision. If I see another opening on the Paris thing, I'm going to bring it up again. At the end of the day, I'm not a person who's going to walk away and say, 'If you don't do what I want, I leave.' I'm not on a council, so I don't have those kind of decisions. But I care deeply about America. I want America to do well. America's more important than bloody politics from my point of view." https://bloom.bg/2ssFn5A

-- Bloomberg Businessweek has also launched a new redesign that's anchored by a print magazine that will have three editions (Asia, Europe and the Americas), a new email newsletter, and a redesigned app and website. They're also rolling out a two-tiered membership model -- a digital only subscription and an "all access" one that includes the weekly magazine. http://bit.ly/2ssMrPF ... ***Some of the magazine's 2017 covers*** http://bit.ly/2rvkY0u

FRIENDLY RELATIONSHIP -- "Leaked audio reveals Malcolm Turnbull roasting Donald Trump over 'fake polls' and Russia," from 9News's (an Australian news network) Laurie Oakes: "Prime Minister Malcolm Turnbull isn't known for being a comedian but he tried some daring Donald Trump material on a room full of journalists in Canberra last night. He gave a tongue-in-cheek speech, which Nine's Political Editor Laurie Oakes has decided to reveal, at Parliament House's annual Mid Winter Ball. ... He even does a Donald Trump impersonation.

"'The Donald and I, we are winning and winning in the polls. We are winning so much, we are winning, we are winning like we have never won before,' he says. He also alludes to the probe into the Trump campaign's links with Russia, adding: 'I have this Russian guy... Believe me, it's true, it is true.'" http://bit.ly/2ssvBAj

ON TO CANADA -- @GovMattBevin: "Proud of my dear friend, Kelly Knight Craft, the next Ambassador to America's largest trading partner, Canada" ... **@UKCoachCalipari:** "I'm so happy for Kelly Knight Craft and this opportunity for her and Joe Craft as she

gets set to become the American ambassador to Canada."

MEDIAWATCH -- The New York Times editorial board was pilloried online for its editorial about yesterday's shooting. In the editorial, they connect the shooting of then-Rep. Gabby Giffords to a map put up by Sarah Palin's PAC -- even though extensive Times reporting from the time showed no such connection, and the ABC News story they linked to said that "no connection has been made" between the shooting and the map. National Review's David French on the editorial: "Let's be blunt. In its zeal to create moral equivalencies and maintain a particular narrative about the past, the Times flat-out lied. ... The Times editorial board didn't have far to go to understand Loughner's motivations; it could have asked ... New York Times reporters." http://bit.ly/2ssVfoG The New York Times has since issued a rare correction to the editorial, saying in part that "no such link was established." ***The NYT editorial*** http://nyti.ms/2ssS0gK

-- Kaitlan Collins, Daily Caller's White House correspondent, will be a White House reporter at CNN starting on Monday (scooped by Kelsey Sutton at Mic http://bit.ly/2st7gui). **Alex Pfeiffer** is being promoted back at Daily Caller to be their new White House correspondent (a Maxwell Tani scoop at BI http://read.bi/2stkQxO). Pfeiffer is just 20 years old.

SPOTTED at last night's Interfaith Iftar dinner at the stunning UAE embassy, hosted by Ambassador Yousef Al-Otaiba: Wolf Blitzer, Jordanian Amb. Dina Kawar, Martin Indyk, Jason greenblatt, Jim Zogby, Jeremy Katz, Rep. Tom Suozzi (D-N.Y.), Kim Dozier, Andrew Exum, Emma Green, Laura Whitefield, Fred and Kim Kagan, Nahal Toosi, Afghan Amb. Dr. Hamdullah Mohib (a loyal Playbooker) and Azerbaijan Amb. Elin Suleymanov, Husain Haqqani. ***Pics of the embassy*** http://bit.ly/2sesfyl ... http://bit.ly/2seIpYT ... http://bit.ly/2seUuNG

OUT AND ABOUT -- Lanny Griffith was honored as the new president of the Miss America Foundation last night at BGR. **SPOTTED:** Miss America 2017 Savvy Shields, former Gov. Haley Barbour, Dan Murphy, Bill Viney, Chris Henick, Rod Windham, Tammy Haddad, Dan Meyers, William Crozer, George Nassar, Kimble Ratliff, Sam Haskell, Josh Randle, Eli Popicg and Lynn Weidner.

Subject: Playbook Power Briefing, presented by BP: TRUMP wants to call tax bill: 'Cuts, Cuts, Cuts' -- POTUS bashes SCHUMER less than 24 hours after deadliest terror attack in NYC since 9/11 -- NYPD: Attack done 'in the name of ISIS'

View online version | Add politicoplaybook@politico.com to your address book.

Today's Playbook Power Briefing presented by BP

By JAKE SHERMAN (sherman@politico.com; @JakeSherman), ANNA PALMER (anna@politico.com; @apalmerdc), DANIEL LIPPMAN (daniel@politico.com; @dlippman) and ZACH MONTELLARO (zmontellaro@politico.com; @ZachMontellaro)

Good Wednesday afternoon.

THE TAX BILL'S NAME? -- PRESIDENT DONALD TRUMP wants to name the tax bill "Cuts, Cuts, Cuts," according to sources familiar with internal discussions. This is running into a tad bit of resistance among some on Capitol Hill, who don't exactly favor the name. The 1986 tax bill was called, quite plainly, the "Tax Reform Act of 1986." Oh, and by the way: lawmakers don't want to call this a tax cut bill. They want to call it TAX REFORM!

HOT DOC -- START PLANNING YOUR VACATION -- The 2018 House legislative calendar is out. Time to start your vacation planning! http://politi.co/2zZ4X2G

HMM -- "Special counsel: Manafort's stated wealth fluctuated wildly; he keeps 3 passports," by WaPo's Spencer Hsu: "Onetime Trump campaign chairman Paul Manafort keeps three U.S. passports with different identification numbers and submitted 10 passport applications in as many years, the office of special counsel Robert S. Mueller III disclosed in a new court filing Tuesday arguing that Manafort poses a significant flight risk." http://wapo.st/2iQap4x

-- CNN's "MOSCOW" MANU RAJU and **JIM ACOSTA: "Trump didn't dismiss idea when foreign policy adviser suggested setting up Putin meeting":** "Candidate Donald Trump did not dismiss the idea of arranging a meeting with Russia's president when it was suggested in a meeting with his campaign foreign policy advisers last year, according to a person in the room.

"The idea was raised by George Papadopoulos as he introduced himself at a March 2016 meeting of the Republican candidate's foreign policy advisers, according to a court filing. 'He didn't say yes and he didn't say no,' the official said, declining to be more specific about Trump's response to Papadopoulos.

"But the chairman of Trump's national security team, then Alabama senator and

now attorney general Jeff Sessions, shut down the idea of a Putin meeting at the March 31, 2016, gathering, according to the source. His reaction was confirmed with another source who had discussed Sessions' role." http://cnn.it/2iRIGQM

THE LATEST ON THE NYC TERROR ATTACK -- "NYPD: NYC bike path attack 'in the name of ISIS,' planned for weeks," by Newsday's Bart Jones, with reporting from 16 different reporters: "The suspected lone wolf terrorist who drove a rented pickup truck down a lower Manhattan bike path, killing eight people, attacked 'in the name of ISIS' and it appears he 'had been planning it for a number of weeks,' an NYPD official said Wednesday. Investigators found notes, handwritten in Arabic, that Sayfullo Saipov, 29, left behind which said, 'The Islamic State would endure forever,' NYPD Deputy Police Commissioner John Miller said at a late morning news conference.

"A law enforcement source said Saipov came to Manhattan four times before the attack in what were believed to be reconnaissance missions. Miller said Saipov, an Uzbekistan immigrant who came to the United States in 2010 and is a legal permanent resident, appeared to follow ISIS instructions put out on social media 'almost to a T.' ... Miller said Saipov had never been the subject of an FBI or NYPD probe. Six of the people killed Tuesday were foreign tourists, officials said." https://nwsdy.li/2iRWJWE

TRUMP said during a pool spray that he'd "consider" sending the terrorist from the New York City attack to Guantanamo Bay and that he is "starting the process of terminating the diversity lottery program ... I am going to ask Congress to immediately initiate work to get rid of this program." He also said U.S. immigration laws are "a joke."

-- @realDonaldTrump at 7:24 a.m.: "The terrorist came into our country through what is called the 'Diversity Visa Lottery Program,' a Chuck Schumer beauty. I want merit based." ... **at 7:30 a.m.:** "We are fighting hard for Merit Based immigration, no more Democrat Lottery Systems. We must get MUCH tougher (and smarter). @foxandfriends" ... **at 7:40 a.m.:** "'Senator Chuck Schumer helping to import Europes problems' said Col.Tony Shaffer. We will stop this craziness! @foxandfriends".

-- @JeffFlake: "Actually, the Gang of 8, including @SenSchumer, did away with the Diversity Visa Program as part of broader reforms. I know, I was there ... In fact, had the Senate Gang of 8 bill passed the House, it would have ended the Visa Lottery Program AND increased merit based visas."

-- QUICK NOTE: Less than 24 hours after a terrorist incident, the president is bashing the senior senator whose home state was attacked.

****** **A message from BP: We operate the largest renewables business of any major oil and gas company in the world.** *Learn more in our Economic Impact Report.* ******

VP MIKE PENCE is going to the CIA today, and will deliver remarks to agency employees and participate in briefings with CIA Director Mike Pompeo.

UPDATE ON THE NAVY'S SUMMER COLLISIONS -- "Navy crews at fault in fatal collisions, investigations find," by Defense News' David Larter: "Two accidents that claimed the lives of 17 sailors and wounded dozens more resulted from complete breakdowns in standard Navy procedures and poor decision making by officers and sailors on the bridge of the two warships, according to a Navy report obtained by Defense News. The Navy plans to release on Wednesday its first official report on the specific causes of the two unrelated collisions this summer when both the destroyers Fitzgerald and John S. McCain struck commercial vessels in crowded sea lanes in the Pacific.

"The report reveals that both collisions came after critical failures of officers and sailors on the bridge and raise troubling questions about the basic proficiency of the Japan-based 7th Fleet and the surface Navy as a whole. In both incidents, sailors on the bridge failed to sound a ship-wide alarm notifying the crew of danger, which is a standard Navy procedure." http://bit.ly/2iRte7m

****** **A message from BP: From coast to coast, we spent $16 billion with local businesses last year.** *Take 30 seconds to see how we're supporting jobs across the U.S.* ******

ANOTHER IDEA FOR TAX REFORM -- @realDonaldTrump at 10:59 a.m.: "Wouldn't it be great to Repeal the very unfair and unpopular Individual Mandate in ObamaCare and use those savings for further Tax Cuts....." ... **at 11:03 a.m.:** "....for the Middle Class. The House and Senate should consider ASAP as the process of final approval moves along. Push Biggest Tax Cuts EVER"

-- @RichardRubinDC: "It raises money because fewer people would be insured, so the government spends less money on subsidies for them. ... So yes, they COULD use it to 'pay for' more tax cuts. But it introduces health politics into taxes. And Brady trashed the idea yesterday."

YOU'RE INVITED -- REMINDER: JAKE and **ANNA** will sit down **FRIDAY** with **HOUSE WAYS AND MEANS CHAIRMAN KEVIN BRADY** -- Kevin Brady is the House's top tax writer, putting him in the middle of Republicans' biggest and most important legislative push. He will explain the tax bill to us -- and to Washington -- in a Playbook Interview. **LOCATION:** The Newseum (555 Pennsylvania Avenue, NW). **TIME:** Doors open at 11:30 a.m., and the event starts at noon. **RSVP:** http://bit.ly/politicobrady **EMAIL US** if you have questions for the chairman.

VALLEY TALK -- "Burr downplays Russian Facebook ad targeting of Michigan, Wisconsin," by Li Zhou, Nancy Scola and Ashley Gold: "Senate Intelligence Committee Chairman Richard Burr (D-N.C.) on Wednesday sought to downplay reports that Russian-linked actors targeted Facebook ads at two key battleground states in the 2016 election. Quoting from a news story that Russian-linked Facebook ads were aimed at Michigan and Wisconsin, with some of the ads targeting specific demographic groups,

Burr said the situation wasn't that simple. ...

"But Burr later emphasized the continuing threat of Russian meddling. 'We can't afford to kid ourselves about what happened last year and continues to happen today,' he said. 'This is about national security ... deliberate and multifaceted manipulation of the American people by agents of a hostile foreign power.'

"**Sen. Mark Warner (D-Va.),** ranking member of the Intelligence committee, echoed concerns about the ongoing nature of the Russian threat. Russians are using social media to 'set us against ourselves and to undermine our democracy,' he said. 'They did it during the 2016 U.S. presidential campaign. They are still doing now.' Warner called on Facebook, Google and Twitter to 'commit more resources' to identify those who exploit their networks for nefarious purposes." http://politi.co/2iUXeiV

-- HAPPENING TODAY -- FLASH BRIEFING on Facebook, Google Hearings: POLITICO and The Information are partnering to offer an insider flash briefing for real-time analysis, key takeaways, and the impact that Congressional testimony about Russian involvement in the 2016 Election by representatives of Facebook, Google, and Twitter will have. Jessica Lessin will moderate a discussion and Q&A featuring POLITICO's Nancy Scola and The Information's Cory Weinberg on the hearings and their impact on legislation, the latest intel about possible connections to the Trump and Clinton campaigns, and insight into how these tech giants are responding to Russian propaganda arms like RT. Subject: POLITICO's Morning Energy, presented by ExxonMobil: Climate confrontation awaits Trump in Europe — Court blocks delay of EPA's methane rule — Top EPA union official speaks out

By Anthony Adragna | 07/05/2017 10:00 AM EDT

With help from Esther Whieldon, Ben Lefebvre, Sara Stefanini and Alex Guillén

TRUMP FACES CLIMATE CONFRONTATION: President Donald Trump sets off today for Europe ahead of the G-20 summit in Hamburg later this week and it's clear climate change and Trump's decision to withdraw from the Paris accord will be a topic of significant contention. Trump held an "extensive" conversation with German Chancellor Angela Merkel on Monday about climate change, and Merkel warned last week one "cannot expect any easy conversations" about Paris during the gathering. The two leaders are expected to meet sometime on Thursday before the formal kick-off of the G-20 sessions. As POLITICO Europe's Matthew Karnitschnig notes, Merkel's reputation for careful preparation and delving into the smallest detail in negotiations offers a stark contrast with Trump's inclination to follow his gut based on his rudimentary grasp of issues like climate change.

But first up on the trip is friendlier turf for Trump in the form of Poland, whose leaders also harbor doubts about climate change and have long worked to protect the nation's coal mining operations, one of its major economic engines. The White House said last week Trump would deliver remarks on "energy security" at the Three Seas Conference and would highlight the first delivery of U.S. liquefied natural gas to Poland earlier this month. "We are committed to the energy security of our allies and partners, and to the diversification of energy sources, supplies and routes," National Security Adviser H.R. McMaster said ahead of the trip. POLITICO Europe's Micha?? Broniatowski with more on what awaits Trump in Poland.

Obama touts Paris' importance: Speaking in South Korea on Monday, former President Barack Obama touted the importance of the Paris climate accord even while lamenting Trump's decision to withdraw the U.S. from the deal. "The Paris agreement, even with the temporary absence of US leadership, will still be a critical factor in helping our children solve the enormous challenge in civilization," Obama said, according to CNN.

U.N. official says U.S. may hit targets anyways: United Nations chief Antonio Guterres told a conference in Lisbon, Portugal there's been a "global push" toward climate action since Trump's announcement and a "clear" commitment from key developing powers like China and India to address the problem. According to AFP, Guterres said Monday former New York Mayor and current U.N. climate envoy Mike Bloomberg "is convinced that the United States will be able to reach the targets it set itself under the Paris accord" through the efforts of cities and the business community.

WELCOME TO WEDNESDAY! I'm your host Anthony Adragna, and welcome back to a shortened July 4th week! Hope everyone enjoyed some grilling, fireworks and relaxation! Growth Energy's Chris Bliley was first up to identify Austin and Boston as the two state capitals

that share no vowels but rhyme nevertheless. For today: Which state capital shares its name with one of NASA's earliest space shuttles? Send your tips, energy gossip and comments to aadragna@politico.com, or follow us on Twitter @AnthonyAdragna, @Morning_Energy, and @POLITICOPro.

METHANE STAY REBUFFED IN COURT: Environmental advocates won an early victory against EPA Administrator Scott Pruitt's deregulation efforts Monday when a federal appeals court reinstated the agency's methane emissions rule for future oil and gas wells, Pro's Alex Guillén reports . "[This] ruling makes clear that Scott Pruitt lacks the authority to slam the brakes on common-sense methane pollution rules that help protect the climate and communities living near oil and gas wells," Earthjustice attorney Tim Ballo said in a statement. The D.C. Circuit Court of Appeals' decision means that new oil and gas wells and those drilled since the methane rule was implemented last August must comply with all its requirements, though Pruitt continues to pursue separately suspending enforcement of the rule through 2019 in a move considered more likely to pass legal muster.

Oil production is unlikely to be affected much though the American Petroleum Institute said a new stay on the regulation was needed to reduce uncertainty for its members, Alex and Pro's Ben Lefebvre report. Few wells are likely to be shut even as Pruitt's broader deregulatory push largely remains on track. "Most large oil and gas companies have already worked to comply with the rule, either because they saw this coming or because they have shareholders who care" about wasting gas, Amy Myers Jaffe, executive director for energy and sustainability at University of California Davis, said.

ENERGY WEEK RETURNS! July 4th tweet at 3:55 p.m. from the president: "Gas prices are the lowest in the U.S. in over ten years! I would like to see them go even lower."

EPA'S TOP UNION OFFICIAL SPEAKS OUT: Alex is out this morning with an interview with John O'Grady, president of the American Federation of Government Employees Council 238. O'Grady thinks EPA will successfully get around 400 employees to take early retirement or buyout packages this summer (not the 1,200 Pruitt hopes for). He says agency workers are "pretty sick and tired of being beat up as federal employees" but that they are devoted to the agency's mission and busier than ever. "This idea that you can do more with less," O'Grady said. "Well excuse me - you can't. We're at the point where we're at bare bones, we can't do more for less."

O'Grady's takeaway on what's next for EPA: "The outlook is not good. The outlook is that I plan on being in a fight for the next four years. And why this administration cannot understand that EPA does good work for the American people, that the American people want it - it's just hurting the Republican party and this administration."

WHITE HOUSE RELEASES SALARY DATA: Information released late Friday with the full breakdown of White House salaries shows Mike Catanzaro, a top energy and environmental policy aide for Trump, is drawing an annual salary of $115,000. George David Banks is taking home $140,000, according to the document. Chief of Staff Reince Priebus, chief strategist and senior counselor Steve Bannon, press secretary Sean Spicer, counselor Kellyanne Conway,

spokeswoman Hope Hicks and social media director Dan Scavino are all earning $179,700. POLITICO's Nolan D. McCaskill with more here.

O REALLY? ORALLY? Pruitt only issued his "directive" to stop the practice called "sue and settle" orally rather than in writing, Pro's Alex Guillén reports, citing EPA's response to a FOIA request. EPA did not say when Pruitt issued the oral directive to employees to avoid reaching settlements in lawsuits brought by environmental groups, which he and other Republicans have long criticized as a way for environmental groups to force new regulations.

** **Presented by ExxonMobil**: Biofuel refined from algae could transform how we power automobiles and jet planes. It's energy-rich and emits significantly less CO_2 than most transportation fuels. And it doesn't compete with food and fresh water supplies. We're actively researching this technology to move it from the petri dish to the fuel tank: EnergyFactor.com**

MAJOR ANNOUNCEMENT PLANNED: Interior Secretary Ryan Zinke today makes an announcement at 11:30 a.m. near the Antietam National Battlefield Visitor Center about what project Trump's donated presidential salary will support. You may remember the White House announced in April Trump would donate the first quarter of his annual salary - totaling $78,333 - to the National Park Service. The Battle of Antietam was of course the site in September 1862 of the single bloodiest battle in U.S. history with some 23,000 soldiers killed, wounded or missing in just 12 hours of combat.

STUCK IN THE MIDDLE WITH YOU: For years the National Economic Council has been a sleepy home to wonks but it's taken center stage in a host of major policy battles during the Trump administration, especially among those who want Trump to moderate his positions on certain campaign promises, POLITICO's Nancy Cook and Andrew Restuccia report . Led by director Gary Cohn, the NEC held a series of meetings with fossil fuel companies in hopes of building support for sticking with the Paris agreement but weakening U.S. domestic commitments. Cohn seemed more confident during May's G-7 meetings that Trump's was coming around on the issue, but the president ultimately was swayed by others that the accord was a bad deal for the U.S.

WELCOME TO THE POST-CRA WORLD! Months after Trump signed a Congressional Review Act resolution nullifying updated land-use planning and environmental review processes, BLM is accepting comments through July 24 in an online questionnaire on ways to speed up and decrease the costs of the processes, Pro's Esther Whieldon reports. That feedback will in turn become a report for Zinke on possible approaches, though it's worth remembering use of the CRA bars the agency from writing another rule that is substantially the same.

THANKS OBAMA: Prior to the July 4 break, the Center for American Progress released a new analysis arguing policy actions taken during the Obama administration have fueled the rapid growth in the clean energy sector. It argues the approach taken by Trump's White House will decide whether the U.S. will "win the technology race to produce affordable, sustainable energy" globally.

GREENS HIT G-20 ON FOSSIL FINANCING: Oil Change International, Friends of the

Earth U.S., the Sierra Club and WWF European Policy Office are out with a report today finding the U.S. provides $6 billion annually in fossil fuel public financing and G-20 nations spend nearly four times as much on fossil fuel public support than clean energy. Just 15 percent of financing from those G-20 nations is earmarked for clean energy projects, which the environmental groups argue goes against the goals of the Paris agreement. "Our research shows that the G-20 still hasn't put its money where its mouth is when it comes to the clean energy transition," Alex Doukas, senior campaigner at Oil Change International, said in a statement.

FRANCE EYES CARBON NEUTRALITY BY 2050: Prime Minister Edouard Philippe said in his general policy speech to the National Assembly on Tuesday. The government will equalize gasoline and diesel taxes by 2022, increase its existing carbon tax, halve the waste put into landfills and recycle all plastics by 2025.

SHAKING IT UP: The National Oceanic and Atmospheric Administration is extending by 15 days the public comment period on applications to conduct seismic surveys in federal waters off the Atlantic coast. Comments are now due by July 21, NOAA says in a document to be published in the federal register today. The proposed review of five companies' applications has caught criticism from governors of East Coast states and environmentalists, who worry that the surveys could harm marine animals and eventually lead to oil and gas drilling puncturing the region's tourist trade.

GRIJALVA SEEKS REPORT ON THREATS AGAINST FEDERAL EMPLOYEES: Ahead of a July 10 retrial for four officials in the 2014 Cliven Bundy ranch standoff, House Natural Resources Ranking Member Raul Grijalva asked GAO in a letter for a report on threats and attacks against federal land management officials and property.

TIME TO REANALYZE? DOE hinted Monday it may rewrite certain documents related to the agency's efficiency standards for air compressors issued at the end of the Obama administration, Pro's Darius Dixon reports. In a request for information, DOE said small businesses had expressed "concern about the economic burden" of a final version of so-called test procedures for industrial and air compressor efficiency and pledged to collect information about compressors for 60 days.

BLM SEEKS COMMENT ON NEW MEXICO SOLAR STRATEGY: The Interior Department's Bureau of Land Management has taken another step toward eventually offering solar leases in southern New Mexico. BLM is asking for comments by July 21 on its landscape-scale review of the Afton Solar Energy Zone that covers about 30,000 acres. By creating "regional mitigation strategies" for solar zones before offering leases, BLM gives potential developers an idea of what they may be ordered to do under a lease to reduce, or make up for, their impact on such things as local plants and wildlife. The agency has completed strategies for eight SEZs in Arizona, Colorado and Nevada and is developing ones for three zones in Utah.

MOVER, SHAKER: Geoffrey Barnes, a veteran Squire Patton Boggs attorney who in recent years represented coal producer Murray Energy in various lawsuits against EPA, including the Clean Power Plan litigation, retired on Friday.

Chris Kelley has started on API's federal relations team as a director focused on international and corporate issues. He most recently was deputy chief of staff for Rep. Brad Ashford (D-Neb.) (h/t POLITICO Playbook).

Subject: EPA sends Clean Power Plan review to OMB

By Alex Guillén

06/09/2017 08:00 AM EDT

EPA has sent its proposed review of the Clean Power Plan to the White House Office of Management and Budget for review, according to a notice on OMB's website.

The notice submitted Thursday gives no indication of the proposal's details, it is expected to seek to repeal the rule. Environmental and industry groups likely will flood OMB with meeting requests to make their cases for or against keeping the rule.

EPA Administrator Pruitt said last month that he has not yet decided whether to craft new climate rules. The lawsuit over the Clean Power Plan is on hold, and the court is mulling whether to keep it that way or remand the rule to EPA outright.

WHAT'S NEXT: OMB will spend the next several weeks or months reviewing EPA's proposal and meeting with interested parties before it is released.

Subject: The magnitude of rooftop solar subsidies and why it matters

The magnitude of rooftop solar subsidies and why it matters?

November 2017

Ronald M. Barone and Benjamin Zycher

Key points

- **Rooftop solar power is substantially more costly than either conventional electricity or utility-scale solar power.**
- **The various subsidies and other favoritism bestowed on rooftop solar power create an investment bias in its favor of about 20 percent of the costs of rooftop systems.**
- **That bias subsidizes the wealthy and upper middle class at the expense of those in lower income classes.**

Subject: POLITICO's Morning Energy: Trump makes final FERC pick — House Republicans save climate provision in defense bill — No moves yet toward U.S. Paris renegotiation

By Anthony Adragna | 07/14/2017 10:00 AM EDT

FINALLY!: The White House has made official what Pros learned months ago, announcing Thursday night that veteran Jones Day attorney Kevin McIntyre is Trump's pick for FERC chairman, Pro's Darius Dixon reports . The veteran attorney has represented companies across a wide cross-section of the energy industry with Jones Day since early 1994. The announcement should be welcome news for Trump's other two GOP FERC nominees, who have been awaiting confirmation in the Senate since breezing through committee a month ago - not to mention any utilities or pipeline companies with business before FERC. The commission has been unable to do much since it lost its quorum back in February and is now down to just one member.

Buying time: The White House still has to send over McIntyre's nomination paperwork to the Energy and Natural Resources Committee, and it still has not done so for Democratic FERC candidate Rich Glick, whose nomination was announced two weeks ago. Before McIntyre's nomination, FERC-watchers were beginning to worry the paperwork delay would prevent Glick's nomination from advancing before recess. And a day before the announcement, ENR Chairwoman Lisa Murkowski said Majority Leader Mitch McConnell had not promised her floor time for any FERC nominees this work period.

But now that there is an opportunity to restore FERC to full strength - with a Republican majority - we'll see if that situation changes. McConnell announced earlier this week that he was canceling two weeks of recess, which may give the energy committee enough time to process a comprehensive package of FERC nominees, including Glick and McIntyre, so long as the White House can deliver their paperwork soon. Fellow GOP FERC nominees, Neil Chatterjee, a top aide to McConnell, and Pennsylvania regulator Robert Powelson are also waiting in the wings. Trump wants to confirm McIntyre to two consecutive terms, letting him stay at FERC into 2023.

Added pressure: A coalition of 25 groups released a letter Thursday calling on Senate leadership to schedule votes on vacant posts that have left FERC without a quorum for months. "The present lack of a FERC quorum is unnecessarily delaying vitally needed energy infrastructure projects, and is threatening jobs, investments, economic growth, America's environment and our energy security," the letter says. It was signed by groups including the Energy Equipment and Infrastructure Alliance, Associated General Contractors of America and United Association of Journeyman and Apprentices of the Plumbing and Pipe Fitting Industry.

ROVER PIPELINE PROBE COMING: FERC will probe alleged "misstatements" from Energy Transfer Partners associated with its $4.08 billion Rover natural gas pipeline project, Darius reports . In a one-page Notice of Alleged Violations, the agency said it had "preliminarily determined" that Rover "did not fully and forthrightly disclose all relevant information to the Commission in its Application for a Certificate of Public Convenience and Necessity and attendant filings." In response, the company said "we will continue to work with FERC to

address any remaining" issues.

NOT SO FAST! President Donald Trump may have said "something could happen" on the U.S. negotiating its re-entry into the Paris climate agreement on Thursday in France, but back in D.C. a White House official said there's been no real effort toward that end in the administration, Pro's Eric Wolff reports. "There hasn't been, to my knowledge, any conversations" about reopening the deal, the official told reporters. The president has a few broad ideas about what the country would need to return to the deal, but has not asked for specific changes or provisions.

Meanwhile, Trump misstated key details about a pipeline he approved and said the decision was part of his strategy to undercut Russia, Pro's Ben Lefebvre reports . "Dakota Access takes it to the Pacific," Trump told reporters on Air Force One Wednesday night, according to excerpts released by the White House of what was originally an off-the-record conversation. "Who do they compete with? Russia." That pipeline of course goes nowhere close to the Pacific on its North Dakota-to-Illinois route. Trump also misstated when he revived the Keystone XL pipeline and overstated the number of permanent jobs that would be created from both projects.

Quotable Trump: "There is a very good chance we could do a solar wall. One of the things with the wall is you need transparency. You have to be able to see through it. In other words, if you can't see through that wall - so it could be a steel wall with openings, but you have to have openings because you have to see what's on the other side of the wall."

IT'S FRIDAY EVERYBODY! I'm your host Anthony Adragna, and the Glover Park Group's Hayley Moller was first to identify Lowell, Mass. as the first city to assign individual phone numbers way back in 1879. Your end-of-the-week puzzler: In what state is the lowest zip code in the U.S. and what is it? Send your tips, energy gossip and comments to aadragna@politico.com, or follow us on Twitter @AnthonyAdragna, @Morning_Energy, and @POLITICOPro.

HOLD UP! Sen. Dean Heller confirmed Thursday he has a hold deputy Energy secretary nominee Dan Brouillette over his support for Yucca Mountain, Pro's Darius Dixon reports. The hold, Heller said, "is to send a message" about a nuclear waste bill approved 49-4 by the House Energy and Commerce Committee last month, and funding for the project in the House fiscal 2018 energy and water appropriations bill. Asked whether he sought to stop the House bill or get money out of the spending bill, Heller answered, "all of the above."

REPUBLICANS SAVE CLIMATE PROVISION: Bucking their party's normal position on the issue, 46 House Republican joined the entire Democratic caucus to defeat an amendment to the annual defense authorization bill that would've stripped out language directing the Defense Department to prepare for the effects of climate change, Pro's Nick Juliano reports. The section of the bill they decided to keep declares "climate change is a direct threat to the national security of the United States and is impacting stability in areas of the world." Rep. Scott Perry's amendment to strip that section failed 185-234. Among those voting against the amendment were Energy and Commerce Chairman Greg Walden and E&C Energy Subcommittee Chairman Fred Upton. E&C Environment Subcommittee Chairman John Shimkus backed the amendment, while Natural Resources Chairman Rob Bishop didn't vote.

House Climate Solutions Caucus Co-chairman Carlos Curbelo , a Florida Republican, hailed the amendment's defeat as a sign of progress on climate change policy solutions. "This is a great step forward for all who accept the reality of climate change and know Congress needs to act to address it," Curbelo said in a statement. "A bipartisan majority of members are on the record saying climate change and sea level rise must be taken into account when planning for our national defense." Environmental advocates expressed relief in the effort's defeat. "Acknowledging climate change as a national security threat is a step, but this Congress has a long way to go and we need real climate action," the League of Conservation Voters said in a statement.

Side note: Earlier in the debate, House lawmakers defeated an amendment prohibiting the Pentagon from entering into new biofuels contracts while the Budget Control Act remains law, Pro Defense's Connor O'Brien reports. Another amendment from Rep. Ken Buck, which would've blocked the purchase of alternative fuels unless they were found to be cost competitive as traditional fuels, also failed on the floor.

METHANE STAY BACK ON! A federal appeals court temporarily granted EPA's request Thursday to place on hold for two weeks key leak requirements under EPA's methane emissions rule for new oil and gas wells, Pro's Alex Guillén reports . The decision by the D.C. Circuit Court of Appeals gives the agency two weeks to decide whether and how to appeal the court's earlier ruling to overturn Administrator Scott Pruitt's 90-day stay of key regulatory requirements. "To stay issuance of the mandate for longer would hand the agency, in all practical effect, the very delay in implementation this panel determined to be" unlawful, the court said in its order.

SANCTIONS BILL THREATENS BP PIPELINE: Lobbyists are pointing to a BP-led natural gas drilling and pipeline project as an example of why they want tweaks to a Russian sanctions package currently stalled in the House, Pro's Ben Lefebvre reports . BP is the lead operator in a $40 billion project that would take natural gas from a deepwater Shah Deniz gas field near Baku, Azerbaijan, and transport it to Eastern Europe via a South Caucasus Pipeline still under construction. But Russia's Lukoil has a 10 percent stake in the pipeline project, enough to run afoul of the sanctions as currently written. Energy companies want changes to the bill to insulate such projects from the sanctions.

MEADOWS PLEASED BY PRUITT: Count House Freedom Caucus Chairman Mark Meadows among those pleased by what he's seen out of the Scott Pruitt-led EPA. "They're obviously working very hard to make sure the appropriate rules and regulations promulgated by the EPA do one of two things," he told ME. "Either make sure the economy continues to thrive as it should or that it has a fundamental priority for cleaning up our environment. As long as we keep those two primary factors as our main focus and balance those out, I think we'll be in a good place."

FEINSTEIN ENDORSES STATE CAP AND TRADE EXTENSION: Senior California Sen. Dianne Feinstein endorsed efforts by Gov. Jerry Brown and state legislative leaders to extend the state's cap and trade program through 2030. "[The legislation] incentivizes the private sector to reduce its carbon footprint and the revenue generated is used to invest in programs that enable even further emission reductions," she said in a Thursday statement. "As the Trump

administration continues to retreat from our international partnerships, it's more important than ever that California remains a global leader in combating climate change."

Former EPAers too: Obama-era EPA Administrator Gina McCarthy and former Deputy Administrator Bob Perciasepe endorsed the cap-and-trade extension in a letter to the editor in the Los Angeles Times. "A quick and positive vote from the state Legislature to extend its historic cap-and-trade program will be a critical leap forward for our country," they write.

HOW TO FIGHT REGULATORY ROLLBACKS: An all-volunteer, Denver-based group of former EPA employees has released a guide for the public on how regulations are developed and how to participate in the public comment process, while responding to common claims for rolling back rules. "We want to help Americans sound the alarm about the dangerous and counterproductive actions that are being taken, in ways that can help make a difference," Joni Teter, a leader of the Save EPA group, said in a statement.

ALL ABOARD THE CLIMATE ARK! There are now 48 members of the House Climate Solutions Caucus, evenly split among Democrats and Republicans, after Matt Cartwright (D-Pa.) and Leonard Lance (R-N.J.) joined.

NO SUCH THING AS A FREE RIDE: DOE's Office of Fossil Energy improperly paid for an employee's college degree that was unrelated to his job, the agency's inspector general concluded in a report. Then, the employee at question "left the department for work in the private sector shortly after receiving his law degree in May 2013."

SPOTTED: At breakfast at the Four Seasons: former FERC Commissioner Colette Honorable with Itron CEO Philip Mezey and former Sen. Mary Landrieu (D-La.) talking the future of water, gas and electricity; Bill Kristol, Larry Linden, and Alex Flint talking a carbon tax (h/t Playbook).

AIR
Harley-Davidson Inc. Clean Air Act Consent Decree
AIR

Notice of the Justice Department announces a proposed consent decree in United States v. Harley-Davidson Inc. (Civil Action No. 1:16-cv-01687), lodged July 20, 2017, with the U.S. District Court for the District of Columbia. The consent decree addresses a complaint alleging that the defendants violated the Clean Air Act prohibitions on the manufacture or sale of devices that defeat the functioning of motorcycle certified emissions control systems and on tampering with such systems in connection with the manufacture and sale of over 339,392 aftermarket devices, known as "super tuners." The consent decree also addresses the alleged manufacture and sale of over 12,000 motorcycles from model years 2006, 2007, and 2008 that were not certified by the EPA. The consent decree requires the defendants to pay a $12 million civil penalty; to stop selling illegal tuners by Aug. 23, 2016; and to offer to buy back and destroy all such tuners in stock at Harley-Davidson dealerships. The consent decree also requires the defendants to obtain executive orders from the California Air Resources Board for any future tuner sales and conduct related emission testing, to label uncertified super tuners sold outside the U.S., and to ensure that all future motorcycle models intended for sale in the U.S. are certified by the EPA. The consent decree is identical to an Aug. 24, 2016, consent decree (81 FR 57936) except that the requirement for defendants to pay for a specified mitigation project has been removed due to questions over the legality of the project. Comments are due Aug. 28, 2017. Contact: DOJ, Environment and Natural Resources Division; 202-514-2701

Regulatory Update

AIR
NESHAP for Wool Fiberglass Manufacturing
AIR

Direct final rule of the EPA revises the NESHAP for flame attenuation lines in the wool fiberglass

manufacturing industry. The revision provides affected sources an additional year to comply with the emission limits for flame attenuation lines, now requiring compliance by July 31, 2018. The extension provides owners and operators of flame attenuation lines subject to the emission limits for formaldehyde, phenol, and methanol a total of three years to demonstrate compliance with the limits established in a July 29, 2015, final rule (80 FR 45280). The extension is due to new and corrected data submitted by Johns-Manville Corp., of Denver, regarding the final stack test emissions methodology and test data on low-pull flame attenuation lines. The rule is effective Oct. 25, 2017, unless significant adverse comments are received by Aug. 28, 2017, or a hearing is requested by Aug. 3, 2017. ENDANGERED SPECIES
California/Chinook Salmon, Steelhead Enhancement Permit
ENDANGERED SPECIES

Notice of the National Marine Fisheries Service announces the receipt of an application from the U.S. Fish and Wildlife Service to renew for five years a permit to enhance the propagation and survival of anadromous fish. The FWS requests authorization to take threatened California Central Valley steelhead and threatened Central Valley spring-run Chinook salmon during hatchery and monitoring activities associated with the San Joaquin River Restoration Program (SJRRP) and the SJRRP's Salmon Conservation and Research Program. The application includes a new request to collect Central Valley spring-run Chinook salmon from Butte Creek to use as broodstock, which was not authorized by previous permits. Regulatory Update

HAZARDOUS MATERIALS TRANSPORTATION
Medical Qualification Requirements
HAZARDOUS MATERIALS TRANSPORTATION

Notice announces the intention of the Federal Motor Carrier Safety Administration to seek OMB approval for a revised information collection request regarding commercial motor vehicle driver medical qualification requirements. The collection concerns health information submitted by health care professionals treating drivers, including information regarding treatment of diabetes mellitus. The information is used to determine and certify medical fitness of drivers who operate commercial motor vehicles in interstate commerce for nonexcepted industries. The revision is due to an anticipated final rule that would eliminate the blanket prohibition against insulin-dependent diabetic individuals' operation of commercial motor vehicles in interstate commerce. The revision would replace the requirement for written notification from the treating clinician with the insulin-treated diabetes mellitus assessment form. Comments are due Sept. 25, 2017. Contact: Christine Hydock; FMCSA, Medical Programs Division; 202-366-4001; FMCSAmedical.@dot.gov. Citations: 49 CFR 391

HAZARDOUS WASTE CLEANUP
California/Rockets, Fireworks, and Flares Superfund Site
HAZARDOUS WASTE CLEANUP

Notice of the Justice Department announces a proposed consent decree in the City of Colton v. American Promotional Events Inc. (Civil Action No. CV 09-01864) lodged on July 18, 2017, with the U.S. District Court for the Central District of California. The consent decree resolves claims under CERCLA for the recovery of response costs in connection with cleanup actions at the Rockets, Fireworks, and Flares Superfund Site, formerly the B.F. Goodrich Superfund Site, in San Bernardino County, Calif. The proposed consent decree requires the Estate of Wong to pay $5.9 million, which will be allocated as established by a 2013 consent decree between the U.S. and B.F. Goodrich Corp (77 FR 64353). Comments are due Aug. 28, 2017. Contact: DOJ, Environment and Natural Resources Division; 202-514-2701; pubcomment-ees.enrd@usdoj.gov

Subject: States, cities, businesses declare they will stick with Paris goals

By Eric Wolff

06/05/2017 02:34 PM EDT

Mike Bloomberg, trying to keep momentum for an effort by states and cities to stick with the Paris climate deal despite President Donald Trump's rejection of the pact, says he will submit a report to the United Nations outlining what can be done without the federal government's help.

Bloomberg, the U.N. special envoy for cities and climate change, submitted to the United Nations Framework Convention for Climate a joint statement today signed by more than 1,000 business leaders, mayors, governors and others committed to upholding the deal. In the coming months, he says he will work with any interested officials to "formally quantify" what kind of greenhouse gas emissions could be achieved at the state and local level, in the private sector, and at universities or nonprofits.

The statement, known as "We are Still In," includes the governors of California and New York; executives at tech giants like Google and Apple; and the mayors of Houston, home to many major oil companies, and of Pittsburgh, which Trump mentioned in his speech assailing the Paris deal. They declare Trump's exit "a grave mistake that endangers the American public and hurts America's economic security and diplomatic reputation."

The joint statement and Bloomberg announcement comprise early steps in what will be complex discussions between the different entities to work out carbon accounting from such different entities.

Separately, a dozen states and Puerto Rico have launched the U.S. Climate Alliance to coordinate their efforts to cut emissions.

Subject: House spending bill takes aim at EPA, Interior rules

By Alex Guillén, Annie Snider and Esther Whieldon

07/11/2017 04:59 PM EDT

The House's fiscal 2018 Interior-EPA spending bill would prevent the Trump administration from completing a court-ordered rule on hardrock mining and block delay several other key regulations.

As part of a settlement the Obama administration reached with environmentalists, EPA must produce a rule by December requiring hardrock miners to have enough cash on hand to clean up their sites once work is complete. The settlement came a few months after the 2015 Gold King mine spill, although the lawsuit at issue was filed before that disaster. Republicans and industry oppose the rule, and the Forest Service has raised concerns that it will duplicate similar regulations issued by that agency.

The bill also includes a rider that would shield EPA's effort to withdraw the Waters of the U.S. regulation from legal challenges, mirroring a provision from the House's proposed fiscal 2018 spending bill for the Army Corps of Engineers.

House Republicans also included several other appropriations riders that mirrored earlier proposals but did not make it into the existing omnibus spending law, including delaying implementation of the 2015 ozone standard until 2025. EPA Administrator Scott Pruitt has already said he will miss a key implementation deadline for that rule.

A handful of riders in existing law are carried over as well, including language preventing the Interior Department from listing the sage grouse as an endangered or threatened species, a provision classifying electricity generated using biomass as carbon neutral and limits on climate change rules for agriculture.

WHAT'S NEXT: The Appropriations subcommittee with jurisdiction over Interior and EPA plans to mark up the bill on Wednesday.

Today's Playbook Power Briefing presented by the Coalition for Affordable Prescription Drugs (CAPD)

By JAKE SHERMAN (sherman@politico.com; @JakeSherman), ANNA PALMER (anna@politico.com; @apalmerdc), DANIEL LIPPMAN (daniel@politico.com; @dlippman), ZACH MONTELLARO (zmontellaro@politico.com; @ZachMontellaro)

Good Tuesday afternoon. SCOOP -- "Pro-Trump group launches TV, radio ads against Heller over health bill," by Alex Isenstadt: "A pro-Trump outside group is stepping up its attacks on GOP Sen. Dean Heller over his opposition to the Obamacare repeal plan - a stunning act of retribution against a politically vulnerable member of the president's own party. America First Policies, a White House-sanctioned political organization, is launching a $1 million TV and radio ad campaign on Tuesday savaging Heller, the most vulnerable Republican facing re-election in 2018, for his planned 'No' vote." http://politi.co/2uezXbQ ***The TV ad*** http://bit.ly/2uebfsd

SEN. RAND PAUL is going to the White House, as Senate Republicans' efforts to pass a repeal and replace of Obamacare flag.

-- @RandPaul: "Headed to meet with @realDonaldTrump this afternoon. The bill is currently not real repeal and needs major improvement."

READ BETWEEN THE LINES. Paul is expressing pretty fundamental disagreement. He doesn't want the bill changed at the edges -- he wants a big overhaul. **BUT AS OF NOW**, Republicans cannot even move onto debate the bill, because five senators are opposed to the motion to proceed.

RIGHT NOW, SENATORS HAVE MYRIAD issues with the bill. McConnell wants a vote this week, but would push it back if a group of senators flag a specific issue or set of issues in the bill that would bring them all together. If that happened, they would need time to draft that provision. So far, that hasn't happened.

PUSHING IT BACK -- "Lacking support, GOP puts off key repeal vote," by Jennifer Haberkorn and Burgess Everett: "Senate Republicans have put off a critical procedural vote on their Obamacare repeal bill until Wednesday at the earliest, as they fight desperately to come up with the 50 votes needed to start debate on the bill. Sen. John Cornyn (R-Texas), the GOP's chief whip counter, said Tuesday that the vote would be

held 'sometime tomorrow.' He previously said the vote could be held Tuesday or Wednesday. And Republicans are now weighing whether to further delay the vote, sources said." http://politi.co/2tjDRDW

VICE PRESIDENT MIKE PENCE is on Capitol Hill, attending the Senate GOP lunch.

FIRST IN PLAYBOOK -- CLUB FOR GROWTH OPPOSES SENATE BILL -- The Club for growth slammed the Senate health care bill, further complicating Republicans' efforts to get the bill passed. "For seven long years, Americans have waited for health care reform that would repeal the disaster that is Obamacare," Club for Growth President David McIntosh said in a statement. "The Club for Growth and the American people took Republicans in Congress at their word when they promised to repeal every word - 'root and branch' - of Obamacare and replace it with a patient-centered approach to health care." ***Full statement*** http://politi.co/2tjT4VN

STATE OF PLAY: MITCH OR CHUCK -- "McConnell warns Trump over health bill failure," by Burgess Everett, Josh Dawsey and Jennifer Haberkorn: "Mitch McConnell is delivering an urgent missive to staffers, Republican senators and even the president himself: If Obamacare repeal fails this week, then the GOP will lose all leverage and be forced to work with Chuck Schumer. President Donald Trump continued to float the possibility on Monday that Congress and the White House would simply let Obamacare's individual markets collapse if the GOP's repeal effort goes down later this week. But McConnell called up Trump recently, according to people with knowledge of the call, to deliver a reality check. ...

"McConnell delivered a similar missive Monday to Republican senators at his leadership meeting and to top GOP staffers, warning that Democrats will want to retain as much of Obamacare as possible in a bipartisan negotiation, according to Republican aides. 'If we fail, we're going to be negotiating with Chuck Schumer,' said one Republican staffer." http://politi.co/2ue1MB7

BURNING UP THE PHONE LINES -- "Republican senators getting hit by calls from voters worried about Obamacare repeal bill," by Diamond Naga Siu: http://politi.co/2tgGLbH

BEN WHITE SCOOPS -- "White House taps key Senate aide for Treasury rescue mission": "The White House intends to nominate Chris Campbell, staff director for the Senate Finance Committee GOP, to serve as assistant Treasury secretary for financial institutions, people close to the matter said. The job is among the most critical at Treasury as the department, led by Steven Mnuchin, tries to push forward some of Trump's signature goals, including a major tax reform package and sweeping changes to Wall Street regulations. Treasury also faces the need to raise the nation's borrowing limit in the coming months to avoid a potentially catastrophic default." http://politi.co/2rXQwrZ

****** **A message from the Coalition for Affordable Prescription Drugs (CAPD):** A

new study projects pharmacy benefit managers (PBMs) will save Medicare Part D $896 billion over ten years. PBMs drive savings for taxpayers and seniors by negotiating discounts from drug manufacturers; by encouraging the use of lower cost, clinically equivalent drugs; and by providing clinical programs that improve health outcomes. Learn more at affordableprescriptiondrugs.org ******

HAPPENING IN EUROPE -- "Cyberattack under way on Europe's energy and transport companies," by POLITICO Europe's Laurens Cerulus: "A ransomware attack is spreading across Europe in what looks like an outbreak of malware like the global WannaCry attack last month. Russian petroleum company Rosneft confirmed its systems were under attack, saying in a tweet that 'a massive hacker attack has hit the servers of the company.' The transport company A.P. Moller-Maersk confirmed in a tweet it also suffered an attack and its systems were down. Meanwhile, Kiev's main airport has been affected by the malware, the BBC reported. Security researchers have raised similar warnings for energy systems in Ukraine, including Ukrenergo and Kyivenergo. Other incidents are being reported." http://politi.co/2ueisIW

TRUMP INC. -- "Trump's Company Gets Millions So Toronto Hotel Can Erase Brand," by Bloomberg's Katia Dmitrieva: "Donald Trump's business will be paid millions of dollars to release the owner of a Toronto hotel complex from using his name. JCF Capital ULC, the closely held U.S. firm that owns the Trump International Hotel & Tower in the city's downtown business district, reached a buyout deal to exit the contracts with the Trump Organization's hotel unit, the companies said Tuesday in a statement. While no breakup fee was disclosed, the amount was at least $6 million, according to a person with knowledge of the matter. Signage may be removed from the 65-story tower as soon as Aug. 1, said the person, who asked not to be identified discussing confidential details." https://bloom.bg/2ueiDDM

WITH ONE FOOT OUT THE DOOR ... -- "Chaffetz calls for $2,500 legislator housing stipend," by The Hill's Scott Wong: "Rep. Jason Chaffetz (R-Utah) said Monday that House and Senate lawmakers should receive a $2,500 per month housing allowance - something he explained would help ease housing costs for members who can't afford two mortgages or rents. 'I really do believe Congress would be much better served if there was a housing allowance for members of Congress,' Chaffetz told The Hill in an interview in his Capitol office, where he sleeps whenever he's in Washington. 'In today's climate, nobody's going to suggest or vote for a pay raise. But you shouldn't have to be among the wealthiest of Americans to serve properly in Congress.' ...

"'**Washington, D.C., is one of the most expensive places** in the world, and I flat-out cannot afford a mortgage in Utah, kids in college and a second place here in Washington, D.C.,' Chaffetz said. 'I think a $2,500 housing allowance would be appropriate and a real help to have at least a decent quality of life in Washington if you're going to expect people to spend hundreds of nights a year here.'" http://bit.ly/2udthe3

-- ANOTHER IDEA ... -- There is a building that once housed Congressional pages. Use

that to give members of Congress subsidized housing.

LAWYER UP -- "Trump Aides Hire Lawyers for Probe Into Russian Election Hacking," by WSJ's Peter Nicholas and Carol E. Lee: "As investigations intensify into whether the Trump campaign colluded with Russia in the 2016 presidential campaign, at least 10 White House officials and former aides have retained lawyers in conjunction with the probes, or are moving to do so. Inside the White House, President Donald Trump, Vice President Mike Pence and Trump senior adviser Jared Kushner, his son-in-law, all have hired private attorneys, as have former campaign advisers Michael Caputo, Boris Epshteyn and Roger Stone, among others. ...

"Asked about the White House's management of the investigations, Andrew Card, chief of staff to former President George W. Bush, said: 'I think they're learning they have to do a better job of it. I don't fault them for the way they've had to learn this process. But I'm hoping they do not get distracted. That's the most critical thing.' Kellyanne Conway, counselor to President Trump, said, 'It's business as usual here in the White House, where the president's packed schedule and the breakneck pace have been unchanged.'" http://on.wsj.com/2sN4YFX

STATEMENTS FROM THE WHITE HOUSE -- @realDonaldTrump at 6:33 a.m.: "Wow, CNN had to retract big story on 'Russia,' with 3 employees forced to resign. What about all the other phony stories they do? FAKE NEWS!" ... **at 8:30 a.m.:** "Fake News CNN is looking at big management changes now that they got caught falsely pushing their phony Russian stories. Ratings way down!" ... **at 8:47 a.m.:** "So they caught Fake News CNN cold, but what about NBC, CBS & ABC? What about the failing @nytimes & @washingtonpost? They are all Fake News!" ***The president also retweeted several Fox & Friends tweets and a promotional link to Eric Bolling's book.***

-- @CNNPR (replying to the president's tweet about ratings): "CNN just posted it's most-watched second quarter in history. Those are the facts."

HMM... -- "The 'international man of mystery' linked to Flynn's lobbying deal," by Isaac Arnsdorf in a ProPublica-POLITICO joint investigation: "More than two years ago, two men started visiting Washington to push Turkey's agenda in the capital. They dined with dignitaries and enlisted prominent lobbying firms from both sides of the aisle. It was an unremarkable Washington story, except for one thing: the last lobbyist one of the men hired was Gen. Michael Flynn, President Trump's campaign adviser at the time, who was later fired as national security adviser for lying about his conversations with Russia's ambassador.

"Flynn's client, a Turkish businessman named Ekim Alptekin, has gained attention as federal investigators examine Flynn's apparent failures to disclose foreign contacts. But so far, the other man in the pro-Turkey efforts has largely avoided public notice ... The man, Dmitri 'David' Zaikin, is not registered as a foreign lobbyist and has no apparent connection to Turkey.

"What he does have, a ProPublica-POLITICO examination found, is a long track record of partnering with powerful Russian businesspeople and government officials, mostly involving energy and mining deals. More recently, Zaikin has done political work in Eastern Europe, advising parties in Albania and Macedonia that have drifted toward the Kremlin. Zaikin also has business connections to Trump. Working at a real estate agency in Toronto in the 2000s, Zaikin brokered sales in one of the city's new high-rises: the Trump International Hotel and Tower. http://politi.co/2udxG0z

THE HOUSE OF MOUSE -- "Behind the Scenes of Disney's Donald Trump 'Hall of Presidents' Drama," by Motherboard's Kevin Wong: "Walt Disney World's Hall of Presidents -- closed for renovations since January 2017 in order to add a new Donald Trump robot -- was originally scheduled to reopen with its new president in time for summer.

"But now, its reopening has been pushed back to no earlier than the fall, and perhaps beyond that, according to Disney sources familiar with the attraction. After much behind-the-scenes drama and internal machinations about whether or not Trump would have a speaking role in the attraction, Disney told a local TV station that Trump would indeed speak. But the road to get to this point has been fraught with difficulties. According to our source, Trump's communications team turned what should have been a simple recording process into a public relations nightmare-one that Disney executives twisted themselves in knots to avoid, in order to save face for the president, and ultimately, save face for themselves." http://bit.ly/2sN3dZh

PLAYBOOK METRO SECTION -- "The Neighborhood Inside a Building: D.C.'s massive Woodner apartment building has lived many lives-from fancy hotel to one of the last bastions of affordable housing in a gentrifying neighborhood. Now, it's on the brink of another change," by CityLab's Tanvi Misra http://bit.ly/2sNclxf

MEDIAWATCH -- @AshleyRParker: "Excited to share that I am now officially an MSNBC contributor."

WEEKEND WEDDING -- Former Daily Caller entertainment editor **Taylor Bigler,** now a reporter at the Mount Desert Islander in Bar Harbor, married **Donny Mace** at the Causeway Club in Southwest Harbor, Maine. The pair met in 2014 at a restaurant in Northeast Harbor, Maine. They will honeymoon in Kennebunkport. ***Pics*** http://bit.ly/2tftdh2 ... http://bit.ly/2tQLKh0 ... http://bit.ly/2sWkMos **SPOTTED:** Amy Rush, bridesmaids Chrissy Terrell Murray and Kori Kemble, Margaret Atkinson.

****** **A message from the Coalition for Affordable Prescription Drugs (CAPD):** A new study estimates that Medicare Part D costs would be 58 percent higher without pharmacy benefit managers' (PBMs') clinical tools and price negotiations with drug manufacturers and pharmacies. The study shows PBMs significantly lower premiums and out-of-pocket costs for Medicare beneficiaries. In fact, PBMs are projected to save Medicare Part D $896 billion over the next decade. Thanks to PBMs, Medicare Part D continues to drive savings and value for taxpayers and beneficiaries, ensuring that more

than 39 million American seniors can access the prescription drugs they need. Learn more at affordableprescriptiondrugs.org ******

Subject: BREAKING NEWS: House Majority Whip Scalise wounded in Northern Virginia shooting; reports of multiple shots fired

Several people were shot Wednesday morning at a congressional baseball practice, including House Majority Whip Steve Scalise, according to one lawmaker.

The lawmakers were practicing for the annual congressional ballgame when the shooting took place in Alexandria, Va.

According to Rep. Mo Brooks (R-Ala.), Scalise was wounded in the shooting.

"He'd crawled into the outfield but leaving a trail of blood. We started giving him some liquids," Brooks said on CNN.

Brooks was not hit.

United States Resets Climate Change Discussion At G7

U.S. Formally Joins Communiqué, Reaching Consensus On Important Environmental Issues

June 12, 2017

Bologna, Italy – Today, U.S. Environmental Protection Agency Administrator Scott Pruitt announced that the United States stands firm on its decision to withdraw from the Paris Agreement and has reset the conversation about climate change reflective of the new priorities of the Trump Administration and the expectations of the American people.

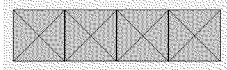
"Respective of the importance to engage with longstanding allies and key international partners, we approached the climate discussions head on from a position of strength and clarity. We are resetting the dialogue to say Paris is not the only way forward to making progress. Today's action of reaching consensus makes clear that the Paris Agreement is not the only mechanism by which environmental stewardship can be demonstrated. It also demonstrates our commitment to honest conversations, which are the cornerstone of constructive international dialogue, " said Administrator Scott Pruitt.

While a party to the communiqué, the United States did not join the climate change sections, explicitly stating:

We the United States of America continue to demonstrate through action, having reduced our CO2 footprint as demonstrated by achieving pre-1994 CO2 levels domestically. The United States will continue to engage with key international partners in a manner that is consistent with our domestic priorities, preserving both a strong economy and a healthy environment. Accordingly, we the United States do not join those sections of the communiqué on climate and MDBs, reflecting our recent announcement to withdraw and immediately cease implementation of the Paris Agreement and associated financial commitment.

The United States and its G7 counterparts found common ground engaging in robust and constructive dialogue regarding other, equally important environmental issues. The United States joined consensus throughout the communiqué including the sections discussing resource efficiency, marine litter, and environmental policies and jobs.

"The United States will continue to show leadership by offering action-oriented solutions to the world's environmental challenges. We have indicated a willingness to engage on an international stage that stands to greatly benefit from American ingenuity, innovation, and advanced technologies. We have already demonstrated significant progress towards mitigating environmental problems and we will continue to develop these for the benefit of all



nations," Administrator Pruitt said.

BACKGROUND ...

G7 Bologna Environment Ministers' Meeting: Communiqué

"We, the G7 Environment Ministers and high representatives, and European Commissioners responsible for environment and climate, met in Bologna on 11-12 June 2017. We were joined by heads and senior officials of International Organizations and by representatives of universities and firms." (G7 Bologna Environment Ministers' Meeting, 06/12/17)

Subject: POLITICO's Morning Transportation, presented by Delta Air Lines: Gateway to the unknown — Has the time come for the FAA overhaul? — Laptop ban update

By Lauren Gardner | 07/05/2017 10:00 AM EDT

With help from Daniel Lippman and Tanya Snyder

GATEWAY TO THE UNKNOWN: DOT quietly pulled out of the Gateway Program's board of directors on Friday, the latest wrinkle in the saga of the $24 billion mega-project (Pros can read a copy of the letter here). While DOT cautioned Monday that its decision "should not be misinterpreted as any form of decision about the multiple individual projects promoted by the Gateway Development Corporation," it at the very least reinforces the feeling that this administration won't treat the project the same way as the Obama administration. More from a department spokeswoman: "The decision underscores the Department's commitment to ensuring there is no appearance of prejudice or partiality in favor of these projects ahead of hundreds of other projects nationwide. Moreover, this decision is more consistent with the Department's provision of effective and objective oversight in instances where we provide financial assistance."

About that money: The Trump administration has already proposed winding down a transit grant program that was expected to fund the Portal North Bridge project in New Jersey, a major bottleneck area where early design work has already begun. John Porcari, interim executive director of the Gateway Program Development Corporation, reiterated in a statement over the weekend that the multibillion-dollar endeavor won't get off the ground without federal backing. "We believe Gateway satisfies each of the administration's infrastructure priorities including project sponsors committing their own financial resources," he said. "While the Gateway team knows that a project of national significance cannot proceed without a federal funding partner, we appreciate the important technical assistance provided by Secretary Chao and her team at USDOT in advancing this vital project."

Nothing to see here: The department says this isn't part of a broader policy change on DOT's service when it comes to other boards "when required by law," like Amtrak. DOT is also authorized to sit on the boards of the redevelopment projects for New York's Penn Station and Washington's Union Station. MT reached out to New York's and New Jersey's senators, who have been vocal boosters for Gateway, but didn't get a response. (Congress is on a week-long break for Independence Day.)

Coming attractions: DOT plans "to make several project announcements regarding the Northeast Corridor in the coming weeks," and specifically anticipates publishing the draft environmental impact statement for the Hudson Tunnel project "in the near future," the spokeswoman said.

IT'S WEDNESDAY: Thanks for tuning in to POLITICO's Morning Transportation, your daily tipsheet on all things trains, planes, automobiles and ports. Send your tips, feedback and lyrics to

lgardner@politico.com or @Gardner_LM and tsnyder@politico.com or @TSnyderDC.

"You know I get paid by the mile / like Avis I pave this / fast save this / everybody smile and act gracious."

Want to keep up with MT's song picks? Our Spotify playlist has over 100 followers - you can get listening, too!

HAS THE TIME COME? Proponents of an air traffic control overhaul are pushing for an answer to that very question, as both chambers prepare to push through bills reauthorizing the FAA that take very different approaches to the subject. But the outstanding question, as your MT co-host and our Brianna Gurciullo write , is whether the Trump administration has spent enough political capital to sway enough lawmakers to his side. We've made this point before - a president's support for an issue when his party controls all levers of power in Washington can help make or break an issue, but when it comes to major policy changes that aren't 100 percent ideological in nature, they can be far from a slam dunk.

Case in point: Sen. Jim Inhofe - a staunch conservative, pilot and GOP booster - questioned just how much President Donald Trump cares about making an air traffic control overhaul a reality. "It's kind of funny because he hasn't mentioned that to me, and I'm the one that he would mention it to, and I've been around him a lot," the Oklahoma Republican said. "So I just question the depth of his commitment to that cause, to that legislation."

Vive la persistance: Even so, some Republicans told us they sensed a shift among at least some of their colleagues on the issue once Trump endorsed changes. "I think members took it more seriously when [Trump] came out and openly endorsed it, yeah. And then the speaker did as well," Rep. Kenny Marchant (R-Texas), a member of Ways and Means, said.

That cooling saucer, though: Still, Senate Commerce Chairman John Thune (R-S.D.) has said for months (many months) that he doesn't have the votes to move House Transportation Chairman Bill Shuster 's plan out of his committee, let alone on the floor, meaning members will more likely than not have to hash things out in the most old-school of ways - through a conference committee (remember those?). It's way too early to tell just how a conference committee might come down, but we'd observe that the last time there was a user fee fight as part of an FAA bill - and that one, keep in mind, was without the additional wholesale governance change that's being proposed - the scuffle forced dozens of extensions strung out over about four years. Which, of course, is the standard time for an FAA reauthorization to run.

A handy visual: Ever wish for a side-by-side comparison of the economic underpinnings of our air traffic control system and that of NavCanada, the closest sibling to the system Shuster wants to implement here - along with a summary of each system's advantages, disadvantages, and performance histories? Of course you have, transportation nerds. Here you go, courtesy of our crack team over at Datapoint.

** **A message from Delta Air Lines:** Delta® partners with CLEAR® to offer SkyMiles® Members exclusive rates on CLEAR membership to enjoy a faster way through security at

airports nationwide. CLEAR's biometric technology platform gets travelers through security with just the touch of a finger or blink of an eye. Enroll today at clearme.com/delta. **

HEAT AWAITS IN THE SENATE: As your favorite Pros reported last week, the Senate bill is not without its own controversies, the biggest of which is language to loosen the strictures on pathways for pilots to be certificated to fly with less than 1,500 hours of flight time logged. A DOT working group set up under last year's FAA bill submitted a final report to Congress last week that urged lawmakers to do just that. "The imposition of the new 1,500 hours requirement has drastically increased the time and cost for aspiring aviators to become commercial airline pilots, in many cases putting the piloting career out of reach," the working group said.

ALPA pushback: In May, the Air Line Pilots Association, which had a representative on the working group, pleaded with Transportation Secretary Elaine Chao to force members back to the drawing board on the report, on which President Tim Canoll said the other panel members "appeared to have a predetermined notion of what the end results should be." Canoll outlined in the 15-page letter the group's issues with the report (while also complaining that it had been limited to a one-page dissent in the eventual submission to DOT and Congress). Members of the panel included regional airline executives (plus Regional Airline Association President Faye Malarkey Black), executives from small airports and state and local government officials - constituencies that have been pushing the notion of a nationwide pilot shortage (which ALPA disputes) for years.

The process: Report author Russell Mills, a former FAA policy analyst and now an associate professor at Bowling Green State University, said the group's work was "a very collaborative process throughout," but conceded that ALPA was always going to disagree on the pilot shortage issue. Mills said that, from his own experience at Bowling Green, he's observed a dearth of flight instructors because they leave as soon as they meet their hours requirement. And to ALPA's complaint that the study didn't do enough to probe ways to improve regional airline business models, Mills noted that regionals are offering job candidates more money now than they historically have.

Other recommendations: The working group urged policymakers to write an Essential Air Service community "Bill of Rights" to give those locations greater say in voicing concerns about their service (while also stating that "many of the perceived inefficiencies in the EAS program are symptoms of larger issues, especially the shortage of qualified pilots"). The group also urged Congress to boost funding for and tweak the Small Community Air Service Development Program.

ADVANCE WARNING: Sen. Richard Blumenthal (D-Conn.) urged MTA Chairman Joseph Lhota to implement a "culture of safety" in the wake of a preliminary NTSB report that found that Metro-North knew of a "real nasty kink in the rail" before train 1373 derailed in Rye, N.Y., in May. Fourteen passengers and two crewmembers sustained minor injuries in the incident. Blumenthal underscored that any improvement in rail safety must include "a commitment to implementation of Positive Train Control" by the December 2018 deadline. Blumenthal asked Lhota to report back to him on "how you will prioritize safety so incidents like the Rye derailment will not be allowed to recur."

Busy weekend for NTSB: NTSB responded to six general-aviation airplane crashes - with a combined death toll of 14 - plus a natural-gas pipeline explosion and an engine fire on a commercial airliner during Saturday and Sunday of the Independence Day weekend.

FREE TO TYPE ABOUT THE CABIN: DHS lifted its ban on large electronic devices in passenger cabins over the weekend for Etihad Airway flights from Abu Dhabi, our Stephanie Beasley reports. While other affected airlines and airports are still subject to restrictions, the department said Etihad and Abu Dhabi International Airport had stood up enhanced security measures that voided the need for them to adhere to the so-called laptop ban. The Associated Press reported late Tuesday that Emirates and Turkish Airlines will meet with U.S. officials today "to show they have complied with measures to be exempted from the ban as well," according to a DHS spokesman.

YES, (MEXICAN) TRUCKS GO: The Ninth Circuit Court of Appeals last week rejected a challenge by the Teamsters of FMCSA's authority to issue permits to Mexican truck companies after a 2015 report by the agency deemed them safe enough to drive within the United States. The judges dismissed the union's suit against the report because it wasn't a reviewable final agency action, and rejected its challenge to FMCSA's issuance of an operating permit "because the decision whether to grant long-haul authority based on the results of a pilot program is committed to agency discretion by law."

CONGRATULATIONS: To Will Kinzel, managing director of government affairs at Delta Air Lines, and Marcie Kinzel, senior adviser to Sen. Steve Daines (R-Mont.), who welcomed a new baby into their family June 29. What a sweetie!

Driving the Day

Good Saturday morning. GOOD NEWS -- MATT MIKA IS OUT OF THE HOSPITAL -- *A note from his family*: "Our family is pleased to report that Matt has been discharged from George Washington University Hospital. We are truly grateful for the compassionate, world-class care provided by the doctors, nurses and team at George Washington, and we will never forget and continue to be grateful for the heroism shown by the U.S. Capitol Police. We truly appreciate the prayers, words of encouragement and support from Matt's friends, family and people across the nation and the world. Matt's discharge is a welcome and important step. As he continues to recover we ask for your respect of our family's privacy. The family currently has no plans to do media interviews or provide further updates."

BAD NEWS FOR TRUMP -- Five Senate Republicans oppose the GOP health care bill. Sens. Dean Heller (Nev.), Ron Johnson (Wis.), Mike Lee (Utah), Ted Cruz (Texas) and Rand Paul (Ky.) have all come out against the package. It matters precious little at this point who else is against the bill because the math here is pretty simple. With Democrats uniformly opposed to the legislation, Senate Majority Leader Mitch McConnell can only lose two votes. While Trump has started personally lobbying GOP senators, his ability to turn votes in the chamber is uncertain and untested. Still, no one should ever count McConnell out -- he's among the savviest leaders Capitol Hill has seen.

WHAT AMERICA IS SEEING THIS MORNING -- SAN DIEGO UNION TRIBUNE: "HEALTH BILL LOBBYING HEATS UP: Key GOP senator balks at current version; Trump, Democrats scramble to shore up allies before vote" http://bit.ly/2t6o0bU ...**DENVER POST:** "Fifth GOP senator opposes latest health bill: Nevada's Heller

worried by Medicaid cuts; Republican super PAC to attack him in ads" http://bit.ly/2tFmhHp ...

... HARTFORD COURANT: "Senators Expect 'Titanic' Fight: Blumenthal, Murphy Blast 'Evil' Bill, GOP Secrecy" http://bit.ly/2u0cRpj ... **JANESVILLE GAZETTE:** "Medicaid faces hard times: Historic change possible with GOP health plans" http://bit.ly/2sBNHzm

STATEMENT FROM THE PRESIDENT, FROM THE WHITE HOUSE -- @realdonaldtrump at 8:51 a.m.: "Democrats slam GOP healthcare proposal as Obamacare premiums & deductibles increase by over 100%. Remember keep your doctor, keep your plan?"

-- GUESS WHAT: Democrats were never going to vote to repeal Obamacare. The stalemate on health care is a GOP issue. If you talk to elected Republicans on the Hill, they pretty much all understand that they now own health care as a political issue.

THE HEADACHE MCCONNELL DOESN'T NEED -- "The surprising GOP holdout on the Senate's health bill," by Jen Haberkorn: "Ron Johnson stormed Washington in 2010 by railing against Obamacare, becoming one of the law's harshest and most persistent critics. Now, with the Senate on the brink of repealing the law, he's one of the surprise holdouts threatening to block the bill. The Wisconsin Republican says Senate leaders are rushing the vote before he and the public can analyze it and are not doing enough to actually bring down premiums. He joined with a trio of Senate conservatives on Thursday who say they're open to negotiation but can't support Majority Leader Mitch McConnell's bill as it is." http://politi.co/2u0cOdd

-- FROM WAPO'S SEAN SULLIVAN, BOB COSTA AND KELSEY SNELL: "As the vote-counting effort intensifies, Trump, who has said he supports the bill but it needs more 'negotiation,' is trying to build consensus both in public and behind the scenes. On Thursday, he called Sen. Ted Cruz (Tex.), one of the five GOP holdouts, to speak with him about his proposed changes, according to White House officials and a Trump ally with knowledge of the conversation." http://wapo.st/2sMHSh6

AIR WARS -- "Pro-Trump group to target GOP Sen. Heller over health care bill," by Matt Nussbaum and Alex Isenstadt: "A pro-Trump outside group is launching an advertising blitz against Republican Sen. Dean Heller over his opposition to the health care repeal bill - a bold act of political retaliation against a member of the president's own party. Heller, a Nevada Republican, is up for re-election in 2018 and is seen as one of the most vulnerable incumbents up for reelection this cycle. The barrage, which will be orchestrated by America First Policies, a group run by many of President Donald Trump's top campaign advisers, is backed by more than a million dollars ... Digital ads [were] set to begin running on Friday, and television and radio spots are set to launch early next week." http://politi.co/2t6bZDi

-- THIS IS STUNNING. Heller is perhaps the most embattled Senate Republican in 2018. A group that VP Mike Pence raised money for is going after him. This is the kind

of thing that is going to have Senate Republicans wondering if the White House and its allies have any idea what they're doing.

-- @HillaryClinton: "Forget death panels. If Republicans pass this bill, they're the death party."

****** **A message from Starbucks:** One in eight Americans struggles to get enough to eat. Inspired by the commitment from our partners (employees), Starbucks is working with Feeding America to channel our unsold fresh food to feed the communities we serve. By 2020, as our FoodShare program grows, we'll donate 50 million meals each year: http://sbux.co/2sBiWeM ******

WHAT REX TILLERSON'S BEEN UP TO -- "Overruling diplomats, U.S. to drop Iraq, Myanmar from child soldiers' list," by Reuters' Jason Szep and Matt Spetalnick: "In a highly unusual intervention, Secretary of State Rex Tillerson plans to remove Iraq and Myanmar from a U.S. list of the world's worst offenders in the use of child soldiers, disregarding the recommendations of State Department experts and senior U.S. diplomats, U.S. officials said. The decision, confirmed by three U.S. officials, would break with longstanding protocol at the State Department over how to identify offending countries and could prompt accusations the Trump administration is prioritizing security and diplomatic interests ahead of human rights.

"Tillerson overruled his own staff's assessments on the use of child soldiers in both countries and rejected the recommendation of senior diplomats in Asia and the Middle East who wanted to keep Iraq and Myanmar on the list, said the officials, who have knowledge of the internal deliberations. Tillerson also rejected an internal State Department proposal to add Afghanistan to the list, the three U.S. officials said." http://reut.rs/2rNvrAa

BONUS FOGGY BOTTOM REPORT -- "Intelligence officials worry State Dept. going easy on Russian diplomats," by Ali Watkins: "Intelligence officials and lawmakers are concerned that the State Department is dragging its feet in implementing a crackdown on Russian diplomats' travel within the U.S., despite evidence that Moscow is using lax restrictions to conduct intelligence operations. The frustration comes amid bipartisan concern that the Trump administration is trying to slow down other congressional efforts to get tough on Russia. ... The Kremlin's U.S.-based diplomatic corps, according to several U.S. intelligence sources, has been known to skip notification rules and use the lax restrictions to roam around the country, likely engaging in surveillance activities." http://politi.co/2tZI8cb

-- "State's Afghanistan-Pakistan envoy leaves, spurring confusion about U.S. diplomacy in region," by Nahal Toosi: "The State Department unit that deals with Afghanistan and Pakistan has lost its top official and its fate is uncertain, even as President Donald Trump weighs increasing U.S. military presence in the region. The development has spawned confusion inside and outside the State Department about the future of the section known as the Office of the Special Representative for Afghanistan

and Pakistan, or SRAP." http://politi.co/2t5NmWF

KOCH WATCH -- "Vice President Pence meets with billionaire Charles Koch," by USA Today's Fredreka Schouten in Colorado Springs: "Pence, who has longstanding ties to Koch's political and policy empire, met with the Kansas industrialist for about 50 minutes ... Friday's meeting included Marc Short, Trump's director of legislative affairs, and longtime Pence aide Marty Obst. Short is a former top official in the Koch network. Those accompanying Charles Koch included key Koch lieutenants Mark Holden and Brian Hooks, who oversee the network's activities, along with Tim Phillips, who runs the Kochs' grassroots arm, Americans for Prosperity. [James] Davis also attended." https://usat.ly/2sMROXU

COMING ATTRACTIONS -- "The other treaty on the chopping block," by Gregory Hellman and Bryan Bender: "A fierce debate is brewing inside the Trump administration over whether to withdraw from another international treaty - this one a cornerstone disarmament pact with Russia banning an entire class of nuclear missiles. ... Leading Republican hawks are pushing legislation to compel Trump to take steps to develop new missiles in response - the first steps to jettisoning what is known as the INF treaty, signed by President Ronald Reagan and Soviet leader Mihkail Gorbachev. ... But there are serious questions inside the Pentagon, State Department and the White House National Security Council - and loud warnings from the architects of the pact - about the consequences of such a move, which some say could spark a full-blown arms race." http://politi.co/2t6mWET

THE JUICE...

SPOTTED: Woody Johnson -- the newly nominated ambassador to the United Kingdom -- in the Franklin study at the Trump Hotel last night for the reception for Steven Mnuchin's wedding to Louise Linton (at 6:30 p.m. tonight at the Carnegie Mellon Auditorium). Mnuchin was wearing a dark suit and red tie.

-- NEW YORK REP. ADRIANO ESPAILLAT (D-N.Y.), who is in his first term, filed a financial disclosure that lists two assets: a pension, and between $5 million and $25 million in cash in a checking account.

SPORTS BLINK -- "AP sources: Jeb Bush, Romney join forces to pursue Marlins," by Steven Wine: "Former Florida Gov. Jeb Bush has switched sides in pursuit of the Miami Marlins, and he's trying to beat out former teammate Derek Jeter. Bush has joined forces with businessman Tagg Romney in a group trying to buy the Marlins ... Bush and Jeter, the 14-time New York Yankees All-Star shortstop, led rival groups earlier this year. They then joined forces, but Bush dropped out in May. Now they're rivals again, and Jeter is still exploring financing options." http://apne.ws/2t2idmz

Playbook Reads

[redacted]

PHOTO DU JOUR: Five-year-old Arabella Rose Kushner and friends play with the lectern in the James Brady Press Briefing Room following press secretary Sean Spicer's off-camera news conference at the White House on June 23. | Chip Somodevilla/Getty

DEPT. OF PREVIOUS LIVES -- N.Y. DAILY NEWS -- "Trump commerce secretary once flouted zoning laws and built a wall around his Southampton property," by James Fanelli: "President Trump isn't the only one in his administration who thinks a border wall can solve a problem. U.S. Secretary of Commerce Wilbur Ross once built an illegal wall on the perimeter of his swanky Southampton estate to block the noise from the American Indian reservation across the street and the traffic along Montauk Highway. When the billionaire cabinet member was told he couldn't have the wall, he waged a three-year legal battle with the local zoning board of appeals that he ultimately lost. Ross installed the sound barrier after his infant grandson kept waking up from the procession of cars and trucks along the highway and from the parade of customers at the tax-free tobacco shops on Shinnecock Nation land." http://nydn.us/2s7v8Qg

THE BLURRING -- "The White House hires a Trump hotel executive to serve as chief usher," by WaPo's Krissah Thompson and Jonathan O'Connell: "Melania Trump on Friday named a senior manager at Washington's Trump International Hotel to serve as chief usher of the White House. Timothy Harleth, who worked for Mandarin Oriental hotels in D.C. and New York before joining one of the Trumps' flagship hotels last year, will take the crucial position overseeing the staff of housekeepers, butlers and others who work in the first family's living quarters and maintain the executive mansion. ... This spring, the Trumps pushed out Chief Usher Angella Reid, an Obama appointee who had also come from the world of luxury hotels. The White House gave no reason for her firing other than a desire for change." http://wapo.st/2rN5NM2

KNOWING CORRY BLISS -- "The GOP's one-man fire brigade: After four special election wins, Republicans are relying on the Congressional Leadership Fund's Corry Bliss to safeguard the House majority," by Eliana Johnson: "Bliss has proselytized relentlessly about the declining importance of television, which Trump used to great effect, and the rising importance of ground game, something Barack Obama and Democrats were quicker to exploit than their Republican counterparts. He was bitterly critical of what he regarded as the [RNC's] weak field program last year in Ohio, where he built an independent field operation on Portman's behalf - a move that ruffled feathers at the [RNC].

"The senator waltzed to victory, but Bliss clashed repeatedly with then-RNC chairman Reince Priebus and his chief of staff, Katie Walsh, over Portman's field program; and Priebus and Walsh later waved off Senate Majority Leader Mitch McConnell and House Speaker Paul Ryan from hiring Bliss to run the [NRSC] and the [NRCC]. Sources close to Bliss and Priebus say they have a cordial relationship now." http://politi.co/2t637gZ

BEYOND THE BELTWAY -- "California activist Tom Steyer adds health care to his brand," by Victoria Colliver in San Francisco: "California billionaire activist Tom Steyer made his name as an environmental activist, worked with Democratic groups to register a million new voters and redefined green politics with high-profile campaigns on climate change and clean energy. Now as he weighs a run for public office, he's adding health care - specifically drug prices - to his brand. ... The former hedge fund executive, 59, is backing a California effort to force drug manufacturers to give notice of price increases, a move Steyer sees as a first step to reining in drug costs and curbing the power of corporate interests." http://politi.co/2s6S8yY

CONNECTING THE DOTS -- NYT A1, "Maritime Mystery: Why a U.S. Destroyer Failed to Dodge a Cargo Ship," by Scott Shane: "There should have been lookouts on watch on the port, starboard and stern of the destroyer Fitzgerald - sailors scanning the horizon with binoculars and reporting by headsets to the destroyer's bridge. At 1:30 a.m. last Saturday, off the coast of Japan south of Tokyo, they could hardly have failed to see the 730-foot freighter ACX Crystal, stacked with more than 1,000 containers, as it closed in. Radar officers working both on the bridge and in the combat information center below it should have spotted the freighter's image on their screens, drawing steadily closer. ... But none of that happened. The Fitzgerald's routine cruise in good weather through familiar, if crowded, seas ended in the most lethal Navy accident in years. Seven sailors lost their lives." http://nyti.ms/2sMJBTG

****** **A message from Starbucks:** One in eight Americans struggles to get enough to eat. Inspired by the commitment from our partners (employees), Starbucks is working with Feeding America to channel our unsold fresh food to feed the communities we serve. By 2020, as our FoodShare program grows, we'll donate 50 million meals each year: http://sbux.co/2sBiWeM ******

FIRST PERSON - DAVID RANK in WaPo, "Why I resigned from the Foreign Service after 27 years": "When the administration decided to withdraw from the Paris agreement on climate change, however, I concluded that, as a parent, patriot and Christian, I could not in good conscience be involved in any way, no matter how small, with the implementation of that decision. ... I worry about the frequently politically motivated portrayal of those who work for the American people as members of some mythical elite, separate and suspicious. Such false characterizations drive talented Americans away from public service or discourage them from entering it in the first place." http://wapo.st/2t5Wif5

IN LANGLEY -- NYT A1, "C.I.A. Set Up Secret Back Channel With Syria to Try to Free U.S. Hostage," by Adam Goldman: "In the early days of the Trump administration, national security officials began exploring ways to free Austin Tice, an American journalist and a former Marine officer believed to be held by the Syrian government. ... [I]n early February, Mike Pompeo, the C.I.A. director, spoke on the phone with Ali Mamlouk, the head of Syria's National Security Bureau intelligence service, a man accused of human rights abuses during the country's civil war and slapped with sanctions by the United States. The call was the highest-level contact between the

governments in years. Though Mr. Pompeo's discussion with Mr. Mamlouk prompted further communications that renewed hope that Mr. Tice would be freed, the operation fizzled out after the Syrian government's nerve gas attack in rebel-held northern Syria in April and the American missile strike in response." http://nyti.ms/2t6hK3Z

DEEP DIVE -- "Why Grenfell Tower Burned: Regulators Put Cost Before Safety," by NYT's David D. Kirkpatrick, Danny Hakim and James Glanz: "The London police on Friday blamed flammable materials used in the facade for the spread of the blaze and said the investigation could bring charges of manslaughter. ... [I]nterviews with tenants, industry executives and fire safety engineers point to a gross failure of government oversight, a refusal to heed warnings from inside Britain and around the world and a drive by successive governments from both major political parties to free businesses from the burden of safety regulations. ... Builders in Britain were allowed to wrap residential apartment towers - perhaps several hundred of them - from top to bottom in highly flammable materials, a practice forbidden in the United States and many European countries. And companies did not hesitate to supply the British market." http://nyti.ms/2s2auWs

GREAT WEEKEND READS, curated by Daniel Lippman, filing from Palm Beach, Florida:

--"China's Mistress-Dispellers," by Jiayang Fan in the New Yorker: "'There are no enduring marriages,' [Ming Li] told me matter-of-factly. 'Only mistresses who haven't worked hard enough at tearing it apart.'" http://bit.ly/2t4q2bO

--**"How Accusing A Powerful Man of Rape Drove A College Student To Suicide,"** by BuzzFeed's Katie J.M. Baker: "When an Alabama college student told the police she was sexually assaulted, she did everything she thought she was supposed to do. She ended up killing herself." http://bzfd.it/2t0rAmV

--"What Makes Us Happy?" by Joshua Wolf Shenk in the June 2009 issue of The Atlantic: "Is there a formula-some mix of love, work, and psychological adaptation-for a good life? For 72 years, researchers at Harvard have been examining this question, following 268 men who entered college in the late 1930s through war, career, marriage and divorce, parenthood and grandparenthood, and old age." http://theatln.tc/2sKRede (h/t Longform.org)

--"Shakespeare's Politics," by Robert Cooper in the American Interest: "We know little of his political opinions, but there's much we can learn of them from the recurrent themes of his works." http://bit.ly/2szQRE1

--"Covering the Cops," by Calvin Trillin in the Feb 17, 1976 issue of The New Yorker - per Longform's description: "A profile of Edna Buchanan, a Pulitzer Prize-winning crime reporter for the Miami Herald during its heyday." http://bit.ly/2tDzwIB

--"Can Jonathan Haidt Calm the Culture Wars?" by Evan R. Goldstein in the

Chronicle of Higher Education - per ALDaily.com's description: "Haidt is famous for explaining how liberals and conservatives think. Now he's wagering that social psychology can calm the campus culture war." http://bit.ly/2szUObR

--"A Declaration of Urban Independence," by Richard Florida in the July/Aug. issue of POLITICO Magazine: "Cities are under assault in the age of Donald Trump. It would be better for the country if they ran themselves instead." http://politi.co/2sAhrgb

--"Fighting for the Immigrants of Little Pakistan," by The New Yorker's Jennifer Gonnerman: "The Brooklyn neighborhood persevered after 9/11. Can it survive in the age of Trump?" http://bit.ly/2t0lovn

--"Trained to Kill: How Four Boy Soldiers Survived Boko Haram," by Sarah A. Topol in the N.Y. Times Magazine: "The four children, from a fishing village in Nigeria, were among thousands abducted by Boko Haram and trained as soldiers. They learned to survive, but only by forgetting who they were." http://nyti.ms/2t4cRZ8

--"What's Wrong With the Democrats?" by Franklin Foer in the July/Aug. issue of The Atlantic: "If the party cares about winning, it needs to learn how to appeal to the white working class." http://theatln.tc/2t4ancx

--"The Tamarind is Always Sour," by Keane Shum in Granta: "The business model was to get as many passengers to Malaysia alive as possible, but crews were not shy about shooting or beating people to maintain order. The murdered would be thrown overboard, along with the handful who perished from starvation or sickness. We think about twelve of every thousand passengers died at sea, almost all from abuse or deprivation." http://bit.ly/2szMg4p

--"The Monster of Florence: A true crime story," by Douglas Preston in the July/Aug. 2006 issue of the Atlantic: "Between 1974 and 1985 seven couples were murdered while making love in parked cars in the hills of Florence. The case was never solved. There have been suicides, exhumations, poisonings, body parts sent by post, séances in graveyards, lawsuits, and prosecutorial vendettas." http://theatln.tc/2sKUFRe

Playbookers

SPOTTED: Supreme Court Justice Sonia Sotomayor last night at the Nats game (the Nats beat the Cincinnati Reds 6-5) ... Rep. Lois Frankel (D-Fla.) asking for (and taking) a selfie with Guardian reporter Ben Jacobs yesterday at the taxi line at West Palm Beach airport after finding out that he was the reporter body-slammed by her new colleague Greg Gianforte (R-Mont.) ... former Sen. Mark Kirk (R-Ill.) on a United Airline flight yesterday from DCA to ORD ... Rep. Cathy McMorris Rodgers (R-Wash.) yesterday at Spokane airport, coming in from a flight from ORD.

TRANSITIONS -- Samantha Greene is starting Monday as the comms director for Rep. Julia Brownley (D-Calif.); Greene most recently spent two years as communications director at the Information Technology and Innovation Foundation. ... **Sara Roberts** had her last day on Friday as digital director for the Senate Committee on Energy and Natural Resources. She's moving to New York to be digital marketing editor for the Peninsula Hotels.

ENGAGED! @sethmoulton: "My girlfriend of 2+ years, Liz Boardman, just said yes! So excited!!" Boardman is a senior client partner at Korn Ferry Sports. ***With pic of the couple on the Speaker's Balcony, where he proposed*** http://bit.ly/2tXZPZt

WELCOME TO THE WORLD -- Alison Hawkins, VP of comms at the Financial Services Roundtable and a Capitol Hill, VA and Romney alum, and **David Hawkins,** a special agent at the VA, recently welcomed Hunter Hawkins. "He's now the little brother to Avery (3) and Evangeline (2) who haven't left their baby brother alone since he got home. He was 8 lb 8 oz, 20 1/2 in long." ***Pics*** http://bit.ly/2rYTGzC ... http://bit.ly/2tWxy5k ... http://bit.ly/2s0Lgrz

-- Sarah Martin Castro, director of federal relations at the University of Washington, and **Andre Castro,** comms director for Rep. Bill Flores (R-Texas), on Friday welcomed Lorraine Lupita Castro in to the world. ***Pic*** http://bit.ly/2s6N1hW

--Amber Moon, comms director for Sen. Gary Peters (D-Mich.) and **Byron Mills,** who works at Treasury's Office of Terrorism and Financial Intelligence, this week welcomed Wesley Samuel Mills to the world. Amber writes in: "He weighed in at 7lbs, 11oz despite being a few weeks early. He's the best birthday gift I could ever ask for!" ***Pic*** http://politi.co/2t4cEEB

BIRTHWEEK (was yesterday): Jeremy Katz, deputy director of the National Economic Council and former Bush 43 Jewish liaison ... Robert D. Kaplan, CNAS senior fellow and senior adviser at Eurasia Group, turned 65 (hat tips: Jewish Insider) ... Bradley Engle of Purple Strategies and a Jindal alum (h/t Kyle Plotkin)

BIRTHDAYS: Ralph Reed, founder and chairman of the Faith & Freedom Coalition ... Washington Free Beacon editor Matt Continetti is 36 ... Roger Fisk, Obama advance alum, is 5-0 ... former NY Gov. George Pataki is 72 ... Ed Traz, Republican mail consultant ... Texas Tribune's Morgan Smith (hubby tip: Travis Considine, filing from Zanzibar on their honeymoon) ... Billionaire activist investor Nelson Peltz is 75 ... former Clinton Labor secretary Robert Reich is 71 (h/ts Jewish Insider) ... Gretchen Reiter, founder of Highline Strategies ... Kevin Goldman, former WSJ media reporter and CNBC spokesman, now senior director and head of global media practice at APCO ... Politico media booking maven Jonathan Yuan ... former Treasury COS Chris Weideman ... former Jeb 2016 research director Quentin Cantu ... Ronie Gazit ... Zach Seward, VP of product and executive editor of Quartz ... Anna Massoglia ... WSJ's Jennifer Maloney ... Mike Gula, a Republican fundraising consultant ... Jesse Stinebring, data scientist at Civis Analytics and Obama alum ... Heather Hurlburt of New America Foundation ...

Sara Shannon ... Kim Fenske ... Brett Rosner (h/t Oliver Darcy, filing from Palm Beach) ...

... Omnika Thompson, executive producer for "MSNBC Live with Katy Tur" (h/t Michael Weiss) ... Mike Gula, who runs the Gula Graham Group with Jon Graham (h/t Zack Roday) ... Benjamin Tomchik, director of public affairs at American Insurance Association ... Neal Becton ... Sara Shannon ... Melinda Arons (h/t Adrienne Elrod) ... Joanna Reagan (h/t Jon Haber) ... Kaitlyn Burton, who writes Politico's Day Ahead newsletter (h/t Peter King) ... Katherine Marie Kulik ... Thomas Doane Perry III ... Allie Bradford ... Tyler Kasperek Somes ... Abel Acuña ... Kathleen Hartnett ... Sarah Dale ... Bush 43 admin. alum Joe Bogosian, now CEO of Safran Vectronix in Boston ... Roger Roscoe ... SEIU alum Tyler Somes ... Ricki Peltzman, spending her day as she always does - dressing all of DC - from her Upstairs on 7th store!) ... Kelda Helen Roys (h/ts Teresa Vilmain) ... Mindy Kaling is 38 ... Minka Kelly is 37 ... Solange Knowles is 3-0 (h/ts AP)

THE SHOWS, by @MattMackowiak, filing from Los Angeles:

--NBC's "Meet the Press": Sen. Bernie Sanders (I-Vt) ... Sen. Ron Johnson (R-Wisc.). Panel: Helene Cooper, Hallie Jackson, Mark Leibovich and George Will

--CBS's "Face the Nation": Sen. Joe Manchin (D-W.Va.) ... Adam Entous ... Sen. Pat Toomey (R-Pa.) ... Sen. Bill Cassidy (R-La.) ... Mark Bowden. Panel: Ben Domenech, Michael Duffy, Ed O'Keefe and Amy Walter

--CNN's "State of the Union", guest-hosted by Dana Bash: HHS Secretary Tom Price ... Ohio Gov. John Kasich ... Rep. Adam Schiff (D-Calif.). Panel: Amanda Carpenter, Rick Santorum, Rep. Andre Carson (D-Ind.) and Rep. Ruben Gallego (D-Ariz.)

--ABC's "This Week": Kellyanne Conway ... Senate Minority Leader Chuck Schumer (D-N.Y.) ... Sen. Susan Collins (R-Maine) ... Sen. Rand Paul (R-Ky.). Panel: Matthew Dowd, Lanhee Chen, Julie Pace and Neera Tanden

--"Fox News Sunday": Senate Minority Whip Dick Durbin (D-Ill.) ... Sen. John Barrasso (R-Wyo.) ... HHS Secretary Tom Price. Panel: Michael Needham, Jennifer Griffin, Josh Holmes and Bob Woodward

--CNN's "Inside Politics" with John King: Michael Bender, Margaret Talev, Karoun Demirjian and Manu Raju

--Fox News' "Sunday Morning Futures": Eric Trump ... Rep. Jason Chaffetz (R-Utah) ... Sen. Jerry Moran (R-Kan.) ... Alberto Gonzales. Panel: Ed Rollins and A.B. Stoddard

--Fox News' "MediaBuzz": Sean Spicer ... Shannon Pettypiece ... Mollie Hemingway ... Ray Suarez ... Ed Henry ... Sarah Lacy

--CNN's "Fareed Zakaria GPS": Chicago Mayor Rahm Emanuel ... Joseph Cirincione ... David Brooks

Leading the News

Congress

Bernhardt Confirmed to No. 2 Interior Department Job

The Senate confirmed David Bernhardt, a lawyer, to the No. 2 job at the Interior Department July 24, providing Interior Secretary Ryan Zinke a much-needed deputy but underscoring the slow progress made on installing Trump administration nominees.

Oil & Gas

BLM Proposes to Kill 2015 Hydraulic Fracturing Rule

The Trump administration is proposing to rescind 2015 regulations on hydraulic fracturing put in place by the Obama administration for oil and natural gas operations on federal and Indian lands.

Solid Waste

China Says No to Even More Foreign Waste

Consumer plastics is among the 24 new solid waste imports China will ban by the end of the year amid increased public concern over environmental contamination and decreased need for scrap materials by industry.

Special Report

Water Pollution

PODCAST: Trump Rhetoric Gives Border Town Mayor Headaches

Small town mayor Serge Dedina has an international environmental problem: water pollution originating in Mexico flows across the border and into his Southern California town, hurting the ecosystem and causing health problems for residents.

Water Resources

Trump's Border Wall Could Trouble Waters With Mexico

A wall covered with solar panels may be President Donald Trump's solution to keep undocumented immigrants and illegal drugs out of the country, but critics say it also could cause flooding and stormwater runoff problems along the 2,000-mile U.S.-Mexico border.

News

Air Pollution

EPA Sued For Not Responding Quickly on Power Plant Permit

Environmental advocates sued EPA July 24 over what they said was the agency's inability to respond quickly enough to concerns over a central Pennsylvania power plant's air pollution permit.

Chemical Security

N.Y. Leads States Challenging EPA Chemical Safety Rule Delay

The EPA's two-year delay of a chemical facility safety rule exceeds the agency's Clean Air Act authority, New York's attorney general and 10 other states said in a July 24 lawsuit.

Climate Change

U.K. Braced for Record-Breaking Wet Winters, Blames Climate Shift

Britain faces a future of record-breaking wet winters, potentially leading to more of the widespread flooding seen in recent years, according to new modeling that incorporates changing climate patterns.

Climate Policy

Conservative Party Merger Alters Landscape in Canada's Oil Patch

The merger of Alberta's two main conservative parties creates a new political force in the heart of Canada's oil patch that threatens to unseat Premier Rachel Notley and kill the province's carbon tax.

Climate Policy

U.K. Seeking to Fill Climate Leadership Void Left by Trump

Britain should seek to fill the leadership void created by Donald Trump's decision to pull the U.S. out of the landmark Paris Agreement, Climate Change Minister Claire Perry said July 24.

Energy

EU Mulls Retaliation Against U.S. Over New Russia-Sanctions Plan

The European Union said it would be prepared to retaliate against the U.S. should Washington hit Russia with new sanctions that affect EU-based energy companies, risking a deeper trans-Atlantic split over economic and security policies.

Energy

Flood Risks Prompt Massachusetts Review of Enbridge Gas Facility

Massachusetts Gov. Charlie Baker (R) bowed to public pressure and ordered his administration to scrutinize a natural gas facility planned by Enbridge for its Pennsylvania to Canada pipeline.

Energy

Photos of Melted Fuel at Japan's Fukushima to Help Cleanup

Japan's likely discovery of melted fuel inside the wrecked Fukushima nuclear power plant is seen as a critical step in hastening the $72 billion, 40-year cleanup of one of the worst atomic disasters in history.

Energy

White House Team Differs on Trump Support for Russia Sanctions

The Trump administration supports the current version of a bill to sanction Russia, the new White House press secretary said, although her boss, Anthony Scaramucci, wouldn't guarantee that President Donald Trump will sign it.

Environmental Taxes

Pennsylvania Eyes Shale Tax to Help Plug $2 Billion Hole

The severance tax debate is heating up again in Pennsylvania.

Motor Vehicles

VW, Daimler Workers Step Up Pressure to Come Clean on Collusion

Germany's carmakers are coming under pressure from their employees to come clean on allegations that they colluded on technology for decades, as investors continued to sell the stocks on concern the industry faces another major scandal following the diesel emissions crisis.

Natural Resources

Ships to Test Slower Speed to Reduce Noise for Whales

Cruise liners, cargo ships and ferries plan to slow down for a two-month trial off Washington state and British Columbia to see if slower speeds and less underwater noise would help protect endangered killer whales.

Renewable Energy

Renewables Scientist Takes South Korea's Energy Helm

South Korea on July 24 inaugurated a sustainable energy scientist and scholar as minister for trade, industry and energy, a move expected to help the country meet stepped-up renewable energy goals by 2030.

Toxic Substances

BP, Marathon, Kinder Morgan Quash Negligence Claim

BP, Marathon Oil and Kinder Morgan won't face statutory negligence claims for environmental contamination, the Northern District of Oklahoma said July 21 (Bristow First Assembly of God v. BP PLC, 2017 BL 253710, N.D. Okla., No. 15-CV-523, 7/21/17).

News

Climate Regulation

Transportation Officials Move to Scrap Obama Climate Rule

The Trump administration is working to roll back another Obama-era climate regulation—this time a provision that would require state transportation planners to account for greenhouse gas emissions.

Climate Regulation

Trump Said to Begin Repeal of Obama Power Plant Emission Cuts

The Trump administration will propose repealing former President Barack Obama's signature plan for combating climate change by asserting that its expansive approach to addressing carbon emissions exceeds legal limits, according to a person familiar with the deliberations.

Coal-Fired Power Plants

Perry's Coal Proposal Seen Unlikely to Reverse Historic Decline

U.S. Energy Secretary Rick Perry's plan to reward coal-fired power plants that keep large stockpiles of fuel won't be enough to reverse the industry's long-term decline, analysts say.

Energy

Army of Women Tackles Electricity Thieves in Indian Slums

India's power companies have a problem largely responsible for $10 billion a year in losses. Slum dwellers steal electricity and refuse to pay their bills. But company officials often can't go in without being chased by mobs—and sometimes beaten, tied up, urinated on, even murdered.

Energy

Electricity, Fossil Fuel Energy Nominees Head to Senate Floor

Energy Department nominees to lead the electricity and fossil fuel offices are headed for full Senate consideration after favorable votes by the Energy and Natural Resources Committee on Oct. 4.

Energy

Japan Regulator Clears Restart of World's Largest Nuclear Plant
Tokyo Electric Power Co. Holdings Inc. moved a step closer to resuming operations of the world's biggest nuclear facility after Japan's atomic regulator gave its tacit approval, delivering a much-needed boost for a company still strapped with the cost to clean up its wrecked Fukushima plant.

Energy
Nuclear Regulatory Panel Nominees Caught in Partisan Senate Spat
The nomination of a Democrat to continue on the Nuclear Regulatory Commission has become caught in a partisan disagreement over whether his nomination should be combined with those of two Republican nominees awaiting Senate action.

Energy
Theresa May's U.K. Energy Price Cap Signals Wafer Thin Margins
Britain's utilities are the new political punching bag after Theresa May proposed a price cap to insulate customers from higher prices.

Motor Vehicles
Western Governors Envision Electric Vehicle Corridor
Governors in seven Western states hope to coordinate an electric vehicle charging network that connects their major thoroughfares—and possibly boosts some the presence of some states in the electric vehicle industry.

Natural Resources
Energy Royalty Advisory Panel Starts Charting New Rules
A royalty policy committee that includes major oil companies will develop new Interior Department regulations on payments companies make for energy development on federal and tribal lands, an Interior official said at the committee's first meeting Oct. 4.

Oil & Gas
Here's the Hot Canadian Oil Play You Probably Never Heard About
There's a land grab quietly taking place in a little-known corner of the Canadian oil sands.

Oil & Gas
Interior Wants to Freeze Obama-era Methane Limits
The Interior Department wants to temporarily stop enforcing an Obama-era rule that limited methane emissions from oil and gas drillers operating on federal lands.

Oil & Gas
Private Oil Made a Big Find in Mexico, Now State Oil Wants a Cut
When private drillers struck oil off Mexico's coast this year, they didn't anticipate sharing it with the state oil company. It looks like they'll have to.

Real Property
Trans-Pecos Pipeline Will Proceed for Now
A Texas property owner whose land was taken by a natural gas utility can't stop its pipeline project for now, the U.S. Court of Appeals for the Fifth Circuit ruled Oct. 3 (Boerschig v. Trans-Pecos Pipeline, LLC, 2017 BL 354426, 5th Cir., No. 16-50931, 10/3/17).

Renewable Energy
Dawn of Solar Age Declared as Sun Power Beats All Others
Solar power blossomed faster than for any other fuel for the first time in 2016, the International Energy Agency said in a report suggesting the technology will dominate

renewables in the years ahead.

Renewable Energy

Storms Spur $22 Billion Investment in Battery-Backed Grids

Growing demand for more resilient power supplies will spur $22.3 billion of global investment in battery-backed local energy systems over the next decade, according to Navigant Research.

TRUMP'S EPA: Agency at a crossroads -- Complete coverage

June 9, 2017

Latest News

Industry Attorneys See Legal Risks To EPA's CPP 'Repeal First' Strategy

Industry attorneys say that EPA faces legal risks if it carries out a plan to revoke the Obama-era Clean Power Plan (CPP) without having a replacement proposal at the ready, charging the agency could face new suits from rule supporters who could argue the agency has a mandatory duty to issue a replacement.

EPA Says Budget, Policy Uncertainty Limits Benzene Air Rule Enforcement

EPA's acting top air official says the agency cannot commit to a timetable for addressing several Inspector General (IG) recommendations to improve its oversight and enforcement of a 2007 rule that restricts cancer-causing benzene in fuel, citing as reasons an “extremely constrained” budget and doubts over the Trump EPA's policy goals.

Trump EPA Defends Obama-Era Policy Finding NSR Violations 'Ongoing'

The Trump EPA and Department of Justice (DOJ) are defending an Obama-era enforcement policy that finds alleged Clean Air Act new source review (NSR) permit violations are “ongoing” and therefore not subject to the statute of limitations, fighting a power company's claim that a pending NSR case is time-barred.

Trump Taps Strong Critic Of GHG Rules To Lead DOJ Environment Team

Jeffrey Clark, President Donald Trump's choice to head the Department of Justice's (DOJ) environment division, is a staunch critic of greenhouse gas regulation and is closely familiar with prior climate case law, having argued some of the critical cases -- a factor that could bolster administration attempts to roll back Obama-era rules and potentially undermine EPA's authority to regulate GHG emissions.

Oil Sector, Biofuels Groups Stake Out Competing Goals For Reform Of RFS

Oil sector and biofuels groups are staking out competing goals for how they want EPA to reform the renewable fuel standard (RFS) program that sets annual targets for blending of renewable and alternative fuels, though debate lingers over whether

the agency can achieve the changes through administrative means or if legislation is necessary.

Senate Democrats Defend Air Law's Jobs Benefits Against Trump Attacks

Senate Democrats are defending the Clean Air Act's economic and job creation benefits against attacks from the Trump administration that claim Obama-era rules crafted under the law have caused unemployment and hurt the economy, with the senators saying the law has been and remains crucial to a successful economy.

Subject: POLITICO's Morning Transportation, presented by Citizens for On Time Flights: Whip it good — How do you solve a problem like the HTF? — Delta joins the A(TC) team

By Lauren Gardner and Stephanie Beasley | 07/14/2017 10:00 AM EDT

With help from Brianna Gurciullo and Tanya Snyder

WHIP IT GOOD: House Republicans got to work Thursday night whipping members on Transportation Chairman Bill Shuster's plan to spin air traffic control operations away from the FAA. Shuster and members of his staff darted across the House chamber to chat with Republicans as the lawmakers voted. (Side note: We haven't seen a whip count yet, but the bill isn't likely to be scheduled unless the leadership is confident it will pass. Friday, when the House releases the floor schedule for next week, will be key.)

What a difference a year makes: House Speaker Paul Ryan told reporters earlier in the day that the bill, H.R. 2997 (115) had "changed substantially" from 2016, when leadership declined to bring it to the floor for a vote. In response to a question from POLITICO about whether President Donald Trump's influence this time around changed the political dynamics, Ryan said: "I think the president's support did help."

INBOX ALERT: A series of emails sent by officials at FAA and DOT this week promoting Shuster's bill are making the rounds among member offices and industry groups, raising some eyebrows about their propriety. Chris Brown, FAA's assistant administrator for government and industry affairs, recently sent emails - one of which had the screaming headline "ATC Reform ALERT - General Aviation Benefits from the AIRR Act" - touting the "benefits" of an air traffic control overhaul for general aviation and noting "a lot of misinformation out there" about the effort. MT has seen two more emails, which are largely derivative of Brown's, that were blasted out by DOT officials from the secretary's office, including one addressed to "stakeholders." The FAA said in a statement that the agency is "providing fact-based information in response to questions and issues that we have been consistently asked over the course of the FAA's reauthorization." As of press time, the DOT secretary's office had not responded.

ACROSS THE DOME: All's quiet on the Senate front, as senators and staff continue to talk through issues with language in that chamber's bill, S. 1405 (115), that would loosen training requirements for some commercial pilots. "I've never been able to see why that was not a solvable problem, but it might not be," Senate Commerce Aviation Subcommittee Chairman Roy Blunt (R-Mo.) told MT. Meanwhile, the committee's top Democrat, Florida Sen. Bill Nelson, said he's optimistic lawmakers can compromise - though his "preference is [for] it to be taken out."

IT'S FRIDAY: Thanks for tuning in to POLITICO's Morning Transportation, your daily tipsheet on all things trains, planes, automobiles and ports. Lauren and Stephanie are at the helm, so send along your tips, feedback and lyrics to lgardner@politico.com or @Gardner_LM and sbeasley@politico.com or @Steph_Beasley.

"Once you step on/You might never get off of the commuter train/Doesn't go very far away, but just the same/It's a trip and a half" (h/t Allison Fultz of Kaplan Kirsch Rockwell)

GET LISTENING: Follow MT's playlist on Spotify. What better way to start your day than with tunes (picked by us and readers) that are all about flying, driving, commuting and sailing?

HOW DO YOU SOLVE A PROBLEM LIKE THE HTF? Transportation Secretary Elaine Chao testified Thursday before the Senate Appropriations subcommittee with jurisdiction over DOT. When subcommittee Chairwoman Susan Collins brought up the Highway Trust Fund, Chao said the Trump administration is considering ways to shore up the accounts in the long run - and a vehicle miles traveled fee could potentially be on the table. "We actually have begun to look at perhaps using different kinds of measurements for funding highways, and one of which is the mileage, using mileage traveled as a parameter as well," Chao said, pointing to VMT pilot programs at the state level.

Collins not moved on ATC: The Maine Republican told reporters after the hearing that Chao's testimony didn't ease her concerns about the idea of breaking up the FAA. "I was not persuaded," Collins said. "I worry that this would end up being dominated by a couple of big carriers, and I don't agree that outmoded technology is responsible for a lot of the delays."

Stay tuned: Heads up, self-driving car geeks. Chao said DOT will release "a new book of guidelines for autonomous vehicles" as early as September.

Also coming soon: Chao said that DOT's Office of Aviation Enforcement and Proceedings has investigated the now-infamous United incident from April and will publish the results "shortly."

DELTA JOINS THE A(TC)-TEAM: Shuster got a big win Thursday when Delta Air Lines announced it would drop its opposition to his proposal to remove air traffic control from FAA. Delta CEO Ed Bastian said the carrier is now "working constructively" with Shuster on his bill, according to USA Today. Delta was the only major carrier that didn't support the ATC spin-off plan. Bastian said Delta was not "philosophically opposed to privatization for privatization's sake," but wanted to make sure that the plan would include "proper governance, transparency, and cost efficiency."

NO RED SIGNALS HERE: MT caught a sneak peek of report language for the House DOT spending bill, and you can expect the committee to elaborate more on its expectations for how the department should carry out the Capital Investment Grant program that the administration has proposed winding down. The language we've seen says the panel "supports the President's commitment to invest in infrastructure, and therefore maintains its position to recognize the need for a robust" grant program, and that it "directs" the secretary to allow projects to move through CIG program phases as they meet the standard requirements, ending with a full funding grant agreement for those that hit the benchmarks.

**** A message from Citizens for On Time Flights:** We should be outraged that a critical piece of our nation's infrastructure is "stuck in the 1950s." But that's where America's air traffic control

system is today. ATC reform will bring us into the 21st century. That will mean fewer delays, enhanced safety and reduced emissions. Learn more at OnTimeFlights.Org. **

DEMS WARN OF PUBLIC TRANSIT SOFT TARGETS: Democrats on the Senate Homeland Security and Governmental Affairs Committee issued a report laying out how Trump's request to cut funding for public transit security to help fund a U.S.-Mexico border wall could leave the United States "highly vulnerable to terrorist attacks." Trump's fiscal 2018 budget proposal would slash $52 million for public transportation security assistance - exactly the kind of "soft targets" terrorists increasingly hit, Democrats noted. The administration has also proposed reducing TSA's VIPR teams from 31 to eight. VIPR teams are deployed to airports and transit stations. "Budgetary cuts of this magnitude to a variety of important counterterrorism efforts will have significant negative impacts," according to the report.

ABA chimes in: The House Appropriations Homeland Security Subcommittee approved a fiscal 2018 DHS spending bill earlier this week, and the American Bus Association is pressing appropriators to include at least $10 million in funding for the Intercity Bus Security Program in the bill. There is currently no funding in the bill for that program. "As with public transit operators and Amtrak, our industry should be equally prepared to mitigate these threats and respond to emergency situations, especially when these modes operate at shared terminal facilities," ABA said in a letter sent to the House Appropriations Committee.

MARK YOUR CALENDAR: The House Energy and Commerce Committee plans to mark up legislation on driverless cars July 19,reports Tanya Snyder. They had hoped to introduce bills this week, but they're still working out details - like whether to introduce a flurry of individual bills or one big bill. Democrats - who had earlier complained of being left out of the process but who are working closely with committee leadership now - are trying to make some changes to the bill text. They're looking to include a measure on hot cars and some way to dial back the number of exemptions to safety standards and language barring states and cities from making their own rules on driverless cars.

Elsewhere: Sen. John Thune (R-S.D.) said he's hoping to introduce similar legislation in the Senate before the August recess - which now starts two weeks later than planned, thanks to Majority Leader Mitch McConnell's tough love on health care and other agenda items.

DON'T CALL IT A COMEBACK: Were you worried that the often floated and perpetually cast aside concept of using repatriated overseas corporate tax earnings for infrastructure was dead? Well, you can breathe a sigh of relief. Tax repatriation is in vogue again among lawmakers. Tanya reports that Sen. Ron Wyden (D-Ore.) told the American Road and Transportation Builders Association on Thursday that senior Republicans and the Trump administration are "ruminating" on the idea of including a repatriation component in a tax overhaul package expected to be introduced this fall. The plan could build on a bipartisan plan previously discussed by Sens. Chuck Schumer (D-N.Y.) and Rob Portman (R-Ohio), Wyden said.

SHIFTING GEARS: Regina Hopper is stepping down from her post as president and CEO of the Intelligent Transportation Society of America. She will become senior vice president of

global policy for GRIDSMART Technologies

GARVEY TO RECEIVE POGUE AWARD: The International Aviation Club of Washington, D.C., will announce today that it is awarding this year's L. Welch Pogue Lifetime Achievement Award to former FAA Administrator Jane Garvey. The club is honoring Garvey for "her many contributions to shaping policy, her efforts to mitigate the effects of Y2K on the air traffic system and her leadership after the terrorist attacks of 9/11," per IAC President Jodie Moxley-Ramos. The award dinner will take place in September.

THE AUTOBAHN:

- "Why Your Airline Says It's Sorry." The New York Times.

- "Lyft explains why Shuttle, its most bus-like service, is not, in fact, a bus." Quartz.

- "U.S. FCC approves new spectrum for vehicle radar systems." Reuters.

- "The awful decline of the New York City subway system." The Atlantic.

- "Self-driving taxis could have a vomit problem." Bloomberg.

- "New directive may expand Trump travel ban." POLITICO.

- Travelers flying from Casablanca to the U.S. may now bring electronics on board. TSA.

THE COUNTDOWN: DOT appropriations run out in 79 days. The FAA reauthorization expires in 79 days. Highway and transit policy is up for renewal in 1,175 days.

** **A message from Citizens for On Time Flights:** Innovation is in America's DNA. If this weren't the case, we'd still be watching black-and-white televisions, computers would be the size of refrigerators, and phones would be tethered to walls. Yet when it comes to our nation's air traffic control (ATC) system, we're using WW-II era technology. Today, controllers sequence planes for take-off using paper strips and track them in flight with ground-based radar. This outdated and inefficient system is responsible for nearly half of all flight delays, yet efforts to reform and improve it have stalled. American taxpayers deserve a 21st-century ATC system that delivers enhanced safety, fewer delays and cancellations, reduced emissions and lower costs. Opponents say reforming the system is too complicated. That's a copout. Since when has a challenge kept America from innovating? Congress has the opportunity to fix the ATC system's structure while giving taxpayers the modern system they deserve. Visit OnTimeFlights.Org to learn more. **

Alaska

WATER
APDES General Permit for Aquaculture Facilities
Alaska WATER

Notice of the Department of Environmental Conservation announces the availability of a preliminary draft Alaska Pollutant Discharge Elimination System (APDES) general permit for discharges from aquaculture facilities. The general permit applies to all commercial and noncommercial concentrated aquatic animal production facilities that produce, hold, or contain 20,000 pounds or more of aquatic animals per year in ponds, raceways, or similar structures; feed 5,000 pounds or more of food during a calendar month; and discharge at least 30 days per year. The permit authorizes and sets conditions on the discharge of pollutants from these facilities, which include total suspended and settled solids, pH, ammonia, dissolved oxygen, and chlorine. The permit also limits the types and amounts of pollutants that may be discharged, provides best management practices, and requires effluent and receiving water monitoring. Comments are due Aug. 9, 2017. Contact: Angela Hunt; DEC; 907-269-7599; angela.hunt@alaska.gov

Regulatory Update

Colorado

OCCUPATIONAL SAFETY AND HEALTH
Railroads, Rail Fixed Guideways, Transportation by Rail, Rail Crossings
Colorado OCCUPATIONAL SAFETY AND HEALTH

Final rule of the Public Utilities Commission amends regulations under 4 CCR 723-7, Rules 7000 through 7327 (nonconsecutive), regarding railroads, rail fixed guideways, transportation by rail,

and rail crossings. The rule incorporates by reference the state Transportation Commission's 2009 Manual on Uniform Traffic Control Devices and the state supplement to the Federal Manual on Uniform Traffic Control Devices 2009, as updated Feb. 26, 2016. The rule also adds temporary safety measures and minimum crossing safety requirements, revises application requirements so only necessary information is provided by type of authority being sought, and adds definitions. The rule is effective Aug. 14, 2017. Contact: Pam Fischhaber; PUC; 303-894-2529; Pamela.Fischhaber@state.co.us

—Colorado Register (07/25/2017)

Regulatory Update

WATER
Water and Wastewater Facility Operators Certification
Colorado WATER

Final rule of the Department of Public Health and Environment, Water and Wastewater Facility Operators Certification Board, amends regulations under 5 CCR 1003-2, Regulation 100.9.7, regarding certification requirements for owners and operators of water treatment facilities, domestic or industrial wastewater treatment facilities, wastewater collection systems, and water distribution systems. The rule requires hearing requests for specified notices of violation and related civil penalty assessments to be submitted to the Water Quality Control Division rather than the board. The rule corrects a Dec. 25, 2016, final rule to align requirements with statute. The rule is effective Aug. 31, 2017. Contact: Jackie Whelan; DPHE; 303-692-3617; jackie.whelan@state.co.us

—Colorado Register (07/25/2017)

Regulatory Update

Florida

SOLID WASTE
Sold Waste Grants Program
Florida SOLID WASTE

Notice announces the intention of the Department of Environmental Protection to amend regulations under FAC 62-716.300 through .500 (nonconsecutive) to revise required data collection and reporting methods, including forms, related to the Solid Waste Grants Program. A workshop is scheduled for Aug. 10, 2017, in Tallahassee, and via teleconference and webinar. A comment due date is not specified. Contact: Henry Garrigo; DEP; 850-245-8822; henry.garrigo@dep.state.fl.us

Regulatory Update

Nevada

AIR

Air Pollution Control Devices for Mobile Sources

Nevada AIR

Proposed rule of the State Environmental Commission amends regulations under NAC 445B.575 concerning air pollution control devices for mobile sources. The rule provides an exemption for motor vehicles subject to a settlement agreement entered into by the state from the requirement that vehicles equipped with devices to control pollution must have those devices correctly installed and in good operating condition. The proposal currently is in effect as a temporary rule, effective June 1, 2017. A meeting is scheduled for Sept. 13, 2017, in Carson City. Comments are due Sept. 8, 2017. Contact: Valerie King; SEC; 775-687-9374

Regulatory Update

Oregon

GENERAL ENVIRONMENT AND SAFETY

Renewable Energy Certificate System/Stranded Thermal Generation

Oregon GENERAL ENVIRONMENT AND SAFETY

Temporary rule of the Department of Energy amends regulations under OAR 330-160-0015 to extend until Jan. 1, 2018, the deadline for stakeholders to apply for thermal renewable energy certificates associated with qualifying "stranded" thermal generation, as established in a Feb. 1, 2017, final rule. The current rule also deletes the deadline for facilities to register with the Western Renewable Energy Generation Information System (WREGIS). The rule retains the requirement for facilities to report thermal generation to WREGIS within six months of gaining approval from the department. The rule is issued because WREGIS has experienced delays in its ability to handle registration and the department has revised the application and application process. The rule is effective July 24, 2017, and expires Jan. 19, 2018. Contact: Elizabeth Ross; DOE; 503-378-8534; elizabeth.ross@oregon.gov

—Oregon Bulletin (07/24/2017)

Regulatory Update

Texas

AIR

Control of Air Pollution from Visible Emissions and Particulates/Outdoor Burning

Texas AIR

Final rule of the Texas Commission on Environmental Quality amends regulations under 30 TAC 111.203 and adopts regulations under 30 TAC 111.217 regarding outdoor burning. The rule adds requirements for prescribed burning when conducted under the direction of a certified and insured prescribed burn manager (CPBM). The rule also defines CPBM and revises the definitions of "landclearing operation" and "prescribed burn." The rule will be submitted to the EPA as a revision to the state implementation plan. The rule is effective Aug. 3, 2017. Contact: Amancio Gutierrez; TCEQ, Program Support Section; 512-239-3770

Subject: Playbook Power Briefing, presented by Postmates: TRUMP meets MERKEL, will dine with MOON and ABE -- How TV networks try to get around bad ratings -- BANNON ally leaves NSC -- SPOTTED: Pence at 'Sound of Music' at Kennedy Center

View online version | Add politicoplaybook@politico.com to your address book.

Today's Playbook Power Briefing presented by Postmates

By ANNA PALMER (anna@politico.com; @apalmerdc), JAKE SHERMAN (sherman@politico.com; @JakeSherman), DANIEL LIPPMAN (daniel@politico.com; @dlippman), ZACH MONTELLARO (zmontellaro@politico.com; @ZachMontellaro)

Good Thursday afternoon. THE PRESIDENT is in Hamburg, Germany. He posed with German Chancellor Angela Merkel for a brief pool spray, shook hands for the camera and chatted a little bit past noon Eastern time. The pair will have meetings throughout the afternoon, and Trump will later dine with South Korean President Moon Jae-in and Japanese Prime Minister Shinzo Abe.

WHAT TRUMP IS FACING -- THE NEW ALLIANCE -- "China Sees Opening Left by Trump in Europe, and Quietly Steps In," by NYT's Steven Erlanger in London: "[T]he leader of the world's other superpower, Xi Jinping of China, will also be in Hamburg, Germany, ready to slip quietly into the widening gap between Mr. Trump and longtime European allies and to position Beijing as the globe's newest, biggest defender of a multilateral, rules-based system.

"Mr. Xi will have just concluded a state visit with Germany, including bilateral meetings and a small dinner Tuesday night in Berlin with the summit host, Chancellor Angela Merkel, who has made no secret of her differences with Mr. Trump. Having helped Ms. Merkel open the Berlin Zoo's new $10 million panda garden (complete with two new Chinese pandas), and watched a German-Chinese youth soccer match, Mr. Xi will have already made a mark. He has cemented his closeness to Germany and Ms. Merkel, the woman many consider not just the most important leader in Europe, but also the reluctant, de facto leader of the West.

"'The election of Trump has facilitated China's aims in Europe,' said Angela Stanzel, an Asia scholar at the European Council on Foreign Relations in Berlin. 'Trump facilitates China's narrative of being the new defender of multilateralism and especially global free trade, and China sees Germany as defending that, too, as a kind of sidekick,' she added. 'And it fits into the Chinese idea of creating an alternative leadership to the United States.'" http://nyti.ms/2sQdG2Y

-- @PhilipRucker: "Trump to talk North Korea strategy at dinner tonight with Abe & Moon. Not included: Xi. On purpose, so China feels heat, per diplo source."

ATTN @ADVANCEGUYNOTES -- BUZZFEED -- "President Trump Apparently Couldn't Find A Hotel To Book For The G20 Summit," by Marcus Engert: "White House officials apparently waited too long to book accommodations for President Trump, leaving him without a hotel in Hamburg, Germany, as world leaders converge for the G20 summit.

Organizers announced the scheduled summit in February 2016, which requires 9,000 hotel rooms to accommodate world leaders, their sizable staffs, and security details.

"The Hamburger Abendblatt, a local news outlet, reported that the US government wanted to accommodate Trump in the Four Seasons, but it was already booked. In fact, it turns out that every luxury hotel in Hamburg was reportedly booked by the time the Americans called, leaving Trump, who is associated with an empire of hotel properties, scrambling for a place to stay. Several weeks ago there were even rumors Trump might have to sleep in Berlin and have to fly to Hamburg via helicopter." http://bzfd.it/2tQdBkf

-- "Bannon Ally Leaves White House As McMaster Consolidates Power: Former Breitbart writer Tera Dahl has exited the National Security Council in a blow to Trump's nationalist wing," by BuzzFeed's John Hudson: "As rival factions inside the White House continue to battle over urgent foreign policy decisions, a key ally of Donald Trump's chief strategist Stephen Bannon is leaving the National Security Council, BuzzFeed News has learned.

"Tera Dahl, deputy chief of staff at the NSC and a former columnist for Breitbart, is being reassigned to a position outside of the White House, three people familiar with the decision told BuzzFeed News. The move frees up National Security Adviser H.R. McMaster to install another staffer of his choosing in his drive to reshape the NSC to his liking. 'Tera Dahl has done exemplary work both on the transition and in the first months of the Trump administration getting the National Security Council staffed up and running from the chief of staff's office,' White House spokesman Michael Anton said. 'It was always her intent to move into a policy role once this task was completed.'" http://bzfd.it/2uuzCmz

POLITICO EUROPE 'MOST INFLUENTIAL' IN EUROPE -- POLITICO EUROPE has the highest readership rate and is the most influential news outlet in Europe, according to a ComRes survey of EU influencers, including members of parliament, aides and "Brussels opinion formers." Our colleagues across the pond beat out the BBC, the Financial Times, the Economist, NYT and WSJ, among others. http://politi.co/2tV6VSA

THIS COULD BE PROBLEMATIC -- THE LATEST ON HEALTH CARE -- "Senate Obamacare repeal vote unlikely next week," by Burgess Everett and Josh Dawsey: "Senate Republicans are highly unlikely to vote next week to repeal Obamacare and are tentatively preparing for a vote in approximately two weeks, according to senators and officials on Capitol Hill and in the White House. The Congressional Budget Office is reviewing legislative language sent by Senate Majority Leader Mitch McConnell; the Senate parliamentarian must weigh in on controversial proposals; and GOP leaders still have not forged a bill that can get 50 votes. Those factors are likely to push the pivotal roll call closer to the end of July than immediately after the July 4 recess. 'There's a lot of moving pieces. My sense is the week of the 17th is when we start moving on it,' Sen. Marco Rubio (R-Fla.) said in an interview Thursday morning. ...

"A White House official said there would be no health care vote next week and that the White House and Senate Republicans would consider nominations on the floor until the health care vote is ready. Republican leaders in the House and Senate originally hoped for a repeal vote as early as January. A spokesman for McConnell said no final decision has been made. ... Work is also beginning on lifting the debt limit, according to the administration and Hill Republicans. That vote may be held immediately before the long August recess if health care has been dealt with by the end of the month, though it could slip to September if the Treasury Department offers reassurances to Hill leaders that such a timeline would work." http://politi.co/2sQbWXH

-- "Hoeven hears criticism of Senate health care overhaul," by Forum News Service's Andrew Haffner: "The national health care debate came home Wednesday afternoon at a roundtable with Sen. John Hoeven (R-N.D.), at Altru Hospital in Grand Forks. ... Hoeven himself said he "doesn't support the bill as it stands," but said the Senate is moving through a process that he believed would better meet its goal of improving access to health care and addressing premium rates." http://bit.ly/2tViLMx

-- DAVE WEIGEL (@daveweigel) at Sen. Jerry Moran's (R-Kan.) town hall: "Moran referring to GOP task; 'Repair, replace, whatever language people are using.' Doesn't say 'repeal.'"

OOPS -- "Watch Poland's First Lady Pass By President Trump's First Attempt at a Handshake," by TIME's Alana Abramson http://ti.me/2tVAUK2

POLITICO PRO BREAKING NEWS ALERT: "Eighteen states and the District of Columbia have filed suit against Education Secretary Betsy DeVos over her delay of regulations meant to provide new protections for federal student loan borrowers, particularly those at for-profit colleges.

"The lawsuit, led by Massachusetts and joined by 18 other Democratic attorneys general, accuses DeVos of illegally delaying the regulations, which were finalized by the Obama administration and had been set to take effect on July 1. The rules made it easier for defrauded student loan borrowers to have their loans forgiven. They also prohibited colleges from requiring students to resolve complaints through arbitration

rather than in court."

WSJ MIDDAY SCOOP -- "White House Limits Pentagon on Afghan Troop Level: After Trump let generals decide number of forces, confidential memo put initial cap at 3,900," by Dion Nissenbaum: "The memo, sent to a small group of administration officials from national security adviser Lt. Gen. H.R. McMaster -- said that the president would let Defense Secretary Jim Mattis send no more than 3,900 troops to Afghanistan without coming back to confer with the White House, according to people familiar with the document. The conflicting messages reflect divisions that have surfaced in the Trump administration as it tries to develop a comprehensive new strategy for Afghanistan, amid concerns about diving back into a 16-year-old conflict that has claimed more than 2,400 American lives and cost the U.S. $2.4 trillion. Mr. Mattis said he hopes to present a plan to the White House by mid-July that will give the U.S.-led coalition the forces it needs to blunt Taliban momentum." http://on.wsj.com/2uuuUF6

BEING THERE -- "At least 101 shot, 15 killed during violent Fourth of July weekend in Chicago," by CBS' Adrianna Diaz in Chicago: "To see the violence for ourselves, CBS News spent Tuesday night with Tim White, a former gang leader who now works to stop violence in the streets. 'We're on our way to a murder scene,' White said. 'We gotta turn those lights on.' We rushed to the site of the murder, a liquor store on Chicago's West Side. As police sealed off the crime scene, it was too much for some to bear. We learned that just after midnight, two people were shot in one of the alleys. You could see a body on the sidewalk that police covered with a blanket. The body laid there for hours as police continued their investigation." http://cbsn.ws/2tkJwsp

AFTERNOON READ -- NEW NYT MAG COVER STORY -- "How the Death of a Muslim Recruit Revealed a Culture of Brutality in the Marines: Recruits at Parris Island have been subjected to severe hazing, far beyond that experienced in other U.S. military boot camps. Is this really the only way to create a warrior?" by Janet Reitman http://nyti.ms/2utT56w ... *The cover* http://bit.ly/2utEmsh

WSJ A-HED -- FUN LUNCHTIME READ -- "In TV Ratings Game, Networks Try to Dissguys Bad Newz from Nielsen: They misspell shows to fool the firm's automated system into ignoring broadcasts on nights with few viewers; 'NBC Nitely News,'" by Joe Flint: " Boosting TV ratings is easy for networks that don't mind playing dumb. In a game largely sanctioned by TV-ratings firm Nielsen, television networks try to hide their shows' poor performances on any given night by forgetting how to spell. That explains the appearance of 'NBC Nitely News,' which apparently aired on the Friday of Memorial Day weekend this year, when a lot of people were away from their TVs. The retitling of 'NBC Nightly News' fooled Nielsen's automated system, which listed 'Nitely' as a separate show.

"Hiding the May 26 program from Nielsen dramatically improved the show's average viewership that week. Instead of falling further behind first-place rival 'ABC World News Tonight,' NBC news narrowed the gap. Walt Disney Co.'s ABC declined to comment. The network, though, groused last month when NBC News intentionally

misspelled an entire week of 'Nightly News' broadcasts. Altogether, NBC, which is ranked second behind ABC in ratings, has played the misspell card 14 times since the start of the 2016-17 television season last fall." http://on.wsj.com/2stLmE8

REMEMBER HARRY? -- "Rosen officially announces Senate bid, says Reid encouraged her to run," by The Nevada Independent's Megan Messerly: "Democratic Rep. Jacky Rosen announced today she is officially running for U.S. Senate, culminating weeks of deliberations that - once again - began with a phone call from Nevada's political godfather Harry Reid. The freshman congresswoman told The Nevada Independent Wednesday evening that she will not seek re-election to her seat in Nevada's 3rd Congressional District but will instead pursue a bid against Republican Sen. Dean Heller ...

"Rosen, 59, said that Reid reached out to her at the end of May and asked her to consider running for Senate. The longtime Democratic senator also encouraged Rosen, a former software programmer and synagogue president, to run for Congress in 2016. 'He told me to think about it and that's what I did when I came home to talk to my husband,' Rosen said." http://bit.ly/2uu7Ia6

TRANSITIONS -- Lauren Zelt, a senior vice president at FP1 Strategies, is signing on as a campaign manager for Independent Women's Voice. (h/t Morning Score) ... **Annabelle Timsit** started today as an editorial fellow at The Atlantic. She's a Politico Magazine alum and former research assistant at the Georgetown Institute for Women, Peace and Security. ... **Darrin Sobin** has been named the new chief programs officer of the D.C. Bar, starting on July 24. He was previously Washington D.C.'s first director of government ethics.

SPOTTED -- Vice President Mike Pence at last night's showing of "The Sound of Music" at the Kennedy Center.

Arkansas

SOLID WASTE
Waste Reduction, Reuse, or Recycling Income Tax Credit
Arkansas SOLID WASTE

Proposed rule of the Department of Environmental Quality, Pollution Control and Ecology Commission, amends Regulation 23 regarding income tax credits for waste reduction, reuse, or recycling. The rule defines "qualified manufacturer of steel," specifies what such manufacturers must do to qualify for the tax credits, and allows qualifying manufacturers to carry forward unused tax credits to subsequent years for 14 years. The rule also clarifies that specified actions by these manufacturers that do not constitute sales or transfers to a third-party purchaser are not disposals, transfers, or cessations. In addition, the rule revises the definition of "waste reduction, reuse, or recycling equipment." A hearing is scheduled for Aug. 14, 2017, in North Little Rock. Comments are due Aug. 14, 2017. Contact: Kelly Robinson; DEQ; 501-682-0916; reg-comment@adeq.state.ar.us

California Regions

AIR
Ozone NAAQS Attainment Plan
California Regions AIR

Notice of the Eastern Kern Air Pollution Control District announces the availability of a draft plan 2008 eight-hour ozone national ambient air quality standards attainment plan. The district is currently classified as moderate nonattainment for the 2008 ozone NAAQS, but the district's and the California Air Resources Board's monitoring data and modeling indicate that the district

could not have met the 0.075 parts per million ozone standard by the applicable attainment date of Jan. 1, 2017. The plan addresses the district's request for a voluntary reclassification by the U.S. EPA to serious nonattainment and a revised attainment date of Dec. 31, 2020. The plan also specifies emissions control measures and provides modeling to demonstrate that the district can timely attain the 2008 ozone NAAQS by 2020. Comments are due July 26, 2017. Contact: Jeremiah Cravens; Eastern Kern APCD; 661-862-5250; cravensj@co.kern.ca.us

Georgia

AIR
Air Quality Control/Permit Fees
Georgia AIR

Final rule of the Department of Natural Resources, Environmental Protection Division, amends regulations under GAC 391-3-1-.03 regarding air quality control. The rule specifies permit fees of $37.34 per ton for coal-fired electric generating units and $35.50 per ton for all other facilities. The rule also references the manual for calculating air permit fees for calendar year 2016. The rule was submitted to the EPA as a revision to the Part 70 permit program. The rule is effective June 21, 2017. Contact: Elisabeth Munsey; DNR, Air Protection Branch; 404-363-7131

Regulatory Update

RADIATION
Radioactive Materials
Georgia RADIATION

Final rule of the Department of Natural Resources, Environmental Protection Division, amends regulations under GAC 391-3-17-.01, -.02, -.05, and -.06 to revise standards for radioactive materials to be consistent with requirements of the Nuclear Regulatory Commission. The rule revises the definition of "unrefined and unprocessed ore" and addresses requirements for glazed ceramic tableware, weight content for glassware, and source material limits. The rule also addresses the use of radionuclides in the healing arts and notice of cancellation of a nuclear waste shipment with advanced notification. The rule is effective June 21, 2017. Subject: BREAKING NEWS: Economy added 222,000 jobs in June

The economy added 222,00 jobs in June, the Labor Department reported Friday, up from 152,000 in May.

The unemployment rate was 4.4 percent, a slight uptick from 4.3 percent in May.

Analysts had predicted the creation of 170,000 jobs, an unemployment rate of 4.3 percent, and an increase in over-the-year hourly earnings of 2.6 percent.

Subject: Ozone, brownfields bill clear House subcommittee

By Eric Wolff

06/15/2017 12:18 PM EDT

A House Energy and Commerce subcommittee today advanced a pair of bills to reauthorize a brownfields cleanup program and delay ozone standards.

The environment panel split along partisan lines on the Ozone Standards Implementation Act (H.R. 806), which would delay implementation of the 2015 ozone standard through 2025 and stretch the regular air quality standard review period from five years to 10. Democrats attacked the bill as weakening Clean Air Act standards while Republicans said the delay would allow regions to catch up to older standards. Democrats offered several amendments all of which were defeated.

A draft brownfields bill advanced on voice vote. The bill reauthorizes and adjusts the brownfields program to raise the cap on federal grant amounts for individual sites. The bill received bipartisan support in the committee, though ranking member Rep. Frank Pallone (D-N.J.) said he wished the program would get more funding.

Democrats also took the time to wonder why no EPA officials had appeared before the committee to address any of the bills at issue.

"We've had no administration witnesses before this committee since the beginning of the year, something that has never happened before in my time on the committee," said Rep. Gene Green (D-Texas).

WHAT'S NEXT: Chairman Greg Walden will likely schedule a full committee markup on the bills.

Good Monday morning. THE BACKDROP -- Republicans are growing increasingly worried that they will lose the House of Representatives. The pervasive pessimism comes as there continues to be a dearth of legislative victories, and a toxic political environment that appears to be worsening. Of course, the midterm elections are nearly a year and a half away. But more than a dozen Republicans we've spoken to in the last few weeks say the prospect for political and legislative wins big and small is dimming. And as much as President Donald Trump has worked to woo over fellow Republicans with dinners at the White House and regular meetings with GOP leadership, it hasn't had much of an impact on the overall state of play.

THE RANK AND FILE has been frustrated with the House committees, which have not produced a drumbeat of legislation to tout as victories. And the party is deeply split on health-care reform, a tax overhaul and infrastructure spending. Passing a budget to set the groundwork for tax reform is still seen as far off. And the congressional schedule doesn't leave a lot of time to kick things into high gear. The House is in session for 13 more days and the Senate is in session for 14 more days before the July 4 recess. Not to mention, there's serious concern in the GOP that there could be more revelations about President Donald Trump, and Robert Mueller's investigation still remains the wild card. Attorney General Jeff Sessions testifying Tuesday before the Senate Intel Committee is expected to just add more drama to distract from the GOP agenda into the mix.

WHAT DOES ALL THIS MEAN? Republicans will be less willing to take risks as they shift into political survival mode.

IVANKA'S FOX DOUBLE HEADER -- Ivanka Trump will be on "Fox and Friends" this morning in the 7 a.m. hour, and then Ainsley Earhardt will go to the White House Wednesday for a second interview, which will air Thursday.

BIG NEWS -- "D.C. and Maryland to sue President Trump, alleging breach of constitutional oath," by WaPo's Aaron Davis: "Attorneys general for the District of Columbia and the state of Maryland say they will sue President Trump on Monday, alleging that he has violated anti-corruption clauses in the Constitution by accepting millions in payments and benefits from foreign governments since moving into the White House.

"The lawsuit, the first of its kind brought by government entities, centers on the fact that Trump chose to retain ownership of his company when he became president. ... But D.C. Attorney General Karl A. Racine (D) and Maryland Attorney General Brian E. Frosh (D) say Trump has broken many promises to keep separate his public duties and private business interests. For one, his son Eric Trump has said the president would continue to receive regular updates about his company's financial health.

"If a federal judge allows the case to proceed, Racine and Frosh say, one of the first steps will be to demand through the discovery process copies of Trump's personal tax returns to gauge the extent of his foreign business dealings. That fight would most likely end up before the Supreme Court, the two said, with Trump's attorneys having to defend why the returns should remain private." http://wapo.st/2s1jKqL

FIRST IN PLAYBOOK -- **ISAAC DOVERE** speaks with **VIRGINIA GOV. TERRY MCAULIFFE:** "Russia was actively involved in destabilizing our democracy," and they had help from "treasonous" Americans, McAuliffe told Isaac Dovere in the latest episode of Off Message podcast, coming Tuesday morning. "Somebody had to give these people a roadmap," McAuliffe said, though he wouldn't name names. "So I believe somewhere in this, somebody was directing the Russians on whose names to use, what impact these certain people sending a memo would have on the American electorate. I mean, they just didn't sit over in some cubicle over there somewhere in Moscow and figure this out."

-- FIGHTING WORDS: WHAT MCAULIFFE SAID TO TRUMP, over dinner at the White House at the end of February for the National Governors Association reception: "I looked him face to face, four inches from his eyeballs, and said, 'Everything you have done has hurt my economy.'"

-- MCAULIFFE hasn't spoken to Trump since, but notes that when the president announced his new appointments to the Council of Governors in May, "Guess who didn't get reappointed." McAuliffe said on immigration policy and the travel ban in particular, but overall, he doesn't think there's ever a clear answer on what Trump administration policy actually is: "Not when this man is president." ***More on what McAuliffe thinks about Hillary's speaking out and Onward Together, the***

Democrats' progressive divide, and his plans for 2018 -- and 2020 -- coming Tuesday http://apple.co/2tbjk0p

THE DIVIDED OPPOSITION -- ALEX BURNS and **JMART** on **"Democrats in Split-Screen:** The Base Wants It All. The Party Wants to Win," in Dunwoody, Ga.: "Democrats are facing a widening breach in their party, as liberal activists dream of transforming the health care system and impeaching President Trump, while candidates in hard-fought elections ask wary voters merely for a fresh chance at governing. The growing tension between the party's ascendant militant wing and Democrats competing in conservative-leaning terrain, was on vivid, split-screen display over the weekend. In Chicago, Senator Bernie Sanders led a revival-style meeting of his progressive devotees, while in Atlanta, Democrats made a final push to seize a traditionally Republican congressional district.

"It may be essential for Democrats to reconcile the party's two clashing impulses if they are to retake the House of Representatives in 2018. In a promising political environment, a drawn-out struggle over Democratic strategy and ideology could spill into primary elections and disrupt the party's path to a majority." http://nyti.ms/2ssSWCl

-- IT'S WORTH NOTING: Democrats aren't the only ones who have had to face a divided party and make a decision about whether to shore up the establishment, or let the activists take hold. Just ask Senate Majority Mitch McConnell (R-Ky.). He led the NRSC into battle in multiple primaries during the 2014 election in order to elect GOP candidates that could win in the general election.

TRUMP'S LEGAL TEAM -- NYT A1, "Role of Trump's Personal Lawyer Blurs Public and Private Lines," by Rebecca Ruiz and Sharon LeFraniere: "Marc E. Kasowitz, a New York civil litigator who represented President Trump for 15 years in business and boasts of being called the toughest lawyer on Wall Street, has suddenly become the field marshal for a White House under siege. He is a personal lawyer for the president, not a government employee, but he has been talking about establishing an office in the White House complex where he can run his legal defense.

"His visits to the White House have raised questions about the blurry line between public and private interests for a president facing legal issues. Mr. Kasowitz in recent days has advised White House aides to discuss the inquiry into Russia's interference in last year's election as little as possible, two people involved said. He told aides gathered in one meeting who had asked whether it was time to hire private lawyers that it was not yet necessary, according to another person with direct knowledge. ...

"'The president's private lawyer is representing only his interests, not the interests of the United States government or the individual interests of the White House staff,' said Robert F. Bauer, who was White House counsel under President Barack Obama." http://nyti.ms/2rfKfeQ

****** **A message from POET - one of the world's largest ethanol producers:** Led by

scientists and engineers, POET operates 30 biofuel facilities & America's first cellulosic biofuel plant. We produce a cleaner fuel for millions of drivers, every day. We're POET and we're driving innovation, from the ground up. Learn more here. ******

THIS TOWN -- "When a liberal power lawyer represents the Trump family, things can get ugly," by WaPo's Marc Fisher: "[Jamie] Gorelick ... finds herself under attack for taking on a share of the Trump family's legal woes. ... In the most public slap, Hilary Rosen, a prominent Democratic strategist and lobbyist, tweeted, 'Hey Jamie Gorelick, you've just poured that 'Complicit' perfume on yourself,' a reference to a 'Saturday Night Live' parody ad that imagined an Ivanka Trump-branded scent. (Rosen declined to elaborate on the tweet, saying only, 'It is what it is.') ...

"In a quintessentially D.C. move, some longtime friends of Gorelick contacted for this article offered complimentary comments about her on the record, and then, after asking if they could make other remarks without attribution, bashed their colleague to smithereens. Those people will not be quoted in this article, by name or anonymously, as one tiny bulwark against outright awfulness." http://wapo.st/2r9klFy

FOR YOUR RADAR -- "Macron's party set for huge French parliamentary majority," by Reuters' Ingrid Melander and Michel Rose in Paris: "President Emmanuel Macron's fledgling party is set to trounce France's traditional main parties in a parliamentary election and secure a huge majority to push through his pro-business reforms, projections after the first round showed on Sunday.The vote delivered a further crushing blow to the Socialist and conservative parties that had alternated in power for decades until Macron's election in May blew apart the left-right divide." http://reut.rs/2rlWHoD

-- "Trump May Not Visit U.K. This Year as Planned," by NYT's Glenn Thrush in Branchburg, N.J.: "President Trump is considering scrapping or postponing a planned visit to Britain this year amid a billowing backlash over comments he made after the recent terrorist attack in London, two administration officials said. Over the past week, Mr. Trump has expressed increasing skepticism to aides about the trip after coming under intense criticism for a misleading charge that he leveled against London's mayor, Sadiq Khan. ... National Security Council and State Department officials were working on the details but had not undertaken the usual 'preadvance' trip to work out the specific logistics of joint appearances, said a person familiar with the situation." http://nyti.ms/2ssMMIG

PENTAGON WATCH -- "Mattis Quietly Keeps Distance From Trump's Most Divisive Moves," by NYT's Helene Cooper, Michael Gordon and Eric Schmitt: "Mr. Mattis ... has appeared behind the lectern in the Pentagon briefing room only twice since he became defense secretary, the better to stay out of political debates, aides say. Mr. Mattis's first, and only, appearance on the Sunday news shows did not come until four months into his term. Mr. Mattis, his friends and colleagues say, is driven by several considerations, including his belief that the military's political neutrality can help hold together a deeply divided nation -- a point that Mr. Mattis hammered home in a

commencement address last month at West Point in which he made one reference to the commander in chief and none to Congress.

"Instead, he pointed to ancient Athens in hailing apolitical 'defenders who look past the hot political rhetoric of our day' to protect 'our experiment in self-governance.' The speech by Mr. Mattis, who is registered to vote in Washington State, which does not require political affiliations be disclosed, stood in contrast to Vice President Mike Pence's address at the United States Naval Academy commencement in which he referred to Mr. Trump a dozen times, calling him the 'best friend the armed forces of the United States will ever have.'

"Mr. Mattis's low profile is part of his strategy for exerting influence from within, at one-on-one meetings with Mr. Trump or the dinners he has with the president and General Joseph F. Dunford Jr., the chairman of the Joint Chiefs of Staff. He was also at the White House last week while the president watched part of the highly anticipated congressional testimony by James B. Comey, the former F.B.I. director." http://nyti.ms/2rQ5KBO

-- MATTIS will be on Capitol Hill today to testify, along with Joint Chiefs Chairman Gen. Joseph Dunford, about their fiscal 2018 budgets.

THE WHITE HOUSE did not allow reporters into President Trump's fundraiser Sunday afternoon for New Jersey Rep. Tom MacArthur, a break from standard practice. MacArthur's spokesman said it raised $800,000, per pooler Todd Gillman of the Dallas Morning News. ***More from Katie Jennings*** http://politi.co/2tbHpE1

TRUMP AND PENCE'S MONDAY -- Trump will be briefed on national security, hold a Cabinet meeting and host the Clemson Tigers football team at the White House to celebrate their football national championship. Pence is joining in the Cabinet meeting and will lunch with the president.

THE JUICE ...

-- PLAYBOOK EXCLUSIVE: **MAJORITY FORWARD** , a nonprofit affiliated with the Senate Majority PAC, is launching a $500,000, three-week TV and digital ad buy in West Virginia supporting Sen. Joe Manchin. The ad will praise the West Virginia Democrat for standing up for constituents on everything from coal to health care and protecting miners' benefits. The ad builds off a $4.5 million campaign in Arizona, Indiana, Missouri, Montana, North Dakota, Nevada and Wisconsin that launched on Memorial Day is continuing to run in those states.

-- JUSTICE NEIL GORSUCH is selling his Boulder, Colorado home -- it's on the market for $1,675,000. http://bit.ly/2sSxpAx

-- SNEAK PEAK: Megyn Kelly previews her interview with conservative radio host Alex Jones to talk about his views, conspiracy theories and controversies. The full interview

will air June 18 at 7 p.m. on "Sunday Night with Megyn Kelly." http://nbcnews.to/2rl5JSz

WASHINGTON'S OWN 'DEAR EVAN HANSEN' WINS 6 TONYS -- WAPO'S PETER MARKS in New York: "'Dear Evan Hansen' claimed the top prize -- best musical -- at the 71st Tony Awards on Sunday, a nail-biter of a night that saw it scoop up five other awards, including one for its universally heralded star, Ben Platt. The musical, birthed in the summer of 2015 at Arena Stage, garnered trophies for its book writer, Steven Levenson, and composer-lyricists, Benj Pasek and Justin Paul, who earlier this year earned an Oscar for their music in 'La La Land.' 'Dear Evan Hansen' tells the story of an introverted teenager who, desperate to be accepted, perpetuates a lie about a friendship with a classmate who has taken his own life, a falsehood that earns him Internet fame but ends in disaster." http://wapo.st/2rlDd3g

-- A NOTE FROM YOUR PLAYBOOKERS: We are especially proud of Ben Platt -- the star of "Dear Evan Hansen" and the winner of best leading actor in a musical. Ben is Jake's wife Irene's first cousin. Anna, Jake, Irene and a whole host of D.C.'ers saw "Dear Evan Hansen" at Arena Stage and fell in love with it. Six Tony's. Not bad.

PHOTO DU JOUR: Marchers hold placards during the #ResistMarch at the 47th annual LA Pride Festival in West Hollywood, California on June 11. | Mark Ralston/AFP/Getty

WELCOME TO WASHINGTON! "Melania Trump, son Barron move into the White House," by AP's Darlene Superville: "The first family is together again under the same roof: the White House. After nearly five months of living apart, President Donald Trump's wife, Melania, announced Sunday that she and the couple's young son have finally moved into the presidential mansion at 1600 Pennsylvania Ave. ... 'Looking forward to the memories we'll make in our new home! #Movingday,' the first lady tweeted Sunday evening after she and Barron arrived at the White House with Trump. The tweet accompanied a photo of the Washington Monument as seen from the White House Red Room." ***With an AP pic of the first family getting to the White House -- Barron wore a t-shirt saying "The Expert"*** http://apne.ws/2rh7FjS ... ***FLOTUS' tweet*** http://bit.ly/2st0h4T

DEEP DIVE - BEN SCHRECKINGER in POLITICO Magazine, **"How Russia Targets the U.S. Military:** With hacks, pro-Putin trolls and fake news, the Kremlin is ratcheting up its efforts to turn American servicemembers and veterans into a fifth column": "Experts warn that effort, which has received far less attention, has the potential to hobble the ability of the armed forces to clearly assess Putin's intentions and effectively counter future Russian aggression. In addition to propaganda designed to influence service members and veterans, Russian state actors are friending service members on

Facebook while posing as attractive young women to gather intelligence and targeting the Twitter accounts of Defense Department employees with highly customized 'phishing' attacks." http://politi.co/2rhanpD

TOP-ED -- "Why foreign aid is critical to U.S. national security," by retired Admiral Mike Mullen and retired General Jim Jones in POLITICO Magazine: "This week, we will join 14 other experienced former four-star generals and admirals in submitting testimony to Congress that military power alone cannot prevent radicalization, nor can it, by itself, prevent despair from turning to anger and increasing outbursts of violence and instability. ... Unfortunately, the administration's budget would cut 32 percent from the budgets of the U.S. Agency for International Development and State Department - including a cut of nearly half to development assistance. This is exactly the wrong decision at a time when development efforts in the world's poorest and most fragile countries are needed more than ever. In turn, these severe cuts to USAID would only increase the risk to Americans and to our brave military service members. Congress should reject this dangerous path." http://politi.co/2tbRlgM

****** **A message from POET - one of the world's largest ethanol producers:** Led by scientists and engineers, POET is a biofuels company built from innovation. POET operates 30 biofuel facilities across eight states & America's first cellulosic biofuel plant. Across the country, we support 40,000 renewable energy jobs producing a cleaner fuel for millions of drivers, every day. Inside the Beltway, we advocate for pro-biofuel policies to remove barriers to consumer fuel choices with a Reid Vapor Pressure (RVP) fix, support a strong Renewable Fuel Standard, and open new markets for U.S. exports and trade. We are securing a cleaner future for all of us. We are POET and we're driving innovation, from the ground up. Learn more here. ******

TALKER - This Sunday's upcoming N.Y. Times Magazine cover story, "The Long, Lonely Road of Chelsea Manning," by Matthew Shaer: "Her disclosure of classified documents in 2010 ushered in the age of leaks. Now, freed from prison, she talks about why she did it - and the isolation that followed." http://nyti.ms/2stgLdo

NEW SUSAN GLASSER PODCAST - "The Shove Heard Round the World: Montenegro's Prime Minister Markovic on joining NATO, Russia and that time Trump pushed him out of the way": "At least, [Dusko] Markovic told me when we met in Washington the other day, Trump's boorish action now means the rest of the planet is suddenly familiar with Montenegro, and the unlikely position it now occupies as a Balkan flashpoint between the wavering West it has been so eager to join and a resurgent Russia to its east, angered by the 'hostile' course it accuses Montenegro of taking. 'I have to say that I'm very grateful that this incident, so to say, took place. Because this is what made us so famous,' Markovic says. 'This is what made Montenegro so famous.'" http://politi.co/2rRy46C ... ***Transcript*** http://politi.co/2r9U4Xv ... ***Subscribe*** http://apple.co/2kJ9q1U

2018 WATCH -- "Jared Polis to join crowded 2018 race for governor, tells The Post he wants 'a Colorado that works for everybody,'" by Denver Post's Mark K.

Matthews: "In an interview with The Denver Post, the fifth-term lawmaker said his platform will focus on three initiatives: getting Colorado to use 100 percent renewable energy by 2040, ensuring parents can access free, full-day preschool or kindergarten for children age 3 and older, and encouraging companies in the state to provide stock options to employees. ... His entry further scrambles a contest that already lacks a clear favorite, and it all but guarantees that the 2018 race to replace Gov. John Hickenlooper will be one Colorado's wildest elections in years. Polis' run is notable too, given that the onetime Internet wunderkind can use his sizable fortune to fund his campaign and - if he wins - Polis would make history as the state's first openly gay governor." http://dpo.st/2ssS4gQ

HMM - WSJ yesterday, "Democrats Look to Cheri Bustos to Map Path to Rural Votes": http://on.wsj.com/2r9lYlt ... **POLITICO Magazine's Michael Kruse, May 12,** "The Secret Weapon Democrats Don't Know How to Use: Cheri Bustos of Illinois has lessons about how to win in Trump territory. Are Democratic leaders listening?" http://politi.co/2s1K5Vr

POLITICO's INAUGURAL "WOMEN RULE" INVESTIGATION: Not only did women not break the glass ceiling in 2016 -they stalled at just 20 percent in Congress, and less than one-quarter of elected offices nation-wide. Even as political activism among women has heated up since the election, there is a persistent gap continues in women's interest running for office. Over the course of several months, POLITICO conducted over 50 interviews with candidates, elected officials, researchers, wavering candidates and political operatives and found that the swell of female political activism does not translate to future candidacies. To change things, recruiters must start earlier in a woman's life for her to consider running, school boards are the best starting place, and the sales pitch to get women to run for office must change. ***Read more*** http://politi.co/2sTFF32

NICE TOUCH -- "Jimmy Carter Shakes Hands With Every Passenger On Flight To Washington," by HuffPost's Igor Bobic: http://bit.ly/2r9vd6e

SPOTTED: Former Senate Majority Leader Trent Lott yesterday at Pentagon City Mall, toting a Nordstrom bag ... Sen. Minority Leader Chuck Schumer on a plane Sunday afternoon from LaGuardia to Detroit ... Rep. Ted Lieu (D-Calif.) yesterday at the Beverly Hilton at a wedding ... Sen. Rand Paul (R-Ky.) at the W hotel on Thursday night ... at Trump National in Bedminster, NJ yesterday: Shalabh "Shalli" Kumar, industrialist, chair of Republican Hindu Coalition and lobbyist Chase Kroll, founder/CEO of Kroll Global.

SPOTTED at "Not the White House Pride Party" at the Brixton on Saturday organized by Obama White House alumni Gautam Raghavan, Aditi Hardikar, and Monique Dorsainvil to benefit Casa Ruby and SMYAL: 350 guests including Valerie Jarrett; Eric

Fanning; former Ambassador Dan Baer; Jim Obergefell; Kate Clinton; Fatima Asghar and Sam Bailey; Tommy Dorfman; Stephanie Rice; Precious Brady-Davi; Mara Keisling; and former Obama White House officials including Brian Bond, Raffi Freedman-Gurspan, Shin Inouye, Lynn Rosenthal, Kyle Lierman, Heather Foster, Alexa Kissinger, Hallie Schneir, Leah Katz-Hernandez, Alissa Ko, and Jonathan Lee. ***Pic*** http://bit.ly/2ssKC5x

FOR COREY -- SPOTTED by James Rosen on vacation with his wife Sara Durkin and their sons in Krakow on Sunday: A gift shop right off Market Square (and other gift shops in the Krakow square), were all selling "LEWANDOWSKI" jerseys. Robert Lewandowski is a soccer player for Bayern Munich and captain of the Poland national team. ***Pic*** http://bit.ly/2rhgkTx

WEEKEND WEDDINGS -- Sarah Wire of the LA Times married **John Bethel** on Saturday at Friends Meeting House in Dupont Circle. The intimate ceremony was officiated by her father, Bob, followed by a dinner in the garden. Per the Columbia Tribune: the "groom, a 2002 graduate of Hickman High School in Columbia, works at Mega Kitchens and Baths. The two met through mutual friends at McNally's Irish Pub in Columbia as Sarah was finishing college in 2010. They lived in Arkansas before moving to Washington D.C. so Wire could cover Congress." ***Pic*** http://bit.ly/2stjdAC ... ***Instapic*** http://bit.ly/2sdMM8F

SPOTTED: a good portion of the women's Congressional Softball press team including Lynn Sweet of the Chicago Sun-Times, Bridget Bowman of Roll Call, Emmarie Huetteman and Mikayla Bouchard, both of The New York Times. Also attending: Allison Wisk of the LA Times, Amber Phillips of the Washington Post and Suzanne Struglinski of the National Press Club.

-- Jacob Daniels, who was just promoted to be SVP of policy at federal affairs consulting firm SPG and is a former Trump campaign staffer, recently married **Stacey Kafka** , press secretary for Rep. Blake Farenthold (R-Texas), in a small ceremony in front of close friends and family in Cabo San Lucas, Mexico. They met in 2014 when he was a city councilor in Creswell, Oregon, and she was a local ABC affiliate reporter and was interviewing him on a story. He soon asked her out on a date but she told him she doesn't date politicians. A few weeks later, he resigned from the city council and they started going out. ***Pic*** http://bit.ly/2ta5lb5

-- Stephen Morrissey and **Elise Aronson**, who met as interns at the DSCC in 2011, were married over the weekend in Philadelphia at the Free Library. Guy Cecil, executive director of the DSCC when the two met, presided over the nuptials. Stephen is now an M&A associate at Skadden Arps, and Elise just graduated with an MBA from Wharton. ***Pics -- cutting the cake*** http://bit.ly/2st0fKf ... ***Elise with her bridesmaids*** http://bit.ly/2s1P1tC

TRANSITIONS -- Alex Booze starts today as an account manager at EPIC PR Group. Booze, who is also a food blogger for East Coast Contessas (http://bit.ly/2r9xWwI) in

her free time, was formerly the manager of media relations at the Charles Koch Institute.

BIRTHDAY OF THE DAY: BuzzFeed reporter **Alexis Levinson,** a National Review alum, is 29. How she's celebrating: "Dinner with my boyfriend. It's a Monday, so nothing crazy. My birthday always sneaks up on me somehow - every year I say I'm going to plan and then all of a sudden it's three days away." Read her Playbook Plus Q&A: http://politi.co/2sjBlwQ

BIRTHDAYS: Dina Powell (hat tips: Sean Spicer, Autumn Vandehei and Amy Little Thomas) ... Carrie Budoff Brown, editor of Politico and the pride of York, Pa. ... Matt Mowers, senior White House advisor at the State Department (h/t Ryan Williams) ... the only, the only Kevin Sheekey, the man, the myth, the legend, is 51 -- Kevin was in China last week (h/ts Tammy Haddad and Helen Brosnan) ... George H.W. Bush is 93 ... Josh Kushner, founder of Thrive Capital, is 32 ... Rabbi Levi Shemtov, EVP of American Friends of Lubavitch (Chabad), is 57 (h/ts Jewish Insider) ... Marv Albert is 76 ... Dag Vega, managing director for public affairs and crisis at Burson-Marsteller and former special assistant to the President and director of broadcast Media at the Obama WH (h/t Ben Chang) ... Alex Castellanos, co-founder of Purple Strategies ... Google's Courtney Pannell ... Hayley Alexander is 28 ... Eli Glazier of urban planning firm Toole Design (h/t Ashley Gold) ... DNC alum Luis Miranda ... AP's Rachel D'Oro ... Rep. Mark Amodei (R-Nev.) is 59 ... Rep. Lucille Roybal-Allard (D-Calif.) is 76 ... Eleanor Lewis (h/t Jon Haber) ... Husein Cumber ... Sally Bradshaw ... Casey Ratlief is 32 ... Todd Beyer ... E&E alum Nathanael Massey is 31 ...

... Matt Wolking, press secretary for Sen. Rubio (h/t Olivia Perez-Cubas) ... Hanna Siegel, deputy director at New American Economy (h/t Sarah Doolin Roy, who starts today at the American Ballet Theatre, working on brand partnerships and engagement strategy) ... Sean Murphy of Gotham Government Relations and Communications ... Zach Baron, new associate at Boies Schiller & Flexner, celebrating (despite this heat wave) at the Nats game (h/ts Shaina and Sarah) ... Mary Urbina-McCarthy ... social media guru Colleen Shalby, engagement editor at the LA Times ... Eli Zupnick ... Democratic fundraiser Lisa Kurdziel ... Melodie McQuade ... Ted Ullyot, partner in policy and regulatory affairs of Andreessen Horowitz and a Facebook, Bush 43 and DOJ alum ... Dan Archer, SVP of federal gov't relations at Wells Fargo ... former Energy Secretary Spencer Abraham, now a principal at Blank Rome, is 65 ... Patrick Schmitt ... Ryan Mannion, CTO for CAR and DRIVER ... Alissa Tabirian ... Campbell Curry-Ledbetter, deputy finance director at Joe Kennedy for Congress ... Sam Buchan ... Adam Wolf ... Katina Tina Rojas Joy ... William Kresse ... Melodie McQuade ... CFPB alum Victor Zapanta ... Jeani Murray, queen of Iowa City, Iowa ... Peter Schechter ... Jack Wetzberger, pride of Dubuque, Iowa ... Travis Worl ... Jon Green, king of winning Paid Sick Days campaigns ... Kate Vilsack (h/ts Teresa Vilmain)

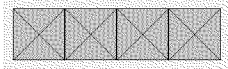
EPA Ends $1 Million Taxpayer-Funded Gym Membership Program

EPA Administrator Scott Pruitt Identified The Gym Memberships As An Abuse Of Taxpayer Dollars

The Washington Free Beacon
Elizabeth Harrington
June 19, 2017
http://freebeacon.com/issues/epa-ends-1-million-taxpayer-funded-gym-membership-program/

The Environmental Protection Agency has ended a nearly $1 million program that provided gym memberships for employees.



The new administration under EPA administrator Scott Pruitt identified the gym memberships as an abuse of taxpayer dollars. Examples of the program's misuse included $15,000 for gym memberships for 37 EPA scientists in Las Vegas last year.

…

Pruitt vowed an end to taxpayer-funded programs after the Washington Free Beacon report on the agency spending $15,000 on gym memberships in Las Vegas, earlier this year. Employees in the U.S. Environmental Science Division billed taxpayers $399 each for gym memberships, even though employees had access to a "state-of-the-art" gym on the University of Nevada, Las Vegas (UNLV) campus.

July 24, 2017 - Number 141

News

Air Pollution
EPA Sued For Not Responding Quickly on Power Plant Permit
Environmental advocates sued EPA July 24 over what they said was the agency's inability to respond quickly enough to concerns over a central Pennsylvania power plant's air pollution permit.

Climate Change
U.K. Braced for Record-Breaking Wet Winters, Blames Climate Shift
Britain faces a future of record-breaking wet winters, potentially leading to more of the widespread flooding seen in recent years, according to new modeling that incorporates changing climate patterns.

Climate Policy
Conservative Party Merger Alters Landscape in Canada's Oil Patch
The merger of Alberta's two main conservative parties creates a new political force in the heart of Canada's oil patch that threatens to unseat Premier Rachel Notley and kill the province's carbon tax.

Climate Policy
U.K. Seeking to Fill Climate Leadership Void Left by Trump
Britain should seek to fill the leadership void created by Donald Trump's decision to pull the U.S. out of the landmark Paris Agreement, Climate Change Minister Claire Perry said July 24.

Congress
Bernhardt Confirmed to No. 2 Interior Department Job
The Senate confirmed David Bernhardt, a lawyer, to the No. 2 job at the Interior Department July 24, providing Interior Secretary Ryan Zinke a much-needed deputy but underscoring the slow progress made on installing Trump administration nominees.

Energy
EU Mulls Retaliation Against U.S. Over New Russia-Sanctions Plan
The European Union said it would be prepared to retaliate against the U.S. should Washington hit Russia with new sanctions that affect EU-based energy companies, risking a deeper trans-Atlantic split over economic and security policies.

Energy
Flood Risks Prompt Massachusetts Review of Enbridge Gas Facility
Massachusetts Gov. Charlie Baker (R) bowed to public pressure and ordered his

administration to scrutinize a natural gas facility planned by Enbridge for its Pennsylvania to Canada pipeline.

Energy

Photos of Melted Fuel at Japan's Fukushima to Help Cleanup

Japan's likely discovery of melted fuel inside the wrecked Fukushima nuclear power plant is seen as a critical step in hastening the $72 billion, 40-year cleanup of one of the worst atomic disasters in history.

Energy

White House Team Differs on Trump Support for Russia Sanctions

The Trump administration supports the current version of a bill to sanction Russia, the new White House press secretary said, although her boss, Anthony Scaramucci, wouldn't guarantee that President Donald Trump will sign it.

Environmental Taxes

Pennsylvania Eyes Shale Tax to Help Plug $2 Billion Hole

The severance tax debate is heating up again in Pennsylvania.

Oil & Gas

BLM Proposes to Kill 2015 Hydraulic Fracturing Rule

The Trump administration is proposing to rescind 2015 regulations on hydraulic fracturing put in place by the Obama administration for oil and natural gas operations on federal and Indian lands.

Renewable Energy

Renewables Scientist Takes South Korea's Energy Helm

South Korea on July 24 inaugurated a sustainable energy scientist and scholar as minister for trade, industry and energy, a move expected to help the country meet stepped-up renewable energy goals by 2030.

Happy Friday. BREAKING IN LONDON -- AP: "Prime Minister Theresa May plans to seek the permission of Queen Elizabeth II to form a government even though her Conservative Party lost its majority in the House of Commons. Downing Street says she plans to meet the queen at 12:30 p.m. local time (1130 GMT).

"May will need the support of another party or group of parties to command a majority. Her plan of calling an early election in the hopes of getting a bigger majority than she enjoyed during the previous parliament backfired in Thursday's general election." http://apne.ws/2saHvzu

FROM THE GUARDIAN -- "May has the right to remain in office and try to assemble a working government - but she is under intense pressure from senior colleagues, many of whom blame her for a botched manifesto launch and a wobbly campaign." http://bit.ly/2slq0fF

IMPORTANT CONTEXT: From POLITICO Europe's Tom McTague in London -- "If Brussels had come round to the prospect of an unyielding two-year Brexit negotiation under May -- grating in its parochialism maybe, but at least grown-up -- they now face the nightmare prospect of a new partner across the table or a weakened May beholden to her backbenchers and a small retinue of Northern Irish MPs." http://politi.co/2rcr7ts

BREAKING at 6:10 a.m. -- **STATEMENT FROM THE PRESIDENT OF THE UNITED STATES:** "Despite so many false statements and lies, total and complete

vindication...and WOW, Comey is a leaker!" ***This statement was made on Twitter.***

-- THIS IS A BIG DEAL: The president of the United States appears to be accusing the former FBI director of lying under oath. He doesn't directly say that James Comey lied while testifying Thursday, but comes pretty close.

-- SEN. BRIAN SCHATZ (D-HAWAII) (@brianschatz): "Making a false statement to Congress is a felony. This is not just another silly tweet."

WHAT WILL HAPPEN NEXT -- Lawmakers will say if the president believes Comey lied, Trump himself should come to Capitol Hill and testify under oath about his recollection of events. This is why keeping quiet is oftentimes the best idea. **TRUMP** has now created a whole new storyline that is certain to distract Washington for the days and weeks to come.

NOTE that most Republicans yesterday didn't accuse James Comey of lying -- in fact, many of them called him honest and honorable. They just took issue with whether Trump directly asked Comey to drop the Russia investigation.

FOR THE PRESIDENT -- WHAT THE STATES YOU WON ARE WAKING UP TO -- CHARLOTTE OBSERVER: "Comey says Trump lied about his firing: Burr offers low-key defense of Trump" http://politi.co/2rTlyBY ... **PHILADELPHIA INQUIRER:** "Comey Challenges Trump ... FIRING: Former FBI director says president's reasons for dismissal 'were lies' ... RUSSIA PROBE: He says request to 'let Flynn go' felt like improper pressure ... LEAK: He admits divulging personal memos in order to prompt a special prosecutor" http://politi.co/2skZBhU ... **DES MOINES REGISTER:** "COMEY SLAMS TRUMP 'LIES': White House: Testimony proves that president has acted appropriately" http://politi.co/2saFwuY ... **THE CINCINNATI ENQUIRER:** "COMEY: TRUMP LIED 'PLAIN AND SIMPLE'" http://politi.co/2saAkr7

WHAT REPUBLICANS ARE SAYING -- Forget what the White House thinks of yesterday's testimony. We spent the day in the Capitol, talking to Republican members of Congress -- the ones that have to vote on President Donald Trump's agenda -- and they were absolutely shocked at how poorly yesterday went for the president. Publicly they say that the president is a political neophyte who is still learning the presidency. But privately, they said James Comey was extraordinarily convincing and Trump's team absolutely botched their response. They're all afraid of more shoes dropping.

MARC KASOWITZ , Trump's lawyer who offered the principal rebuttal to the main event, made a legal argument, which mostly ignored the political reality that an FBI director called the president of the United States a liar and described what most termed disturbing interactions under oath. Trump's political standing on Capitol Hill is growing more and more perilous. Meanwhile, the RNC's principal rebuttal seemed to be that the Obama administration had a bad day -- which is true, but almost entirely irrelevant.

REPUBLICANS were shocked just how well Comey came across. He didn't try to jam

his viewpoint down the committee's throat, he was confident but not cocky and admitted, on several occasions, that his impression of his interactions could've be faulty, but the evidence otherwise seemed overwhelming to lawmakers.

DO NOT UNDERESTIMATE -- How much Trump's weakened position could thwart the GOP agenda. Senate Republicans are plodding their way through health care reform with no definite deal in sight. For every fix, Senate Republicans seem to find another problem. And while Trump has promised the biggest tax cut in the country's history, Republicans are increasingly bearish on a massive rewrite of the tax code. Instead, most are eyeing a simpler and smaller tax cut as a more realistic option.

THE BIG PICTURE -- PETER BAKER on **A1 -- "For Trump, the 'Cloud' Just Grew That Much Darker," by NYT's Peter Baker:** "[T]hanks to Mr. Trump's own actions, the cloud darkened considerably on Thursday and now seems likely to hover over his presidency for months, if not years, to come. Rather than relieve the pressure, Mr. Trump's decision to fire Mr. Comey has generated an even bigger political and legal threat. In his anger at Mr. Comey for refusing to publicly disclose that the president was not personally under investigation, legal experts said, Mr. Trump may have actually made himself the target of an investigation. While delivered in calm, deliberate and unemotional terms, Mr. Comey's testimony on Thursday was almost certainly the most damning j'accuse moment by a senior law enforcement official against a president in a generation." http://nyti.ms/2rHGaig

JOSH GERSTEIN AND KYLE CHENEY's "Five takeaways from Comey's dramatic testimony": "From the outset, Comey regarded Trump as a liar. Comey's prepared statement made it clear that the former FBI director was troubled by his interactions with Trump in recent months, but it wasn't until Comey's live testimony Thursday that the FBI director suggested he harbored doubts about Trump's honesty from the very first time he met him - and perhaps even earlier. ...

"The cloud is growing, not lifting. Comey testified that Trump repeatedly asked him to help lift the 'cloud' of the Russia investigation dogging his administration. But even though Comey confirmed Trump wasn't personally under investigation as of May 9, his testimony complicates life for a president trying to wash away the stain of the scandal. ... **New mysteries.** Comey's startling testimony may have provided striking revelations about his meetings with the president, but what he declined to discuss may be even juicier. ...

"Collateral damage. Trump was expected to take a bruising at Thursday's hearing and it seemed inevitable that Comey would also take some hits over his actions. Both those things transpired, but what was less expected was the collateral damage to a slew of others, including Sessions, former Attorney General Loretta Lynch and Deputy Attorney General Rod Rosenstein. ... **Partisanship reigns.** The aftershocks from Comey's testimony are still reverberating but it took virtually no time for partisans to retreat to their corners and begin sniping at each other over the meaning and import of what he said." http://politi.co/2rcwkBr

BEHIND CLOSED DOORS -- "Comey told senators Sessions may have met Russia's ambassador a third time," by CNN's Manu Raju, Evan Perez and Jim Sciutto: "Former FBI Director James Comey told senators in a closed hearing this afternoon that Attorney General Jeff Sessions may have had a third interaction with Russia's ambassador to the U.S., according to people familiar with the briefing. The information is based in part on Russian-to-Russian intercepts where the meeting was discussed ... But the sources said it is possible the ambassador, Sergey Kislyak, was exaggerating the extent of the encounter." http://cnn.it/2sarx8r

****** **A message from Samsung:** Samsung is committed to creating high-skilled jobs, investing in cutting-edge manufacturing and R&D, and forming trusted partnerships nationwide. Samsung's footprint in the U.S. has been growing for nearly 40 years, with 18,500 employees across the country. Our Austin, TX semiconductor facility is one of the single-largest U.S. FDI's. Visit Samsung.com/VisionForTomorrow for more. ******

BEFORE THE TWEET -- TARA PALMERI, ELIANA JOHNSON and JOSH DAWSEY proved prescient, in a story posted at 5:26 p.m. yesterday: "[A]s the day wore on, aides began to voice concerns that their boss would 'explode' later in the evening or on Friday after he watches TV news coverage and talks to friends in New York and Florida - a pattern of delayed response that's repeated itself in the months since Trump took office. ... Trump was also quiet after setbacks like the failure of his first health care bill in March, only to fire back the next day on Twitter." http://politi.co/2rcFgXD

--MAGGIE HABERMAN and GLENN THRUSH on NYT A13, "'I Was Right': As Trump Watches Comey on TV, Anxiety Yields to Relief": "In all, Mr. Trump watched only about 45 minutes of Mr. Comey's testimony, the people close to the president said. Much of that time was spent under the eye of his take-charge personal lawyer, Marc E. Kasowitz, and Defense Secretary Jim Mattis, one of the cabinet members he trusts most. This was by design, with the president's tacit consent. His aides packed the day with meetings and speechwriting sessions, including a 90-minute sit-down focusing on North Korea, Qatar and the terrorist attacks in Iran with the national security adviser, H. R. McMaster; Secretary of State Rex W. Tillerson; and Mr. Mattis. ... There was pleasure among White House aides with how Republican senators - who largely avoided taking on the president - performed in the hearing." http://nyti.ms/2slnxSm

-- PHIL RUCKER and BOB COSTA in WaPo, "Behind Trump's silence: Why the counterpuncher let others do the punching": "[Kasowitz's] combative presentation was on full display Thursday as he read from a statement that contained two typos. (He misspelled 'president' as 'predisent,' and the surname of Director of National Intelligence Daniel Coats as 'Coates.')" ***With cameos by Rudy Giuliani, Chris Ruddy, Sam Nunberg, Jack Quinn, and Boyden Gray*** http://wapo.st/2t0OIDS

TODD S. PURDUM in Politico, "Comey's devastating indictment of President Donald Trump": "Comey had not finished testifying before the White House deputy press secretary, Sarah Huckabee Sanders, was moved to insist, 'I can definitively say

the president is not a liar. I think it's frankly insulting.' Such protestations from any White House are never a good thing. (See Richard Nixon's, 'I am not a crook,' and Bill Clinton's, 'I did not have sexual relations with that woman, Miss Lewinsky,' just for starters)." http://politi.co/2r8QUay

LATE-NIGHT BEST - STEPHEN COLBERT on Comey's testimony: "He thought Trump might lie. That's razor-sharp FBI instinct in action right there. Fellas, look, I don't want to get out over my skis here but I think this dead body might not be alive." ***Video*** http://bit.ly/2r8VGF0

THE NEXT TURN OF THE SCREW -- "Comey's Testimony Sharpens Focus on Questions of Obstruction," by NYT's Charlie Savage: "If one believes James B. Comey's account of his encounters with President Trump, it could present a prosecutable case of obstruction of justice, several former prosecutors said Thursday. But they also cautioned that little is normal about this situation. The Justice Department has long argued that the Constitution does not permit prosecuting a sitting president. And even if Mr. Trump left office first - through impeachment, or simply by losing re-election in 2020 - there is no guiding precedent in which any former president has been indicted on a charge of ordering a criminal investigation closed for improper reasons." http://nyti.ms/2rHShMa

POLITICO MAGAZINE FRIDAY COVER - "Will Comey's Testimony Matter? Legal experts tell us what Thursday's high-drama hearing means for Trump and the Russia investigation" http://politi.co/2saJqnG

COMING ATTRACTIONS -- "Jared Kushner Could Meet With Senate Intel Committee Staffers This Month, Sources Say," by NBC News' Kasie Hunt and Phil Helsel: "The Senate Intelligence Committee expects top presidential adviser and son-in-law Jared Kushner to meet with committee staffers this month, two sources familiar with the planning told NBC News Thursday. A third source familiar with the conversations said discussions about timing are still ongoing. The committee expects Kushner will meet with staff, provide documents and ultimately take questions from the senators, the two sources said." http://nbcnews.to/2rI4QHh

NEXT WEEK'S NEW YORKER COVER - BARRY BLITT did next week's cover illustration, "Modern Times," which shows Trump (wearing a long red tie) caught in the gears. Blitt writes: "Charlie Chaplin and Donald Trump both get caught in the grinding gears of modern times. But with Trump it's not so funny." http://bit.ly/2skW3w6

SNEAK PEEK - WHAT VLADIMIR PUTIN told Oliver Stone for his Showtime special about what he thinks about Sen. John McCain. "[H]onestly, I like Senator McCain to a certain extent. And I'm not joking. I like him because of his patriotism, and I can relate to his consistency in fighting for the interests of his own country." ***2-min. video*** http://bit.ly/2sKbJ9J

BUZZ: THE NEW LOYALTY TEST? -- An aide to a Democratic Senate Judiciary

committee member told us that he expects that FBI director pick Christopher Wray will be asked in a confirmation hearing if he pledged "loyalty" to Trump in the interview process.

THE LATEST ON HEALTH CARE -- "Senate GOP finds a new problem for every one resolved on Obamacare repeal," by Adam Cancryn, Jen Haberkorn, Burgess Everett and Rachana Pradhan: "Senate Republicans hoping to get the bulk of an Obamacare repeal bill done within the next few days keep finding a new problem for every old one they get closer to resolving.

"A burst of optimism that they could agree on a more generous version of the House-passed repeal bill was quickly doused by concerns over the cost. An emerging consensus on subsidies to stabilize shaky insurance markets was countered by a threat that crucial abortion restrictions could derail the effort altogether. And looming over it all, lawmakers are still struggling to bridge the deep divide over the future of Medicaid.

"'Building consensus is hard,' Sen. John Cornyn , the chamber's No. 2 Republican, said earlier this week. 'We've all got a better idea. But pretty soon we're going to have to make a decision on a single bill.'" http://politi.co/2slewbZ

THE JUICE ...

-- TRUMP CAMPAIGN VETS, members of the "45 Club", gathered at Morton's Thursday night. **SPOTTED:** Scott Mason, Anthony Pugliese, Matt Mowers, Paul Gates and Kirk Bell.

-- SPOTTED last night at The Palm for a party honoring longtime maitre d' Tommy Jacomo: Kellyanne Conway, Wolf Blitzer, Tony Kornheiser, James Carville and Mary Matalin. The shindig included a pre fixe menu for dinner, balloons, a video of Tommy and pictures of him throughout the years.

PHOTO DU JOUR: Senate Intelligence Committee Chairman Richard Burr and Vice Chairman Mark Warner greet fired FBI Director James Comey before his testimony on Capitol Hill on June 8. | John Shinkle/POLITICO

SILICON VALLEY WATCH -- "Tech CEOs Cook, Bezos, Catz Said to Attend Kushner-Led Summit," by Bloomberg's Mark Bergen and Brian Womack: "Leaders from the largest technology companies are set to visit the White House later this month for an inaugural meeting of President Donald Trump's group formed to modernize government services, according to three people familiar with the plans. ... The list of planned attendees include Apple Inc. Chief Executive Officer Tim Cook, Microsoft Corp. CEO Satya Nadella, Amazon.com Inc. CEO Jeff Bezos, Oracle Co-CEO Safra Catz and

International Business Machines Corp. CEO Ginni Rometty ... Alphabet Inc. plans to send Executive Chairman Eric Schmidt." https://bloom.bg/2slapNb

-- IT'S WORTH NOTING: Despite the tech industry's tough talk on Trump's decision to pull out of the Paris Climate agreement and over his administration's proposed travel ban, neither appear to have made as big of an impact on the RSVPs for Kushner's summit as some insiders expected.

TRY THIS ONE ON FOR SIZE -- "Trump Picks Scaramucci to Be Ambassador to OECD, Sources Say," by Bloomberg's Jen Jacobs: "President Donald Trump will appoint SkyBridge Capital founder Anthony Scaramucci ambassador to the Paris-based Organisation for Economic Co-operation and Development, said two people familiar with the plan. Scaramucci, 53, was a campaign fundraiser for Trump and regular adviser during the presidential transition, appearing almost every day at Trump Tower and regularly defending the president on television." https://bloom.bg/2slnaHp

****** **A message from Samsung:** Samsung's footprint in the U.S. has been growing for nearly 40 years. Today, we employ more than 18,500 people across the country, covering nearly every state. Samsung Austin Semiconductor (SAS) hosts 6,000+ manufacturing and engineering jobs and has become a $17bn investment - making it one of the largest single FDI's in the U.S. We're also committed to building strong communities through citizenship and support of programs for children's health, STEAM education, veterans and military families. Visit Samsung.com/VisionForTomorrow for more. ******

NO!!!! -- "Trump's Aluminum Tax Could Make Your Beer More Expensive," by Bloomberg's Joe Deaux: "Donald Trump's efforts to save American metal-making jobs by punishing cheap imports may come with an bitter side effect: pricier beer. That's the view of Tim Weiner, senior commodity risk manager at Molson Coors Brewing Co. and its MillerCoors LLC unit. ... [I]f the U.S. does impose import duties on primary aluminum, it will affect the roughly 5,000 brewers scattered across every congressional district, Weiner said." https://bloom.bg/2s35akG

OFF MESSAGE PODCAST: HRC PREZ CALLS OUT IVANKA -- Human Rights Campaign president Chad Griffin blasted President Trump and other members of his administration - including the president's daughter and senior adviser Ivanka Trump. "An ally is not someone who tells people that they're an ally. An ally is not someone who sends a tweet to show that they're an ally. An ally is someone who stands up and fights for a cause," Griffin told Isaac Dovere on "Off Message." Ahead of a weekend of nationwide Pride marches, Griffin said he'd like to say this directly to Ivanka, but he'd be wary of an invitation to the White House: "Anyone who is invited to meet with this president needs to be careful that they're not being used."

Isaac also talked to Tony-nominated "Indecent" playwright Paula Vogel, who says she'd love it if Mike Pence made her show about the outrage over a 1920s Yiddish theater play featuring a lesbian kiss - his next stop on Broadway after "Hamilton." "You

don't want to write something that preaches to the converted, all right? You want to convert," she said. http://politi.co/2saDGdJ ... ***Listen and subscribe*** http://apple.co/2nEa7y0

NERDCAST PODCAST: James Comey made his first public appearance as the former director of the FBI Thursday. POLITICO's Scott Bland, Charlie Mahtesian, Ken Vogel and Eliana Johnson break down what he said and what it means for the Russia investigation. Plus, the latest on New Jersey and Virginia's gubernatorial races and what they say about the future of the Democratic Party - and what's new in Georgia's intense special House election. ***Listen and subscribe*** http://apple.co/2qA91oh

MEDIAWATCH -- JOHN DICKERSON, "Face the Nation" moderator and CBS News Chief Washington Correspondent, is now a contributing editor to The Atlantic. He will write regularly for the print magazine and the website. ***His first piece for The Atlantic, "Donald Trump Is an Impossible Boss"*** http://theatln.tc/2sas9uX

Subject: Playbook Power Briefing, presented by PhRMA: DUELING CHIEFS at CFPB -- TRUMP to visit MISSOURI on Wednesday to sell tax plan -- RAND a YES on tax bill -- FLYNN faces scrutiny for 2015 trip to Egypt and Israel

View online version | Add politicoplaybook@politico.com to your address book.

Today's Playbook Power Briefing presented by PhRMA

BULLETIN -- AP at 11:16 a.m.: "WASHINGTON (AP) - White House official: Trump will not campaign for embattled Alabama Senate candidate Roy Moore before Dec. 12 election."

-- NEW ROY MOORE AD: "Right Choice" http://bit.ly/2ABqouW

Good Monday afternoon. WHATTA TOWN! -- LORRAINE WOELLERT: "Confusion and chaos engulf consumer agency": "Two acting directors of the Consumer Financial Protection Bureau showed up for work Monday, trading memos and warnings as a political showdown threw the embattled agency into confusion.

"White House budget director Mick Mulvaney, President Donald Trump's choice to temporarily lead the bureau, arrived at about 7:30 a.m. and settled into the CFPB director's office, where he read briefing books. His challenger for the job, CFPB Deputy Director Leandra English, was also in the building. English, former Director Richard Cordray's hand-picked replacement, sent the staff an emailed greeting shortly before 8 a.m. and signed it with the bureau's top title, acting director." http://politi.co/2k4lQGa

-- REUTERS: "White House's Mulvaney tells CFPB staff to 'disregard' Leandra English: memo": "'Please disregard any instructions you receive from Ms. English in her presumed capacity as Acting Director,' Mulvaney wrote to staff in a memo seen by Reuters. 'If you receive additional communications from her today ... please inform the General Counsel.'" http://reut.rs/2zsNeke

-- @chrisgeidner: "Leandra English's CFPB case has been assigned to Judge Timothy J. Kelly, a Trump nominee who was confirmed to the bench in September."

SEN. AL FRANKEN on the Hill: "I know there are no magic words that I can say to regain your trust and I know that it's going to take time. I'm ready to start that process and it starts with going back to work today." Franken said he "will be open" to making the findings of the Ethics Committee investigation public.

ALWAYS BE SELLING -- "Trump to visit Missouri on Wednesday to promote tax

overhaul," by the Kansas City Star's Lindsay Wise and Jason Hancock: "The president is expected to discuss tax cuts during the visit to St. Charles Wednesday afternoon, the sources say. The White House has not yet publicly announced the trip. Trump last visited Missouri in August to launch his administration's push to overhaul the nation's tax code. The U.S. House has since passed its version of the bill, while the U.S. Senate is expected to vote on its version when lawmakers return from Thanksgiving recess." http://bit.ly/2k4EZru

-- WSJ's Siobhan Hughes and **Greg Ip:** "'I don't know what the fix is going to be yet,' Sen. Ron Johnson (R-Wis.) said in an interview on Monday, when asked whether he could yet support the tax bill. One of his arguments: That the government will lose a lot of money if pass-through businesses have an incentive to convert to C corporations, which are taxed separately from their owners.

"Mr. Johnson said he spoke with both President Donald Trump and Vice President Mike Pence over the weekend, and that both shared his concern and 'agreed this is a problem to be fixed and we'll get it fixed.'" http://on.wsj.com/2k1E1ML

ON THE PRESIDENT'S MIND -- @realDonaldTrump at 9:04 a.m.: "We should have a contest as to which of the Networks, plus CNN and not including Fox, is the most dishonest, corrupt and/or distorted in its political coverage of your favorite President (me). They are all bad. Winner to receive the FAKE NEWS TROPHY!" ... **at 9:16 a.m.,** quote-tweeting a Dan Scavino tweet bashing "Morning Joe": "The good news is that their ratings are terrible, nobody cares!" ... **at 9:24 a.m.:** "The Tax Cut Bill is coming along very well, great support. With just a few changes, some mathematical, the middle class and job producers can get even more in actual dollars and savings and the pass through provision becomes simpler and really works well!"

RAND IS A YES ON THE TAX BILL -- FOX NEWS OP-ED: "Here's why I plan to vote for the Senate tax bill (and my colleagues should step up)": "This tax bill is a true test for my colleagues. I'm not getting everything I want -- far from it. But I've been immersed in this process. I've fought for and received major changes for the better -- and I plan to vote for this bill as it stands right now." http://fxn.ws/2k3vAki

-- NEW DSCC AD -- The DSCC has released a new ad on the GOP tax proposal called "Mailbox" which hammers Republicans for raising taxes on some middle-class families and what it would do to the state-and-local deduction. A DSCC spokesman told us that they're starting the ad on digital platforms "as a part of our ongoing six-figure buy in key states across country." http://bit.ly/2jr9cx2

MORE PROBLEMS FROM FLYNN -- "Michael Flynn's role in Middle Eastern nuclear project could compound legal issues," by WaPo's Michael Kranish, Tom Hamburger and Carol Leonnig: "In June 2015, retired lieutenant general Michael Flynn took a little-noticed trip to Egypt and Israel, paid for by a U.S. company he was advising. The company hoped to build more than two dozen nuclear plants in the region in partnership with Russian interests. Flynn's quiet involvement in that project -- and his

failure to disclose his ties to the effort -- could complicate the legal issues facing President Trump's former national security adviser, who has signaled he may be willing to cooperate with special counsel Robert S. Mueller III.

"Congressional Democrats say that Flynn may have violated federal law by failing to disclose the Middle Eastern trip in his security clearance renewal application in 2016. A top House Republican declined the Democrats' request for a congressional inquiry but referred the allegations to the special counsel." http://wapo.st/2k1nZT5

****** **A message from PhRMA: How much are hospitals marking up medicine prices?** According to new Moran Company analysis, hospitals mark up medicine prices nearly 500 percent. The analysis of 20 medicines also found a hospital is paid 2.5 times what the biopharmaceutical company, who brought the medicine to market, receives. Read more: http://onphr.ma/2hSaqox ******

ON THE WORLD STAGE -- "Angela Merkel's party backs coalition with Social Democrats," by POLITICO Europe's Emily Schultheis in Berlin: "Leaders of Angela Merkel's Christian Democrats agreed late Sunday to try to form a 'grand coalition' with the Social Democrats, following the failure of efforts to build a governing alliance with smaller parties. Christian Democratic Union (CDU) leaders said they wanted to renew the coalition between Germany's two biggest parties that governed for the past four years rather than form a minority government or call for a new general election. ...

"Immediately after suffering heavy losses in September's general election, SPD leaders declared the party was not available for another grand coalition and wanted to renew itself in opposition. However, under pressure after talks between Merkel's conservatives, the Greens and the liberal Free Democrats collapsed last week, SPD leader Martin Schulz said his party was open to discussions." http://politi.co/2iaA2wK

FAIRFIELD COUNTY UPDATE --"Tax-Hike Fears Trigger Talk of Exodus From Manhattan and Greenwich," by Bloomberg's Simone Foxman, Patrick Clark and Sridhar Natarajan: "By eliminating the deduction for most state and local taxes, an individual making a yearly salary of $1,000,000 -- a figure not uncommon in the financial industry -- would owe the Internal Revenue Service an additional $21,000, according to a preliminary analysis by accounting firm Marcum LLP. ... Goldman Sachs Group Inc. is estimating that New York City alone could lose as much as 4 percent of its top earners if the bill becomes law." https://bloom.bg/2Ac4bTK

VIDEO DU JOUR -- @FLOTUS: "The decorations are up! @WhiteHouse is ready to celebrate! Wishing you a Merry Christmas & joyous holiday season!" ***1-min. video tour of the WH decorations and Melania*** http://bit.ly/2Aa3No1

--@StephGrisham45: "This year's Gingerbread House I was baked w 300 lbs of dough & features @FLOTUS signature wreaths! #TimeHonoredTraditions". ***Pic*** http://bit.ly/2k7tKip

TODAY'S BEYOND THE BELTWAY -- Feinstein predicts another 'Year of the Woman' election -- Bob Menendez's veiled warning to Steve Fulop http://politi.co/2k68Pfh

HMM -- Alex Seitz-Wald (@aseitzwald): "Inauguration crowds redux: Stock image in this pro-Trump group's ad appear to be from Obama's inauguration." http://bit.ly/2jrAMuh ... ***The ad from America First Policies*** http://bit.ly/2Bh44TH ... ***The stock picture*** https://istockpho.to/2iatfmX

MEDIAWATCH -- FINANCIAL TIMES -- "Meredith to cut hundreds of jobs at Time Inc: Plan backed by billionaire Koch brothers will explore sale of leading titles," by Shannon Bond and James Fontanella-Khan in New York: "People briefed about Meredith's plans said there would be 'significant jobs cuts' after the companies are combined. They added that the Iowa-based publisher would explore the sale of some of Time Inc's best-known titles, including Time magazine and Sports Illustrated. Although Charles and David Koch, who backed the deal with $650m in preferred equity, will not have any editorial or operational influence on Meredith's titles or seats on its board, they are expected to work with the publisher to ensure they get a good return on their investment, a person close to the family said. ...

"'For them [the Koch brothers] this is a smart bet, a pure financial investment. They don't want to run magazines but they agreed to back the deal because Meredith has shown them a sound plan that includes significant job cuts,' said a person briefed on Meredith's takeover strategy. Steve Lombardo, a spokesman for Koch Industries, described the investment as 'passive', adding: 'We're basically acting as a bank here.'" http://on.ft.com/2k1Zntv

--VAN JONES will get a one-hour prime-time program "The Van Jones Show," airing bimonthly on CNN starting in January.

SCOTT PRUITT UPDATE - "Scott Pruitt on a mission to change the culture of the EPA," by USA Today's Ledyard King: "Nearly a year into his tenure, Pruitt still feels the resistance from employees who have yet to buy into his message that the EPA ought to work more with business to find mutually acceptable solutions when it comes to public health. 'The most challenging thing that we encounter (at EPA) is this thinking, this attitude that we as a country have to choose between growth and jobs and being good stewards of our environment,' he recently told an audience at the conservative Federalist Society National Lawyers Convention. ... His many critics say that's code for giving the energy industry and other polluters carte blanche to maximize profit with little regard for environmental damage." https://usat.ly/2hXAoDq

DESSERT -- "Secrets of the Marvel Universe: After a decade of unprecedented success, Marvel Studios is at a pivotal moment: the looming farewell to some of its founding superheroes, and the rise of a new generation. Kevin Feige, the creative force behind the $13 billion franchise and a slew of Marvel stars, discusses its precarious beginnings, stumbles, and ever-expanding empire," by Vanity Fair's Joanna Robinson

http://bit.ly/2iaCNym

TRANSITIONS -- Allison Schwartz is joining Dun & Bradstreet as their global leader of government affairs. She was previously at Intuit. ... **Kathryn McQuade** has joined Senate Majority Leader Mitch McConnell's office as broadcast communications adviser. She previously worked for the House Republican Conference.

ENGAGED -- Jennifer Hatten, VP of the American Bankers Association's Health Savings Account Council, got engaged to **Joel Levesque,** CFO of Army Emergency Relief and a retired Lieutenant Colonel in the U.S. Army, in a proposal Thanksgiving night in downtown D.C. "Jennifer is an alum of Huckabee 2008, NFIB and Tennessee Gov. Don Sundquist. The couple's first date was at Hank's Oyster Bar in Old Town Alexandria. They are planning to wed next year in Biddeford Pool, Maine." ***Pic - they are the couple on the right*** http://bit.ly/2iU1VGv (h/t Alice Stewart)

****** **A message from PhRMA:** According to new analysis from the Moran Company, hospitals mark up medicine prices, on average, nearly 500 percent. The analysis of 20 medicines also found a hospital is paid 2.5 times what the biopharmaceutical company, who brought the medicine to market, receives. While hospital markups lead to higher costs for patients, employers and payers, these markups are often overlooked in conversations about medicine costs. As the provider market continues to become more concentrated and the number of medicines being administered in hospital-owned facilities is growing, the amount hospitals mark up medicine prices needs greater scrutiny. http://onphr.ma/2Ba0TOa ******

Subject: Playbook Power Briefing, presented by Morgan Stanley: Job growth decelerates in May -- TILLERSON downplays Paris accord exit -- LEWANDOWSKI and KUSHNER hug it out -- MUELLER'S next move -- CIA's new head of Iran operations

View online version | Add politicoplaybook@politico.com to your address book.

Today's Playbook Power Briefing presented by Morgan Stanley
06/02/2017 12:55 PM EDT

Good Friday afternoon.

OUR FRIENDS AT THE INFORMATION -- the super-sharp publication covering Silicon Valley -- have launched a great feature that curates tweets about politics from tech-industry leaders in a sortable fashion (sort by topic, or tech leader). ***The feature*** http://bit.ly/2qO9IqA

JESSICA LESSIN , the founder and editor in chief of The Information, emails Playbook: "Much like the president, tech leaders are turning to Twitter every day to spout off about hot-button political issues. From the Paris Climate withdrawal to net neutrality, their tweets -- and even their retweets -- offer an important glimpse into their views. Since no one wants to follow individuals one by one, our graphics editor Mike Sullivan and senior editor Wendy Pollack created this graphic that filters the politically-related tweets of several hundred tech leaders by topic. It's an interesting look at everything from Steve Ballmer on net neutrality to Tony Fadell on fake news."

UPDATES TO THE SUNDAY SHOWS ... AL GORE is on with **JAKE TAPPER** on **CNN'S "STATE OF THE UNION"** and **CHRIS WALLACE** on **"FOX NEWS SUNDAY"** ...

CHOOSE YOUR NEWS -- "Job growth decelerated in May," by Tim Noah and Marianne LeVine: "The economy added 138,000 jobs in May, the Labor Department reported Friday, signaling a possible slowdown in job growth. May's jobs numbers were a decrease from April, when the economy added 174,000 jobs. Job growth for both months was below the average monthly gain of 181,000 jobs over the previous year.

"The totals since January leave job growth under President Donald Trump well under the million he claimed credit for yesterday when announcing U.S. withdrawal from the Paris climate accord. But unemployment fell to 4.3 percent, down slightly from April's 4.4 percent, indicating that the job market remains tight and virtually guaranteeing that the Federal Reserve's Open Market Committee will hike interest rates when it meets June 13-14." http://politi.co/2swZ8Wq

-- NOTE: Like last month's jobs report and dozens of job reports before that, there are pieces that both sides will cling on to. The underlying fact is that job growth has slowed

down, the labor force participation rate is still low, and that the actual numbers underperform economists' expectations. Trump long called these numbers phony before taking office. Kellyanne Conway, on Twitter: "Guessing this headline on @CNN is more relevant than 'Russia' to real people: 'U.S. Unemployment hits lowest level since 2001'."

MUELLER'S NEXT MOVE -- "Exclusive: Special counsel Mueller to probe ex-Trump aide Flynn's Turkey ties," by Reuters' Nathan Layne, Mark Hosenball and Julia Edwards Ainsley: "Robert Mueller, the special counsel investigating possible ties between the Trump election campaign and Russia, is expanding his probe to include a grand jury investigation into former national security adviser Michael Flynn, three sources told Reuters.

"The move means Mueller's politically charged inquiry will now look into Flynn's paid work as a lobbyist for a Turkish businessman in 2016, in addition to contacts between Russian officials and Flynn and other Trump associates during and after the Nov. 8 presidential election. Federal prosecutors in Virginia are investigating a deal between Flynn and Turkish businessman Ekim Alptekin as part of a grand jury criminal probe, according to a subpoena seen by Reuters." http://reut.rs/2sxBTv7

MIXED SIGNALS -- "Tillerson downplays significance of Paris exit," by Andrew Restuccia: "Secretary of State Rex Tillerson, in his first public comments since Donald Trump announced his intention to withdraw from the Paris climate agreement, declined to specifically endorse the move but said the U.S. would continue working to reduce its emissions regardless.

"'Well, it was a policy decision and I think it's important that everyone recognize the United States has a terrific record on reducing our own greenhouse gas emissions. It's something I think we can be proud of and that was done in the absence of a Paris agreement,' Tillerson told reporters Friday when asked for his reaction to Trump's announcement. 'I don't think we're going to change our ongoing efforts to reduce those emissions in the future either, so hopefully people can keep it in perspective.'" http://politi.co/2rzsaHs

SEAN SPICER and EPA Administrator **SCOTT PRUITT** will brief the press on-camera at the White House at 1:30 p.m.

****** **A message from Morgan Stanley:** Morgan Stanley helped All Aboard Florida raise capital to bring Brightline, an express railway, to the Sunshine State-potentially cutting travel time across Southern Florida by up to 25-30%[1] versus existing options. Investing in infrastructure isn't just good for people-it can be good for cities. Learn more at morganstanley.com/brightline. ******

VIDEO DU JOUR -- Vice President **MIKE PENCE** on Fox News: "For some reason or another, this issue of climate change has emerged as a paramount issue for the left -- in this country and around the world." http://bit.ly/2sxqKL5

GARY COHN on Fox Business: "We will be delivering a tax plan to Congress by the end of the summer and we're going to expect the Congress to act on our tax plan this year." http://bit.ly/2rzv0wo **WAIT A SECOND...** Didn't the president say his tax plan was moving through Congress and was far ahead of schedule?

A DETENTE? -- "Rose Garden Hug Ends Lewandowski's Year-Long Rift With Kushner," by Bloomberg's Kevin Cirilli, Shannon Pettypiece and Jennifer Jacobs: "After Corey Lewandowski met with Donald Trump in the Oval Office on Monday, someone was waiting outside with a bit of unfinished business.

"Jared Kushner, the president's son-in-law and trusted adviser -- who had pressed for Lewandowski's ouster as campaign manager almost a year ago -- joined him for a stroll through the White House Rose Garden. Their conversation ended with a hug, according to people familiar with their exchange. It also resulted in a restored relationship and an understanding that Kushner is no longer a barrier between Lewandowski and the White House." https://bloom.bg/2sxz0KZ

VLADIMIR PUTIN told Megyn Kelly that the evidence gathered by U.S. intelligence services that pointed to Russia being behind hacks surrounding the 2016 election was not definitive proof. "IP addresses can be invented -- a child can do that! Your underage daughter could do that. That is not proof," he said. Putin also compared the allegations about Russia to "anti-Semitism and blaming the Jews." ***Kelly's full interview will air Sunday at 7 p.m. on her debut show*** http://nbcnews.to/2sxvD6C

WHAT JARED SOUNDS LIKE -- "Jared Kushner, seen but not heard," by CNN's Hunter Schwarz: "He has a verified Twitter account with no tweets. He declined to comment for recent stories about him ... And to most Americans, the very sound of his voice is a mystery. ... But you can hear it in a few videos on YouTube. There's one of him speaking to a group about Brooklyn real estate, to a Jehovah's Witness program about buying one of their buildings, and to SundanceTV about buying the New York Observer. His voice sounds young, and he sometimes stretches out the sound of his vowels." *With an embedded video of one of his talks* http://cnn.it/2rrKSil

SCOOP -- "C.I.A. Names New Iran Chief in a Sign of Trump's Hard Line," by NYT's Matt Rosenberg and Adam Goldman: "He is known as the Dark Prince or Ayatollah Mike, nicknames he earned as the [CIA] officer who oversaw the hunt for Osama bin Laden and the American drone strike campaign that killed thousands of Islamist militants and hundreds of civilians. Now the official, Michael D'Andrea, has a new job. He is running the C.I.A.'s Iran operations, according to current and former intelligence officials, an appointment that is the first major sign that the Trump administration is invoking the hard line the president took against Iran during his campaign. ...

"Ezra Cohen-Watnick, the [NSC's] senior director for intelligence - the main White House liaison to intelligence agencies - has told other administration officials that he wants to use American spies to help oust the Iranian government, according to multiple defense and intelligence officials. ... In Mr. D'Andrea, the director has found a

workaholic to be his Iran sentinel. Mr. D'Andrea grew up in Northern Virginia in a family whose ties to the C.I.A. span two generations. He met his wife, who is Muslim, on a C.I.A. posting overseas, and converted to Islam to marry her, though he is not known to be particularly observant." http://nyti.ms/2qKptDL

AFTERNOON READ -- "How the World's Most Interesting Man Befriended the World's Most Powerful Man," by Jonathan Goldsmith (the actor who played the Most Interesting Man in the World) with POLITICO Magazine's Friday cover: "It was August 2011 and 'The Most Interesting Man in the World,' the absurdly debonair character I played on the Dos Equis beer commercials, had become an international cultural phenomenon. Finally, after decades of trying to break through in Hollywood, I was a recognizable star with my meme-ready line, 'Stay thirsty, my friends.' The character's nearly mythical traits, recounted by a narrator in a nearly endless string of deliciously funny one-liners-'His personality is so magnetic, he is unable to carry credit cards,' and 'He once had an awkward moment, just to see how it feels'-had generated a cult following. I had millions of fans all around the world. One of them happened to live in the White House." http://politi.co/2sx9vte

TODAY'S BEYOND THE BELTWAY -- Blue states rally against Trump's Paris dropout -- New Jersey Democratic gubernatorial primary heats up
http://politi.co/2rzhQzh

PLAYBOOK METRO SECTION -- "Here's Everyone We Know Will Be Included On Ben's Chili Bowl's New Mural," by Washingtonian's Richard Morgan
http://bit.ly/2sxwmF3

COMING ATTRACTIONS -- MADELINE ALBRIGHT will speak at the Marshall Center's 70th Anniversary symposium this coming Monday at the George C. Marshall Home and International Center in Leesburg, Virginia. **NEIL GORSUCH** and **STEPHEN BREYER** will talk with **JEFFREY ROSEN** tonight at Harvard at an event from the Association of Marshall Scholars. The full weekend program on the Marshall Plan's legacy and the future of transatlantic relations includes: Madeleine Albright, Bill Burns, Kathleen Sullivan, Karen Donfried, Graham Allison, Jane Harman, Dan Baer, Sewell Chan, Kim Darroch, Malcolm Rifkind, Daniel Benjamin, Steve Pomper, Matthew Barzun, Peter Orszag, Valerie Amos and Malcolm Rifkind. LinkedIn founder and Marshall alum Reid Hoffman is giving a major gift and participants will also enjoy a performance by Yo-Yo Ma's Silk Road Ensemble. ***Saturday's livestream*** http://bit.ly/2rzvW3A

OUT AND ABOUT -- Commerce Secretary **Wilbur Ross** and Treasury Secretary **Steven Mnuchin** spoke yesterday with CEOs and board members of the Business Council for International Understanding (BCIU) about tax reform, trade priorities and global finance issues. **SPOTTED:** CEO of Estée Lauder William Lauder, CEO of Harris Bill Brown, North America CEO of Citi Bill Mills, Americas CEO of ABB Greg Scheu and other Trump administration and private sector attendees.

-- The Herald Group's Outreach and Coalitions team held a happy hour for advocacy

and academic organizations and industry experts at Ghibellina on 14th Street last night. **SPOTTED:** Meghan Milloy, Josh Althouse, Mattie Duppler, Johnny Craig, Emily Sternfeld, Kaitlan Collins, Megan Van Etten, Kelsey Greissing, JP Freire, Todd Thurman, Melissa Quinn, Rob Shrum, Casey Given, Matt Coglianese and Alex Pfeiffer.

SPOTTED: Milwaukee County Sheriff David Clarke wearing a Cowboys hat boarding a Southwest plane to Milwaukee at DCA and immediately being questioned by passengers about his support for the Packers. He took the hat off eventually. ... James Carville in LSU attire boarding an American flight this morning to New Orleans from DCA.

BONUS BIRTHDAYS: Eric Thayer, D.C.-based freelance photographer for the New York Times ... Ali Meyer of the Washington Free Beacon and the pride of New Orleans, who also loves to DJ (h/t Morgan Chalfant) ... Ian Byrne of the Washington Institute for Near East Policy (h/t Alison Percich)

****** **A message from Morgan Stanley:** Morgan Stanley helped raise the capital needed by innovative company All Aboard Florida to enhance Florida's infrastructure by developing the nation's first express, intercity rail, Brightline. The train, connecting cities across Southern Florida, is expected to cut down on travel time for residents and tourists, and could potentially add up to hundreds of millions in federal, state and local government tax revenue over the next several years.[1] Capital creates better connections for people, communities and cities. Learn more at morganstanley.com/brightline. Capital creates change.

Subject: POLITICO's Morning Score: Recruiting push: Club for Growth poll shows Hawley leading McCaskill — O'Rourke outraised Cruz in Texas — FEC tangles over Russia action

By Scott Bland | 07/14/2017 10:00 AM EDT

With Zach Montellaro, Kevin Robillard and Elena Schneider

The following newsletter is an abridged version of Campaign Pro's Morning Score. For an earlier morning read on exponentially more races - and for a more comprehensive aggregation of the day's most important campaign news - sign up for Campaign Pro today. (http://www.politicopro.com/proinfo)

'COME ON IN, THE WATER'S WARM' - Club for Growth poll shows Hawley leading McCaskill in MIssouri, via Campaign Pro's Kevin Robillard: "The poll, conducted by Fabrizio, Lee & Associates, finds [Democratic Sen. Claire] McCaskill's favorability at 43 percent, with 46 percent seeing her unfavorably. Among independents, that slips to 39 percent favorable and 49 percent unfavorable. In a memo , the pollsters note this is 'quite a precarious position for an incumbent facing reelection.' ... When she's placed head-to-head with [Missouri Attorney General Josh] Hawley, McCaskill trails 46 percent to 42 percent, with 12 percent undecided. ... With Rep. Ann Wagner choosing not to run, national Republican recruiting efforts have focused almost entirely on the 37-year-old Hawley, a former law professor who only won the attorney general's office in November. The Club for Growth hasn't officially endorsed a candidate in the race." **Full story.**

- ALSO - "GOP Missouri treasurer Schmitt in [D.C] to talk Senate challenge to McCaskill," by the Washington Examiner's David M. Drucker: "Missouri Treasurer Eric Schmitt ... was scheduled to sit down with Senate Majority Whip John Cornyn, R-Texas, and Sen. Cory Gardner of Colorado, chairman of the NRSC, the Senate GOP campaign arm. A meeting with Senate Majority Leader Mitch McConnell, R-Ky., who is intimately involved in candidate recruitment for the midterm, was tentative. ... [S]ome Missouri Republicans believe Hawley is leaning no. He is 37 and has a young family." **Full story.**

RUH ROH JOE - "Senator's family business uses Mexican labor," by the Associated Press' Brian Slodysko: "Joe Donnelly, considered one of the nation's most vulnerable Democratic senators up for re-election next year, has long blasted free-trade policies for killing American jobs. He accused Carrier, an air conditioner and furnace maker, of exploiting $3-an-hour workers when it announced plans to wind down operations in Indiana and move to Mexico. ... For more than a year, Stewart Superior Corp. and its subsidiaries have been shipping thousands of pounds of raw materials to Mexico, where the company has a factory that produces ink pads and other supplies, according to customs records from Panjiva Inc., which tracks American imports and exports. The finished products are then transported back to a company facility in California, the records show." **Full story.**

- Republican operatives quickly gave Donnelly a new nickname: Mexico Joe. **A statement**

from Donnelly: "Investing in my brother's business - that I haven't had a role in for more than a decade, and which has created Hoosier jobs in LaPorte - doesn't change my record. I've worked hard every day to keep jobs in Indiana and fight for fair trade deals that level the playing field for the American worker. Hoosiers know I'm fighting to renegotiate NAFTA for American workers and to stop new trade deals that will allow other countries to flood U.S. markets."

Q2 FUNDRAISING ROUNDUP - Arizona: GOP Sen. Jeff Flake announced raising $1.5 million in the second quarter and finishing with $3 million on hand.

- Indiana: Democratic Sen. Joe Donnelly announced raising $1.5 million in the second quarter, with $3.7 million cash on hand.

- Michigan: Democratic Sen. Debbie Stabenow raised $2.1 million, with $5.8 million in her campaign account.

- Texas: Democratic Rep. Beto O'Rourke announced raising $2.1 million in the second quarter for his run against GOP Sen. Ted Cruz. O'Rourke outraised Cruz, who raised $1.6 million, per the Texas Tribune. But Cruz has $5.7 million on hand to $1.9 million for O'Rourke.

- West Virginia: Democratic Sen. Joe Manchin raised $1.4 million in the second quarter and finished with over $3.5 million on hand.

- Wisconsin: "Illinois businessman Richard Uihlein has now donated a total of $3.5 million toward a super PAC supporting Republican Kevin Nicholson's potential campaign for Wisconsin's U.S. Senate seat," Wisconsin Public Radio reported. **See more fundraising numbers from the House below the jump.**

'THE ERA OF THE KINDER, GENTLER REPUBLICAN IS OVER' - "Stewart challenges Kaine and GOP with Virginia Senate run," by Campaign Pro's Kevin Robillard: "Prince William County Board of Supervisors Chair Corey Stewart announced Thursday he would challenge Virginia Sen. Tim Kaine in 2018 - and cast his campaign as a challenge to the rest of the Republican Party, too. Stewart launched his Senate run exactly one month after barely losing Virginia's GOP gubernatorial primary to former Republican National Committee Chairman Ed Gillespie with fighting words for Kaine and the GOP alike. Stewart massively outperformed expectations in losing to Gillespie by less than 2 points, and he painted his combative, Trump-inspired style as the future of the Republican Party." **Full story.**

Days until the 2017 election: 116.

Days until the 2018 election: 480.

HOUSE Q2 FUNDRAISING - FIRST IN SCORE - NY-22: GOP Rep. Claudia Tenney raised $300,000 in the second quarter and ended the period with $440,000 in cash on hand, per a statement from her campaign.

- AZ-09: Democratic Rep. Kyrsten Sinema raised $649,000 in the second quarter and finished with over $3.2 million on hand.

- CO-06: Democrat Jason Crow raised over $300,000 in the second quarter for his run against GOP Rep. Mike Coffman, Colorado Politics reported, and finished with $247,000 on hand.

- FL-18: GOP Rep. Brian Mast raised $730,000 in the second quarter, with $1.1 million in cash on hand, per a statement from his campaign.

- IL-03: Marie Newman, the Democrat challenging Rep. Dan Lipinski in a primary, announced raising $195,000 in the second quarter.

- MI-08: GOP Rep. Mike Bishop announced raising over $275,000 in the second quarter.

- MN-03: GOP Rep. Erik Paulsen raised over $571,000 in the second quarter and finished with over $986,000 in the bank.

- NJ-05: Democratic Rep. Josh Gottheimer raised $840,000 in the second quarter, ending the period with $1.4 million in cash on hand, per a statement from his campaign.

- NH-01: Republican Eddie Edwards raised over $120,000 and had $100,000 on hand after the second quarter for his run against Democratic Rep. Carol Shea-Porter, via WMUR, while GOP state Sen. Andy Sanborn raised $100,000 in two weeks, also via WMUR.

- NY-19: GOP Rep. John Faso raised $337,000 in the second quarter and finished with almost $496,000 on hand.

- PA-17: Republican John Chrin raised $350,000, including $300,000 from himself, in the second quarter for his run against Democratic Rep. Matt Cartwright, the Morning Call reported.

ROAD TO COMMISSION - "FEC fiercely debates Russian election interference," by Campaign Pro's Maggie Severns: "The FEC held an intense debate Thursday about how to handle Russia's interference in the 2016 election, but Republican commissioners concerned with jumping into the Russia 'frenzy' urged caution as the commission proceeds. The commissioners are sharply divided on how the FEC, which is tasked with overseeing illegal foreign spending in U.S. elections, should wield its power as reports pile up that Russia worked to advance President Donald Trump's candidacy in ways that may have violated election law. Democratic Commissioner Ellen Weintraub has repeatedly urged the commission to take broad steps to gather information and begin making changes at the commission to respond to potential foreign election interference in the future." **Full story.**

Q&A - "POLITICO Pro Q&A: CO-07 Democrat Brittany Pettersen," by Campaign Pro's Elena Schneider: Full story.

DEEP IN THE HEART - "As congressional races draw big interest, Democrats still filling out statewide ticket," by Texas Tribune's Patrick Svitek: "While the congressional races are overflowing with candidates, the party remains without a number of statewide contenders - a reality that is coming into focus ahead of Republican Gov. Greg Abbott's anticipated announcement Friday that he's running for re-election. Barring any last-minute surprises, Abbott will make his second-term bid official without the presence of a serious Democratic rival. The state's Democrats are urging patience, saying they are in talks with potential Abbott challengers and other possible statewide candidates." **Full story.**

PERSONNEL MOVES - Sen. Claire McCaskill has hired David Kirby to manage her reelection campaign in Missouri. Kirby previously worked for Colorado Democrat Ken Salazar's 2004 campaign and McCaskill's 2006 campaign. Since then, he has worked as an assistant attorney general in Missouri and as a lawyer in private practice. **Full story.**

- Democratic strategists Katherine Archuleta, Tony Massaro, Amy Sanchez Raaz and Dusti Gurule have teamed up in Colorado to form Dimension Strategies, LLC, "a new political affairs full-service agency."

CODA - QUOTE OF THE DAY: "We will be voting next week." - Senate Majority Leader Mitch McConnell, on the GOP health care bill currently circulating in his chamber, via POLITICO.

TRUMP'S EPA: Agency at a crossroads -- Complete coverage

July 27, 2017

Latest News

EPA To Seek En Banc Review In Methane NSPS Delay Suit, Sources Expect

Faced with a July 27 judicial deadline to restart implementation of Obama-era methane limits for new oil and gas operations, sources expect EPA to petition the full U.S. Court of Appeals for the District of Columbia Circuit to reconsider a court panel's ruling vacating its 90-day administrative stay of key portions of the rule.

SAB Seeks More Data On Aircraft GHGs, Declines Review Of Other Policies

EPA's Science Advisory Board (SAB) is seeking more information about the science underpinning the agency's ongoing effort to craft aircraft greenhouse gas (GHG) standards to review the rule, although the board is declining review of other EPA policies because they do not meet SAB's review criteria.

Kicking Off Fuel Economy Rule Process, NHTSA Weighs Changes To MY21

The National Highway Traffic Safety Administration (NHTSA) says it is considering whether to reassess the stringency of its final fuel economy standards for model year 2021, a move that could expand the scope of an ongoing "mid-term review" of MY22-25 efficiency standards for four subsequent years and related EPA greenhouse gas limits.

Senate Democrats Eye PRIA As Vehicle To Reverse EPA Pesticide Policies

Senate Democrats are looking to reauthorization of the Pesticide Registration Improvement Act (PRIA) as a vehicle for provisions to reverse several Trump EPA pesticide policies they oppose including weakening of worker-protection standards and dropping a ban on chlorpyrifos, saying the bill should not advance without those measures.

Waste Definition Ruling Prompts Mixed Reaction, Uncertainties Over Impact

The U.S. Court of Appeals for the District of Columbia Circuit's recent ruling that vacates aspects of the Obama EPA's definition of solid waste (DSW) rule is prompting varied reaction, with the hazardous waste recycling industry concerned it

will bring new uncertainties -- particularly if environmentalists push for rehearing -- and the chemical industry saying it will encourage more recycling.

Daily Feed

Obama EPA enforcement chief joins University of Chicago

Cynthia Giles, who led the Obama EPA's enforcement office, is joining the University of Chicago as director of strategic initiatives to develop novel ways to cut pollution.

EPA slated to publish proposed repeal of CWA jurisdiction rule

The Trump EPA will publish in the July 27 *Federal Register* its proposed repeal of the Obama-era Clean Water Act jurisdiction rule, starting a 30-day comment period.

9th Circuit temporarily pauses youth climate trust suit

A three-judge panel says it will issue a separate order fully addressing the Trump administration's rare request to pause a district court proceeding before that court has issued a final ruling.

Ewire: A daily news roundup

EPA Administrator Scott Pruitt's frequent travel to his home state of Oklahoma prompts criticism from a top Senate Democrat and former Obama agency chief.

Corps downplays impact of CWA rule repeal on 'adjacency' suit

The Corps is saying its arguments on CWA jurisdiction should stand even as it prepares to withdraw the 2015 rule defining which waters are subject to the law.

AIR
Ceiling Fan Efficiency Standards
AIR

Notice of the Department of Energy, Office of Energy Efficiency and Renewable Energy, announces the completion of a review and confirmation of the effective date for a Jan. 19, 2017, final rule (82 FR 6826) that amends regulations under 10 CFR 430.32 to revise the energy conservation standards for ceiling fans. The rule establishes standards expressed as the minimum allowable airflow efficiency in terms of cubic feet per minute per watt for each product class as a function of ceiling fan diameter in inches. The rule also adds several related definitions and specifies a compliance date of Jan. 21, 2020. The agency previously delayed the effective date on two occasions to allow it to conduct a substantive review of the rule. On Jan. 31, 2017 (82 FR 8806), the DOE delayed the effective date of the rule until March 21, 2017, in response to a presidential memorandum establishing a regulatory freeze. The current action confirms a March 21, 2017, final rule (82 FR 14427), without change, which established an effective date of Sept. 30, 2017. GENERAL ENVIRONMENT AND SAFETY
CAFTA-DR Trade Agreement/Environmental Affairs Council Meeting
GENERAL ENVIRONMENT AND SAFETY

Notice of the Department of State and the Office of the U.S. Trade Representative announces the 11th meeting of the Environmental Affairs Council representing parties to the Dominican Republic-Central America-U.S. Free Trade Agreement (CAFTA-DR). The agenda includes presentations and discussions regarding the implementation and outcomes of Chapter 17 (Environment) of the agreement and a presentation from the CAFTA-DR secretariat for environmental matters. The meeting is scheduled for June 21-22, 2017, in San José, Costa Rica.

Comments are due June 8, 2017. Contact: Neal Morris, Department of State, Office of Environmental Quality and Transboundary Issues; 202-647-9312; MorrisND@state.gov

82 FR 23973 (05/24/2017)

Regulatory Update

GENERAL ENVIRONMENT AND SAFETY
West Virginia/Rhodes Storage Field Complex and Skin Creek Storage Field
GENERAL ENVIRONMENT AND SAFETY

Notice of the Federal Energy Regulatory Commission announces the filing of a prior notice request by Equitrans LP, of Pittsburgh, for authorization to modify Storage Well 8217 at the Rhodes Storage Field Complex and Skin Creek Storage Field in Lewis County, W.Va., and abandon in place associated natural gas storage pipeline. The proposed modification will allow Storage Well 8217 to serve as a single completion well to allow use of high-resolution casing logging tools. The agency will complete an environmental assessment or issue a notice of schedule of environmental review by Aug. 16, 2017. Protests and motions to intervene are due July 17, 2017. Contact: FERC, Office of External Affairs; 866-208-3676; FERCOnlineSupport@ferc.gov

Regulatory Update

MINING
Coal Markets Reporting System
MINING

Notice of the Department of Energy, Energy Information Administration, announces the submission of a revised information collection request to the OMB regarding the Coal Markets Reporting System. The collection gathers information concerning coal production, consumption, receipts, stocks, sales and prices. The collection consists of the Quarterly Survey of Nonelectric Sector Coal Data (EIA-3), the Annual Survey of Coal Production and Preparation (EIA-7A), and the Annual Survey of Coal Stocks and Coal Exports (EIA-8A). The collection also consists of the Emergency Coal Supply Survey (Standby) (EIA-6) and the Emergency Weekly Coal Monitoring Survey for Coal Burning Power Producers (Standby) (EIA-20). The revisions include modifications to questions, response options and instructions to Forms EIA-3, EIA-7A and EIA-8A and a requirement for Forms EIA-3 and EIA-8A to be submitted through the Energy Information Administration's Data xChange Portal. Comments are due June 23, 2017. Contact: JenAlyse Arena; DOE, Energy Information Administration; 202-586-4866; JenAlyse.Arena@eia.gov

TOXIC SUBSTANCES
Formaldehyde Emission Standards for Composite Wood Products
TOXIC SUBSTANCES

Direct final rule of the EPA amends regulations under 40 CFR 770.2, 770.3, 770.7, 770.10, 770.12, 77.015 and 770.30 to extend the compliance dates for a Dec. 12, 2016, final rule (81 FR 89674) that established formaldehyde emission standards for composite wood products and finished goods containing these products that are sold, supplied, manufactured or imported, or offered for sale in the U.S., under TSCA Title VI. The December 2016 rule set forth standards for laminated products and products made with no-added formaldehyde-based resins or ultra low-emitting formaldehyde resins and addressed testing requirements, product labeling, chain of custody documentation and recordkeeping, enforcement, import certification, and product inventory sell-through provisions. The rule also established a third-party certification program, provided procedures for the accreditation of third-party certifiers, and set forth general requirements for accreditation bodies and third-party certifiers. The current rule extends compliance dates for emission standards, recordkeeping and labeling provisions to March 22, 2018; import certification provisions to March 22, 2019; and provisions applicable to producers of laminated products to March 22, 2024. The current rule also extends the transitional period for California Air Resources Board third-party certifiers to March 22, 2019. The rule is effective July 10, 2017, unless adverse comments are received by June 8, 2017. WATER
New York/Clean Water Act Consent Decree
WATER

Notice of the Department of Justice announces a proposed consent decree in United States v. James F. Jerge Jr. (Civil No. 1:17-cv-00428), lodged on May 17, 2017, with the U.S. District Court for the Western District of New York. The consent decree resolves claims against the defendant under the Clean Water Act for alleged discharges of pollutants without a permit into waters of the U.S. and failing to comply with the terms and conditions of a permit issued by the Department of the Army. The consent decree requires the defendant to restore impacted areas, to perform mitigation and to pay a civil penalty. Comments are due June 23, 2017. Driving the Day

Good Sunday morning. BREAKING LATE LAST NIGHT -- JOHN MCCAIN OUT DUE TO EYE SURGERY -- STATEMENT FROM SENATE MAJORITY LEADER MITCH MCCONNELL: "Elaine and I, along with the entire Senate family, wish John the very best and wish him a speedy recovery. There are few people tougher than my friend John McCain, and I know he'll be back with us soon. Our thoughts are with Cindy and his family, his staff, and the people of Arizona.

"While John is recovering, the Senate will continue our work on legislative items and nominations, and will defer consideration of the Better Care Act."

-- BURGESS EVERETT and **SEUNG MIN KIM** , who broke the news of the delay: "The Senate may consider the Federal Drug Administration user fees extension and lower level nominees while McCain is out. The chamber may also try to raise the debt limit. McConnell canceled two weeks of recess last week as GOP senators grew antsy at the swelling workload. That leaves the Kentucky Republican the option of bringing up the health care vote in August if McCain is able to return." http://politi.co/2tXZAim

WHAT DOES THE DELAY MEAN? Who knows for sure, but here are some factors in play: it will give the White House and Senate leaders more time to lobby undecided lawmakers and governors to support the bill, but opponents are also on the march, and they could also benefit from the delay. Right now, there's no real sign of momentum. Yes, senators are holding their fire for now, but if this bill is going to pass, people need to start getting to yes.

SINCE FRIDAY NIGHT, the president of the United States has tweeted five times about

the U.S. Women's Open at a golf club that bears his name.

-- TWEETS THIS MORNING: at 6:35 a.m.: "HillaryClinton can illegally get the questions to the Debate & delete 33,000 emails but my son Don is being scorned by the Fake News Media?" ... **at 6:51 a.m.:** "Thank you to all of the supporters, who far out-numbered the protesters, yesterday at the Women's U.S. Open. Very cool!" ... **at 7:04 a.m.:** "Thank you to former campaign adviser Michael Caputo for saying so powerfully that there was no Russian collusion in our winning campaign." ... **at 7:15 a.m.:** "With all of its phony unnamed sources & highly slanted & even fraudulent reporting, #Fake News is DISTORTING DEMOCRACY in our country!" ... **at 10:10 a.m.:** "The ABC/Washington Post Poll, even though almost 40% is not bad at this time, was just about the most inaccurate poll around election time!"

ALSO: How is a 36 percent approval rating "not bad at this time?"

WHAT THE PRESIDENT DOESN'T WANT TO READ -- "Poll finds Trump's standing weakened since springtime," by WaPo's Scott Clement and Dan Balz: "Approaching six months in office, Trump's overall approval rating has dropped to 36 percent from 42 percent in April. His disapproval rating has risen five points to 58 percent. Overall, 48 percent say they 'disapprove strongly' of Trump's performance in office, a level never reached by former presidents Bill Clinton and Barack Obama and reached only in the second term of George W. Bush in Post-ABC polling." http://wapo.st/2tX7lXd

THINGS THE PRESIDENT HAS NOT TWEETED ABOUT IN THE LAST FEW DAYS: Wishing John McCain well after he announced he'd have surgery for a blood clot in his eye. Urging senators to raise the debt ceiling or pass the health care bill. Urging House Republicans to pass the air-traffic control overhaul bill, which is in big trouble.

-- "Trump becomes the star of the show at Bedminster," by Andrew Restuccia in Bedminster, New Jersey: http://politi.co/2uvijEU

TRUMP's WEEK AHEAD -- Monday: Trump meets with VP Mike Pence at 12:30 p.m. for lunch, then meets with Secretary of State Rex Tillerson at 1:30 p.m., and then he has a "Made in America product showcase" at 3 p.m. ...**Tuesday:** Trump meets with H.R. McMaster at 11 a.m. ... **Wednesday** : Trump has "Made in America certification event." ... **Thursday:** Trump makes a "Made in America announcement." ... **Saturday:** Trump attends the commissioning of the Gerald R. Ford CVN 78, a new aircraft carrier. The aircraft carrier is in Norfolk.

NYT's JONATHAN MARTIN and **ALEX BURNS: "Governors Give Chilly Reception to Health Bill Push":** "At a private luncheon for governors on Saturday, three Democratic governors called for the group to release some sort of joint, bipartisan statement on the health bill. Gov. Dannel P. Malloy of Connecticut proposed a letter formally opposing the Senate legislation, while Gov. Terry McAuliffe of Virginia, the chairman of the National Governors Association, and Gov. Steve Bullock of Montana suggested a more restrained approach that would communicate their unease with the

measure. But a handful of Republican governors opposed making a collective statement, noting there was no broad agreement about the nature of their opposition. 'It's important if anything goes out under the name of the N.G.A. that it has the endorsement of members certainly, and I think there was not consensus on that,' Gov. Matt Bevin of Kentucky, a Republican who voiced his discomfort with a joint communiqué during the lunch, said after the session." http://nyti.ms/2tXJgQe

THE DAWSEY DOWNLOAD -- At a recent Capitol Hill meeting of Senate communicators on health care messaging, a Trump press aide said the White House would also be focusing on its "energy week." The comment drew private guffaws, according to three people familiar with it. "What the hell is energy week?" one person familiar with the comment mused afterwards.

As the debate on one of the president's core agenda items has unfolded, some Hill aides and advisers have grown increasingly frustrated -- and even amazed -- that Trump hasn't used much besides his Twitter and a radio address to talk health care. No rallies on the topic. Few public comments. Two foreign trips in three weeks. Non-stop scandals and revelations. Fights with TV anchors on Twitter. "Does he just watch Fox all day?" one Hill aide asked.

And they have noted that Trump often uses "they" when referring to Republicans, almost like he's not even a part of the discussion. One person close to Senate Majority Leader Mitch McConnell noted how aggressive President Obama was in passing his health care law and added: "His people keep saying he's going to do more, or travel, or this or that, but it never seems to materialize."

What emerges from conversations with West Wing aides is that many, outside of Vice President Mike Pence, legislative affairs head Marc Short and a few others, have moved on. Many in the West Wing say they don't see a way for the bill to succeed -- and some privately note it "isn't the most popular thing," in the words of one. So while Short and his team have continued to visit the Hill every day, and Medicaid administrator Seema Verma has tried to woo weary senators, the White House often doesn't seem like one fighting for a signature policy item that could wide-ranging ramifications on the rest of its agenda.

YA CAN'T MAKE IT UP -- Cyndi Lauper brought Sen. Susan Collins (R-Maine) on stage Friday night in Bangor. http://bit.ly/2t4rCYg

THE MAN IN THE ROOM -- NYT A1, "Soviet Veteran Who Met With Trump Jr. Is a Master of the Dark Arts," by Andrew Higgins and Andrew E. Kramer in Moscow:"Rinat Akhmetshin, the Russian-American lobbyist who met with Donald Trump Jr. at Trump Tower in June 2016, had one consistent message for the journalists who met him over the years at the luxury hotels where he stayed in Moscow, London and Paris, or at his home on a leafy street in Washington: Never use email to convey information that needed to be kept secret. While not, he insisted, an expert in the technical aspects of hacking nor, a spy, Mr. Akhmetshin talked openly about how he had worked with a

counterintelligence unit while serving with the Red Army after its 1979 invasion of Afghanistan and how easy it was to find tech-savvy professionals ready and able to plunder just about any email account. ...

"Mr. Akhmetshin, a gregarious, fast-talking man with a sharp sense of humor, was a skilled practitioner in the muscular Russian version of what in American politics is known as opposition research. From his base in Washington, Mr. Akhmetshin has been hired by an ever-changing roster of clients, often Russians, to burnish their image and blacken those of their rivals. Some clients were close to the Kremlin. Others were its bitter foes." http://nyti.ms/2tfCs1z

-- "Here Are the RNC's Talking Points on Donald Trump Jr.," by The Daily Beast's Betsy Woodruff: "The [RNC] is directing its allied TV talking heads to emphasize that even though his son's meeting with a Kremlin-linked Russian attorney was harmless, President Donald Trump's attorney says the president didn't know about it. That's according to 'Pundit Prep,' a semi-regular email blast the RNC's communications team sends out to friendly TV and radio commentators ... The Daily Beast reviewed the email, which provides insight into how the GOP is gearing up for questions from the media on the president's son. 'Don Jr. has been transparent about the logistics and substance of the meeting,' one of the talking points says. 'He has released emails pertaining to the matter without being asked, and he has stated that he will happily cooperate with Congressional Committees should they need to investigate the matter further.'" http://thebea.st/2uxhlIh

-- "Trump campaign paid $50,000 to Trump Jr.'s attorney," by Maggie Severns: "President Donald Trump appears to have used more than half a million dollars in campaign funds to pay legal fees over the last three months, new campaign filings show. The spending included $50,000 in legal expenses to lawyer Alan Futerfas, who is now representing Donald Trump Jr., on June 27th. Trump disclosed $677,826 in payments described in filings as 'legal consulting' between April and June of 2017 - a significant chunk of the $4.37 million his campaign spent overall - as the number and velocity of investigations into potential Russian interference in the 2016 election increased. ...

"Trump's campaign and two affiliated joint fundraising committees disclosed raising $13.9 million on Saturday. ... The Trump campaign made the payment to Futerfas two weeks before The New York Times reported an exchange between Trump Jr. and a Russian official about arranging a meeting to discuss damaging research on the Clinton campaign. Futerfas' involvement was first reported by Reuters on July 10th." http://politi.co/2tXUx1j

WHAT AMERICA IS READING -- THE DESERT SUN (Palm Springs, California):"GOP PUSHES TRUMP ON NATIONAL MONUMENTS" http://bit.ly/2us1OIQ ...**THE MERCURY NEWS** (San Jose): "San Jose cat killer gets max sentence: Inability to prove sexual abuse of animals means man will serve time in county jail" http://bit.ly/2us01U9 ... **DENVER POST:** "Premiums could spike: State health insurers aim for an average of

a 27 percent increase" http://bit.ly/2v5NTq3 ...

... **CHICAGO TRIBUNE:** "Obama center adds Exelon to top-donors list ... Microsoft also contributing over $1M" http://bit.ly/2uxg18w ... **LAS VEGAS REVIEW-JOURNAL:** "Revised health bill near collapse: Heller could cast the deciding vote" http://bit.ly/2v67B4K ... **AUSTIN AMERICAN-STATESMAN:** "Texas leads in farms bought by foreigners" http://bit.ly/2tfXVaA

FOR YOUR RADAR -- NYT A1, "Iran Dominates in Iraq After U.S. 'Handed the Country Over,'" by Tim Arango: "Walk into almost any market in Iraq and the shelves are filled with goods from Iran - milk, yogurt, chicken. Turn on the television and channel after channel broadcasts programs sympathetic to Iran. A new building goes up? It is likely that the cement and bricks came from Iran. And when bored young Iraqi men take pills to get high, the illicit drugs are likely to have been smuggled across the porous Iranian border. And that's not even the half of it. Across the country, Iranian-sponsored militias are hard at work establishing a corridor to move men and guns to proxy forces in Syria and Lebanon. And in the halls of power in Baghdad, even the most senior Iraqi cabinet officials have been blessed, or bounced out, by Iran's leadership." http://nyti.ms/2v6dcrX

POLITICO MAGAZINE: "What Politicos Are Reading This Summer: Recommendations from 20 of the most interesting people we know" including Sen. John McCain, Leon Panetta, Jill Abramson, Gail Sheehy, David Petraeus, Bill Gates, Paul Ryan, Kori Schake, Jonathan Chait, Hugh Hewitt, Lawrence Tribe, Andrew Sullivan, Mitch Landrieu. http://politi.co/2tXusRI

****** **A message from BMA: HEALTH CARE POLICY ALERT:** We can all agree that high need, high cost patients deserve the right care. And with Medicare Advantage, seniors and people with disabilities are getting the high-value care they need through flexible benefits and specialized care. Learn more: http://www.bettermedicarealliance.org/special-needs-plans ******

SUNDAY BEST -- CHUCK TODD speaks with **SENATE MAJORITY WHIP JOHN CORNYN (R-TEXAS)** on **NBC'S "MEET THE PRESS": TODD:** "One of the things you were criticizing the Democrats back in 2010 during health care, you said the following, 'Americans have already seen and rejected the way Democrats bought their way to 60 votes in the Senate including political payoffs such as the Louisiana Purchase, the Cornhusker Kickback and billions of dollars in Gatorade.' Senator, as you know, this revised bill had a special carve to for Alaska, had money that senators from West Virginia and Ohio wanted for the opioid fund. The point is somebody from the other side of the aisle could easily say you guys are doing the same thing. You have redesigned the bill specifically to get wavering votes. You accept that criticism?"

CORNYN: "There's no state specific relief here. But what there is an attempt to try to accommodate the concerns of those states that expanded Medicaid under Obamacare and those that did not. And that's the hard task ahead of us. But I believe we're making

great progress as a result of the good work of the administration, particularly CMS administrator Seema Verma and Dr. Price. People are now understanding the benefits of this better care plan in terms of bringing down the price of health care and making it more available to more people as they can choose what they want at a price they can afford."

TODD: "If this health care bill does not pass, what's next? Some say it was a threat, but Senator McConnell has said it means you're going to have to work with the Democrats. Is that what happens?" **CORNYN** : "Well, if we're not successful now I assume we'll keep trying. But at some point if Democrats won't participate in the process then we're going to have to come up with a different plan. But what I don't want to happen is for us to just do a multi-billion dollar bailout of insurance companies without any reforms."

-- JOHN DICKERSON speaks to **SEN. RAND PAUL (R-KY.)** on **CBS's "FACE THE NATION"** -- **DICKERSON:** "The bill has been delayed because of Senator McCain's surgery on Friday. How will that change the way this goes forward?" **PAUL:** "You know, I think the longer the bill's out there, the more conservative Republicans are going to discover that it's not repeal. And the more that everybody's going to discover that it keeps the fundamental flaw of Obamacare."

-- FOX NEWS'S CHRIS WALLACE also spoke with **SEN. RAND PAUL: WALLACE:** "Whenever it comes up, whenever Sen. McCain is in good health and comes back, does Senate Majority Leader McConnell have the votes to pass this revised bill?" **PAUL:** "You know, I don't think right now he does, and the real problem we have is you know we won four elections on repealing Obamacare but this bill keeps most of the Obamacare taxes, keeps most of the regulations, keeps most of the subsidies and creates something that Republicans have never been for, and that's a giant insurance bailout super fund. That's not a Republican idea to give taxpayer money to a private industry that already makes $15 billion in profit."

-- JON KARL spoke with **JAY SEKULOW** on **ABC'S "THIS WEEK": KARL:** "Sen. Warner says that he is concerned the president will issue pardons to the key figures in this investigation. Will the president rule out giving pardons to people like Michael Flynn, Paul Manafort, any others that are in this investigation." **SEKULOW:** "I have not had that conversation with the president about any of that and I wouldn't share it if I did because it would be attorney-client privilege. But I've not had that conversation with the president on that and what he could or could not do. He can pardon individuals, of course that's because the founders of our country put that in the United States Constitution -- the power of pardon. But I have not had those conversations, so I could not speculate on that."

KARL: "So pardoning the key figures in this investigation is not off the table." **SEKULOW:** "No, I can't say that. The president told me in conversations that I've had with him about a variety of issues. But we've not talked about pardoning individuals in this at all. So you're asking me to speculate on something I cannot speculate on."

JAKE TAPPER speaks with **SEN. MARK WARNER (D-VA.)** on **CNN'S "STATE OF THE UNION": TAPPER:** "Do you think Kushner's security clearance should be suspended?" **WARNER:** "Listen, I think -- I'm trying to give all these people the benefit of the doubt until I get a chance to talk to them, until we get a chance to interview them. But it's very bothersome to me that Jared Kushner has forgotten not once, not twice, but three times to put down this information. But, again, we see this pattern. General Flynn failed to put down information. He got fired.

"The attorney general failed to disclose information. He had to recuse himself. We had examples that were put out about what the firing of Jim Comey was about. Then the president himself said he fired Jim Comey because of the Russia thing. So, the level of credibility from the senior levels of this administration really is suspect, and I think suspect regardless of which political party you belong to."

--JOHN DICKERSON also spoke with **SEN. MARK WARNER (D-Va.) - DICKERSON:** "Another area that it appears you're interested in is the data operation of the Trump campaign, which Jared Kushner was overseeing. Explain that. And is that, again, another extrapolation? Or do you have some evidence for that inquiry?" **WARNER:** "Well, we do know that there was a series of Russian trolls, paid individuals, who worked for the Russian services that were trying to interfere and put fake news out. We also know they created what's called bots. In effect, Internet robots that actually could interfere as well. The question we have is: Did they somehow get information from some of the Trump campaign efforts to target that interference? We don't know that for sure. But what we do want to know is - I'd like to talk to the folks with Cambridge Analytica. I'd like to talk to some of the folks from the Trump digital campaign."

Playbook Reads

PHOTO DU JOUR: President Donald Trump waves to spectators as he watches the third round of the U.S. Women's Open Golf tournament from his observation booth on July 15 in Bedminster, New Jersey. | Seth Wenig/AP Photo

COMING ATTRACTIONS -- "Comey's Writing a Book, and Publishers Are Eager to Pay Big Money for It," by NYT's Alexandra Alter: "James B. Comey, the former F.B.I. director who was fired in May by President Trump, is writing a book about his experience in public service, including his tumultuous and brief tenure in the Trump administration. Mr. Comey has been meeting with editors and publishers in New York in recent days, and is being represented by Keith Urbahn and Matt Latimer, partners at the literary agency Javelin. The book is expected to go to auction this coming week, and all the major publishing houses have expressed keen interest, Mr. Latimer said." http://nyti.ms/2vqF3SS

BUSINESS BURST -- **"New Jets Threaten Airbus and Boeing Duopoly:** Competitors

from China, Russia and Canada are moving into the so-called single-aisle air market," by WSJ's Robert Wall in Le Bourget, France: "Boeing and Airbus suddenly have competition. For nearly two decades, the two have had the global market for big commercial jets largely to themselves. That is all changing, with three new competitors-from China, Russia and Canada-rolling out their own entrees into the so-called single-aisle market. Orders for these new jets are few for now, and the Russian and Chinese makers won't deliver planes for years. The jury is also still out on how popular they will ever be. Boeing and Airbus, meanwhile, are selling plenty of their own, tried and tested work horses in the category." http://on.wsj.com/2tXmqrT

BEYOND THE BELTWAY -- "Darrell Issa was Obama's toughest critic. Here's why he's suddenly sounding like a moderate," by L.A. Times' Sarah D. Wire: "The hundreds of protesters who show up weekly to wave signs outside Rep. Darrell Issa's office in a drab office park in Vista, Calif., have written a song for him to the tune of 'Oh! Susanna.' 'Darrell Issa, you've got to oversee. You need to check-and-balance [Trump] before it's World War III,' they sing toward the tinted windows of the building. As chairman of the committee charged with overseeing the executive branch, Issa was once known as President Obama's toughest critic.

"Now the richest man in Congress has found himself with protesters at his door, no committee to lead, and a tough race expected in 2018. It has forced the nine-term congressman to walk a shaky line, reassuring his conservative base that he's not moderating his positions while showing the growing number of independents and Democrats in his district that he's not as partisan as people think." http://lat.ms/2tX1UHW

NEW DETAILS EMERGING -- "GOP donor Peter W. Smith's final day: 'It seemed like he had a lot on his mind'," by L.A. Times' Katherine Skiba, David Heinzmann and Todd Lighty: "Months after he said he'd started to quietly work to contact Russian hackers to look for a cache of Hillary Clinton's emails, Peter W. Smith called the Wall Street Journal on May 4 to explain. The next day, the longtime Republican operative and donor checked into a hotel near the Mayo Clinic, far from his Chicago-area home, police records show.

"Smith, 81, would kill himself there 10 days later. The detailed notes he left behind spoke to failing health since January. Also in January, his son David entered a state prison following a conviction on aggravated criminal sexual abuse charges, state records show. The notes also cite an expiring $5 million life insurance policy, and property records show he sold his Gold Coast condo last year amid a foreclosure threat." http://lat.ms/2ux0ipJ

****** **A message from BMA: MEDICARE ADVANTAGE TAILORED CARE MEETS THE NEED OF HIGH COST, HIGH NEED CARE SENIORS:** 18.5 million seniors and people with disabilities choose Medicare Advantage for one reason: it gives them the affordable, robust, and individualized health care they need. And with health needs in this country becoming more complex, it's clear that innovative, holistic solutions are

required.

Under Medicare Advantage, Special Needs Plans (SNPs) specializes care for the health care system's fastest growing and most costly and complex care beneficiaries - frail, disabled, and chronically-ill Medicare beneficiaries. SNPs tailor benefits, provider networks, and prescription drug coverage to best meet the needs of the beneficiaries they serve. In addition to providing Traditional Medicare benefits, SNPs also provide reduced cost sharing and enhanced benefits related social services, wellness and home care. SNPs are designed to address complex conditions by providing better access to specialized care for those who need it most. Learn more: http://www.bettermedicarealliance.org/special-needs-plans ******

BONUS GREAT WEEKEND READS, curated by Daniel Lippman, filing from Great Barrington, Massachusetts:

-- "Modern Economists: The Inept Firefighters' Club," by Dean Baker in Democracy Journal: "Suppose that our fire department was staffed with out-of-shape incompetents. That would be really bad news, but it wouldn't be obvious most of the time because we don't often see major fires. The inadequacy of the fire department would become apparent only when a major fire hit and we were left with a vast amount of unnecessary death and destruction. This is essentially the story of modern economics." http://bit.ly/2tqeXhz

-- "The Laws of Attraction," by Wendy Paris on the cover of July's Psychology Today: "Who we desire is driven by powerful evolutionary forces, but while most of us are drawn to looks first (whether or not we admit it), human attraction is far more complex than it appears at first sight." http://bit.ly/2tW2uUF

-- "What happened when Walmart left," by The Guardian's Ed Pilkington: "In West Virginia, the people of McDowell County can't get jobs, and recently lost their biggest employer - the local Walmart store. They describe the devastating loss of jobs, community and access to fresh food." http://bit.ly/2vnKrWR

-- "Balancing Act," by Luiza Ch. Savage on the cover of the July issue of Delta Sky magazine: "Canadian Prime Minister Justin Trudeau is busy running his country at home and abroad -- all while being a father, an active outdoorsman and the son of a former prime minister." http://bit.ly/2vnCTne ... ***The cover*** http://bit.ly/2vnCtNN

-- "Trump's Russian Laundromat," by Craig Unger on the cover of TNR: "Whether Trump knew it or not, Russian mobsters and corrupt oligarchs used his properties not only to launder vast sums of money from extortion, drugs, gambling, and racketeering, but even as a base of operations for their criminal activities. In the process, they propped up Trump's business and enabled him to reinvent his image. Without the Russian mafia, it is fair to say, Donald Trump would not be president of the United States." http://bit.ly/2t1C2YH

-- **"Next-Door Strangers: The Crisis of Urban Anonymity,"** by Marc J. Dunkelman in the University of Virginia's Hedgehog Review: "Today's reinvigorated cities boast much of what made urban America so vibrant during its heyday. The cultural amenities, the coffeehouse culture, the vast diversity, and even the convenience of public transit have emerged in places for which, in the mid-1970s, conventional wisdom predicted continued decline. But one feature distinguishes today's urban meccas from those of eras past. The core sociological building block that Jane Jacobs celebrated in 'The Death and Life of Great American Cities'-the Dunbarian village instantiated in an urban neighborhood-has all but collapsed." http://bit.ly/2upoXMm

-- **"The Night the Lights Went Out on Broadway,"** by Neil Demause in the Village Voice: "Forty years ago, a blackout plunged New York into what seemed like a failing city's final moment of chaos. Here's how it really looked." http://bit.ly/2uqqC44

--**"Did Brits Kill New York City Cops to Get U.S. into WWII?"** by Marc Wortman in The Daily Beast: "For 77 years the culprits behind a July 4, 1940, terror bombing at the New York World's Fair have never been found. Is this the answer?" http://thebea.st/2t4yzZj

-- **"Of money and morals,"** by Alex Mayyasi in Aeon Magazine: "Today, a banker listening to a theologian seems like a curiosity, a category error. But for most of history, this kind of dialogue was the norm. Hundreds of years ago, when modern finance arose in Europe, money lenders moderated their behaviour in response to debates among the clergy about how to apply the Bible's teachings to an increasingly complex economy." http://bit.ly/2v2QkcV

-- **"Burn Me Like a Forest Fire,"** by Leigh Cowart in Hazlitt: "Just because a forest is built to burn, or needs to burn, it doesn't mean the process is benign. I think a lot about those forests burning. I wonder if the trees are screaming. I wonder where the birds go. I wonder how on earth anything could ever escape an inferno, never mind find within the wreckage the raw materials of rebuilding. I think about my marriage. I know now that I made my home in a volatile forest." http://bit.ly/2vnBBsv

-- **"A Kingdom for a Horse,"** by Will Boast in VQR: "The most decorated athlete in all of Kazakhstan is a five-year-old Mongolian horse named Lazer. ... In the ancient nomadic game known here as kokpar (roughly, 'goat grabbing'), Lazer is a champion many times over, with eight Kazakh National Games and two Central Asian Games titles to his name. Kokpar's premise is simple: Two teams compete over a headless, freshly slaughtered goat, wrestling control back and forth in an attempt to score by flinging it into the opponent's goal." http://bit.ly/2tqFuve

-- **"Nuclear plant shutdowns a crisis for small towns across the USA,"** by The Journal News' Thomas Zambito: http://lohud.us/2vgGZxb

-- **"The Return of Monopoly,"** by Matt Stoller in TNR: "With Amazon on the rise and a business tycoon in the White House, can a new generation of Democrats return the

party to its trust-busting roots?" http://bit.ly/2tq9jMz

-- "The Louisiana Environmental Apocalypse Road Trip," by Justin Nobel in Longreads: "Louisiana serves as a terrifying example of what can become of a state that shortchanges science and environmental regulations to boost industry and infrastructure." http://bit.ly/2t1sGvT

-- "A New Era of Competition," by Christopher Walker in International Reports: "The growing threat from authoritarian internationalism as a global challenge to democracy." http://bit.ly/2unxOy8

Playbookers

SPOTTED IN NANTUCKET: Greta Van Susteren yesterday afternoon, strolling on Federal Street.

SPOTTED IN MARTHA'S VINEYARD at an all new DSCC "Legacy Circle" members lunch yesterday at the home of Christopher Celeste and Nancy Kramer: Phil Munger, Tony Podesta, Heather Podesta, Nancy and Harold Zirkin, Larry Parks, Robert Roche, Neil Simon, Sens. Gary Peters (D-Mich.), Heidi Heitkamp (D-N.D.), Chris Van Hollen (D-Md.), Joe Donnelly (D-Ind.), Debbie Stabenow (D-Mich.), Al Franken (D-Minn.) and Amy Klobuchar (D-Minn.). On the menu: Salmon and steak, corn, cherry tomatoes orzo with asparagus and Caesar salad. To be part of the "Legacy Circle," donors have to max out to the DSCC five years in a row.

TRANSITIONS -- Lila Nieves-Lee is starting on Monday at USTR as their new director of congressional affairs. She was previously the Trade LA for House Ways and Means. ... **Mike Naple,** a former Obama HHS communications director, is now strategic communications director at Smoot Tewes Group. ... **William Murray** is joining R Street Institute as federal energy policy manager. He was editor of RealClearPolitics' energy page for the last two years.

ENGAGED - Natalie Andrews, social media editor and Congress reporter at the Wall Street Journal, got engaged on Friday to **Christopher Silva,** who is moving to Washington in a few weeks to be the director of housing at AU. Silva is also pursuing a doctorate in higher education. He asked her: "Will you marry me?" She replied: "Are you serious?! I mean, yes!" He responded: "Yes!" Then she said: "Then, YES!" The couple met and dated at Utah State in 2004 and reconnected last year when he messaged her on Facebook. He proposed on Utah State's campus with a titanium ring he made himself. He learned how to make the rings from his grandfather in Brazil and then went to a Makers Lab in Denver to actually make the ring. It took two months. ***Pics*** http://bit.ly/2ttJs6t ... http://bit.ly/2tYjwlf ... ***The handmade rings*** http://bit.ly/2uwFizq

WEEKEND WEDDING - OBAMA ALUMNI: "Leslie Jones, Benjamin Flatgard" - N.Y.

Times: "The bride, 31 ...is the vice president for museum affairs and the decorative arts curator at Cheekwood Estate and Gardens, a museum and botanical garden in Nashville. She graduated from Miami University of Ohio, received a master's degree in the history of decorative arts from the Smithsonian Institution, and another master's, in the appraisal of fine and decorative art, from N.Y.U. ... The groom, 32, is a cybersecurity consultant in Nashville, and a fellow with the Atlantic Council, a research and policy center on national affairs in Washington. [He previously served as the director of cybersecurity policy at the National Security Council from 2015 to Jan. 2017 and is also a Treasury and Commerce alum.] He graduated from the University of Edinburgh. ... The couple met in 2014 through the dating app Hinge." ***With pic*** http://nyti.ms/2vqqKxN

BIRTHDAYS: Amanda Henneberg, COO of Cavalry ... Neil Chatterjee, picked by President Trump to be a FERC commissioner, is 4-0 ... Jeremy Martin is 4-5 (hat tip: little brother Jonathan) ... Florida

GENERAL ENVIRONMENT AND SAFETY
Environmental Resource Permitting/Northwest Florida Water Management District
Florida GENERAL ENVIRONMENT AND SAFETY

Notice of the Department of Environmental Protection announces a workshop on proposed amendments to regulations under FAC 62-330.010 through .635 (nonconsecutive) and the Applicant's Handbook Volumes I and II regarding environmental resource permitting within the Northwest Florida Water Management District. The amendments would clarify regulatory processes and modify the application and notice form. The amendments also would provide exemptions for certain de minimis activities and remove duplicate submittal requirements. The workshop is scheduled for July 25, 2017, via webinar. Contact: Heather Mason; DEP; 850-245-8480; Heather.Mason@dep.state.fl.us

—Florida Administrative Weekly (07/03/2017)

Regulatory Update

WATER
Innovative Nutrient and Sediment Reduction and Conservation Pilot Project Program
Florida WATER

Final rule of the Department of Environmental Protection adopts regulations under FAC 62-570.100, .200, and .300 to establish procedures for participation in the Innovative Nutrient and Sediment Reduction and Conservation Pilot Project program. The program funds pilot projects to test the effectiveness of innovative or existing nutrient reduction or water conservation technologies, programs, or practices designed to minimize nutrient pollution or restore flows in state bodies of water. The rule also sets forth provisions concerning definitions, general program requirements, and project selection criteria. The rule is effective July 17, 2017. Contact: Kate Merchant; DEP, Division of Water Restoration Assistance; 850-245-2952

—Florida Administrative Weekly (07/05/2017)

Regulatory Update

WATER
State Revolving Fund Program for Drinking Water Facilities
Florida WATER

Final rule of the Department of Environmental Protection amends regulations under FAC 62-552.200 through .800 (nonconsecutive) and repeals regulations under FAC 62-552.350 through .900 (nonconsecutive) regarding the Drinking Water State Revolving Fund Program. The rule provides principal forgiveness funding to more communities to align with standards under FAC 62-503 concerning the Clean Water State Revolving Fund. The rule also adds exceptions to program requirements and establishes requirements for the department to perform an environmental review for each project to be funded. In addition, the rule revises construction and procurement requirements; general program information; and provisions concerning loan applications and agreements, planning, design, and required audits. Finally, the rule removes provisions concerning preconstruction loans and grants, program administration costs, project lists, priority determinations, program forms, and project allowances. The rule is effective July 17, 2017. Contact: Paul Brandl; DEP; 850-245-2986; paul.brandl@dep.state.fl.us

Regulatory Update

New Hampshire

WATER
Drinking Water Programs/Grants for Public Water Systems
New Hampshire WATER

Proposed rule of the Department of Environmental Services amends regulations under NHAR Env-Dw 1002 regarding the Water Supply Land Protection Grant Program. The rule provides that match property does not have to be located in the same source water protection area as the grant property or in a protection area for another source serving the same grantee. The rule also updates the scoring system to address applicants that already have authorized funds and specifies that the history of land use runs from the present back to the property's first developed use or 1940, whichever is earlier. In addition, the rule requires annual stewardship reports to include a map or sketch and updates required contact information. A hearing is scheduled for July 27, 2017, in Concord. Comments are due Aug. 11, 2017. Contact: Holly Green; DES; 603-271-3114; Holly.Green@des.nh.gov

Regulatory Update

OIL AND GAS INDUSTRY
Gas Companies–Safety
Washington OIL AND GAS INDUSTRY

Notice of the Utilities and Transportation Commission announces the withdrawal of a March 2, 2016, notice of intent to amend regulations under WAC 480-93-240 regarding annual pipeline safety fees for gas companies. The rule would have addressed the methodology for allocating the annual overhead charge, accounting for penalty money collected under the state dig law, and consideration of federal fund proceeds received that are different than projected. The rule also

would have provided for assessment of an annual fee for jurisdictional master meter operators. The withdrawal is dated June 9, 2017. Contact: Alan Rathbun; UTC; 360-664-1219

Subject: BREAKING NEWS Gillespie wins Virginia GOP gubernatorial primary

Ed Gillespie has narrowly won the Republican nomination for governor in Virginia, besting Prince William County Supervisor Corey Stewart by a slim and closer than expected margin Tuesday night.

Gillespie had 43.7 percent of the vote when the Associated Press called the GOP primary with 99 percent of precincts reporting. Stewart had 42.6 percent, while state Sen. Frank Wagner had 13.7 percent.

Gillespie will face Lt. Gov. Ralph Northam in the November general election. Northam defeated former Rep. Tom Perriello in the Democratic primary earlier Tuesday night. See http://www.politico.com/story/2017/06/13/virginia-governor-northam-perriello-gillespie-stewart-239517 for full primary coverage.

Reuters

The election that was Theresa May's Waterloo

Desmond Lachman | The Hill

It is said that those whom the gods wish to destroy they first make mad. This seems to be all too true of Theresa May. Without any real reason, she took a big gamble by calling a snap election three years ahead of schedule. Then, she managed to make every mistake in the book in fighting that election. In the process, she blew what had appeared to have been an impregnable lead in the polls for her Conservative Party.

Twenty20

How the private sector can lead delivery and

payment reform

James C. Capretta | Health Affairs

Employers and other private purchasers of medical services have played an important role in spurring health care delivery system and payment reform. The development of managed care has been accelerated by federal and state policies over the years but originated with private sector purchasers. These models are now being used to improve quality and lower costs in Medicare and Medicaid.

Subject: Pruitt meets with health groups on air issues

By Alex Guillén

06/19/2017 01:40 PM EDT

EPA Administrator Scott Pruitt will meet today with utility executives and representatives from several public health groups, an agency spokeswoman said.

"Administrator Pruitt is meeting with utility representatives today, and he also met with representatives from the American Lung Association, American Public Health Association, Alliance of Nurses for Healthy Environments, and other members of the Health Partners Group," EPA spokeswoman Amy Graham said in an email.

Pruitt and the health groups discussed clean air issues, according to EPA.

POLITICO reported earlier today that Pruitt meets this afternoon with at least 10 utility CEOs to discuss next steps on the Clean Power Plan, and potentially other topics.

Subject: Today on Climate Beat

July 24, 2017

Today on Climate Beat . . .

. . . we went on the road, reporting that EPA Administrator Scott Pruitt has spent half of his time on the job so far in his home state of Oklahoma rather than at agency headquarters or any other EPA office, underscoring concerns that he is a "short-timer" at the agency, though an agency spokesperson says he is "not running for elected office."

Out on the wires, a prominent energy analyst is pointing to the "internal contradictions" within the Trump administration's approach to electricity and energy policy, accentuated by the Energy Department's (DOE) forthcoming grid study expected to explore whether it is necessary to prop up baseload power like coal and nuclear.

And our daily news roundup looked at a report that the Trump administration is reaching out to well-known conservative think tank Heartland Institute for help with its "red-team, blue-team" review of climate change science.

. What causes high tuition? Don't trust your intuition

AEI's daily publication of independent research, insightful analysis, and scholarly debate

Twenty20

What causes high tuition? Don't trust your intuition.

Preston Cooper | The Wall Street Journal

A typical student at a US public college pays thousands of dollars more in tuition than he or she would have just a decade ago. Students and parents are frustrated, and many point the finger at state legislators, who have cut funds to state schools. Hillary Clinton agreed, throwing her support behind "free college." It's a simple and appealing narrative. It also collapses under scrutiny: Tuition goes up no matter what legislatures do.

AEI

Michael R. Strain | AEIdeas

AEI's commitment to academic freedom for its scholars is one of the best parts of working here, says AEI Director of Economic Policy Studies Michael Strain. One example from the past month: Aparna Mathur leads a working group to advocate for paid family leave, which Benjamin Zycher argues will lead to undue government intrusion on labor markets. At the very least, it makes lunch hour with colleagues all the more fun.

Reuters

Can Democrats win with a gloomy view of our economic future?

James Pethokoukis | AEIdeas

According to an election autopsy performed by a Democratic super PAC, the party has a real problem with working-class voters, including many of its longtime core constituencies. One hurdle is that when it comes to the white working class, there is deep suspicion of the progressive agenda. How do Democrats "forge a workable coalition in their vision of a permanent low-income, low-growth world?," asks one Fed president.

Reuters

The Tehran attacks reveal a surprise: ISIS is deep in Iran

Marie Donovan and Frederick W. Kagan | AEI Critical Threats

The horrific Tehran terror attacks demonstrate that there is a well-resourced, well-prepared

ISIS support structure in the Islamic Republic. The Iranian regime is trying to downplay the significance of the attack, instead redirecting public anger toward the United States and Saudi Arabia. That Iran plans to respond to tragedy by escalating regional conflict should worry us all.

EHS State Regulatory Alert

July 14, 2017 - Number 134

You can create a report customized by topic, jurisdiction, and date range by using the Regulatory Summaries Report Tool. The report can be generated in Excel, Word, or PDF.

California Regions

AIR
Fees
California Regions AIR

Final rule of the Bay Area Air Quality Management District amends Regulation 3 to increase fees by between 2.7 and 9 percent. The rule also establishes new fees to recover costs for facilitywide health risk assessments (HRAs) and risk reduction plans, effective upon adoption of Regulation 11, Rule 18. In addition, the rule establishes a new fee equal to the risk screening fee for HRA scenarios above three under Regulation 2, Rule 5, concerning new source review of toxic air contaminants. Finally, the rule adds diesel exhaust particulate matter to the schedule of toxic air contaminants subject to excess emission fees, revises fees for semiconductor and related operations, and updates terminology. The rule is effective June 21, 2017. Contact: Barry Young; Bay Area AQMD; 415-749-4721; byoung@baaqmd.gov

—California RegionsRegulations (06/21/2017)

Regulatory Update

AIR
Toxic Air Contaminants
California Regions AIR

Final rule of the San Diego County Air Pollution Control District amends Rules 1200 and 1210, Tables I, II, and III, to revise the lists of toxic air contaminants for which potential carcinogenic impacts, chronic noncancer impacts, and acute noncancer impacts must be calculated. The rule adds carbonyl sulfide (CAS 463-58-1), which is used as an intermediate in organic compound synthesis, to the lists of toxic air contaminants for which potential acute and chronic noncancer impacts must be calculated. The rule also adds sulfuric acid (CAS No. 7664-93-9) and sulfur trioxide (CAS No. 7446-71-9) to the lists of toxic air contaminants for which potential chronic noncancer impacts must be calculated. In addition, the rule makes technical corrections to all three lists. The rule is effective July 11, 2017. Contact: Angela Ortega; San Diego County APCD; 858-586-2753; Angela.Ortega@sdcounty.ca.gov

—California RegionsRegulations (07/11/2017)

Regulatory Update

AIR
Volatile Organic Compounds/Exemptions
California Regions AIR

Final rule of the San Diego County Air Pollution Control District amends Rule 2, Table 1, to update the list of exempt compounds that have negligible or very low photochemical reactivity and are not regulated as volatile organic compounds. The rule adds Chemical Abstracts Service registration numbers for previously listed compounds. The rule is effective July 11, 2017. Contact: Angela Ortega; San Diego County APCD; 858-586-2753; Angela.Ortega@sdcounty.ca.gov

Regulatory Update

WATER
Agricultural Order/Discharges from Irrigated Lands
California Regions WATER

Notice of the Central Coast Regional Water Quality Control Board announces meetings on the development of a new agricultural order to conditionally waive waste discharge requirements for discharges from irrigated lands. The order would replace the board's March 8, 2017, three-year agricultural order (Ag Order 3.0, Order No. R3-2017-0002), which expires March 7, 2020. The 2017 order revised monitoring requirements and expanded the total nitrogen applied reporting requirement. The meeting will include discussion of the structure of the order, tiering and enrollment, and monitoring and reporting requirements. The meetings are scheduled for Aug. 7, 10, and 15, 2017, in Salinas, Santa Maria, and Watsonville, respectively. A comment due date is not specified. Contact: Central Coast RWQCB; 805-549-3147; AgNOI@waterboards.ca.gov

—California RegionsRegulations (07/13/2017)

Regulatory Update

WATER
Climate Change Strategy
California Regions WATER

Notice of the Los Angeles Regional Water Quality Control Board announces a workshop to discuss the development of the board's climate change strategy. The board seeks input on how facility dischargers and water resources and associated beneficial uses may be impacted by climate change. Input will be taken into consideration by the board in the development of drinking water, water quality, and other regulations. The board is developing the strategy in response to a March 7, 2017, resolution of the State Water Resources Control Board that requires a proactive approach to climate change in all board actions. The workshop is scheduled for Aug. 8, 2017, in Los Angeles. Comments are requested, but a due date is not specified. Contact: Celine Gallon; Los Angeles RWQCB; 213-576-6784; celine.gallon@waterboards.ca.gov

Regulatory Update

New Hampshire

WATER
Public Water Systems/Operating Permits
New Hampshire WATER

Final rule of the Department of Environmental Services amends regulations under NHAR Env-Dw 501.01 and .02 regarding public water system operating permits. The rule clarifies provisions concerning information required and recorded for permits to operate. The rule is effective June 20, 2017. Driving the Day

Good Thursday Morning. WE HEAR that Sean Spicer's private media tour in New York is continuing through the end of the week. ***N.Y. Post on Spicer's post-government gig hunting*** http://pge.sx/2u0SfwK

-- HADAS GOLD and **TARA PALMERI**: "Two sources tell POLITICO that ABC's 'Dancing With the Stars' has expressed interest in Spicer joining the show, in which celebrities are paired with professional dancers and compete with one another. The New York Post first reported on the reality TV show's interest in Spicer on Wednesday. Spicer did not respond to a request for comment. An ABC spokesperson said: 'We don't comment on casting.'

"Separately, multiple sources told POLITICO Spicer met in New York on Wednesday with ABC's news division, CBS, NBC and Fox. Some were conversations pertaining to a contributor-style position while others were just get-to-know-you sessions, according to people familiar with the meetings." http://politi.co/2v0zvSK

GOOD WORK IF YOU CAN GET IT -- BIG LORRAINE WOELLERT SCOOP: "Scaramucci still stands to profit from SkyBridge from the White House: The newly named White House communications director has earned millions from ownership stake since last year, according to his financial disclosure": "The incoming White House communications director earned $4.9 million from his ownership stake in SkyBridge in addition to more than $5 million in salary between Jan. 1, 2016, and the end of June, when he joined the Export-Import Bank, according to a financial disclosure filed with the Office of Government Ethics. ... In his disclosure, Scaramucci listed assets worth as much as $85 million. He has several real estate investments, including single-family

rental homes on Long Island. A minority stake in the New York Mets is worth as much as $5 million. He also is an investor in Juice Press, a chain of snack and smoothie shops in the Northeast." http://politi.co/2u1gDhT ... ***The financial disclosure*** http://bit.ly/2w2mCo1

-- @Scaramucci : "In light of the leak of my financial disclosure info which is a felony. I will be contacting @FBI and the @TheJusticeDept #swamp @Reince45". ***This tweet was later deleted***

-- @RyanLizza: "In case there's any ambiguity in his tweet I can confirm that Scaramucci wants the FBI to investigate Reince for leaking."

-- NOT SO, SAYS SCARAMUCCI: @scaramucci: "Wrong! Tweet was public notice to leakers that all Sr Adm officials are helping to end illegal leaks. @Reince45".

-- DOJ SPOX SARAH ISGUR FLORES at 10:39 p.m.: "I was watching Hannity's segment with Anthony Scaramucci [on Wednesday night] and have this comment on leaks: 'We have seen an astonishing increase in the number of leaks of classified national security information in recent months. We agree with Anthony that these staggering number of leaks are undermining the ability of our government to function and to protect this country. Like the Attorney General has said, 'whenever a case can be made, we will seek to put some people in jail,' and we will aggressively pursue leak cases wherever they may lead.'"

FOR THE RECORD, Scaramucci's financial disclosure is a public document that is released through official channels upon request.

WHAT DONALD TRUMP IS READING -- Reps. Jim Jordan (R-Ohio), Matt Gaetz (R-Fla.), Mike Johnson (R-La.) and Andy Biggs (R-Ariz.) are asking the "House Judiciary Committee to direct an investigation into former FBI Director James Comey's management of Hillary Clinton and her emails."

ABOUT LAST NIGHT ... -- @RyanLizza: "Scoop: Trump is dining tonight w/Sean Hannity, Bill Shine (former Fox News executive), & Anthony Scaramucci, per 2 knowledgeable sources".

****** **A message from BP: We delivered 11 billion gallons of fuel in the U.S. last year - that's enough to run all the cars in New York & New Jersey for the entire year.** *Find out what we're doing in your state.* ******

TRUMP'S THURSDAY -- POTUS is meeting with H.R. McMaster at 11 a.m. and participating in a ceremony honoring first responders to the shooting of Steve Scalise at 3 p.m. The rest of the day is blank.

SCHUMER'S HEALTH CARE PLAY -- "Dems to GOP: No amendments until you show us your bill," by Seung Min Kim: "Senate Democrats are taking their ball and

going home in the looming health care vote-a-rama - until Republicans finally cough up their actual Obamacare repeal plan. Fed up with the GOP's constant vacillations over how to dismantle Obamacare, Democrats say they will hold back on offering any more amendments in the health care floor fight until Senate Majority Leader Mitch McConnell (R-Ky.) shows what plan the GOP will ultimately coalesce around. 'Democrats are not going to participate in this one-sided and broken process,' announced Senate Minority Leader Chuck Schumer (D-N.Y.) Wednesday evening. 'Once the majority leader shows his hand, reveals what his bill will actually be, Democrats will use the opportunity to try and amend the bill.'" http://politi.co/2uz3PTh

ONE SENIOR REPUBLICAN AIDE noted that "during reconciliation Senators can offer zero or 100 amendments. Dems declaring they won't offer amendments is basically taking their ball and going to the sideline. It doesn't affect anything. ... In fact, all it does it show how unserious they are about participating. Hours will continue to be burned and we will keep voting."

-- THE SCHEDULE: @phil_mattingly: "The Senate will gavel in at 10am Thursday. About 10 hours of debate left on the health care clock. First amendment votes @ 2:30pm" ... First (and so far only) amendment on deck: @SteveDaines 'Medicare for All' proposal - i.e. effort to force Dems to take a tough vote".

GET SMART FAST -- "'Skinny' repeal could have big ramifications for Obamacare markets," by Paul Demko: "Senate Republicans are hoping a 'skinny' repeal bill can solve their stalemate over dismantling Obamacare. But this partial Obamacare repeal - which is gaining steam in the Senate - could destabilize already wobbly Obamacare insurance markets, make premiums jump and increase the number of uninsured by millions, health policy experts say. ... Killing the individual mandate would take away the primary mechanism that helped build the Obamacare insurance markets. The CBO estimated 16 million fewer people would have coverage in a decade without the individual mandate tax penalty in place, based on an analysis requested by Senate Democrats." http://politi.co/2uzjl1F

-- WHY A WORRIED REPUBLICAN WOULD VOTE AGAINST THE SKINNY REPEAL : The pitch from Republican leadership is this: vote for the skinny repeal so the House and Senate can move to a formal health care negptoatopm. But a negotiation between the House and Senate will be thorny: there is disagreement on changes to many things, including changes to Medicare. If you vote for the skinny repeal and end up with a negotiated product you don't like a few weeks or months later, it could be politically perilous.

-- BURGESS EVERETT, SEUNG MIN KIM and **JEN HABERKORN: "'Skinny' Obamacare repeal still lacks votes to pass:** A bare-bones plan picks up some key GOP support, but centrists and conservatives are skeptical": "Even a bare-bones repeal of Obamacare is no sure thing in the Senate. A handful of key Republican senators who had spurned earlier overtures from GOP leadership endorsed the latest plan to gut Obamacare's individual and employer coverage mandates and its medical device tax.

But several centrists said they're undecided on the so-called skinny repeal, leaving the GOP in limbo through at least the end of the week. ...

"Centrist GOP Sens. Rob Portman of Ohio and Shelley Moore Capito of West Virginia were undecided on the so-called skinny repeal Wednesday. Another Republican from an expansion state, Sen. Dean Heller of Nevada indicated he would back it. ... Conservatives could be another matter. 'I don't like it,' Sen. David Perdue of Georgia said of the process. 'Because I don't know where we end up. This whole [health care system] holds together or falls apart in totality. We've got a system that is collapsing.'" http://politi.co/2v1sWPs

****** **A message from BP: We generated about $67 billion in economic value for the U.S. last year.** *Take 90 seconds to see what that means to American jobs and businesses.* ******

TAX REFORM BY AUGUST? NOT SO FAST -- "White House adviser clashes with Mnuchin over tax plan," by Nancy Cook: "The White House is eager to present a unified front on tax reform, but those leading the effort inside the administration haven't been able to bridge deep fissures over how much to cut taxes and the best way to pay for it. The White House's top tax staffer, Shahira Knight, who works for Gary Cohn at the National Economic Council, has feuded in the last few months with Treasury Secretary Steve Mnuchin and other Treasury officials, according to a senior administration official and four other people familiar with their interactions. This comes as the administration and congressional leaders prepare to unveil a broad-brush tax proposal, weeks ahead of schedule, as a way to pivot from the grinding debate over health care - and to show movement on an issue significant to the business community before Congress adjourns for its August recess.

"Yet many key outstanding questions remain, including how low the corporate tax rate can go -- a major focus of the president who wants it at 15 percent -- and what if any tax benefits or breaks lawmakers will need to eliminate to pay for cuts. These trade-offs are part of what makes tax reform difficult. No businesses, or individuals, like to see any particular tax break eliminated and tend to mobilize when their goodie is threatened. Figuring out how to balance the many competing interests at play have been the focal point of Knight's disagreements with Treasury - and a foreshadowing of Republicans' challenges with any tax overhaul." http://politi.co/2uEKGhh

SESSIONS WATCH -- "Trump talks privately about the idea of a recess appointment to replace Sessions," by WaPo's Carol D. Leonnig, Ashley Parker, and and Philip Rucker: "President Trump has discussed with confidants and advisers in recent days the possibility of installing a new attorney general through a recess appointment if Jeff Sessions leaves the job, but he has been warned not to move to push him out because of the political and legal ramifications, according to people briefed on the conversations. ... Two of those people, however, described Trump as musing about the idea rather than outlining a plan of action ... Several people familiar with the discussions said that Trump's fury peaked over the weekend and that he and Sessions

now seem to be heading toward an uneasy detente." http://wapo.st/2tF4FuJ

-- "Allies Warn Trump of Conservative Revolt Unless He Backs Off Sessions," by NYT's Peter Baker and Jennifer Steinhauer: "For a week, some of President Trump's top aides have tried to talk him down from his public campaign against Attorney General Jeff Sessions. It was exposing tensions within the administration, stirring consternation with the conservative base and setting off a revolt among Senate Republicans incensed over the treatment of a former colleague. Among those urging Mr. Trump to spare Mr. Sessions have been Reince Priebus, the White House chief of staff; Stephen K. Bannon, the president's chief strategist; and Donald F. McGahn II, the White House counsel, according to officials who asked not to be named describing internal deliberations." http://nyti.ms/2tLvhyu

--FOR THE RECORD, NO NEW ATTORNEY GENERAL WILL BE CONFIRMED -- @chuckgrassley: "Everybody in D.C. Shld b warned that the agenda for the judiciary Comm is set for rest of 2017. Judges first subcabinet 2nd / AG no way".

FRIENDS IN HIGH PLACES -- "Sessions' powerful friends stand up to Trump," by Josh Gerstein and Josh Dawsey: "South Carolina Republican Sen. Lindsey Graham was among Sessions' most vocal defenders Wednesday, when he seemed to almost be taunting the president, suggesting that his failure to fire Sessions showed weakness, while also hinting that the impact of such a move could be catastrophic for Trump's presidency. ... Several Republican senators have reached out directly to Sessions and told him to stay put, expressing their frustrations with his puzzling situation, according to a person with knowledge of the contacts.

"Sessions has basically mused back to them he doesn't understand it either - but that he won't quit at the moment. The senators view Trump's treatment of their former colleague as 'offensive' ... Some GOP senators also fear that if Trump pushes out Sessions, the results could be dire for the president. Such a development might lead to mass resignations at the Justice Department and it might be impossible to find a majority in the Senate to confirm a replacement for Sessions." http://politi.co/2v0ZQ2w

POLITICO'S TY COBB INTERVIEW -- "Trump's newest Russia lawyer: 'I think very highly' of Mueller," by Darren Samuelsohn: "President Donald Trump is exasperated with the Russia probes that have overwhelmed his first six months in office, but his newest White House lawyer is looking to make nice with the president's main investigator - at least for now. 'I have a very respectful and professional relationship with Bob Mueller. I think very highly of him,' Ty Cobb, who starts Monday in a West Wing office as White House special counsel, said in an interview.

"Cobb, a prominent Washington white-collar lawyer who in the 1990s represented several Democrats under investigation during the Clinton era, was hired in part to help spearhead the internal Trump White House effort to respond to the expanding Russia

investigations by Congress and special counsel Mueller. ... In preparation for his arrival next week, Cobb met Wednesday with White House Communications Director Anthony Scaramucci. Both men are new to the Trump team and both answer directly to Trump. ... It's possible that he'll speak on television and on the record with reporters.

"'I'll certainly provide background willingly when appropriate, but will work primarily with the comms staff and try to make sure the message is accurate and not confusing and let them run with those kind of things,' Cobb said. 'I'm there to be a professional,' he added. 'And it's not about me. But I need to give the president good advice. and I need to make sure that anything we're asked to do at the White House and related to any of these investigations that we do well and on time.'" http://politi.co/2tF2yHy

FOR YOUR RADAR -- "GOP moves toward solution on Russia sanctions bill," by Elana Schor: "House and Senate Republicans clashed Wednesday over a bipartisan package of sanctions targeting Russia, Iran, and North Korea before appearing to resolve a dispute that threatened to delay the bill's arrival on President Donald Trump's desk. ... But further political headaches for the GOP appeared to be averted Wednesday night, when [Sen. Bob] Corker announced that he had reached agreement with House Majority Leader Kevin McCarthy (R-Calif.) on a solution that would pave the way for final approval of the sanctions bill. 'Going forward, the House has committed to expeditiously consider and pass enhancements to the North Korea language, which multiple members of the Senate hope to make in the very near future,' Corker said in a statement Wednesday night." http://politi.co/2tDuU4K

-- "AP sources: U.S. seeks to test Iran deal with more inspections," by Josh Lederman and Matt Lee: "The Trump administration is pushing for inspections of suspicious Iranian military sites in a bid to test the strength of the nuclear deal that President Donald Trump desperately wants to cancel, senior U.S. officials said. The inspections are one element of what is designed to be a more aggressive approach to preventing Iran from obtaining a nuclear weapon. While the Trump administration seeks to police the existing deal more strictly, it is also working to fix what Trump's aides have called 'serious flaws' in the landmark deal that - if not resolved quickly - will likely lead Trump to pull out." http://bit.ly/2h5gpVB

YIKES -- BuzzFeed's Cora Lewis, Dominic Holden and Nancy Youssef: "At the Pentagon, the first of the three tweets [on Trump's transgender decision] raised fears that the president was getting ready to announce strikes on North Korea or some other military action. Many said they were left in suspense for nine minutes, the time between the first and second tweet. Only after the second tweet did military officials receive the news the president was announcing a personnel change on Twitter." http://bzfd.it/2u0J1AQ

FUN READ - KATIE GLUECK in McClatchy, "Inside the Trumps' Instagram obsession": "Eric Trump was Making America Great Again at his father's New Jersey golf club just as United Nations Ambassador Nikki Haley crammed onto a couch with a gaggle of her 'sweet friends' and the sunglasses-clad Trump surrogate Katrina Pierson

reminisced about the days before politics forced her out of her car and into an Uber. Or, so said their Instagram feeds. If President Donald Trump's favorite form of social media is Twitter, the outlet of choice for many of his relatives, campaign boosters and even a Cabinet member is Instagram, the photo-sharing app owned by Facebook.

"People in Trump's orbit -including several of his children-use Instagram to highlight television appearances and tout the president's luxury properties. ... [T]hese social feeds closely say the Instagram accounts offer a glamorous glimpse into the president's inner circle and his ritzy enclaves, providing routine reminders of the days when' 'Trump' was more closely associated with celebrity than the White House. The feeds are a nonstop stream of fodder for a clamoring, adoring Instagram fan base that doesn't seem to mind the disconnect between that Trumpian lifestyle and that of the president's working-class base." http://bit.ly/2tFvu25

THE JUICE ...

-- MARK PRESTON and **CHRIS FRATES** are getting get their own SiriusXM shows. **FRATES** will take over "Politics Inside Out" and it will be renamed "Politics Inside Out with Chris Frates." **PRESTON**, the executive editor for CNN Politics, will have a new show called "Full Stop with Mark Preston." Preston's new show debuts Saturday at noon, and reairs Sunday at 1 p.m. "My goal with "Full Stop" is to provide listeners with an opportunity to step off of the breaking news wheel for one hour a week to hear interesting stories from compelling people in politics and pop culture," Preston told us. **ON THE DEBUT EPISODE** : Dana Bash and Gloria Borger. In the coming weeks he'll have Rep. Will Hurd (R-Texas) and George Shultz. ***The promo for Preston's show*** http://bit.ly/2v02QvV

-- KANSAS GOV. SAM BROWNBACK has been officially nominated as ambassador at large for religious freedom. He had been rumored to be up for the position for weeks. He gave his first interview to J.C. Derrick of WORLD Magazine. http://bit.ly/2h529wd

-- MICHAEL DUFFY will be on "Morning Joe" this morning at 8:30 a.m. to discuss the new Time Magazine cover story, "The Anti Antidepressant". ***See the cover:*** http://bit.ly/2tKrH7H

Playbook Reads

FOGGY BOTTOM WATCH -- "Tillerson faces fights on eliminating envoys," by Nahal Toosi: "As Secretary of State Rex Tillerson moves to restructure the State Department, he wants to slash dozens of positions known collectively as special envoys - ambassadors-at-large, coordinators and others who deal with specific issues such as food security, labor and LGBT rights. ... [But] a slew of critics have emerged to protest. Jewish organizations and many lawmakers are furious that Tillerson hasn't yet named a new special envoy to combat anti-Semitism. Digital gurus are unhappy that Tillerson

may chop the slot focused on cyber issues. Tillerson's attempt to discard the special envoy for Afghanistan and Pakistan spurred such an outcry among South Asia watchers that he went ahead and named someone to the role temporarily." http://politi.co/2tExQ1e

JEFF FLAKE PROFILE - MCKAY COPPINS in The Atlantic, "Jeff Flake's Gamble: The Arizona Republican is betting his Senate seat on the political appeal of decency-but can that pay off in Trump's America?": "In 2013, Flake was part of the bipartisan 'Gang of Eight,' which helped pass a comprehensive immigration-reform bill in the Senate (it died in the House). He recalled for me his deep personal frustration watching Trump and his fellow Republicans make naked appeals to 'nativist sentiment' last year. When Kaine traveled to Florida and in fluent Spanish praised the patriotism of newly naturalized citizens, 'I almost cried,' Flake said. 'I just thought, *That should be us. That* was *us, and now it's not.*' ...

"When I visited Flake and his wife, Cheryl, in his office on Capitol Hill the day after the shooting, he looked drained. Resting his head on the back of his armchair, he recounted the preceding 24 hours in a quiet, halting voice. 'It was a long day,' he said, glancing at Cheryl. 'Just-I'm just glad to be here.' He seemed to view the episode as a grim validation of his worst fears about the country. 'The deterioration of political discourse in general aids this,' he said. 'When we ascribe motives to our opponents, that they are evil, then we've almost given license to extreme behavior.'" http://theatln.tc/2uYNp7M

THE NEXT TURN OF THE SCREW -- "Lawyers for Brady, rival rebut claims of illegal campaign payoff," by the Philadelphia Inquirer's Jeremy Roebuck, Chris Brennan and Tricia L. Nadolny: "U.S. Rep. Robert Brady's lawyer pushed back Wednesday against federal prosecutors' claims that the congressman secretly paid a political rival $90,000 to drop a bid to unseat him in the 2012 Democratic primary. Scoffing at the depiction of the money as a covert payoff, attorney James Eisenhower said that the funds were intended in part to acquire exclusive rights to valuable polling data from the primary challenger, Municipal Court Judge Jimmie Moore.

"But almost as if they had anticipated that explanation, government lawyers shot back in a court filing made public for the first time Wednesday. At the time Brady bought the data, they said, the poll in question was irrelevant, outdated, and contained information that the congressman had already had his possession five months before his campaign cut the checks. What's more, wrote Assistant U.S. Attorney Eric L. Gibson, the price Brady paid was twice what it cost Moore to commission the survey." http://bit.ly/2uZNJDq

THE IVANKA BEAT -- "Trump Administration Tapping Tech CEOs for STEM Policy Approach," by Bloomberg's Margaret Talev: "White House officials including Ivanka Trump have begun an outreach campaign to major technology, business and education leaders including Laurene Powell Jobs and Apple's Tim Cook for advice on shaping funding approaches to science, technology, engineering and math education in U.S. public schools. ... [O]n Wednesday [she] joined Reed Cordish, the president's special

assistant for technology initiatives, on a conference call with politicians, educators and CEOs to discuss STEM education, according to two people with knowledge of the call. Other participants on the roughly hour-long call included Lockheed Martin CEO Marillyn Hewson; Accenture North America's CEO Julie Sweet, Microsoft President Brad Smith; Arkansas Governor Asa Hutchinson and representatives from the Chan Zuckerberg Initiative, Stanford, MIT and Broward County, Florida, Schools." https://bloom.bg/2tLCZZr

WEST COAST WATCH -- "The cannabis candidate: Gavin Newsom dominates donations from a growing industry aiming for influence," by L.A. Times' Ryan Menezes and Maloy Moore: "California will soon have open sales of recreational marijuana, and it needs to decide how to regulate its newest cash crop. Hoping to influence those decisions, the cannabis industry is seeking access to the state's political leaders. One candidate in 2018's open race for governor is actively inviting their support. ... Cultivators, retailers and others have given Newsom's campaign more than $300,000 ... As part of his aggressive fundraising drive, Newsom has become the first California gubernatorial candidate to solicit large sums from the cannabis industry - far eclipsing his rivals." http://lat.ms/2tLt5qG

MEDIAWATCH -- "Matt Drudge is firing warning shots at Trump, and that should worry the president," by CNN's Oliver Darcy: "Matt Drudge has been in the White House an awful lot these days - 'all the time,' as one senior administration official puts it. He's met with President Donald Trump, spent time with Ivanka Trump, and doled out advice to Jared Kushner. ... [He] has been one of Trump's most ardent supporters since Trump announced his candidacy. ... But ... lately Drudge has appeared irked by Trump and his White House, frustrated with the president's inability to carry out the ambitious agenda he campaigned on. ... Over the past several weeks, Drudge's website has covered the White House with a more critical eye, more frequently drawing attention to news not exactly flattering to the president." http://cnnmon.ie/2h4oTMF

Playbookers

SPOTTED: Wilbur Ross trotting through the House press gallery yesterday with his security detail to use the men's room ... Chris Wallace last night at the West End Bistro ... Tom Perez sitting behind the Brewers dugout last night and getting scolded by the usher for putting his feet up ... Sens. John McCain and Lindsey Graham and former Speaker John Boehner last night dining at Trattoria Alberto - ***pic*** http://bit.ly/2uz5hoD

OUT AND ABOUT -- Scott Mason, Jeff Freeland and Mackenzie Smith of the original Trump congressional campaign team hosted a happy hour for members and staff at Stanton & Greene last night. **SPOTTED:** HHS Secretary Tom Price, Reps. Marsha Blackburn (R-Tenn.), Kevin Cramer (R-N.D.), and Steve Palazzo (R-Miss.), Seth Appleton, Michael McAdams, Andrew Cooper, Andrew Smith, Tom Qualtere, Mark Gruman, Bill Tighe, Jonathan Hayes, Al Lytton.

--BIPARTISAN HAPPY HOUR -- Pool report: "On the roof at Bar Deco, Hoosier GOP and Dem staffers from the office of VP Pence, Sens. Donnelly and Young, and RNC and DNC [did] their part to return to regular order. The happy hour started after the 2010 elections when Republican and Democratic staffers from Indiana decided to 'bury the hatchet' and start hanging out together." **SPOTTED:** Mark Lee, Katie Wall, Lindsay Jancek, the pride of Fort Wayne, Joel Riethmiller, Adam Shifriss, Nick McGee, Jodi Richardson, Andrew Terp, Adrienne Watson, Elizabeth McWhorter, Erica Bordador.

TRANSITIONS - Kim Ford has been promoted to be SVP and head of gov't affairs at FirstData. She first started with the company in 2004. ... Michael Auslin is joining the Hoover Institution to be their inaugural Williams-Griffis fellow in contemporary Asia, focusing on Asian political and security issues, especially related to China and Japan. He was previously an associate professor of history at Yale and is an AEI alum. ... **Kate Geldaker** , deputy director of congressional affairs at the National Telecommunications & Information Administration, is moving to Alaska Airlines to do government affairs, based in DC. Geldaker is a Klobuchar and Begich alum. ...

... Andrew Gray has been promoted to be JPMorgan Chase's chief external communications officer of global finance, corporate technology and operations. The three year veteran of JPMC previously led media relations for a number of the bank's corporate groups. ... **Lauren Huston** is leaving Capitol Hill after four years on the Senate Commerce Committee and House Judiciary. She will pursue a J.D. full time at Catholic University's Columbus School of Law. ... **Brianna Manzelli** is the new press secretary and digital director on Senate Commerce. She most recently was on the press team at the RNC.

WELCOME TO THE WORLD -- Erin Oldfield, director of comms at Howard Consulting Group, and **Kyle McGettigan,** database manager at LHK Partners, welcomed Lyra Joy Oldfield McGettigan, who "has the best hair," according to her mom. ***Pic*** http://politi.co/2tEtqqZ

BIRTHMONTH (was last Monday): Emma Loop, the other Canadian half of BuzzFeed News in D.C. (hat tip: Erin Gee)

BIRTHDAY OF THE DAY: Cecilia Muñoz, VP of policy and technology and director of the New America National Network and former director of the Obama WH Domestic Policy Council. **A fun fact about her:** "I used to speak a lot of Spanish in the West Wing office now occupied by Stephen Miller. Lots and lots of Spanish. It's still in the walls." Read her Playbook Plus Q&A: http://politi.co/2h5fK6B

BIRTHDAYS: Priscilla Painton, executive editor at Simon & Schuster and a WaPo and Time alum ... FusionGPS' Neil King, a WSJ alum ... Andy Spahn ... BuzzFeed News' Paul McLeod, likely celebrating by sequestered in the Senate reporting on health care (h/t Erin Gee) ... DOT spox Allison Moore ... Jeremy Berkowitz, privacy counsel for Deloitte, is 34 ... Natalie Raabe, comms maestro at The New Yorker (h/ts Adrea Piazza

and Erica Hinsley) ... Susan Durrwachter ... former Commerce secretary Don Evans is 71 ... Rep. William Lacy Clay (D-Mo.) is 61 ... Rep. Dave Brat (R-Va.) is 53 ... Rep. G.T. Thompson (R-Pa.) is 58 ... Jeremy Adler, comms director at America Rising Squared, is 25 (h/ts Colin Reed and Ryan Williams) ... Parag Khanna is 4-0 ... David Spielfogel ... Lauren Durham ... Sarah Feinberg, finance manager for WaPo ... Amy Tilley ... SIFMA's Bo Ollison ... Aaron Lichtig is 37 ... Johanna Persing, RNC's director of media affairs/surrogates (h/t Ryan Mahoney) ... Georgie Whatmore, business development manager for AtlanticLIVE and an NBCUniversal alum (h/t Patrick Garrigan) ...

... Jonathan Strong, an alum of National Review and Roll Call ... Morning Chalk-Up publisher Justin LoFranco, a Team Issa, McCarthy, Romney and RNC alum, is 31 (h/ts Kurt Bardella) ... Sean Savett, press secretary for Sen. Duckworth and an O'Malley alum, is (h/ts fiancé Taylor and cousin Dan) ... Salvatore Colleluori ... Morgan Shoaff ... PJ Wenzel ... Jeremy Deutsch, COS for House Republican Conference Chair Cathy McMorris Rodgers ... Juan Mejia of CGCN Group (h/t Ali Swee) ... Nicholas Barnabò ... Saumitra Thakur, president of College-100 ... Sofia Gerard ... Andrew Grossman, who just started as a consultant at Bain and is a WSJ alum ... Alex Wirth, co-founder of Quorum ... Ben Rothenberg is 35 ... Ed Cohen ... Maya Goines ... Elizabeth Arledge ... Ellen Daniels ... Jamie Sullivan ... Phong Ngo ... Heather Piedmont ... Gaurav Parikh ... Pamela Reeves Kilian Fox ... Susan Phalen ... Suzanne Hanas ... Paul Caron is 6-0 ... Dennis Lewis ... Tim Kirby ... Carrie Ann Alford ... Diana Allen ... Terry Gouette ... Katie Wheelbarger ... Sally Adams ... Degee Wilhelm (h/ts Teresa Vilmain)

California

GENERAL ENVIRONMENT AND SAFETY
Pollution Control Financing Authority
California GENERAL ENVIRONMENT AND SAFETY

Final rule of the Pollution Control Financing Authority adopts regulations under 4 CCR 8078.8 through 8078.14 to establish the California Americans with Disabilities Act Small Business Capital Access Financing Program. The program provides loans to assist small businesses in financing the costs of projects that alter or retrofit existing facilities to comply with the federal Americans with Disabilities Act. The rule is effective May 8, 2017. Contact: Bianca Smith; PCFA; 916-653-5408; bianca.smith@treasurer.ca.gov

Regulatory Update

AIR
Architectural Coatings
California Regions AIR

Notice of the El Dorado County Air Quality Management District announces a hearing on a proposed rule to amend regulations under Rules 101 and 215 regarding architectural coatings and the volatile organic compound (VOC) exempt compound list. The rule reduces the allowable VOC content in architectural coatings to align with the California Air Resources Board's 2007 suggested control measure. The rule also aligns the VOC exempt compound list with those of the U.S. EPA and other state air districts and clarifies definitions. If adopted, the rule will be submitted to CARB and the U.S. EPA as a revision to the state implementation plan. The hearing is scheduled for June 20, 2017, in Placerville. Comments are requested, but a due date is not specified. Contact: Adam Baughman; El Dorado County AQMD; 530-621-7501; aqmd@edcgov.us

WATER
Climate Change Work Plan
California Regions WATER

Notice of the Central Valley Regional Water Quality Control Board announces the availability of a draft climate change work plan. The plan specifies current and proposed efforts that board programs are undertaking in response to climate change and prioritizes major efforts that promote climate change resiliency. The plan addresses efforts concerning water supply and quality of surface water and groundwater. A workshop is scheduled for June 1, 2017, in Rancho Cordova. Comments are requested, but a due date is not specified. Contact: Andrew Altevogt; Central Valley RWQCB; 916-464-4656; RB5S-Climate-ChangeComments@waterboards.ca.gov

Kentucky

SOLID WASTE
Area Solid Waste Management Plans
Kentucky SOLID WASTE

Proposed rule of the Department for Environmental Protection, Division of Waste Management, amends regulations under 401 KAR 49:011 regarding area solid waste management plans. The rule incorporates by reference the March 2017 versions of the solid waste management area annual report form and the guidance for preparing a solid waste management area plan five-year update. A hearing is scheduled for June 27, 2017, in Frankfort. Comments are due June 30, 2017. Contact: Michelle Mitchell; DEP, Division of Waste Management; 502-782-6713;

SOLID WASTE
Solid Waste Planning/Grant Programs and Registration
Kentucky SOLID WASTE

Proposed rule of the Department for Environmental Protection, Division of Waste Management, amends regulations under 401 KAR 49:080 regarding solid waste grant funds and solid waste collector and recycler registration. The rule removes quarterly status reporting requirements and the supplemental application process for the Illegal Open Dump Program. The rule also requires counties to report on the amount of recyclables collected by weight, establishes criteria for grant extensions, and adds a definition of "Litter Abatement Program." In addition, the rule clarifies that approval of supplemental grant requests for the household hazardous waste program is dependent on remaining funds and clarifies grant deadline extension procedures. A hearing is scheduled for June 27, 2017, in Frankfort. Comments are due June 30, 2017. Contact: Michelle Mitchell; DEP, Division of Waste Management; 502-782-6713; MichelleM.Mitchell@ky.gov

Montana

PESTICIDES
Pesticides
Montana PESTICIDES

Notice of the Department of Agriculture announces changes to and an extension of the comment period for a Dec. 9, 2016, proposed rule to amend regulations under ARM 4.10.201 through .1806

(nonconsecutive); adopt regulations under Rules I and II; and repeal regulations under ARM 4.10.702, .709 and .1801 regarding pesticides. The rule sets forth requirements and procedures for the Pesticide Container Recycling Program and exchangeable pesticides to reflect current practice and adds related recordkeeping requirements. The rule also updates provisions regarding applicator certification and competency, recordkeeping, licensure applications, dealers, classification and registration, storage, penalties, waste disposal and fees. In addition, the rule removes obsolete provisions regarding registration and the use of pesticides on pest infestations in alfalfa seed crops. The changes remove provisions concerning an obsolete credit for participation in the recycling program. Comments now are due July 15, 2017. Contact: Cort Jensen; Department of Agriculture; 406-444-3144; agr@mt.gov

Regulatory Update

SOLID WASTE
Solid Waste Management/Landfarm Facilities and Organic Waste Compost Standards
Montana SOLID WASTE

Notice of the Department of Environmental Quality announces corrections to a March 10, 2017, final rule that amended regulations under ARM 17.50.403 and .502 and adopted regulations under ARMN 17.50.1601 through .1719 regarding solid waste management standards, landfarm facilities and compost standards. The rule updated and clarified definitions relating to the licensure and management of composting facilities for animal carcasses and butcher waste. The rule also updated standards for facilities that treat contaminated soils from underground storage tanks and other small-volume cleanup activities, reduced the amount of compost feedstock that facilities may accept annually and clarified the definition of "floodplains." In addition, the rule set forth standards for landfarm facility contaminated soil cleanup. Finally, the rule established standards for organic waste compost facilities, including application requirements, siting standards, design criteria, operation and maintenance plans, recordkeeping and reporting, remediation, sampling, and closure/post-closure plans. The corrections revise several typographical errors. The corrections are effective May 27, 2017. Contact: Denise Hartman; DEQ; 406-444-2630; dhartman2@mt.gov

HAZARDOUS WASTE MANAGEMENT
Underground Storage Tanks
Ohio HAZARDOUS WASTE MANAGEMENT

Proposed rule of the Department of Commerce, Division of State Fire Marshal, amends regulations under OAC 1301:7-9-01 through -19 (nonconsecutive); rescinds and readopts regulations under OAC 1301:7-9-05, -06 and -07; and rescinds regulations under OAC 1301:7-9-09 and -14 to clarify underground storage tanks (UST) standards and conform to a July 15, 2015, EPA final rule. The rule updates provisions concerning requirements for reporting hazardous substances, the list of hazardous substances, UST registration and permitting, and definitions.

The rule also updates provisions concerning financial responsibility for petroleum USTs; design, construction, installation, operation and maintenance requirements; release detection methods and requirements; and installer certification and training. In addition, the rule updates out-of-service, closure-in-place, permanent removal, change-in-service and closure assessment requirements; delegations of authority for inspection; contaminated soil, sampling and analysis of soil; delivery prohibitions; and operator training requirements. Finally, the rule deletes provisions concerning sensitive areas and voluntary corrective actions. A hearing is scheduled for June 20, 2017, in Reynoldsburg. Comments are due June 20, 2017. Contact: David Sauer; Division of State Fire Marshal, Bureau of Underground Storage Tank Regulations; 614-752-7096; David.Sauer@com.state.oh.us

AIR

Asbestos Health Protection/General Provisions

Texas AIR

Notice of the Department of State Health Services announces the withdrawal of a Nov. 11, 2016, proposed rule that would have adopted regulations under 25 TAC 296.1 through .5 regarding general provisions for asbestos heath protection. The rule would have adopted by reference national emission standards for hazardous air pollutants regarding the national emission standard for asbestos and demolition and renovation activities, Asbestos Hazard Emergency Response Act (AHERA) standards for asbestos-containing materials in schools, and memorandums of understanding concerning inspection of solid waste facilities that receive asbestos waste. The rule also would have addressed compliance with AHERA standards and excluded single private residences or single apartment buildings with no more than four dwelling units from this rule. A concurrently withdrawn proposed rule would have repealed existing provisions under 25 TAC 295.31 and .33. The withdrawal is effective May 9, 2017. Contact: Lisa Hernandez; DSHS; 512-776-6972

Asbestos Abatement Supervisors

Texas OCCUPATIONAL SAFETY AND HEALTH

Notice of the Department of State Health Services announces the withdrawal of a Nov. 11, 2016, proposed rule that would have adopted regulations under 25 TAC 296.71, .72, .73 and .74 to set forth license and registration fees for asbestos abatement supervisors. The rule would have reduced the licensure fee to $400, increased the fee to process refunds to $50, and added a fee of $30 for each returned check. The rule also would have specified circumstances that result in late fees and established provisions concerning payment devices that are not honored by the issuing financial institution. In addition, the rule would have clarified what constitutes good cause for denying a request for fee reimbursement. A concurrently withdrawn proposed rule would have

repealed existing provisions under 25 TAC 295.46. The withdrawal is effective May 9, 2017. Contact: Lisa Hernandez; DSHS; 512-776-6972

Summaries

AIR
California SIP/Antelope Valley AQMD
AIR

Final rule of the EPA approves a revision to the Antelope Valley Air Quality Management District (AQMD) portion of the California SIP regarding volatile organic compounds and nitrogen oxide emissions from passenger vehicles. The revision addresses a mechanism for obtaining documentation of emission reductions resulting from trip reduction programs that encourage ridesharing and educate employees and the public on health impacts of motor vehicle pollution. The rule is effective Aug. 7, 2017. Contact: Jeffrey Buss; EPA Region 9; 415-947-4152; buss.jeffrey@epa.gov. Citations: 40 CFR 52.220

Regulatory Update

AIR
Pennsylvania SIP/Volatile Organic Compound Reasonably Available Control Technology
AIR

Direct final rule of the EPA approves revisions to the Pennsylvania SIP to certify that the state's 2006 reasonably available control technology (RACT) controls that were approved by the EPA under the one-hour ozone NAAQS are based on currently available controls and that they continue to represent RACT for the 1997 ozone NAAQS for applicable control technique guideline (CTG) source categories and for three non-CTG volatile organic compound (VOC) categories. Pennsylvania makes a negative declaration that there are no sources in the commonwealth for five CTG source categories. The revisions do not address Pennsylvania's May 2016 VOC and nitrogen oxides RACT rule, which will be addressed in a separate action. The rule is effective Oct. 5, 2017, unless adverse comments are received by Aug. 7, 2017. Contact: Maria Pino; EPA Region 3; 215-814-2181; pino.maria@epa.gov. Citations: 40 CFR 52.2020

AIR

Pennsylvania SIP/Volatile Organic Compound Reasonably Available Control Technology

AIR

Proposed rule of the EPA would approve revisions to the Pennsylvania SIP to certify that the state's 2006 reasonably available control technology (RACT) controls that were approved by the EPA under the one-hour ozone NAAQS are based on currently available controls and that they continue to represent RACT for the 1997 ozone NAAQS for applicable control technique guideline (CTG) source categories and for three non-CTG volatile organic compound (VOC) categories. Pennsylvania makes a negative declaration that there are no sources in the commonwealth for five CTG source categories. The revisions do not address Pennsylvania's May 2016 VOC and nitrogen oxides RACT rule, which will be addressed in a separate action. A concurrent direct final rule adopts the revisions, effective Oct. 5, 2017. Comments are due Aug. 7, 2017. Contact: Maria Pino; EPA Region 3; 215-814-2181; pino.maria@epa.gov. Regulatory Update

AIR

Tennessee/Reid Vapor Pressure Requirements

AIR

Final rule of the EPA approves Tennessee's noninterference demonstration regarding revisions to gasoline Reid vapor pressure (RVP) requirements in Shelby County. The revisions modify the RVP standard to 9.0 pounds per square inch for gasoline sold from June 1 to Sept. 15 each year. The noninterference demonstration supports the conclusion that the revision will not interfere with the attainment or maintenance of any NAAQS or with any other applicable requirement of the Clean Air Act. The rule is effective July 7, 2017. Contact: Sean Lakeman; EPA Region 4, Air, Pesticides and Toxics Management Division; 404-562-9043; lakeman.sean@epa.gov. Citations: 40 CFR 52.2220

AIR

Wisconsin SIP/Site-Specific SO2 Requirements for USG-Walworth

AIR

Direct final rule of the EPA approves revisions to the Wisconsin SIP regarding site-specific sulfur dioxide (SO2) requirements for the USG Interiors LLC facility in Walworth (USG-Walworth). The revisions include an increase in the height of the cupola exhaust stack to 175 feet and an SO2 emission limit of 301.3 lbs/hour in conjunction with a minimum cupola stack flue gas flow rate. The revisions also address sampling requirements for sulfur, moisture, and heat content of each of the materials input to the cupola and sulfur content of the mineral wool product or waste material output from the cupola. The revisions will enable the area near USG-Walworth to qualify for designation as attainment of the 2010 primary SO2 national ambient air quality standards,

which will be addressed in a future rulemaking. The rule is effective Sept. 5, 2017, unless adverse comments are received by Aug. 7, 2017. Contact: Jenny Liljegren; EPA Region 5; 312-886-6832; Liljegren.Jennifer@epa.gov. Citations: 40 CFR 52.2570

ENDANGERED SPECIES
New Mexico, Texas/Texas Hornshell
ENDANGERED SPECIES

Notice of the U.S. Fish and Wildlife Service announces the receipt of applications from the Center

of Excellence in Hazardous Material Management and the New Mexico State Land Office for two separate enhancement of survival permits and draft programmatic candidate conservation agreements with assurances for the endangered Texas hornshell and sensitive species that inhabit the same habitat, including the Rio Grande River cooter, gray redhorse, blue sucker, and Pecos springsnail. The first permit application addresses activities in west Texas and southeast New Mexico and the second permit application addresses activities on New Mexico state trust lands. The permits and agreements would authorize incidental take resulting from voluntary activities to restore, maintain, enhance, or create habitat for the species for a 30-year term. The notice also announces the receipt of a draft candidate conservation agreement for the species from the Bureau of Land Management that addresses activities on federal land in southeastern New Mexico and that would provide participants with a high degree of certainty that additional conservation measures or limitations will not be imposed upon them should one or more of the species become listed in the future. In addition, the notice announces the availability of a draft environmental assessment. Comments are due Aug. 7, 2017. TOXIC SUBSTANCES
Chemical Substance Risk Evaluations/Scoping Documents
TOXIC SUBSTANCES

Notice of the EPA announces the availability of scoping documents for the 10 chemical substances designated for initial risk evaluations under the June 2016 amendments to TSCA (81 FR 91927; 12/19/2016). The scoping documents address the hazards, exposures, conditions of use, and potentially exposed or susceptible subpopulations the EPA expects to consider in conducting the risk evaluations. The listed chemicals are 1,4-dioxane; 1-bromopropane; asbestos; carbon tetrachloride and cyclic aliphatic bromide cluster; methylene chloride; N-methylpyrrolidone; Pigment Violet 29; trichloroethylene; and tetrachloroethylene. Because the first 10 chemicals were not subject to the prioritization process, the EPA will issue problem formulation documents intended to refine the current scope prior to publishing draft risk evaluations. The problem formulation documents are expected to be available by January 2018. The notice also announces the reopening of the existing dockets for the chemicals to receive additional information for problem formulation. Subject: House EPA spending chair: Budget cuts are 'untenable'

By Alex Guillén

06/15/2017 11:26 AM EDT

Lawmakers from both parties made it clear at the outset of EPA's first appropriations hearing of the year that the White House's proposed $2.4 billion cut to the agency won't fly.

House Interior-EPA spending panel Chairman Ken Calvert (R-Calif.) told EPA Administrator Scott Pruitt that the proposed budget is "untenable."

Calvert said the budget managed to cut programs important to every member of the spending subcommittee. He specifically noted cuts to a program that upgrades dirty diesel engines as key for his state of California, along with targeted air shed grants that were cut entirely from the budget, and a 31 percent reduction to Superfund clean-ups.

"These are all proposals we are unlikely to entertain," Calvert said. "This is perhaps not how you would personally craft EPA's budget, but it's the budget you have to defend here today."

The panel's top Democrat, Betty McCollum (D-Minn.) also had even harsher words for the budget proposal, which she said "would endanger the health of millions of Americans, jeopardize the quality of our air and water and wreak havoc on the economy." McCollum also slammed the proposed reduction of thousands of workers.

Calvert did praise the budget proposal for maintaining funding for key state water grants and the nascent Water Infrastructure Finance and Innovation Act program.

WHAT'S NEXT: Pruitt is facing questions today from the House spending subcommittee that will write EPA's fiscal 2018 spending bill later this summer.

Subject: Morning Energy, presented by Chevron: U.S. speaks today in Bonn — Burr, Tillis won't support EPA nominee — Durbin lifts some Interior holds

By Anthony Adragna | 11/16/2017 05:42 AM EDT

With help from Darius Dixon, Alex Guillén, Sara Stefanini and Eric Wolff

FINDING TEA LEAVES TO READ: The top U.S. diplomat at an international climate summit is scheduled to deliver a closely watched speech today, as world diplomats attempt to tease out a firmer sense of where the country stands in the climate negotiations. Judith Garber, the acting assistant secretary for oceans, environment and science who stepped in at the last minute to lead the State Department delegation in Bonn, Germany, is not expected to promote the White House effort calling for developing countries to build more efficient fossil fuel-fired power plants. Garber is set to speak sometime in the mid-to-late morning in the U.S., and a webcast will be available here.

World leaders who descended on COP23 Wednesday didn't dwell on President Donald Trump's intention to leave the landmark climate accord, focusing instead on the need for action, Pro's Emily Holden reports from Bonn. "The point is now to keep working [with] those that are in the agreement, those that are staying in the agreement, to walk forward, to walk fast and be able to implement Paris," said J. Antonio Marcondes, chief negotiator for Brazil. "The U.S. decision is the U.S. decision and it's up to them."

But some were worried about funding. "The U.S. team has been on the ground and they are working with us," said South Africa's Minister of Environmental Affairs Edna Molewa. "But the actual payment of the money they have committed already — it has to come." The Trump administration has said it would not pay what's left of the $3 billion the Obama administration promised to the Green Climate Fund — while leaving open the possibility working with other countries or institutions like the World Bank to finance fossil fuel or nuclear plants.

A carbon tax on EU imports?: French President Emmanuel Macron called for the European Union to impose a border tax on carbon emissions, Sara Stefanini reports from Bonn. "We need a border tax to make it possible for us to protect imports from countries that do not protect our goals," Macron said in a speech at the summit.

Germany's coal problem: Chancellor Angela Merkel broached the uncomfortable topic of Germany's coal addiction at the summit, as talks to form a coalition government after the country's recent election get down to the wire. "We know we have a long way yet to go," Merkel said in her speech. Still, coal has to make a "very important contribution" to cutting emissions, and how it does that will be discussed "very precisely" in the coming days, she said.

TROUBLE FOR EPA CHEMICAL NOMINEE: Michael Dourson is one vote away from seeing his nomination go down the drain. North Carolina Republican Sens. Richard Burr and Thom Tillis announced late Wednesday they would vote against confirming his nomination to lead EPA's chemicals office, according to the Wilmington Star News . The senators cited their home state's water problems and Dourson's industry-friendly history. One more Republican defection would leave Dourson short of the support to clear the chamber, with Democrats expected to oppose him unanimously. Burr confirmed his opposition to ME: "I will not be supporting the nomination of Michael Dourson. With his record and our state's history of contamination at Camp Lejeune as well as the current Gen X water issues in Wilmington, I am not confident he is the best choice for our country."

Don't forget: Dourson is already working at EPA as a senior adviser to Administrator Scott Pruitt — a position that does not require him to go through Senate confirmation. Ethics groups said that was inappropriate when reports of the arrangement emerged last month, but EPA defended itself by pointing to other administrations that had brought on employees who were waiting to be confirmed. In fact, Pruitt began laying the groundwork to get Dourson into the building without waiting on the Senate even before his first committee hearing. Pro's Alex Guillén lays out the timeline, based on a newly FOIA'd document.

Senate EPW Ranking Member Tom Carper tweeted: "Dr. Dourson's nomination must be pulled, he should not remain in an unconfirmed role at @EPA and we must find a credible regulator who the American people can trust."

What's EPA to do? If it becomes clear Dourson doesn't have the votes, EPA would face criticism for circumventing the Senate's duty to provide advice and consent, but its other option would be to acknowledge hiring someone who couldn't clear a Republican Senate and fire him. Both seem super awkward. The agency didn't respond to request for comment.

** **A message from Chevron:** We're piloting a program that uses drones to keep an eye on Chevron wells, tanks, and pipelines—all to keep DOERS and what they're doin' safer. Watch the video: http://politi.co/2zx6RdM **

QUOTABLE: From former EPA transition official David Schnare at the Heartland Institute's gathering last week in Houston on a recording obtained by The Washington Post:

—On getting allies in the administration: "There are ways to get names in, and we've used every door and window and crack in the wall we can use."
—On forcing EPA to challenge the endangerment finding using what conservatives have derided

as the "sue and settle" approach: ""If we come up with this case and say, well, this is what we want to do, and then we send a little note off to Scott Pruitt and say, 'We are going to sue you, would you like to sit down and talk.' It's not exactly sue and settle, it's just, 'We are going to sue your a--, and you ought to settle.'"

EPA WANTS TWO YEARS TO RECONSIDER COAL ASH RULE: EPA told the D.C. Circuit on Wednesday night that it would take until December 2019 to finish reconsidering a swath of technical issues in the coal ash rule. That answer may not please the court, which will hold oral arguments over the rule on Monday and has already once rejected EPA's request to pause that lawsuit in the meantime. EPA only just last week asked for a handful of issues be remanded for reconsideration, enraging environmental groups who noted the court date is so close. In a filing Wednesday night, EPA noted that it's already working on several provisions that were remanded back in June 2016, and said completing a review and potential rewrite of all the provisions in question would mean a proposal in September 2018 and finalization in December 2019.

EASY DOES IT: The National Association of Regulatory Utility Commissioners urged the Trump administration in a resolution approved Wednesday to tread carefully as it considers trade tariffs for imported solar panels, Pro's Eric Wolff reports. "NARUC is concerned that at least some of the requested trade protections could significantly increase the price of solar panels and therefore the cost of solar electricity generation," the resolution said.

YEAH I'M THE TAX MAN: House lawmakers expect to pass their tax package, H.R. 1 (115), today but that isn't stopping the flurry of groups pushing their priorities for the final product. Upset with reductions in value to the wind production tax credit, more than 200 companies in the wind industry asked House leaders to scrap an "unprecedented claw back" of the credit and stick to a phase-out deal reached two years ago.

Ahead of the vote: A roundup of the energy and environmental provisions in the legislation here.

Wither infrastructure? The House tax vote may also spell doom for Trump's hope for a trillion-dollar infrastructure package, Pro Financial Services' Colin Wilhelm reports. The bill eliminates tax preferences for private activity bonds, which support public-private partnerships similar to those Trump had pitched as a way to pay for infrastructure investments. "If that moved forward it would pretty substantially undermine the Trump infrastructure plan," said Michael Likosky, a principal at the infrastructure advisory firm 32 Advisors.

DURBIN LIFTS SOME HOLDS: After meeting with Secretary Ryan Zinke on Tuesday, Senate Minority Whip Dick Durbin lifted two of his holds on Interior nominations, your ME host reports . That may clear a floor path for Joseph Balash's nomination to be assistant secretary for land and minerals management and Brenda Burman's selection to lead Interior's Bureau of Reclamation. Durbin didn't offer details on Zinke's decisions on each national monument designation, but told reporters: "He went through his reasoning on each one of them." Five Senate Democrats attended the session, according to the Illinois Democrat.

DOE nominees announced: Trump announced Wednesday his selection of John Vonglis, a senior adviser with Cross Range Capital, a private equity firm in New York, as the Energy Department's chief financial officer, Pro's Darius Dixon reports. He also tapped Melissa Burnison, currently the Nuclear Energy Institute's director of federal affairs, as the agency's head of congressional affairs.

TODAY'S FERC MEETING: This is expected to be Neil Chatterjee's last FERC meeting as chairman before Kevin McIntyre takes the gavel, and regulators have a few items of note on the agenda. Commissioners are slated to get their annual briefing on the agency's enforcement work, and they will consider a petition from NERC, the electric industry's reliability organization, to rework standards for detecting, assessing and limiting faults on the electric grid.

The agenda also includes the Millennium Pipeline Co.'s 7.8-mile Valley Lateral Project. FERC on Wednesday night denied a rehearing request from New York environmental regulators who were upset that FERC overrode their opposition to the pipeline. But that order did not appear to address a challenge to the underlying certificate that acted as FERC's initial green light, so commissioners may weigh in on that rehearing request today.

FERC on top? When Chatterjee met with reporters last week, he said he hoped that by the end of today's meeting he might be able to announce that FERC was "dug out from that backlog" that accumulated when it was without a quorum earlier this year. So...?

NEW PAGE: A proposal issued Wednesday by PJM Interconnection to alter its wholesale power market that is likely to lead to higher electricity prices in the region, Pro's Darius Dixon reports. "We expect that under this proposal energy market prices — and therefore energy market payments — will go up," Stu Bresler, a PJM operations and markets executive, told reporters.

FLINT MAYOR TO MEET PRUITT: Fresh off beating back a recall attempt, Flint mayor Karen Weaver returns to Washington today for meetings with White House officials and Pruitt. "This is a significant step in our effort to communicate to White House officials what we still need in Flint to fully recover from the water crisis," she said in a statement.

McCASKILL PROBES GRID CONTRACTS IN PUERTO RICO: Senate Homeland Security ranking member Claire McCaskill sent a letter to the Army Corps of Engineers on Wednesday seeking additional information on four contracts the agency awarded for grid restoration work on Puerto Rico. Among her requests: How it awarded each of the four contracts, how they each relate to grid restoration contracts given out by the island's utility and what the terms of performance are for each of them.

Ahem, seems timely: McCaskill's letter comes as much of the island was left in the dark again Wednesday after a line repaired by Whitefish Energy under its now-cancelled $300 million contract failed again, Mashable reports. Puerto Rico Gov. Ricardo Rosselló set Wednesday as his goal of restoring power to half the island, which government figures showed he met.

INHOFE OKAY WITH CLIMATE STUDY: Sen. Jim Inhofe, arguably the most ardent denier

of mainstream climate science, said he has no problem with a provision in the compromise version H.R. 2810 (115) of the National Defense Authorization Act requiring the Pentagon to detail threats posed by climate change to military installations. "Let's have it so we know if they really believe that [it's an increasing security threat to the United States]," he told reporters. "I didn't object at all to that."

FIAT CHRYSLTER HIRES TSCA REFORM AUTHOR TO LOBBY ON EMISSIONS: The American subsidiary of automaker Fiat Chrysler, has hired a bipartisan team of lobbyists from Holland & Knight, according to a newly filed disclosure. They include Dimitri Karakitsos, a Republican former EPW aide who helped write the Toxic Substances Control Act reform bill, and Rich Gold, a former aide to then-EPA Administrator Carol Browner. FCA US is currently battling EPA allegations that the company sold more than 100,000 diesel vehicles equipped to cheat emissions tests.

MAIL CALL! BIODIESEL TO TRUMP: HIGHER VOLUMES, PLEASE: The National Biodiesel board is calling on Trump to ask EPA to set advanced biofuel and biodiesel volumes significantly higher than the agency proposed over the summer. "These base numbers contained in EPA's original, July proposal ... are themselves so low that, if finalized, they will halt the growth of the biomass-based diesel industry," the board writes.

— The National Association of Convenience Stores sent a letter to the Senate Finance Committee urging it "to retain the biodiesel tax credit as a blenders' credit and phase it out responsibly." Link here.

SHOTS FIRED BACK: The Renewable Fuels Association is taking issue with a letter sent earlier this week by the Petroleum Marketers Association of America arguing the underground storage tank systems of many small businesses would be unable to handle higher percentage ethanol blends. "PMAA's claims that underground storage tanks at fueling stations cannot legally store gasoline containing 15% ethanol are grossly overstated, and their conclusion that the Renewable Fuels Standard (RFS) should thus be reduced is completely unfounded," Bob Dinneen, the group's head, said in a letter to EPW Chairman John Barrasso. "There is no basis whatsoever to PMAA's claims and there is no legal justification for this group or any other to seek a reduction in ethanol volumes under the RFS."

NEWSPAPER SUES EPA: Bay Journal Media, Inc., publisher of the *Bay Journal* newspaper, filed a lawsuit against EPA seeking documents that might explain why the agency abruptly cut off grant funding to the newspaper that had been funded since 1991. "If this decision stands, it will leave a gap in Chesapeake Bay news coverage by threatening our ability to provide the public with information about how actions by the EPA, and others, may affect restoration efforts," editor Karl Blankenship said.

MOVER, SHAKER: Colin Hayes, who stepped down as Senate Energy staff director in September, will team up with Josh Lahey, a principal at the Podesta Group, to launch their own public affairs firm, called Lot Sixteen. The new firm will focus on energy work, but "it's absolutely going to be broader than that," Lahey said (h/t POLITICO Influence).

World leaders press climate case as poor countries decry loss of U.S. funds Back

By Emily Holden | 11/15/2017 03:13 PM EDT

BONN, Germany — Heads of state arrived at the international climate conference Wednesday to press ahead with negotiations on implementing the global pact, while developing countries warned the loss of U.S. money would imperil their ability to meet their goals.

Few world leaders dwelled on President Donald Trump's move to withdraw the U.S. from the Paris agreement, instead focusing on the need to set the rules for the pact.

But Germany's Chancellor Angela Merkel lauded the U.S. governors and mayors who traveled here to promote their efforts to curb carbon pollution despite the Trump administration's work to erase any trace of former President Barack Obama's climate actions.

"I very much welcome this," Merkel said. "It underlines the importance attached to climate change in broad swaths of American society, irrespective of the decision of President Donald Trump to leave the Paris agreement."

J. Antonio Marcondes, chief negotiator for Brazil, declined to comment on how the U.S. negotiators were influencing the talks other than to say "[w]e're working with them. We're talking with them. They are participating in meetings."

Countries were disappointed by the U.S. plan to withdraw from the Paris agreement, he said, but the talks were proceeding.

"The point is now to keep working [with] those that are in the agreement, those that are staying in the agreement, to walk forward, to walk fast and be able to implement Paris. The U.S. decision is the U.S. decision and it's up to them."

China's special representative for climate change, Xie Zhenhua, said the U.S. remained active in the talks and that China "hopes that the United States will continue to play a constructive role in those negotiations."

State Department negotiators in talks hadn't veered far from the positions held under previous administrations. And the White House hasn't sought to renegotiate terms already settled in Paris, raising hopes that the U.S. might ultimately alter its course and decided to remain a party to the deal after all.

Still, developing countries were worried about Trump's pronouncements that he won't fulfill Obama-era promises to fund climate action around the world.

"The U.S. team has been on the ground and they are working with us," said South Africa's Minister of Environmental Affairs Edna Molewa. "But the actual payment of the money they have committed already — it has to come."

The U.S. has contributed $1 billion of the $3 billion that Obama pledged to help poor nations fight climate change under the Green Climate Fund, but the Trump administration has said it would not pay the rest. The GCF funding, which the Paris deal says should rise to $100 billion annually from 2020 to 2025, has long been a source of tension between industrialized nations that produced most of the carbon pollution over the past century and developing countries that are seeing their emissions now climb.

Asked whether the world should trust the U.S. after it has backed out of more than one climate agreement in recent decades, Molewa said the global community is "fairly concerned."

"That's why everybody is dong the level best to get all of us sobering up and really just thinking hard about what the world needs," she said. "The issue of climate change, the fight we are engaging in, is not about us only as individual countries, but it is beyond us. For humanity to survive, it is important that we all work together."

After a last-minute announcement that U.S. Undersecretary of State Tom Shannon would not attend the high-level segments of the talks because of a family emergency, acting Assistant Secretary Judy Garber is set to make the first big speech on behalf of the U.S. on Thursday. Like Shannon, she is a career State Department official, and she is not expected to promote the White House effort calling for developing countries to build more efficient fossil fuel-fired power plants.

Although the U.S. won't contribute to the GCF, Trump aides here say they're open to working with other countries to build coal, natural gas and nuclear plants. White House energy adviser George David Banks said the U.S. may band together with countries that may want coal plants but can't get financing for fossil fuels.

"It's come up a few times, but I don't know if we've had any sort of real international discussions or lengthy discussions with potential partners on that kind of arrangement," Banks said. "I would say that the administration is interested in the idea and would like to explore exactly what it means."

The White House may also initiate discussions with development banks, like the World Bank, about financing coal projects, he said.

The administration's coal pitch could cheer politicians from heavy coal-producing nations. Jerzy Buzek, the former prime minister of Poland and current chair of the European Parliament's Committee on Industry, Research and Energy, raised questions in Brussels last week about the financing necessary to transition off of fossil fuels.

"In the medium term, we still need huge investments also into existing systems," he told reporters in Brussels.

Buzek said he supports a transition to cleaner technologies but that it "is not very easy to achieve in all the regions of the European Union. In the regions with heavy industry — let's say coal- and carbon-intensive regions — it's not easy."

Banks said the administration also supports renewable energy but couldn't offer any evidence of how.

"The United States has been helping finance the deployment of renewable energy technologies, right? But it's essentially been a job program for China and for other countries," he said.

He said the White House is conducting a review of its renewable energy policies, but declined to offer details.

David Siders, Kalina Oroschakoff and Sara Stefanini contributed to this report.

Macron to call for a carbon border tax and other climate measures Back

By Sara Stefanini | 11/15/2017 03:07 PM EDT

BONN, Germany — France will call on the EU to impose a border tax for carbon emissions and include environmental goals in its trade policy, among other efforts to reduce greenhouse gas emissions, President Emmanuel Macron said Wednesday.

"We need a border tax to make it possible for us to protect imports from countries that do not protect our goals," Macron said in a speech at the COP23 climate summit.

He also said France will work in the coming months on a "CO2 plan for Europe" to push the carbon trading price to €30 per ton.

"It will not be easy in any European country, there will be industrial groups who will ask for more time, say they won't be able to reach these goals," Macron said, adding that the plan will build on the "excellent" deal reached last week to reform the EU's Emissions Trading System from 2021.

"This agreement is in the right direction, but in the coming year it must be complemented with more action," he said.

Furthermore, France will support the development of electricity interconnectors with Germany, Ireland, Spain, Italy, Benelux and elsewhere to boost renewable energy use, Macron said.

France is "literally obsessed with reducing our greenhouse gases," he said, noting that it aims to close all coal-fired power plants by 2021.

That's why the government decided to drop a goal to reduce the share of nuclear power in France from 75 to 50 percent of the mix by 2025, Macron said, as closing nuclear plants would mean re-opening coal-fired power.

EPA started hiring process for Dourson ahead of hearing, document shows Back

By Alex Guillén | 11/15/2017 05:18 PM EDT

EPA began laying the groundwork to get Michael Dourson onto the agency payroll without waiting for him to be confirmed — even before his nomination hearing occurred, according to documents obtained by POLITICO via a Freedom of Information Act request.

Dourson joined EPA as a senior adviser to Administrator Scott Pruitt sometime last month. On Sept. 20, Pruitt and EPA chief of staff Ryan Jackson signed Dourson's "position description coversheet," outlining his duties advising Pruitt on legislative and regulatory issues related to chemicals and pesticides. That was two weeks before Dourson's Oct. 4 hearing before the Senate Environment and Public Works Committee, though President Donald Trump nominated him in July as the assistant administrator for toxic substances. (In an apparent error, the document does not include Dourson's name, but was identified by EPA as Dourson's paperwork.)

The committee approved his nomination along party lines Oct. 25, but a Senate floor vote has not yet been scheduled. Dourson has drawn criticism over his past toxicology work for various companies, and some Republicans have indicated they have reservations.

EPA last month pointed out that previous administrations had hired nominees to begin working before their confirmation. The agency did not immediately respond to a request for a comment today.

Susan Bodine, who is awaiting a confirmation vote to become EPA's enforcement chief, also has already started at EPA. Pruitt and Jackson signed off on her job description July 12, according to a copy of the document obtained by POLITICO.

WHAT'S NEXT: It is unclear when Dourson may receive a final floor vote in the Senate.

State power regulators oppose hefty solar tariffs Back

By Eric Wolff | 11/15/2017 05:50 PM EDT

The National Association of Regulatory Utility Commissioners today approved a measure asking the Trump administration to go easy on trade tariffs for imported solar panels.

The group, a trade association for public utility regulators, approved a resolution at its annual

meeting in Baltimore that said it "does not dispute" the U.S. International Trade Commission's finding that cheap imports from China and elsewhere harm U.S. manufacturing, but was concerned about potential trade barriers.

"NARUC is concerned that at least some of the requested trade protections could significantly increase the price of solar panels and therefore the cost of solar electricity generation," the resolution said.

The ITC sent its recommendations for tariffs and quotas to President Donald Trump on Monday. The Office of the U.S. Trade Representative is now taking comments on proposed remedies that it will present to Trump, who will make the final decision.

NARUC "urges the USTR, in its consideration of potential action, to carefully weigh the harm that could result to energy customers from increasing the costs of solar inputs across the country, and the potential challenges to achieving state renewable energy and greenhouse gas goals that may result from higher solar energy prices," the group said.

WHAT'S NEXT: The USTR will take comment until Nov. 20. Trump has until January to make a decision.

Emily Holden contributed to this report.

Tax bill teed up for House vote Back

By Rachael Bade and Heather Caygle | 11/15/2017 01:15 PM EDT

House Republicans are set to pass a sweeping rewrite of the tax code Thursday, bringing President Donald Trump and the GOP closer to the major legislative win they so desperately want. And leadership apparently barely lifted a finger to whip votes this week.

Speaker Paul Ryan and his top lieutenants have been working behind the scenes on a few tax reform holdouts in recent days. But House Republicans think they've already got enough votes lined up — and have not needed to turn to Trump to flip opponents.

Republicans cleared a key procedural vote on the massive tax-cuts package Wednesday afternoon on a party-line vote. The final passage vote is expected soon after Trump rallies the GOP Conference at an 11:30 a.m. closed-door meeting in the Capitol on Thursday.

There's little room for error for Republicans. House Democrats have been working to keep their 194-member caucus together, not only to show unified opposition but to deny Republicans any opportunity to tout the bill as a bipartisan effort.

Massachusetts Rep. Richard Neal, ranking member on the Ways and Means Committee, has been keeping close tabs on the Democratic Caucus' most squishy members for months and recently redoubled his outreach to individuals who may be considering voting for the GOP plan. On Wednesday, House Minority Whip Steny Hoyer predicted that not a single Democrat will vote for the tax package.

"I don't think we'll lose anybody," Hoyer told reporters. "I think the consensus conclusion of almost every Democrat — pro-business Democrat, conservative Democrat — is that this bill is not good for the country, is not good for average working people."

White House sources say they're focusing all their energy on the Senate, with little concern about the House vote. The House whip team has not had to turn to the president to move people from "no" to "yes" — if only because most Republicans are so desperate for a legislative win. That's a shift from a few months ago, when Trump persuaded wavering House members to pass legislation repealing Obamacare.

Republicans can afford to lose only 22 GOP votes. Most of those opponents, House Republican sources say, will be lawmakers from high-tax states, including half the delegation from New York and most of New Jersey, and perhaps one or two from California. Those members' constituents could see a tax increase under the GOP plan because the bill axes their most prized tax break: the state and local tax deduction.

House Majority Leader Kevin McCarthy of California has been working to keep fellow California Republicans on board after Rep. Darrell Issa peeled off last week. It's unclear whether any other Golden State Republicans will join him in opposing the legislation, though sources say several are concerned about how the bill will affect their districts.

Issa told reporters Wednesday that he expects "two or three" California Republicans to follow suit.

Meanwhile, some conservatives are sulking over leadership's refusal to include a repeal of Obamacare's individual mandate in the tax bill.

GOP leaders originally argued that mixing controversial health care matters with taxes could kill the tax package, legislation they believe they must pass to save their majority in 2018. They speculated that the Senate would be unlikely to pass such legislation if the two were combined — particularly because the upper chamber failed to rally around a single Obamacare replacement proposal.

But on Tuesday, Senate Republicans added the mandate repeal to their bill, surprising House GOP leaders and causing envy among some rank-and-file House members. Republican Study Committee Chairman Mark Walker of North Carolina tried to persuade House leaders Tuesday night to add the mandate repeal to the House bill, offering an amendment cosigned by 60 House Republicans during a Rules Committee hearing to combine the two issues. Leaders rebuffed him.

Despite some unhappiness with the final House product, GOP leaders have been selling members on the House plan by arguing that the bill they pass Thursday will not be the final version that heads to Trump's desk. Ryan has promised lawmakers that the House will go to conference with the Senate — and that any outstanding concerns could be addressed at that time.

That argument appears to have won over a large swath of lawmakers. Conservatives who want the individual mandate in the bill are willing to wait. Others with more niche concerns — like preserving the historic tax credit to renovate older buildings, or changes they want made to the small business tax cuts — are similarly holding their fire.

That's still a few weeks away, as Senate Republicans are expected to vote on their tax bill after Thanksgiving. After Senate passage, GOP leaders in both chambers will appoint conferees to begin hashing out their differences, from the phase-in of the corporate tax cuts to how they handle high-tax areas.

House Democrats, meanwhile, are working to keep members unified in opposition to the bill.

The White House and Ways and Means Committee Chairman Kevin Brady had courted some Blue Dogs and other moderate Democrats since the spring, hoping to pick off a few when their bill eventually made it to the floor.

Neal has met with each coalition within the caucus in recent months from the pro-business New Democrats to the Congressional Progressive Caucus to get a read on members. And in the two weeks since the House GOP bill was first introduced, he touched base with members considering supporting the plan, working them on the House floor or coordinating with other messengers to talk to them.

In a coup for Democrats, the leaders of the centrist Blue Dog Coalition put out a statement Wednesday announcing their opposition to the bill. The group, whose 18 members were seen as the most likely defectors, cited the tax bill's deficit-busting numbers as the ultimate reason they decided to oppose the plan.

But privately, Democrats said they also were discouraged by Republicans' promises of bipartisanship before shutting them out of every part of the process.

"I think this is probably one of the most hypocritical bills that I've seen on the floor of the House of Representatives," Hoyer said. "It is one of the most fiscally reckless bills that has been presented. And I think there's a consensus in our party that that's the case."

House tax bill slashes value of wind energy tax credit Back

By Eric Wolff | 11/02/2017 02:20 PM EDT

The House tax bill released Thursday would substantially reduce the value of a key wind energy incentive, tighten requirements on what renewable energy companies have to do to qualify for tax credits, extend a nuclear energy tax break, and restore support for clean energy technologies that had been "orphaned" from an earlier tax extenders law.

The bill also eliminates an electric vehicle tax credit and jettisons some little-used oil industry tax breaks — as well as getting rid of the more significant domestic production tax deduction enjoyed by oil companies and other manufacturers.

The wind industry was quick to condemn the changes to its tax treatment.

"Despite comments to the contrary, this proposal reneges on the tax reform deal that was already agreed to, and would impose a retroactive tax hike on an entire industry," Tom Kiernan, CEO of the American Wind Energy Association, said in a statement. "The House proposal would pull the rug out from under 100,000 U.S. wind workers and 500 American factories, including some of the fastest growing jobs in the country. We expect members of the House and Senate to oppose any proposal that fails to honor that commitment, and we will fight hard to see that wind energy continues to work for America."

Here are some highlights from the text and a section-by-section summary provided by the Ways and Means committee.

— **PTC cutbacks:** The bill would reduce the value of the Production Tax Credit to 1.5 cents per kilowatt-hour, the level it was set at in 1992, rather than indexing it for inflation. That would reduce its value far beyond the terms of a tax credit phase-out that was implemented with bipartisan support in 2015. Wind farms and other eligible projects that begin construction this year can now claim a 1.9 cents/kWh credit, down from 2.3 cents/kWH for projects that started last year. The credit is scheduled to disappear for projects built after 2019 under current law, a schedule maintained in the House bill.

Developers also would face tougher requirements to claim the credit, the value of which is determined by when construction begins. The House bill requires a "continuous program of construction" until a facility comes online in order to qualify for the credit, eliminating provisions of existing law that allow developers to make "safe harbor" investments to qualify. The Joint Committee on Taxation says eliminating the inflation-adjustment and tightening the construction requirements will save $12.3 billion over 10 years, according to the bill summary.

— **ITC repealed after 2027, orphan credits revived** : The House bill extends the investment tax credit for a set of "orphaned" technologies left out of the 2015 legislation phasing out the ITC and PTC over five years. Fuel cells, small wind turbines, combined heat and power systems and microturbines can now claim the ITC until Jan. 1, 2022, with the credits phasing down at the same rate as the solar ITC. But what was to be a permanent 10 percent tax credit for solar investments will now terminate at the end of 2026. The House bill includes similar "continuous construction" requirements for the ITC as for the PTC. The changes would cost the government

$1.2 billion in reduced revenues over 10 years, according to JCT estimates cited in the bill summary.

— **Advanced nuclear tax credit extended:** The bill extends a tax credit for advanced nuclear projects, allowing the secretary of Treasury to transfer unused credits after 2020, which was the in-service deadline under current law. The extension has long been a priority for South Carolina Republican Sens. Lindsey Graham and Tim Scott, among others. The credits would cost $400 million over 10 years.

— **Utilities keep interest deduction**: The bill would change how much loan interest some businesses can deduct form their taxes, while allowing them to take advantage of full expensing of capital investments. However, it excludes regulated utilities from the new rules, providing a win for the industry. Eric Grey, director of government relations for the Edison Electric Institute, a trade group, told POLITICO in September that losing the interest tax deduction was a major concern for utilities. Overall, JCT estimates the deduction-and-expensing changes would save the government $172 billion over 10 years.

— **No more 199:** The House bill would eliminate the domestic manufacturing credit known as section 199. Current law allows certain oil and gas companies to claim a 6 percent tax deduction, and other manufacturers can claim a 9 percent deduction, but the House bill would strip section 199 from the tax code starting next year. Doing so would save $95.2 billion over 10 years.

— **Minor oil credits repealed:** The bill repeals two small oil industry credits that have barely been used because they only kick in when commodity prices are low. Repealing the enhanced oil recovery credit would cost the government about $200 million over 10 years, while eliminating the marginal well production credit would have no effect on revenues.

— **EVs lose credit:** The bill repeals a $7,500 tax credit for electric vehicles. It is part of a slew of tax credits, along with a mortgage credit, and an adoption credit, that the bill proposes repealing. Repealing all of the credits would save $4 billion over 10 years, but the summary does not include a JCT estimate for the electric vehicle credit alone.

— **Biodiesel, CCS missing:** An expired biodiesel blenders credit was not restored, something likely to become an issue in the Senate where Sen. Chuck Grassley wants it revived as a producers credit; and a credit for carbon capture and sequestration did not get in the text, despite having bipartisan support.

Tax reform may doom Trump infrastructure plan Back

By Colin Wilhelm | 11/16/2017 05:01 AM EDT

The tax reform bill set to be voted on Thursday by the House of Representatives could kill any chance of the Trump administration's trillion-dollar infrastructure plan ever happening.

At best, House support for the plan would signal lukewarm backing among Republicans for President Donald Trump's ambitions. At worst, the bill would effectively end the funding structure that the administration touts as a way to reach its $1 trillion target and minimize the burden on taxpayers.

The House bill ends tax breaks for private activity bonds, a key part of public-private partnerships in projects ranging from roads to low-income housing. The administration has said it wants to leverage those partnerships to reduce the direct cost of the president's building plan.

Private activity bonds leverage local or state government debt for a project deemed to be a public good but too expensive for that government to manage, so it arranges for a private entity to run it. Examples range from aquariums to water systems. Those bonds come with a tax exemption, as other municipal bonds do, on what they pay out to entice investors to buy them.

The White House did not comment on the change, but suggested that it would attempt to restore tax breaks for that type of infrastructure financing.

"We will continue working with Congress throughout the process to ensure that the President's priorities are reflected in the tax cut bill that reaches his desk," White House deputy press secretary Lindsay Walters said in an emailed statement to POLITICO.

Rep. Bill Shuster (R-Pa.), chairman of the House Transportation Committee, said he was concerned about repealing the tax exemption for those bonds.

"I don't know that there's a commitment" to restore the bond exemption between the House and Senate when they reconcile their bills. "There's a lot of money on the sidelines that comes into play, so I think it's something that would hopefully be put back in there."

Added Shuster: "The president's talked about doing these kinds of things, so it's not a helpful thing" for Trump's building plan.

Infrastructure experts agreed.

"If that moved forward, it would pretty substantially undermine the Trump infrastructure plan," said Michael Likosky, a principal at the infrastructure advisory firm 32 Advisors. "A large amount of infrastructure is financed through the tax code."

The head of the infrastructure financing desk for one major bank, who asked not to be named for fear of being seen as critical of Congress, said he viewed the tax reform provision as a sign of the House's rejection of Trump's infrastructure plan.

"Infrastructure is a lower priority for the House of Representatives as they've wrestled with tax reform," he said.

Matt Fabian, a partner at Municipal Market Analytics, estimated that 80 percent of the public-private partnerships that Trump would rely on to pay for new building use private activity bonds.

Elimination of such bonds would "effectively neuter" any infrastructure agenda that would use private financing, Fabian said.

The Joint Committee on Taxation, which does nonpartisan economic and budgetary analysis for Congress, estimates that eliminating those bonds would raise almost $40 billion over 10 years, which would help make up for lost revenue from tax cuts made by the House reform bill.

Republicans need to meet strict budget requirements to pass tax reform along a party-line vote in the Senate.

Unless Trump can create an unlikely alliance of Democrats and Republicans to pass $1 trillion in new infrastructure spending, repeal of the bonds could effectively end those hopes. That may set up a high-stakes fight to save the exemption if the House and Senate have to agree on unified tax reform legislation.

Shuster and other infrastructure spending supporters hope that the issue will be fixed, in part because the Senate's version of tax reform includes the private activity bond exemption. But the Senate tax bill is already over the budgetary limit for money the government may lose under the tax reform bill it's considering. That makes it more likely that provisions repealed by the House to fit those budgetary requirements will be included in a final product.

Even Republican supporters of private activity bonds sounded pessimistic.

"Finding revenue, finding the scorer space, it's an inside-D.C./Beltway problem; but it's the reality of the legislative sausage-making process that we're dealing with, and so finding the revenue is one of the difficult questions that has to be answered," said Rep. Tom Reed (R-N.Y.). "Even after tax reform, we're not going to give up the fight, because I believe in these types of programs."

Likosky and other infrastructure financing experts expected major municipal bond market distortions for the remainder of the year, due to a rush to market for private activity bonds before they would be repealed by the House bill.

"The muni market itself would shrink accordingly," Fabian said, and federal government aid to assist those programs would likely need to increase to offset it. Airports, hospitals and other institutions reliant on private activity bonds may increase costs to individuals to make up for the shortfall if that federal aid didn't come.

Fabian said he expected projects important to the constituencies of many Republicans, like rural hospitals, small religious universities and charter schools, to be hit particularly hard by loss of the bonds.

According to Chris Hamel, head of the infrastructure investment group for Royal Bank of Canada, a portion of low-income housing construction would also likely stall out. According to RBC, private activity bonds financed over $4 billion worth of low-income housing projects in 2016.

But some view private activity bonds skeptically as government subsidization and see no problem killing them, regardless of the impact on Trump's infrastructure ambitions.

"What it does is dries up another revenue source with regard to that particular form of infrastructure," said Rep. Mark Sanford (R-S.C.), who sits on the House Transportation Committee. "But I think that there is fairly unanimous consent, within at least the House [Republican] conference, that they need to go."

Multiple members said they have yet to hear much pushback on the repeal from the White House, either, suggesting a potential abandonment of the private financing route for Trump's infrastructure plan.

"I think that's been a valuable tool," said Rep. Pat Tiberi (R-Ohio), a Ways and Means member. "If there is some abuse, which some say there has been, I would be for trying to limit [the private activity bond tax exemption's] scope. If it ends up being repealed, I think it will have an impact on the housing market."

Durbin lifts some Interior holds after Zinke meeting Back

By Anthony Adragna | 11/15/2017 03:13 PM EDT

Senate Minority Whip Dick Durbin told reporters today he's lifting holds on two Interior nominees after a meeting Tuesday in which Secretary Ryan Zinke walked five senators through his decisions on national monument designations.

"He went through his reasoning on each one of them," Durbin (D-Ill.) said. "I thought it was terrible reasoning on Bears Ears." He didn't offer further details.

Also attending the meeting with Zinke were Democratic Sens. Catherine Cortez Masto of Nevada, Martin Heinrich of New Mexico, Jeff Merkley of Oregon and Tom Udall of New Mexico, according to Durbin.

A spokesman clarified Durbin lifted his hold on Joseph Balash's nomination to be assistant secretary for land and minerals management and would also lift his hold this afternoon on Brenda Burman to lead Interior's Bureau of Reclamation.

Durbin and Zinke got into a war of letters last week over holds on two additional nominees besides Balash and Burman: Ryan Nelson to be agency solicitor and Susan Combs to be Interior's assistant secretary for policy, management and budget.

WHAT'S NEXT: Lifting the holds could clear the way for fast floor consideration of Balash and Burman.

White House announces picks for DOE CFO, congressional affairs Back

By Darius Dixon | 11/15/2017 05:54 PM EDT

President Donald Trump intends to nominate John Vonglis as the Energy Department's chief financial officer, and Nuclear Energy Institute official Melissa Burnison as the agency's head of congressional affairs, the White House announced today.

Vonglis is a senior advisor with Cross Range Capital, a private equity firm in New York. He has previously held positions with Red Apple Group, The Hudson Group and IBM. During the George W. Bush administration, Vonglis, a colonel in the Army Reserve, served in the Department of Defense in various roles, including acting assistant secretary for financial management and the chief management officer of the Air Force. He also ran for a House seat in 2000, the White House states.

Burnison, who will be nominated as the DOE assistant secretary for congressional intergovernmental affairs, is NEI's director of federal affairs. Before NEI, she was a senior advisor at DOE and with the House Natural Resources Committee. According to the White House, she began a career on Capitol Hill with Sen. Mitch McConnell, of her home state of Kentucky, and worked for former Tennessee Rep. Zach Wamp.

WHAT'S NEXT: The White House must formally nominate the picks and send their paperwork to the Senate before the Senate Energy and Natural Resources Committee will hold a hearing.

FERC overrules New York's pipeline project rejection Back

By Darius Dixon | 09/15/2017 01:32 PM EDT

FERC cleared the way today for a natural gas pipeline in New York, ruling the state had taken

too long to issue its rejection of the project — a decision today that may signal how Washington could curtail states' efforts to stall energy infrastructure projects.

FERC's three sitting commissions ruled in in favor of the Millennium Pipeline Co.'s 7.8-mile Valley Lateral Project, saying the New York Department of Environmental Conservation had waived its right to determine whether the project met CWA requirements because it had wrongly interpreted when the law's one-year review period for the application had started.

The NYDEC argued that its clock to review applications starts when it deems the paperwork complete — a date that was delayed by two state requests for additional information in Millennium's case. But FERC decided the one-year period started when the application was initially received by state regulators in 2015, making New York's rejection of the water quality clearance on Aug. 30 invalid.

"Giving effect to the plain text of a statute, the one-year review period began November 23, 2015, the date that New York DEC received the application," FERC's order states.

The new pipeline is designed to connect Millennium's mainline to the proposed CPV Valley Energy Center.

WHAT'S NEXT: New York can challenge FERC's interpretation in at the agency and request that a federal court issue an injunction on construction.

PJM floats market plan that would boost power prices Back

By Darius Dixon | 11/15/2017 05:16 PM EDT

The PJM Interconnection issued a proposal today to alter its wholesale power market that is likely to lead to higher electricity prices in the region.

"We expect that under this proposal energy market prices — and therefore energy market payments — will go up," Stu Bresler, a PJM operations and markets executive, told reporters on conference call this afternoon.

While payments to power plants that participate in PJM's capacity markets would likely go down, he said, "the net impact in the total, combined energy and capacity markets, costs will be [up] somewhere between around 2 and 5 percent."

PJM's plan would allow power plants that can't quickly alter their output, like nuclear generators, to set market prices.

"When the cost of an inflexible unit that is needed to serve demand is precluded from setting price, the [local price] does not accurately reflect the true incremental cost to serve load," PJM's proposal states.

Second, the proposal would increase the window for the market's so-called shortage pricing, a period when power payments are higher because of a lack of generating capacity. Shortage pricing currently doesn't kick in until the 10 minutes before a potential shortfall, but PJM wants that increased to 30 minutes.

Bresler emphasized that PJM's proposal was under development long before Energy Secretary Rick Perry's grid resiliency proposal.

"We don't think we have the issue that the DOE seems to think we have," Bresler said, noting that PJM has been working on pricing issues for a year.

WHAT'S NEXT: Bresler said that a panel within PJM would start looking at the proposal on Dec. 7 but the plan is unlikely to get to FERC until fall 2018.

Subject: Morning Energy: Pruitt briefly attends G-7 environment meeting — Final call on Bears Ears expected imminently — More cities join climate data transparency push

By Anthony Adragna | 06/12/2017 05:41 AM EDT

With help from Sara Stefanini and Anca Gurzu

CIAO! ARRIVEDERCI! EPA Administrator Scott Pruitt will not appear alongside his counterparts from the rest of the G-7 today to close out the environmental ministers meeting in Bologna, Italy, because he left after the first few hours of the confab on Sunday. "As planned, Administrator Pruitt is returning home to attend the first full cabinet meeting at the White House," EPA spokesman Lincoln Ferguson told ME. "Senior staff will remain in Bologna and continue to engage in proactive discussions with our international partners." President Donald Trump is scheduled to convene his full Cabinet for the first time today.

Stark divisions remain — and aren't likely to bridged: The G-7 environment ministers meeting comes less than two weeks after Trump announced he would pull the U.S. out of the Paris climate agreement, a decision that has strained diplomatic relations. Ministers are still expected to issue a communiqué today, but the other nations have made clear their displeasure at the U.S. leaving the Paris pact. German Environment Minister Barbara Hendricks told reporters there will be one, but that it will "differentiate the opinions " (which sounds like what G-7 leaders did in their statement last month). Italian Environment Minister Gian Luca Galletti described the differences in perspectives on Paris between the U.S. and the other six nations as "distant."

All welcome to Paris: Patricia Espinosa, head of the United Nations climate change secretariat, told the ministers she intends to open the door for regions, cities and other sub-national players to join the international talks, said Carlo Carraro, a member of the U.N.'s International Panel on Climate Change Bureau. "This is obviously important, because cities like New York and states like California that intend to pursue the same direction — of reducing emissions very ambitiously — will have a voice and will be able to sign agreements inside the international convention on climate change."

So, what'd Pruitt do while in Italia? EPA has declined to provide information on Pruitt's schedule during his taxpayer-funded trip, but he tweeted about a series of meetings in Europe. They included ones with Japan's environment minister, Britain's Department for Environment Food & Rural Affairs minister Therese Coffey, Galletti, more business representatives, judicial officials in Rome and Vatican representatives. Espinosa and Hendricks posted their own photos of meetings with Pruitt. Family portrait here.

"The United States has always been a world leader when it comes to environmental stewardship, and that was demonstrated on a global stage today," Pruitt said in a statement after he left. "I believe engaging in international discussion is of the utmost importance to the United States when it comes to environmental issues."

WELCOME TO MONDAY! I'm your host Anthony Adragna, and ClearPath Foundation's Spencer Nelson was first to identify Sen. Ron Wyden as the senator whose spouse co-owns the Strand Bookstore. Send your tips, energy gossip and comments to aadragna@politico.com, or follow us on Twitter @AnthonyAdragna, @Morning_Energy, and @POLITICOPro.

BEARS EARS ANNOUNCEMENT COMING: Interior Secretary Ryan Zinke's recommendation on the fate of 1.4 million-acre monument Bears Ears National Monument was due to the White House last weekend, and the Trump administration is expected to announce its decision shortly. Sen. Orrin Hatch, dean of the Utah congressional delegation, said in a weekend statement he was "prepared to support whatever recommendation Secretary Zinke offers to the president at the conclusion of a thorough review process." Zinke's recommendations could be to shrink or completely revoke the monument designation, moves sure to be staunchly opposed by green groups and Democrats in Congress, or he could press for lawmakers to craft a legislative solution.

ICYMI: Pro's Esther Whieldon scored an interview with former Interior chief Sally Jewell, who said the Obama administration opted to designate Bears Ears because "no credible effort was put forth by the Utah delegation to do it through congressional means in spite of repeated offers and efforts to help them do that." Republicans strongly dispute that contention, saying it was environmentalists who walked away from legislative negotiations.

CLIMATE HITS THE C SUITES: Pro's Ben Lefebvre examines growing momentum from activist investors calling on major energy companies to disclose how government efforts to limit global warming to 2 degrees Celsius would affect their businesses. Majority owners of three major energy companies — Exxon Mobil, Occidental Petroleum and Pennsylvania-based PPL Electric Utilities — backed resolutions along those lines this year and similar efforts came within percentage points of passage at Ameren, Dominion Energy, Duke Energy and DTE.

LATEST VOLLEY IN EXXON V. SCHNEIDERMAN: Exxon Mobil said in a Friday filing it was appropriate to use different carbon prices in calculations conducted for different purposes, including some taking global energy demand and prices into account and others calculating possible project investments, Pro's Ben Lefebvre reports . "ExxonMobil has not said that it relied on one set of figures for all purposes, and a reasonable investor would not draw such a conclusion from ExxonMobil's public statements," the fossil fuel giant's attorneys wrote. New York Attorney General Eric Schneiderman has argued Exxon may have defrauded investors by keeping its in-house research on climate change hidden, though the company has refused to comply with all of the his subpoena requests and accused Schneiderman of using the litigation to further his career.

HITTING THE FAST LANE: The Senate Environment and Public Works Committee plans to vote on the renomination of Nuclear Regulatory Commission Chairwoman Kristine Svinicki on June 15, separating her nomination from those of two other NRC picks, Pro's Darius Dixon reports. Lawmakers will hold a rescheduled nomination hearing for Svinicki, NRC nominees Annie Caputo and David Wright and EPA enforcement nominee Susan Bodine on Tuesday.

SCIENTIFIC INTEGRITY MEETING PUSHED: EPA will invite more industry participants to a meeting hosted by the agency's scientific integrity official after House Science Chairman Lamar Smith complained the guest list was too tilted toward environmentalists, Pro's Alex Guillén reports. EPA "recently sent invitations to additional organizations representing the regulated community and state governments," Robert Kavlock, the acting assistant administrator for research and development, wrote last week to Smith. The meeting was initially planned for Wednesday, but it has been postponed and will be rescheduled. The scientific integrity official, Francesca Grifo, has been out sick in recent weeks.

DOZEN MORE CITIES POST CLIMATE DATA: Following the lead of Chicago Mayor Rahm Emanuel, 12 more cities are joining efforts to post EPA climate change information that the Trump administration has removed from its website. "I will continue to work with these Mayors and all those involved in the Climate Alliance to take action at the local level, including honoring the Paris Agreement," Emanuel said in a statement. Cities joining the effort are Atlanta; Boston; Evanston, Ill.; Fayetteville, Ark.; Houston; Milwaukee; New Orleans; Philadelphia; Portland, Ore.; San Francisco; Seattle; and St. Louis.

DEFENSE'S ENERGY WIZARD TAPPED: Trump late Friday announced his intent to nominate Lucian Niemeyer to serve as assistant secretary of Defense for Energy, Installations and Environment. He was previously a long-time staffer on the Senate Armed Services Committee where he ran the military installation portfolio and conducted oversight of federal energy and environmental programs. He currently works as a senior adviser to the Roosevelt Group, according to the defense consulting firm's website.

MINOR ENERGY BILLS HIT HOUSE FLOOR: Lawmakers today vote on 10 minor energy bills in the House with most having to do with extending the deadlines for hydroelectric power projects. A couple of exceptions: H.R. 338, which aims to have DOE prioritize training for modern energy and manufacturing jobs; H.R. 1109, which would amend the Federal Power Act to set $10 million as the minimum threshold for mergers and acquisitions subject to FERC jurisdiction and H.R. 627, which aims to spread information about federal programs available to help schools fund energy efficiency efforts. Full list of bills available here.

SCHUMER PUSHES REPUBLICANS ON OVERSIGHT REQUESTS: Senate Minority Leader Chuck Schumer hailed Sen. Chuck Grassley's letter calling an administration policy pushing agencies to only respond to Republican oversight requests "nonsense " and urged other Republican chairmen to follow of the Iowan's lead. "We believe the administration has a responsibility to be responsive to oversight requests regardless of party," Schumer said in a statement. "We hope other Republican chairmen will follow Chairman Grassley's lead in demanding the administration withdraw this misguided memo."

POLIS LAUNCHING COLORADO GOVERNOR BID: Colorado Rep. Jared Polis will this week jump into a crowded Democratic field seeking to replace term-limited John Hickenlooper, POLITICO's Rebecca Morin reports. One of the key planks of his bid, he told the Denver Post, will be getting the state to 100 percent renewable energy by 2040.

MORE STAFFING UP: Veteran Hogan Lovells energy attorney Patrick Traylor has joined EPA as a deputy in the Office of Enforcement and Compliance Assurance, Pro's Alex Guillén reports, citing the agency's website and Traylor's LinkedIn profile . He's specialized in Clean Air Act issues, environmental litigation and infrastructure at Hogan Lovells, where he's worked since 1997. Previous clients include: utility Southern California Edison; Venture Global LNG, a natural gas exporter; Flint Hills Resources, a Koch subsidiary refiner; Koch Nitrogen, maker of synthetic fertilizer; and several wind companies seeking Endangered Species Act permits.

ELECTRIC BIGWIGS GATHER: The Edison Electric Institute gathers today in Boston to kick off its annual conference. Keynote speakers include NBC's Tom Brokaw and retired general Keith Alexander. Full schedule here.

Italian minister: G-7 'distant' on climate change Back

By Sara Stefanini | 06/11/2017 11:06 AM EDT

BOLOGNA, Italy — G-7 ministers are in "complete agreement" on all the environmental issues they're discussing today and Monday — except for climate change, Italian Environment Minister Gian Luca Galletti told reporters today.

The two-day G-7 environment ministers gathering comes 10 days after President Donald Trump confirmed that he would withdraw the U.S. from the Paris climate agreement.

But even before his announcement, American resistance to tackling climate change emerged as a sticking point at the G-7 leaders' summit last month and the G-7 energy meeting in April, where the ministers failed to agree on a communiqué.

"The positions, especially on Paris, are distant positions," said Galletti, host of the environment meeting.

"Here in Bologna we're doing very important work, we're mending. We'll only know at the end what result it will have, but we have already obtained a result because we continue to talk, to identify solutions and common objectives," he added. U.S. Environmental Protection Agency Administrator Scott Pruitt is in Bologna representing the U.S. but is leaving this afternoon.

Galletti said his early departure was always planned because of a meeting with Trump.

"The administrator has had bilateral meetings with a number of our G-7 partners discussing the importance of engagement and environmental issues including conservation, food waste, climate, marine litter and resource efficiency," Lincoln Ferguson, Pruitt's spokesman, told POLITICO by email.

Patricia Espinosa, head of the United Nations' climate change secretariat, told reporters that Pruitt said the U.S. wants to continue to make efforts to combat climate change and engage with the secretariat.

Zinke's Bears Ears plan due this weekend Back

By Esther Whieldon | 06/09/2017 03:28 PM EDT

Interior Secretary Ryan Zinke is slated to send the White House his recommendations this weekend on whether to roll back the Bears Ears National Monument in Utah that was established in the waning days of the Obama administration.

The 1.4 million-acre monument was among the final conservation acts under former President Barack Obama, who added nearly 760,000 square miles to the nation's protected lands during his two terms, angering Republicans who accused him of overriding local opposition and abusing the Antiquities Act to put vast acreage off limits for commercial activity, including mining, oil and gas development.

Before the monument designation, oIl and gas producer EOG Resources had planned to drill new exploratory wells there as part of its operations in the lucrative Uinta Basin, a move that drew opposition from local groups that complained the work would spoil an important gateway to the Bears Ears site.

Zinke, who traveled to Bears Ears and the Grand Staircase-Escalante monuments last month, could recommend that President Donald Trump shrink or completely revoke the monument designation — moves that environmental groups and Democrats in Congress have vowed to fight — or he could press for lawmakers to come up with a legislative solution, a path that yielded no success in the past.

According to Zinke's predecessor, former Secretary Sally Jewell, the administration had held off establishing the Bears Ears Monument until it failed to reach a deal to address its concerns through the Utah Public Lands Initiative legislation proposed by Utah Republicans Rob Bishop and Jason Chaffetz.

"The Bears Ears Monument declaration was done in December because no credible effort was put forth by the Utah delegation to do it through congressional means in spite of repeated offers and efforts to help them do that," Jewell told POLITICO.

Jewell said her agency had been in discussions with Utah lawmakers on legislation that could pass both chambers, and that Obama had delayed creating the monument hoping for a compromise that would "recognize the areas that were very important for conservation and preservation" as well as those with "high development potential largely for oil, gas and mining."

But the legislation that emerged, she contended, did not include compromise language the administration hoped would garner bipartisan support in Congress. Instead, she said, Bishop's legislation had changed the definition of wilderness, transferred firefighting efforts over to the

state and allowed motorized equipment in wilderness areas for tree clearing.

Bishop denies that his legislation surprised anyone, saying it was the environmental community that "bailed on us" early in 2016. Bishop's committee passed the Public Lands Initiative in September, but the measure never made it to a floor vote.

Obama's move to create the monument drew an angry reaction from the Utah delegation, including Chaffetz, who called Bears Ears a "midnight monument" that disregarded economic development and multiple land use provisions that had been in a bill.

Sen. Orrin Hatch (R-Utah) also disputed Jewell's contention, saying in an emailed statement that it was the previous administration that did not work in good faith with the Utah delegation and ultimately "chose to run down the clock."

As Trump exits Paris accord, investors bring climate change into boardrooms Back

By Ben Lefebvre | 06/09/2017 03:33 PM EDT

As President Donald Trump reduces the pressure on businesses to deal with climate change, activist investors are flooding company shareholder meetings to apply it themselves.

The grassroots campaign has picked up significant momentum, even as it has been overshadowed by Trump's decision to abandon the Paris climate accord and his efforts to dismantle federal policies to limit heat-trapping emissions. This year, for the first time, majority owners of three major energy companies endorsed resolutions calling for them to disclose how government efforts to limit global warming to 2 degrees Celsius would affect their businesses.

Exxon Mobil shareholders endorsed one such resolution just the day before Trump's Rose Garden announcement that he would pull the U.S. out of the global climate agreement because, he said, it would harm manufacturing. Similar resolutions were adopted by investors in Occidental Petroleum and Pennsylvania-based PPL Electric Utilities. And at utilities Ameren, Dominion Energy, Duke Energy and DTE, climate-focused shareholder resolutions came within a few percentage points of succeeding.

The resolutions sprung from efforts among dozens of institutional investors — including the New York Comptroller, the California Public Employees' Retirement System and the Church of England — who teamed up with activist groups including Ceres and As You Sow. This year they targeted 15 publicly traded energy companies with shareholder resolutions calling for companies to disclose how changes in government climate policies could change their businesses.

"There's a growing realization of this systemic risk that climate change poses to investors," said

Adam Matthews, head of engagement for the Church of England's commissioners and pension boards, which owns stock in Exxon Mobil as part of an overall $10 billion in holdings. "You've got a lot of dialogue between asset owners and major funds, and there's a clearer realization of the importance of addressing climate change. It's a shame what happened in the terms of the U.S. and the position of Donald Trump withdrawing from Paris, but the message to investors is this is longer-term than any one President. The train has left the station."

To be sure, the resolutions are non-binding, but corporate boards typically respond to the wishes expressed by shareholders.

Investors worried that a company isn't doing enough to deal with falling demand for gasoline, for example, may sell their shares to invest in a competitor. Or green-minded investors may support a hostile takeover of the company by activist investors who promise to take climate change more seriously.

Part of what helped the climate resolutions this year was growing support from cool-eyed capitalists, alongside the more liberal-minded shareholders who have championed them in the past. That was the case this year with Occidental Petroleum and investment firm Blackrock, one of its major shareholders.

Blackrock, which manages $5.4 trillion in its overall portfolio, decided in 2015 that climate change could pose a significant risk to some of the companies it owns. Still, the firm sided with Occidental's management last year to help stave off a climate related resolution to give the oil company more time to address the issue on its own.

By the time this year's shareholder meeting came around, Blackrock decided to endorse activist investors' effort to get the company to do more. A resolution urging Occidental to publish annual assessments of how government climate change policies could risks its business passed with support from 67 percent of voting shareholders.

"Our patience is not infinite — when we do not see progress despite ongoing engagement, or companies are insufficiently responsive to our efforts to protect the long-term economic interests of our clients, we will not hesitate to exercise our right to vote against management recommendations," Blackrock said in a letter to clients endorsing the resolution.

Blackrock's support demonstrated the growing economic appeal of climate resolutions that activist shareholders have been organizing around for years.

The win at Exxon only occurred after the Church of England sought potential allies via Ceres, a Boston-based nonprofit that helps connect investors interested in various social causes. The Church eventually made contact with New York State Comptroller, which holds Exxon shares through its retirement fund.

Exxon CEO Darren Woods said before the company's annual shareholder meeting that the company supports the Paris provisions and would factor government climate policies into its business plan. But investors still wanted to ensure the company would keep that promise, New

York State Comptroller Thomas DiNapoli said.

"As investors, we want to be sure that companies like Exxon walk the walk when it comes to climate risk, and that's where our shareholder resolutions can be very effective," DiNapoli told POLITICO. "No company wants to be in a fight with a majority of its shareholders."

Exxon's board will reconsider the provision to disclose how climate policies would impact is business, Woods said after the vote, in which 62 percent of voting shareholders endorsed the climate resolution. The Church of England, whose other holdings include BP and Shell, will continue to focus on bringing climate-related risk disclosure resolutions up. But will also start looking at a potential next step — forcing companies to publicize how climate change is affecting their financial performance, Matthews said.

In many cases, investors and nonprofits are trying to convince energy executives to incorporate more climate-related disclosures outside the threat of resolutions.

As You Sow, a nonprofit that lobbies companies on the behalf of shareholders, filed a climate-related resolution with Anadarko Petroleum that would have gone to shareholders this year. It withdrew the resolution after getting a meeting with Anadarko's CEO and other executives at the company's headquarters outside Houston, according to representatives of both entities.

"We wanted to talk and work together to see if there way to move forward with carbon reporting," said Danielle Fugere, As You Sow's chief counsel. "We had a good discussion, and we will have another meeting or two."

Despite the few outright wins at shareholder meetings this year, the relatively strong showing has convinced some that the movement is gaining momentum. Sen. Sheldon Whitehouse (D-R.I.), who on the floor of the senate last week called American corporations "AWOL in the policies of climate change," said he is encouraged by the progress.

"For the first time, after hundreds and hundreds of these resolutions have gone to failure at the hands of company management, shareholders are starting to win," Whitehouse told POLITICO. "Part of what that's about is very big and very smart investors coming to the realization that they are not getting adequate information when it comes to fossil fuel liability. The power of a Blackrock, Goldman Sachs or CalPERS is engaged in a new and different way."

Exxon says carbon cost differences did not mislead investors Back

By Ben Lefebvre | 06/09/2017 02:26 PM EDT

Exxon Mobil lawyers swung back at New York Attorney General Eric Schneiderman's

allegations that the oil giant used a separate carbon price that it did not disclose to investors, saying the practice did not mislead investors.

The company's filing today in the New York state Supreme Court is the latest round in the legal battle between Exxon and Schneiderman. The New York attorney general filed a suit against the oil giant alleging that it may have defrauded investors by keeping its in-house research on climate change hidden.

Exxon for its part has refused to comply with all of the attorney general's subpoena requests, accusing Schneiderman of using the case to further his career.

Exxon said it used different numbers as part of different calculations, including some taking global energy demand and prices into account and others calculating possible project investments. That meant it was appropriate to use various numbers, not just those included in its public filings, the company argued.

"Considering the different purposes of those two exercises, it is unsurprising that different figures would be used," Exxon's attorneys wrote in the filing. "ExxonMobil has not said that it relied on one set of figures for all purposes, and a reasonable investor would not draw such a conclusion from ExxonMobil's public statements."

EPW to vote on Svinicki June 15 Back

By Darius Dixon | 06/09/2017 05:11 PM EDT

The Senate Environment and Public Works Committee intends to vote on the renomination of Nuclear Regulatory Commission Chairwoman Kristine Svinicki on June 15, a panel spokesman told POLITICO today.

Svinicki, a Republican whose term expires June 30, will move forward before the panel votes on fellow NRC nominees Annie Caputo and David Wright, said Mike Danylak, a spokesman for Environment and Public Works Chairman John Barrasso.

The committee will vote on the appointments of Caputo, Wright and EPA enforcement nominee Susan Bodine later in the month, but a June 13 hearing will still consider all four nominees.

Earlier this week, Sen. Tom Carper, Environment and Public Works' top Democrat, told reporters that he supports Svinicki's renomination and asked Barrasso that she get confirmed while the panel reviews the other two Republican nominees and packages them with a renomination of NRC Commissioner Jeff Baran, a Democrat whose term runs out next summer.

WHAT'S NEXT: The Senate Environment and Public Works Committee has scheduled a nomination hearing to review Bodine and all three GOP NRC nominees on June 13.

EPA reschedules science meeting to add industry voices after Smith cries foul Back

By Alex Guillén | 06/09/2017 03:43 PM EDT

EPA has postponed an upcoming meeting hosted by the agency's scientific integrity official and invited more industry officials and state representatives, following complaints from a senior Republican lawmaker.

The meeting is an annual event at which the scientific integrity official, Francesca Grifo, discusses her work and the agency's scientific integrity policy. House Science Chairman Lamar Smith last month flagged the meeting after discovering the guest list primarily consisted of environmentalists, science organizations, watchdog groups, certain media representatives and think tanks, but almost no one from regulated industries.

EPA "agrees that invitees to the EPA Scientific Integrity Stakeholder meeting should include a balanced representation of those organizations having an interest in scientific integrity at the EPA," Robert Kavlock, the acting assistant administrator for research and development, wrote this week to Smith.

Previous meetings included more industry attendees, and EPA "recently sent invitations to additional organizations representing the regulated community and state governments."

A separate email to invitees seen by POLITICO said the meeting would be rescheduled, but did not specify a timeline.

Grifo, a career official who was hired from the Union of Concerned Scientists in 2013, rose to prominence this spring when she was asked to investigate the Sierra Club's complaint that Administrator Scott Pruitt violated EPA's scientific integrity policy by saying on television that carbon dioxide is not a primary driver of climate change.

Earlier this week, the free-market group Cause of Action Institute filed a Freedom of Information request it says is meant to investigate alleged politicization in Grifo's office.

WHAT'S NEXT: EPA will invite more industry and state representatives and reschedule the meeting for a future date.

Chicago mayor Emanuel posts EPA's deleted climate change page Back

By Edward-Isaac Dovere | 05/06/2017 10:42 AM EDT

Chicago Mayor Rahm Emanuel's response to the Trump administration pulling down its website detailing information about climate change: putting up his own.

The new section of the City of Chicago's website, launched this weekend, pulls data from the archived Environmental Protection Agency page, noting, "while this information may not be readily available on the agency's webpage right now, here in Chicago we know climate change is real and we will continue to take action to fight it." Emanuel is promising to build the site out more in the coming weeks, using city resources.

"The Trump administration can attempt to erase decades of work from scientists and federal employees on the reality of climate change, but burying your head in the sand doesn't erase the problem," Emanuel said.

Through both Republican and Democratic administrations in the past two decades, the EPA accepted and promoted climate change data. That changed under President Donald Trump, who's expressed doubts about the science and already eliminated regulations put in place by President Barack Obama, and EPA Administrator Scott Pruitt, who has repeatedly questioned global warming and fought environmental protections from the government he argues unfairly target businesses.

Last week, the EPA scrapped the climate-change website.

"We are currently updating our website to reflect EPA's priorities under the leadership of President Trump and Administrator Pruitt," a message on the "page is being updated" EPA site has read since.

Emanuel said he wants to see other cities and universities joining in preserving the data that the federal government is removing to ensure it stays public.

Emanuel, in office in 2011 after serving as Obama's first chief of staff, has a local environmental record reducing carbon emissions and waste that he likes to tout.
The new Chicago website has information about the science of climate change and its effects on the weather, human impact that has accelerated the problem and steps the federal government had been taking to reduce it.

Grassley rips Trump administration for blowing off certain oversight requests Back

By Burgess Everett | 06/09/2017 11:25 AM EDT

The Trump administration's policy of ignoring the oversight requests of Democrats and rank-and-file members has earned it a powerful enemy: Senate Judiciary Committee Chairman Chuck Grassley.

In a letter to President Donald Trump, the veteran Iowa Republican senator urged Trump to reverse a policy instituted by the White House and the Department of Justice's Office of Legal Counsel to answer oversight requests only from committee chairmen, all of whom are Republicans because of GOP control of Congress. Though Grassley said that the Obama administration did sometimes ignore him, he said the formalization of a policy of ignoring the minority party "doesn't drain the swamp, Mr. President. It floods the swamp."

"I respectfully request that the White House rescind this OLC opinion and any policy of ignoring oversight request from non-Chairmen. It harms not just the members who happen to be in the minority party at the moment, but also, members in the majority party who are not currently chairmen. It obstructs what ought to be the natural flow of information between agencies and the committees, which frustrates the constitutional function of legislating," Grassley wrote.

He was not near done. In the seven-page letter to the president, Grassley calls the administration's opinion "nonsense" and argues that the president is being "ill-served and ill-advised" by his staff.

"To so fundamentally misunderstand and misstate such a simple fact exposes its shocking lack of professionalism and objectivity. Indeed, OLC appears to have utterly failed to live up to its own standards," Grassley added.

The Justice Department declined to comment to Grassley's letter. The White House did not immediately respond.

Fearing the weaponization of oversight requests by Democrats amid a deepening investigation into the administration's ties to Russia, White House officials instructed government agencies not to respond to oversight requests from anyone other than chairmen last month. Also in May, OLC wrote a guidance memo that formally restricted the flow of information to Democrats.

"Individual members of Congress, including ranking minority members, do not have the authority to conduct oversight in the absence of a specific delegation by a full house, committee, or subcommittee," OLC wrote in the memo.

There have been some exceptions to this policy on subjects like national security and at the Treasury Department, according to Democratic and Republican Hill staffers. But Democrats released dozens of letters on Thursday that they said have gone substantively unanswered by the Trump administration.

Democrats are outraged at the moves by the Trump White House to squash their requests, which range from overtly partisan letters asking for information that would likely damage the president to parochial issues that will never grab headlines. And now, some Republicans are, too.

"Members of Congress simply do not treat executive branch officials with such contempt and they do not deserve such treatment in return," Grassley wrote. "Unlike virtually all executive branch officials, Members are elected to constitutional positions. Instead, the executive branch should work to cooperate in good faith with all congressional requests to the fullest extent possible."

Polis to run for Colorado governor Back

By Rebecca Morin | 06/11/2017 01:41 PM EDT

Colorado Rep. Jared Polis will announce his bid for Colorado governor this week, according to an interview.

"This is a campaign of big, bold ideas, and I'm trying to make them happen," Polis told The Denver Post on Sunday. "We want a Colorado that works for everybody."

Polis, a Democrat, is jumping into a crowded field. Four other Democrats — Rep. Ed Perlmutter, former state Sen. Mike Johnston, former state Treasurer Cary Kennedy and businessman Noel Ginsburg — are also vying for the position in next year's election.

A number of Republicans are also running in the race, including Mitt Romney's nephew Doug Robinson; George Brauchler, the prosecutor in the Aurora theater shooting case; and former state legislator Victor Mitchell.

Democrat John Hickenlooper, the current governor, is ineligible to seek another term.

Polis, who would be Colorado's first openly gay governor if elected, told the Post his platform would focus on getting the state to 100 percent renewable energy by 2040, providing free access to full-day preschool or kindergarten for those 3 and older, and encouraging companies in Colorado to provide stock options to employees.

Polis tweeted Sunday that he would finish his term in the House.

"I currently plan to serve out my term to help the #resistance and fight Trump's radical agenda," he wrote.

EPA hires energy attorney for enforcement office Back

By Alex Guillén | 06/09/2017 04:50 PM EDT

EPA has hired veteran Hogan Lovells energy attorney Patrick Traylor as a deputy in the Office of Enforcement and Compliance Assurance, according to the agency's website and his LinkedIn profile.

Traylor has been an attorney at Hogan Lovells since 1997 and specialized in Clean Air Act issues, environmental litigation and infrastructure.

According to his law firm biography, Traylor's clients included the utility Southern California Edison; Venture Global LNG, a natural gas exporter; Flint Hills Resources, a Koch subsidiary refiner; Koch Nitrogen, maker of synthetic fertilizer; and several wind companies seeking Endangered Species Act permits. The bio also says he "helped secure an 'against all odds' series of permits authorizing the expansion of a coal mine on the Navajo Nation for BHP Billiton."

Other clients included TransCanada, Dominion Energy, AES Corp., NRG Energy and the Anschutz Corporation, according to the Energy Bar Association.

Traylor earned his law degree from the South Texas College of Law in 1994 and received an advanced degree in environmental law from George Washington University in 1998.

President Donald Trump's nominee to run the enforcement office, Senate Environment and Public Works Committee staffer Susan Bodine, is slated to have a confirmation hearing next week.

Renewables Scientist Takes South Korea's Energy Helm

Posted July 24, 2017, 03:58 P.M. ET

By Elaine Ramirez

South Korea on July 24 inaugurated a sustainable energy scientist and scholar as minister for trade, industry and energy, a move expected to help the country meet stepped-up renewable energy goals by 2030.

Paik Un-gyu, replacing Joo Hyung-hwan to join the 2-month-old Moon Jae-in the administration's Cabinet, said the country would "lay the foundations for an energy paradigm shift" by moving away from coal and nuclear power and discovering new energy industries to replace them.

Moon has pledged to shut down 10 aging coal-fired power plants and stopped all plans for new nuclear plants and extending aging nuclear plants' life cycles in a bid to herald a "nuclear free" era. In their place, South Korea must nearly quadruple the proportion of its current renewable energy use and increase imports of liquefied natural gas.

South Korea, which signed the Paris climate accord, has vowed to reduce its greenhouse gas emissions by 37 percent of current levels by 2030. Twenty-four nuclear reactors provide about one-third of South Korea's electricity.

Paik, an energy engineering professor at Hanyang University who advised Moon on energy policy, said comparing the economic efficiency of nuclear power plants with renewable energy is a "short-sighted perspective," while vowing to harness technology to create eco-friendly industries such as environmentally friendly smart cars.

Public sentiment in South Korea over nuclear power turned negative after the 2011 Fukushima disaster in neighboring Japan. Paik told reporters on July 24 that he would be willing to promote the export of nuclear reactors to countries that don't suffer the same problem as Korea of having multiple plants in a concentrated area.

The state-owned Korea Electric Power Corp. (KEPCO) has a $20 billion order to build four nuclear plants—the same model as Shin-Kori units 5 and 6 in southeast Korea—in the United Arab Emirates.

As a scientist and scholar, Paik developed cathode material for eco-friendly batteries, researched materials for solar cells and studied energy demand forecasting and renewable energy.

U.K. Seeking to Fill Climate Leadership Void Left by Trump

Posted July 24, 2017, 02:57 P.M. ET

By Jessica Shankleman

Britain should seek to fill the leadership void created by Donald Trump's decision to pull the U.S. out of the landmark Paris Agreement, Climate Change Minister Claire Perry said July 24.

While Prime Minister Theresa May has been criticized by some environmental groups for failing to speak out over the U.S. president's June 1 decision to step back from the 2015 Paris deal, Perry said U.K. ministers "haven't missed an opportunity" to express their disappointment over the news.

Perry said that as well as head-of-state discussions, she has also been having talks with "other players" in the U.S. who are seeking to ensure the U.S. delivers on its carbon reduction commitments. Last week the mayor of Houston visited the U.K. and discussed climate opportunities, she said.

"The U.K. is ranked third in the world in tackling climate change. I think we need to exploit and take that leadership position because we can change the world doing this and we can also generate highly productive jobs," she said while visiting a green housing project at Nottingham University, in the East Midlands of England.

Perry's department on July 24 unveiled policies designed to make it easier for homeowners to install battery systems that can store renewable energy created by solar panels or wind turbines. That includes updating a 28-year-old Electricity Act that doesn't recognize batteries as part of the power system.

Perry said the U.K.'s green economy already employs about 400,000 people and could provide a source of growth through research and exports for certain technologies as the country quits the European Union.

"I look at this and see it's the way the world is going, so it's not just about British businesses, it's about global mega-trends, so how do we seize that opportunity to decarbonize our own economy and help other countries," she said.

White House Team Differs on Trump Support for Russia Sanctions

Posted July 24, 2017, 12:17 P.M. ET

By Ros Krasny

The Trump administration supports the current version of a bill to sanction Russia, the new White House press secretary said, although her boss, Anthony Scaramucci, wouldn't guarantee that President Donald Trump will sign it.

The legislation, which would affect energy projects abroad and may soon land on Trump's desk for a signature, wasn't the only area where Trump's hand-picked communications director differed from others in the administration on July 23, two days after taking the job.

Scaramucci and press secretary Sarah Huckabee Sanders, also named to her role on July 21, along with Jay Sekulow, one of Trump's lawyers, were the administration's collective face on Sunday's political talk shows. The interviews came days after both teams were shaken up in an effort by Trump to impose order on his White House in the face of a widening Russia probe.

Sanders' comments on sanctions followed a tentative deal reached by Republican and Democratic leaders in the House to move ahead this week on a measure that, among other things, would prevent the president from acting unilaterally to remove sanctions on Russia for its involvement in the 2016 election and other actions.

"The original piece of legislation was poorly written, but we were able to work with the House and Senate. And the administration is happy with the ability to do that and make those changes that were necessary," Sanders said on ABC's "This Week." "We support where the legislation is now."

'Decision Shortly'

Scaramucci, brought on board to reset the administration's communication's strategy as Trump enters his second six months in office with record-low approval ratings, said on CBS's "Face the Nation" that "I don't know the answer to whether the president will sign" the sanctions bill. On CNN's "State of the Union," Scaramucci suggested that Trump is "going to make that decision shortly."

If the president were to veto the bill, "we will override his veto," Sen. Ben Cardin (D-Md.), the top Democrat on the Senate Foreign Relations Committee, said on "Fox News Sunday."

Heading into a week of congressional action on the investigations into Russian election meddling, including testimony behind closed doors to two committees by his son-in-law and senior adviser Jared Kushner, Trump said on Twitter July 22 that "all agree the U.S. President has the complete power to pardon."

House to Vote Soon

Republican and Democratic leaders in the House reached a tentative deal over the weekend to fix procedural concerns, add measures against North Korea, and modify provisions that would restrict the participation of U.S. energy companies in some international projects.

A version of the bill released by House Republican leaders includes changes sought since the Senate passed legislation in June that would prohibit U.S. businesses from working on or supporting energy projects that include any participation by Russian companies, even outside Russia's borders.

The new version would also set a threshold for Russian involvement, applying that restriction to projects where sanctioned Russian entities have at least a 33 percent interest.

A separate procedural impasse would be resolved by allowing leaders from both the majority and minority parties in the Senate or House to force their respective chamber to consider an objection to White House action on sanctions. The original bill allowed any member of Congress in either chamber to force consideration of sanctions waivers. Senators can still introduce resolutions, with leadership approval.

The bill is expected to be considered in the House on July 25 using an expedited process that requires two-thirds of all members voting for passage.

The modified House bill represents a modest victory for oil companies, manufacturers and oilfield service firms that had argued the earlier, Senate-passed bill could jeopardize projects around the globe—even those that weaken Russia's ability to use its own natural gas as a political weapon. They had warned that under the Senate measure, Russia would be empowered to elbow U.S. companies out of energy projects globally simply by making small investments in them.

The 33 percent threshold that would be established under the compromise legislation likely is high enough to avoid disruptions at the giant Shah Deniz project in Azerbaijan, a chief alternative to Russia-sourced natural gas for Turkey. That project could have been swept up by the Senate-passed bill because Russia's Lukoil owns a 10 percent share in an ongoing expansion, even though BP Plc is the lead operator.

The White House had argued that it needs flexibility to adjust economic sanctions against Moscow. Administration officials were on Capitol Hill earlier this month asking lawmakers to reconsider the Russia provisions that the Senate added to an Iran sanctions bill and passed 98-2.

—With assistance from Terrence Dopp, Robert Schmidt, Jennifer A. Dlouhy, Billy House and Anna Edgerton.

U.K. Braced for Record-Breaking Wet Winters, Blames Climate Shift

Posted July 24, 2017, 9:38 A.M. ET

By Jessica Shankleman

Britain faces a future of record-breaking wet winters, potentially leading to more of the widespread flooding seen in recent years, according to new modeling that incorporates changing climate patterns.

England and Wales now have a 34 percent chance of record rainfall between October and March, the study by the government's Met Office said July 24. In 2013, heavy rain deluged parts of Cornwall and the south east. That was followed by three named storms that flooded some of Cumbria, Lancashire and Yorkshire in December 2015, while Storm Angus battered parts of Britain last November.

Changing weather patterns caused by increasing global temperatures means meteorologists can no longer rely on historical rainfall records to predict future weather events. Instead, a new supercomputer at the Met Office simulated thousands of possible scenarios using current climate patterns.

"This gave many more extreme events than have happened in the real world, helping us work out how severe things could get," Adam Scaife, lead researcher on the study, said in a statement.

The simulations could help insurers and governments to assess risks and plan for future extreme weather events, Vikki Thompson, lead author of the report, said in a video released by the Met

Office. The Association of British Insurers estimated floods in December cost about 1.3 billion pounds ($1.7 billion) in claims.

"This is important research and reinforces our call for the government to prepare for and expect a significant flood event to take place somewhere in the country almost every year," said Daniel Johns, head of adaptation at the U.K. Committee on Climate Change, which advises the government on its response to global warming.

Conservative Party Merger Alters Landscape in Canada's Oil Patch

Posted July 24, 2017, 9:18 A.M. ET

By Doug Alexander and Josh Wingrove

The merger of Alberta's two main conservative parties creates a new political force in the heart of Canada's oil patch that threatens to unseat Premier Rachel Notley and kill the province's carbon tax.

Members of the Wildrose and Progressive Conservative parties voted July 22 to create the United Conservative Party. Combined, those parties hold 30 of 87 districts, though they received 52 percent of the vote in the last election.

In recent polls each has outpaced Notley's New Democratic Party, which won a surprise majority in 2015 and benefited heavily from a split among right-leaning voters in the province with Canada's highest median household income. The next election is due in 2019.

For the NDP, unification "is their worst-case scenario," Duane Bratt, a political scientist at Mount Royal University in Calgary, said in an interview. While an improving economy or a divide over social policies could still help Notley hold power, "a unified conservative party at this stage would be tough to beat."

Some 95.4 percent of Wildrose members who voted backed the merger, while it won 95 percent support from the PCs, according to the July 22 results.

Carbon Tax

While the merger agreement doesn't specify a plan to repeal the carbon tax, its key figures have all campaigned against it. Notley's carbon measures include a hard cap on emissions from Alberta's oil sands, the world's third-largest proven oil reserve, though the province isn't near its self-imposed cap. Repeal of that will set up a collision course with Prime Minister Justin Trudeau, who has imposed a minimum carbon price nationally as of 2018.

Alberta is Canada's heaviest carbon emitter, though only its fourth-most populous, and a frequent target of environmental and anti-oil campaigns.

"I'm not convinced that the carbon tax will disappear, and for evidence of that, all you have to do is look south of the border with repeal-and-replace of Obamacare," Bratt said. "Once you bring in a program and it runs for a couple of years, it is tough to get rid of."

The parties had also pledged to balance the budget and slash Alberta's ratio of debt to nominal gross domestic product, which has more than doubled in the past two years, to 13.8 percent from 6.1 percent, with the slump in oil prices. Alberta draws 8 percent of its revenue from oil and other non-renewable resources, down from 18 percent just three years earlier, government budget documents show.

Disapproval Rating

The unified party will pick its leader on Oct. 28, with an interim leader serving in the meantime. The leading candidates are expected to be Wildrose leader Brian Jean, a former federal lawmaker who hails from Fort McMurray, the hub of the oil sands region, and Progressive Conservative leader Jason Kenney, a former federal lawmaker and cabinet minister who largely led the unity push. Doug Schweitzer, a Calgary lawyer, announced his interest in the leadership position in June.

"If anybody other than myself is elected by the members they will have my total enthusiastic support because this unity project will only work if we are prepared to park our egos --- and I'm certainly prepared to do that," Kenney said in his July 22 speech.

Notley has one of the highest disapproval ratings among Canada's provincial leaders, though the premier's numbers remain relatively strong in each of the two major cities, where about two-thirds of electoral districts are clustered, polling from Mainstreet Research shows.

"It's going to be a tough road for Rachel Notley and the NDP if the PCs and Wildrose unite—not impossible," Mainstreet President Quito Maggi said in an interview. The merger could still spur further splintering, both among staunch conservatives and centrists. "It's not a guarantee of that unified party forming government. They're still going to have to do some work."

EU Mulls Retaliation Against U.S. Over New Russia-Sanctions Plan

Posted July 24, 2017, 9:10 A.M. ET

By Jonathan Stearns

The European Union said it would be prepared to retaliate against the U.S. should Washington hit Russia with new sanctions that affect EU-based energy companies, risking a deeper trans-Atlantic split over economic and security policies.

The European Commission, the bloc's executive arm, made the threat as U.S. lawmakers prepare to give the green light as soon as this week to economic penalties against Russia over its meddling in last year's American presidential election. The draft U.S. measures would prohibit American businesses from being involved in energy projects that include Russian companies, including ventures outside Russia.

"The EU is always ready to respond adequately and imminently should the case be needed," Margaritis Schinas, the commission's chief spokesman, told reporters on July 24 in Brussels. "I will not speculate on any retaliation."

The latest trans-Atlantic tensions follow sharp disagreements over U.S. President Donald Trump's "America First" agenda, including his anti-trade stance, his withdrawal from an international treaty to fight climate change and his criticism of European nations for failing to spend more on defense. The

fresh friction also contrasts with close cooperation between the EU and former U.S. President Barack Obama over sanctions against Russia for its encroachment in Ukraine.

Expanded Sanctions

The commission, led by President Jean-Claude Juncker, is echoing concerns expressed by German Chancellor Angela Merkel, whose spokesman said in June that the U.S. Congress's plan for expanded sanctions against Russia posed a threat to European economic interests. One casualty could be the planned $10 billion Nord Stream 2 natural-gas pipeline between Russia and Germany, a project that to some extent would compete with U.S. exports of liquefied natural gas to Europe.

Schinas said the adequacy of energy supplies for the EU is at stake and the commission is engaged in a diplomatic offensive to limit the impact of any U.S. measures on the bloc, expressing "hope" that no European countersteps will be necessary.

"We are activating all diplomatic channels to address these concerns—from these U.S. measures—with our U.S. counterparts," he said. "We expect" Europe's "interests to be addressed by the ongoing, pre-legislative process."

The Financial Times and Politico reported on July 24 that Juncker planned to put retaliation against the U.S. on the agenda of a regular meeting of EU commissioners on July 26, citing an internal commission note. Both reports said the goal is for the 28-nation bloc to be able to react "within days."

Separately, the commission is preparing for possible retaliation against the U.S. over a threat by Trump to curb steel imports on national security grounds. In June, EU Trade Commissioner Cecilia Malmstrom said she was "extremely worried" about the possibility of such American trade restrictions, saying they could trigger protectionist reactions around the globe.

Photos of Melted Fuel at Japan's Fukushima to Help Cleanup

Posted July 24, 2017, 8:58 A.M. ET

By Stephen Stapczynski

Japan's likely discovery of melted fuel inside the wrecked Fukushima nuclear power plant is seen as a critical step in hastening the $72 billion, 40-year cleanup of one of the worst atomic disasters in history.

Images released on July 22 by Tokyo Electric Power Co. Holdings Inc.—Japan's biggest utility and owner of the plant—showed for the first time what is likely melted fuel at the bottom of the containment vessel of the No. 3 reactor at Fukushima. Pictures released July 21 showed fuel possibly hanging from the top of the pressure vessel inside the same reactor.

"The recent investigation results are significant early signs of progress on the long road ahead to safely decontaminate and decommission the Fukushima Dai-Ichi facility," said Lake Barrett, a former official at the U.S. Nuclear Regulatory Commission who was involved with the cleanup at the Three Mile Island nuclear power plant in the U.S.

While TEPCO, as the utility is known, said some of the debris captured on film is "highly likely" to contain melted fuel, the company noted that definitive confirmation will take time.

For Tokyo Electric, which bears most of the cleanup costs, the discovery could help the utility design a way to remove the highly radioactive material, according to Takahiro Kimoto, an official at the company.

Melted Fuel Removal

The company aims to decide on the procedure to remove the melted fuel from each unit as soon as this summer, with fuel removal slated to begin in 2021.

"This is a continuous step-wise program of gathering unit-specific engineering data so that engineers can develop the various engineering approaches and specific remote-controlled equipment to remove the melted fuel and other highly radioactive materials," Barrett, the former U.S. nuclear official, said by email.

With only a handful of nuclear meltdowns ever occurring around the world, TEPCO must come up with new technology for its cleanup. New tools, such as long-handled devices guided by a television monitor system, were developed for removing fuel core debris at Three Mile Island after its meltdown in 1979. In Chernobyl, a concrete sarcophagus was used to entomb the wrecked plant with no attempt to remove its fuel.

Decommissioning the reactors in Japan will cost 8 trillion yen ($72 billion), according to an estimate in December from the Ministry of Economy, Trade and Industry. Removing the fuel is one of the most important steps in a cleanup that may take as long as 40 years.

The pictures taken over the weekend were made possible with the help of a Toshiba Corp.-designed robot sent to explore the inside of the reactor for the first time. The 30-centimeter (12 inches) long swimming robot was tasked with surveying the damage and finding the location of corium—a mixture of the atomic fuel rods and other structural materials formed after the meltdown.

TEPCO must still confirm the location of melted fuel inside the No. 1 and 2 reactors at Fukushima.

In January, the company took photographs of what appeared to be black residue covering a grate under the Fukushima Dai-Ichi No. 2 reactor, which was speculated to have been melted fuel. A follow-up survey by another Toshiba-designed robot in February failed to confirm the location of any melted fuel in the reactor after it got stuck in debris.

A robot designed by Hitachi-GE Nuclear Energy Ltd. also failed to find any melted fuel during its probe of the No. 1 reactor in March.

"This could be a very early step, with many more hard steps to go, on the path to eventual decommissioning," M.V. Ramana, a professor at the Liu Institute for Global Issues at the University of British Columbia, said by email. "In the more short term, if some of these fragments can be brought out of the reactor and studied, it would allow nuclear engineers and scientists to better model what happened during the accident."

Flood Risks Prompt Massachusetts Review of Enbridge Gas Facility

Posted July 24, 2017, 7:51 A.M. ET

By Adrianne Appel

Massachusetts Gov. Charlie Baker (R) bowed to public pressure and ordered his administration to scrutinize a natural gas facility planned by Enbridge for its Pennsylvania to Canada pipeline.

Enbridge Inc. wants to build a 7,700-horsepower natural gas compressor station in Weymouth, Mass., as part of an expansion to its 60-year-old Algonquin Gas Transmission pipeline. The expansion, called Atlantic Bridge, will deliver natural gas from Pennsylvania up to Maine and Eastern Canada.

Enbridge received permission (a Certificate of Public Convenience and Necessity) from the Federal Energy Regulatory Commission Jan. 25 for the expansion, including the compressor station, following years of protests by local residents who say the plant would pose health and safety risks.

The plant still needs local and state permits before it begins operating, and those permits could be stymied depending on the outcome of studies ordered by Baker July 14.

"Although the siting of compressor stations is primarily regulated by the Federal Energy Regulatory Commission, the Commonwealth need not and will not remain silent during this process," Baker said in a July 14 letter to Weymouth Mayor Robert Hedlund.

Air, Storm Safety

The compressor facility would be built directly on the coast south of Boston, near Quincy, and therefore is subject to review by the state Office of Coastal Zone Management.

Baker ordered the coastal zone office to obtain more information from Enbridge "in an effort to achieve a conclusive and definitive understanding of what the specific flooding and inundation risks are," as sea level rises and storms increase in the future due to climate change.

The plant site "is susceptible to flooding and waves during storm events under present and future conditions," Baker said. Enbridge must show that it will mitigate any potential climate change impacts, Baker said.

Public Health

Baker also directed the Massachusetts Department of Environmental Protection and Department of Public Health to prepare an assessment of any impact the facility would have on air quality. The assessment will be completed and potential air quality considered before any air permits are issued by the DEP, Baker said.

Baker instructed his secretary of public safety and secretary of energy and environmental affairs to help bring the concerns of the public about the plant's safety to the federal Department of Transportation's Pipeline and Hazardous Materials Safety Administration.

FERC granted the certificate to Enbridge after a comprehensive, 23-month review, Marylee Hanley, an Enbridge spokeswoman, said in a July 21 email to Bloomberg BNA. More than 600 public comments were considered.

"The Atlantic Bridge facilities are designed and will be constructed, operated and maintained to meet or exceed federal safety standards and regulations," she said.

Visited Baker's Office 76 Days

Public opposition to the compressor facility has been fierce for years, and Baker is a relative latecomer to the debate.

Baker is "committed to ensuring the community's concerns are heard fully," Baker spokesman Brendan Moss told Bloomberg BNA July 21 in an email.

Local groups, Hedlund and U.S. Sens. Elizabeth Warren (D) and Edward Markey (D) have expressed opposition to the planned compressor station. One Weymouth resident, Andrea Honore, visited the governor's office for 76 straight days about her concern about the Weymouth plant before Baker agreed to visit the plant site and meet with her. Days later, Baker issued his directives about the plant.

Baker, a popular moderate Republican in a state that mostly votes Democratic, is up for re-election in 2018. Democratic gubernatorial candidates Setti Warren and Jay Gonzalez both issued statements against the plant before Baker took action.

Subject: Morning Energy: Pruitt's approach to EPA panned by former chiefs — Zinke nears decision on Bears Ears — Carper floats separating consideration of NRC picks

By Anthony Adragna | 06/09/2017 05:42 AM EDT

With help from Eric Wolff, Sara Stefanini and Alex Guillén

WANT THAT OLD THING BACK? EPA Administrator Scott Pruitt has pressed the idea of taking the agency "back to basics," returning to its roots of cleaning up toxic waste sites under the Superfund program and providing safe drinking water, while rejecting the Obama administration's initiatives on issues like climate change. But as Pro's Alex Guillén reports, previous EPA administrators from both parties say the agency's mission is far broader than the cramped version Pruitt's promoting. "I don't think it has to be an either-or, nor should it be," said Christine Todd Whitman, George W. Bush's first EPA administrator. "Superfund is not the only issue for human health. Water pollution is a huge issue and very important and you need to work on it, but it's not the only issue. Air is an issue too. Even if you don't want to believe in climate change, you've got to believe that carbon and mercury are not good for you."

It's not just old administrators though. Thomas Jorling, who co-authored the Clean Air Act in 1970 and the Clean Water Act in 1972 as a Senate Republican staffer, said that Pruitt's philosophy of "EPA originalism" is wrong. Continuing to stick to a limited set of cherry-picked priorities Pruitt has chosen to champion is "just disingenuous," he added. "It's all basically a smokescreen to their real intention, which is kind of a moral and ethical corruption, to ... restore the dependence of the United States energy system on fossil fuels." The agency did not make Pruitt available for an interview.

ME EXTRA — HISTORY LESSON: Lee Thomas, Reagan's second-term EPA administrator, said Pruitt's budget-slashing, anti-regulatory agenda has certain parallels to one of his predecessors: Anne Gorsuch Burford, Reagan's first EPA chief and the mother of Supreme Court Justice Neil Gorsuch. Burford, who died in 2004, had no previous relationship with agency staff, reduced EPA's budget by 22 percent and once boasted about cutting a book of water regulations from six inches thick to just half an inch. She ultimately resigned in 1983 after being cited for contempt of Congress in a management scandal regarding Superfund, at that time a new program. More than a dozen other agency officials quit in the surrounding months amid a turbulent atmosphere at the agency.

Thomas, at that time deputy director at the Federal Emergency Management Agency, came on as a top official to help right EPA, and two years later returned as administrator after Bill Ruckelshaus had stabilized the agency. "I've seen it go bad. And I've seen what it takes to go back on track," Thomas said. "The public does not want EPA to go through that kind of crisis."

G-7'S (TOTALLY AWKWARD) ENVIRONMENT MEETING: G-7 environment ministers meet in Bologna on Sunday and Monday, just 10 days after Trump announced he was ditching the Paris climate agreement (unless the rest of the world agrees to better terms, of course). Pruitt

will be there as the American representative. The biggest battle to watch for: Will the other six ministers and Pruitt come to any agreement on a communiqué that supports efforts to tackle climate change? (ME bets no.) Disagreements over climate already scuppered a joint statement at the G-7 energy ministers meeting, and Trump refused to back commitments made at the leaders summit last month.

Benvenuti! Pruitt tweeted a picture Thursday from Italy after "mtg w/ U.S. companies doing business in Europe." The agency told ME representatives from Whirlpool, DuPont, Chemours, First Solar and 3M attended, as well as a few Italian companies, but declined to provide any further details on Pruitt's schedule while in Europe.

TGIF MY FRIENDS! I'm your host Anthony Adragna, and Hunton & Williams' Joe Stanko was first to identify Sen. Lamar Alexander as the former Cabinet member (Education Secretary under President George H.W. Bush) now in the Senate. Your end-of-the-week fun: The spouse of which U.S. senator co-owns the legendary Strand Bookstore? Send your tips, energy gossip and comments to aadragna@politico.com, or follow us on Twitter @AnthonyAdragna, @Morning_Energy, and @POLITICOPro.

ROUND, ROUND, GET AROUND: He's apparently still in discussions with the White House ahead of a final recommendation about whether to rescind or tweak the designation of the Bears Ears National Monument in Utah, but Interior Secretary Ryan Zinke is planning to keep chugging on his national tour. Zinke plans to visit Connecticut, New Hampshire, Maine, and Massachusetts during a four-day swing kicking off June 13. That trip will include a tour of the hotly contested Katahdin Woods and Waters National Monument in Maine, another of the more than two dozen monument designations under the Antiquities Act currently under review by the Trump administration.

TRUMP HAILS NEW COAL MINE'S OPENING: Trump hailed the opening Thursday of Corsa Coal Corp. in Pennsylvania, a new mine digging coal used to make steel, as proof deregulation is helping bring jobs to the industry, ABC News reports. "We have withdrawn the United States from the horrendous Paris climate accord, something that would have put our country back decades and decades, we would have never allowed ourselves to be great again," the president said in a video message. About 200 miners, business leaders, and politicians celebrated its opening under a tent amid mining headgear labeled "Make Coal Great Again."

RIDIN' SOLO? Sen. Tom Carper, the top EPW Democrat, has asked Republicans to split off the reappointment of Kristine Svinicki to the NRC from other two Republican nominees in order to fast track the process, Pro's Darius Dixon reports. "One of the things I've suggested to Chairman [John] Barrasso is to find a way to pair those two maybe with one Democrat, and there's a Democrat on the NRC whose term expires ... next year," Carper said. Svinicki, who has been an NRC commissioner for nine years, would have to step down, even temporarily, if the Senate fails to confirm her for another five-year term by June 30.

FOR YOUR WEEKEND RADAR: Activists will gather Saturday at city halls and statehouses across the country to protest Trump's decision to pull out of the Paris climate accord. "Our communities cannot and will not allow these reckless policies and decisions to wreck our

future," organizers, who include 350.org, the Sierra Club, The Climate Reality Project and many more, said in a statement.

Now here's a far away hearing: Senate Energy and Natural Resources plans to hold a field hearing at 10 a.m. local time Saturday in Cordova, Alaska — accessible only by boat or plane (book you tickets for Mudhole Smith Airport). Representatives from Sandia National Laboratory, Alaska Center for Energy and Power, Alaska Village Electric Cooperative and Alaskan Brewing Company will be examining microgrids and hybrid energy systems. Both Lisa Murkowski and Maria Cantwell, the top Republican and Democrat on the committee, are slated to participate.

WHITEHOUSE: CCS CREDITS BILL READY TO FOR REPRISE: A bill to expand tax credits for carbon capture projects should be ready for introduction soon, Sen. Sheldon Whitehouse told ME. "It's close enough that we're having conversations about when and final steps," he said. The bill, which will be co-sponsored with Sen. Heidi Heitkamp , would attempt to revive is one a trio of "orphaned" tax credits, along with credits for geothermal and for advanced nuclear plants — that were left out of the 2015 omnibus bill that extended solar and wind tax incentives.

Warns 'raiding party' has hit EPA: Republican "heads would be exploding" if a Democratic administration simply ignored requests for information as Pruitt's EPA has done to Democrats, Whitehouse told ME. "Basically, the fossil fuel industry has sent a raiding party into EPA and taken it over," the Rhode Island Democrat said. "I think he feels a kind of immunity from any kind of accountability because the fossil fuel industry so owns the Republican Party and so owns him."

JUDGE, IRKED BY DOJ, LETS KIDS CLIMATE CASE GO TO TRIAL: A federal judge on Thursday slammed the Justice Department for trying to force her hand on a legal matter in the lawsuit brought by children seeking to compel sweeping federal action on greenhouse gas emissions. The Trump administration had asked Judge Ann Aiken of the U.S. District Court in Oregon to let them appeal her decision not to dismiss the lawsuit before moving into the discovery phase. In a short order, Aiken criticized DOJ for threatening to go to the 9th Circuit anyway by today if she hadn't already ruled on the request, noting that the suit is already on an expedited schedule. She said the government's arguments were too weak to secure even faster consideration, and panned DOJ because it asked for a rapid decision after waiting four months to make its initial request. Aiken also gave the green light to move closer to the trial phase. The Trump administration could still try to get the 9th Circuit involved, but the appellate court is unlikely to intervene in an ongoing case.

BIPARTISAN BILL PASSES SENATE: Senators passed Wildlife Innovation and Longevity Driver Act (S. 826) by voice vote Thursday. The legislation, co-sponsored by Chairman John Barrasso and Carper, would reauthorize funding for the Partners for Fish and Wildlife Program in which the Interior partnerships with private landowners in fighting invasive species and offer rewards for innovative technologies to stop invasive species. The bill cleared committee in April.

TROLL SO HARD: French President Emmanuel Macron poked Trump again Thursday by

launching a website urging anyone concerned with climate change to move to France, POLITICO Europe's Nicholas Vinocur reports. The website — www.MakeOurPlanetGreatAgain.fr — plays on Trump's campaign slogan and invites researchers, entrepreneurs and NGO workers from around the world to state their interest in climate change and their specialist field, then apply for positions and immigration documents to come to France.

ANOTHER BOLD PROMISE: Did everyone remember it's the White House's Infrastructure Week? Well, Vice President Mike Pence certainly did, and told a working luncheon Thursday that Trump intended to speed up the approval of new projects. "We'll revolutionize federal permitting and review with the goal of reducing wait times from 10 years to two years," he said.

ENERGY PRIORITIES OUTLINED FOR NAFTA: A bipartisan group of eight senators has outlined specific "principles" that the Trump administration should consider when it renegotiates NAFTA, Pro Trade's Adam Behsudi reports. "NAFTA has played a key role in all North American energy markets including electricity, renewable, oil, and natural gas, as each market is highly integrated with and remains dependent on vital energy infrastructure and trade crossings that border the United States, Canada, and Mexico," they wrote in a letter organized by Sen. John Cornyn.

EPA UNION DEMANDS GUVS FIGHT FOR GREAT LAKES: The union representing some 1,000 EPA employees has asked to meet with six Midwest governors — Mark Dayton of Minnesota, Eric Holcomb of Indiana, John Kasich of Ohio, Bruce Rauner of Illinois, Rick Snyder of Michigan and Scott Walker of Wisconsin — to strongly oppose proposed budget cuts to the agency that they warn would severely impact the Great Lakes. "Aside from the long term health and safety of the public in the Great Lakes region, the economic threats to the region must be recognized," Michael Mikulka, president of Local 704 of the American Federation of Government Employees, said in a statement.

THEY'RE FIRED UP: Green groups are burning up over the Forest Service's proposal this week to expand two coal leases inside Colorado national forests. Local and national green groups are bristling at the plan to bulldoze wilderness for several new miles of roads and build new drilling pads for methane vents in an area home to black bears, elk and lynx. "Giving away our western public lands to the coal industry isn't energy independence, it's a scheme to make executives and shareholders rich at our expense," said Shannon Hughes of WildEarth Guardians. A 45-day public comment period ends July 24; if approved, the next step is a second approval from the Bureau of Land Management.

SOMETHING SYMBOLIC HERE: California Gov. Jerry Brown and Energy Secretary (and former Texas governor) Rick Perry shaking hands while going opposite directions on an escalator during a trip to China. Pic.

REPORT: EPA DIDN'T UPDATE POLICIES AS REQUIRED: The GAO released a report Thursday finding EPA failed to update the agency's policy statement for the Science Advisory Board as required under a congressional spending bill, Pro's Alex Guillén reports. "EPA did not update its policies or requirements for the SAB as directed by the explanatory statement," it said.

REPORT: CLEAN ENERGY'S DIRTY SECRET: America Rising Squared is out with a new white paper arguing there are "great human and environmental costs" behind the production of clean energy technologies like solar panels, wind turbines, electric vehicles and EV batteries. "The inconvenient truth is that these 'clean' sources of energy are produced under the worst of labor and environmental rights violations," it says.

DEMOCRATIC REPORT: ENERGY EFFICIENCY EFFICIENTLY CREATES JOBS: Democrats on the Joint Economic Committee, a congressional economic advisory committee formed in 1946, are out with a report today arguing for the job-creating capacity of energy efficiency measures. The report notes that EE jobs bounced up to 2.2 million in 2016, 7 percent increase from the previous year. The report calls on Congress to fully fund the Energy Star program, scheduled to be eliminated under Trump's budget, and in additional research.

AD WATCH: 15 PERCENT ETHANOL ALERT: Growth energy is launching a seven-figure TV and digital ad buy in D.C. and other markets to promote Sen. Deb Fischer's bill to allow year-round sale of 15 percent ethanol fuel. The bill is set to get a hearing at EPW next week.

MOVER, SHAKER! Former House Speaker John Boehner has joined Arizona Mining Inc.'s board of directors (h/t POLITICO Influence).

Stories from POLITICO Pro

Pruitt's predecessors pan EPA 'originalism' philosophy Back

By Alex Guillén | 06/09/2017 05:00 AM EDT

Environmental Protection Agency Administrator Scott Pruitt is sounding one theme as he pushes to erase the agency's regulations and shrink its workforce: EPA is returning to its roots.

To Pruitt, that means helping states and cities clean up their toxic waste sites and provide safe drinking water — while rejecting the Obama administration's expansion into issues like climate change. He calls it a "Back to Basics" agenda, aimed at bringing EPA "back to the core of what we do as an agency."

But Pruitt's brand of "EPA originalism" has one big problem: His predecessors say he's got it wrong.

Past EPA administrators from both parties, as well as the GOP author of EPA's landmark environmental laws, say the agency's mission is far broader than the cramped version he's promoting, and has been designed by Congress to take new environmental issues into account.

"I don't personally think you can say, 'I'm somehow going back to what the basic responsibilities of EPA are,'" said Lee Thomas, who led the agency during Ronald Reagan's second term. "That's not what EPA is, that's not where the laws are and that's not where the risk is."

That mission began with a 1970 order from President Richard Nixon, calling for the creation of a single federal agency that would help keep the planet "a place both habitable by and hospitable to man."

Christine Todd Whitman, George W. Bush's first EPA administrator, said Pruitt appears to have jettisoned the agency's responsibility as a protector of human health when regulations impose costs on businesses. She also disputes his decision to focus on a limited set of EPA programs, such as the toxic-waste programs it carries out under the 1980 Superfund law.

"I don't think it has to be an either-or, nor should it be," Whitman said, adding: "Superfund is not the only issue for human health. Water pollution is a huge issue and very important and you need to work on it, but it's not the only issue. Air is an issue too. Even if you don't want to believe in climate change, you've got to believe that carbon and mercury are not good for you."

The tension highlights the dispute over EPA's role, particularly as environmental threats evolve beyond the mid-20th century crises of burning rivers and smog-choked cities into the long-term global menace of climate change. Admirers say Pruitt's approach makes him an "EPA originalist," in the words of Wall Street Journal columnist Kimberley Strassel — much like some conservative judges who argue for hewing to the Founders' original intent when interpreting the Constitution.

So far, Pruitt has launched rollbacks of former President Barack Obama's greenhouse gas rules for power plants, delayed deadlines for polluters and slowed agency work on new regulations, and most recently helped persuade President Donald Trump to withdraw from the Paris climate agreement.

EPA did not make Pruitt available for an interview, but he told Strassel that his aim is for EPA to achieve "tangible" results through "a restoration of its priorities," such as cleaning up the nation's 1,300 Superfund sites.

"These are issues that go directly to the health of our citizens that should be the absolute focus of this agency," Pruitt told the Journal. "This president is a fixer, he's an action-oriented leader, and a refocused EPA is in a great position to get results."

Trump has endorsed that vision as well. "We're going to have clean, beautiful air — clean, beautiful, crystal water," he said in a speech Wednesday in Cincinnati, Ohio, about his infrastructure priorities. "But you're going to have your jobs also."

On the other hand, Trump's proposed 2018 budget, which seeks to chop EPA's spending by 31 percent, has also called for slashing the same toxic-waste and clean-water programs that Pruitt has put at the center of the agency's mission.

The EPA administrator can have huge influence over the direction of the agency, but its scope and responsibilities are set out by Congress in laws like the Clean Air Act and Clean Water Act.

Pruitt has prioritized a different focus for EPA: economic concerns, which he has cited in rolling back regulations on climate change, air pollution and clean water, even in cases where the Supreme Court has said costs cannot factor into the regulation.

Thomas Jorling, the Senate Republican staffer who co-authored the Clean Air Act in 1970 and the Clean Water Act in 1972, said that Pruitt's philosophy of "EPA originalism" is just wrong.

Pruitt cannot be a "tinhorn dictator" who decides which laws to avoid "in favor of economic development," said Jorling, who filed a court brief last year defending the Obama EPA's landmark climate regulation. Continuing to stick to a limited set of cherry-picked priorities Pruitt has chosen to champion is "just disingenuous," he added.

"It's all basically a smokescreen to their real intention, which is kind of a moral and ethical corruption, to ... restore the dependence of the United States energy system on fossil fuels," he said.

Pruitt maintains that his Obama-era predecessors, such as Gina McCarthy, vastly overstepped EPA's authority by issuing regulations such as the carbon dioxide limits in its climate regulations for power plants. Pruitt previously made that argument while waging legal fights against the agency's regulations when he was Oklahoma attorney general.

Pruitt said last month that he has not yet decided whether to craft new climate rules after repealing the Obama versions.

But his Republicans critics say it's wrong to reject climate change as an EPA priority, even if there's room for debate on the details of Obama's actions. The Supreme Court has ruled that EPA must regulate greenhouse gases if they threaten human health and welfare, and the agency has

concluded they do.

States say Superfund sites are big issues in their communities, said Thomas, but the risks of climate change are "significantly higher."

"There's a lot more uncertainty around [global warming], but that doesn't mean you don't deal with it," he said.

Meanwhile, the rollbacks under Pruitt's "EPA originalism" campaign go well beyond climate change. Pruitt has ordered a rewrite of the Obama-era Waters of the U.S. rule, a sweeping regulation that sought to define which waterways and wetlands fall under the federal government's purview. And he remains critical of the Obama administration's efforts to tighten smog standards when much of the country have yet to meet previous limits — even though the Clean Air Act says EPA is supposed to base those decisions solely on the latest health science.

In addition, Pruitt has said his philosophy will involve fewer instances of the federal government overriding state cleanup plans it deems insufficient. And he says EPA will use fewer consent decrees — settlements negotiated with companies that have violated regulations — a practice Republicans have long criticized as "regulation by litigation."

Instead, Pruitt aims to focus on the Superfund program, cleanups of polluted "brownfields" and drinking water infrastructure, all of which involve economic development. He has also placed an emphasis on implementing last year's bipartisan chemical safety reforms, especially the process that approves new chemicals for use in products.

Myron Ebell, a longtime critic of climate change science and the Trump administration's transition leader for EPA, supports Pruitt's originalism mission because it dials back the agency's reach.

"It seems to me EPA has fairly clear statutory responsibilities under a number of statutes, and those statutory responsibilities should come first," said Ebell, director of the Competitive Enterprise Institute's Center for Energy and the Environment.

"But over time and particularly in the Obama administration, they have taken on a whole lot of things which are entirely discretionary, that they don't have to do, they're not required by law to do it, but they decided to do it anyway," Ebell added.

Jorling said he and Leon Billings, his late Democratic counterpart in writing the laws, believed that the environmental statutes they wrote were not static, despite what critics like Ebell contend. Instead, they were designed to adapt to new situations.

"It's a complete misreading of those statutes and it really denigrates the senators and members of Congress that I worked for and with at the time," he said. "They were very concerned that you don't just write a statute for the past, you write a statute for the future."

Georgetown environmental law professor William Buzbee agreed that the legislative history of

environmental laws shows they were "not written to be frozen in time, but to give EPA important protective roles that will evolve in light of improved science and understanding of emerging risks."

For example, the Clean Air Act included a catch-all provision, Section 111, that allowed the agency to address newly discovered pollutants not covered elsewhere in the law. EPA used that provision just five times over the decades, mostly on obscure pollutants, before the Obama administration wielded it to target carbon dioxide from power plants.

McCarthy, Pruitt's immediate predecessor, said it's "crazy" to believe EPA's role was not intended to evolve to include new problems like climate change.

"I know that a lot of this language about 'EPA originalism' is really just an excuse ... for disempowering the agency, particularly as it relates to climate change," she said.

"Is EPA supposed to respond and say, 'We're really busy cleaning up Superfund sites from the '60s. We really can't address the problems that you're facing today?'" McCarthy added. "Is that what they're really suggesting? And as long as we catch up with the damage that was in place when these laws came in, that we'll have done our job? That doesn't make any sense."

Carper has asked Barrasso to reconfirm Svinicki solo Back

By Darius Dixon | 06/08/2017 03:31 PM EDT

A Senate Democrat said today that he's asked Republicans to split up the confirmations of Nuclear Regulatory Commission nominees in order to fast track the reappointment of Kristine Svinicki.

Sen. Tom Carper, the top Democrat on the Senate Environment and Public Works Committee, told reporters that he supports Svinicki's renomination and pitched to EPW Chairman John Barrasso that she get confirmed while the panel reviews the other two Republican nominees.

"She's been through several times, so it shouldn't be too heavy a lift," the Delaware Democrat said.

Carper said the other nominees, Annie Caputo and David Wright, could be packaged with a renomination of NRC Commissioner Jeff Baran, a Democrat whose term runs out next summer.

"One of the things I've suggested to Chairman Barrasso is to find a way to pair those two maybe with one Democrat, and there's a Democrat on the NRC whose term expires ... next year," Carper said. "The idea of going ahead and moving his renomination along with a couple of Republicans

would be of interest to me."

Repackaging the two new GOP nominees with Baran would mean "we wouldn't have to do them, like, next week," Carper said.

Svinicki, who has been an NRC commissioner for nine years, was elevated to the agency's chairmanship by Trump in January. But she's facing a time crunch and would have to step down, even temporarily, if the Senate fails to confirm her for another five-year term by June 30.

WHAT'S NEXT: The Senate Environment and Public Works Committee has scheduled a nomination hearing to review all three GOP NRC nominees on June 13.

Bipartisan group of senators outlines energy priorities for NAFTA Back

By Adam Behsudi | 06/08/2017 05:46 PM EDT

A bipartisan group of senators with major energy interests in their states have submitted a list of specific "principles" that the Trump administration should consider when it renegotiates NAFTA.

"NAFTA has played a key role in all North American energy markets including electricity, renewable, oil, and natural gas, as each market is highly integrated with and remains dependent on vital energy infrastructure and trade crossings that border the United States, Canada, and Mexico," eight lawmakers wrote in a letter organized by Sen. John Cornyn (R-Texas).

The senators, in their letter to U.S. Trade Representative Robert Lighthizer, set out eight points that should be considered "to protect American energy consumers and producers and enhance U.S. energy security."

First on the list is a demand that any revised deal allow for the free flow of electricity, oil, natural gas, refined products, petrochemicals and other energy-intensive manufactured goods. Among other things, the lawmakers also want zero tariffs on all energy products; competitive and transparent bidding for licenses; investor protections; and product-specific rules to allow the use of diluent, a lubricant added to crude oil for pipeline transit of oil.

GAO says EPA falls short on advisory board policy Back

By Alex Guillén | 06/08/2017 03:40 PM EDT

EPA fell short on recent orders from Congress to update the agency's policy statement for the Science Advisory Board, according to a report issued today by the Government Accountability Office.

A spending bill passed in 2015 directed EPA to ensure its SAB policy included a way to evaluate bias if the administrator wants "financial-related metrics" to "identify conflicts of interest or bias." EPA critics have long complained that SAB and other advisory panels are weighted toward researchers who receive research grants from the federal government.

The spending bill also directed EPA to study ways of increasing state membership and methods for considering public comment.

However, GAO says EPA fell short on all counts. "EPA did not update its policies or requirements for the SAB as directed by the explanatory statement," the report said.

A draft document did not delve into the financial metrics because agency staff use the "existing legal and policy framework," including Office of Government Ethics rules. The other directives also came up short, and the agency has yet to finalize the document, GAO said.

While the report made no recommendations before the guidance is finalized, GAO said EPA should keep the criticisms in mind.

Administrator Scott Pruitt made waves last month when he declined to re-appoint nine members of the Board of Scientific Counselors, a separate entity from SAB that advises EPA on research issues. Observers also say EPA is behind on finding a new chair for the seven-member Clean Air Scientific Advisory Committee.

Summaries

AIR
Maine SIP/Gasoline Dispensing Facilities
AIR

Final rule of the EPA approves revisions to the Maine SIP regarding vapor control requirements for gasoline dispensing facilities (GDFs). The revisions require GDFs to decommission their Stage II vapor recovery systems by Jan. 1, 2013. The revisions also require GDFs whose monthly throughput exceeds a threshold of 100,000 gallons per calendar month to comply with requirements of the NESHAP for GDFs (40 CFR 63, Subpart CCCCCC). In addition, the revisions include updated procedures for testing Stage I vapor recovery systems and for ensuring that hoses in the Stage I vapor balance system are properly connected. The rule is effective Aug. 14, 2017. Contact: Eric Rackauskas; EPA Region 1, Air Quality Planning Unit; 617-918-1628; rackauskas.eric@epa.gov. Citations: 40 CFR 52.1020

Reuters

It's still mission impossible for the Republican health bill

James C. Capretta | Real Clear Health

Senate Majority Leader Mitch McConnell did the seemingly impossible on Monday and got the votes he needed to proceed on consideration of the House plan for repealing and replacing Obamacare. At this point, it's hard to tell what will happen in the coming days, but the scene looks troubling. The problem for Senate Republicans is that their principal goal is incompatible with the process they are using to pass the legislation.

Twenty20

The left denies the role of marriage in escaping poverty

W. Bradford Wilcox | City Journal

For today's progressives, marriage doesn't matter when it comes to fighting poverty. In a column titled "No, young people aren't poor because they're not married," Melissa Boteach and Anusha Ravi of the Center for American Progress argue that "[two] poor people getting married does not make anyone less poor." Their underlying assumption is that marriage is irrelevant to poverty simply because it's not a panacea.

Reuters

The US has paralyzed itself by fixating on the war on terror

Thomas Donnelly | Strategika

The collapse of the Islamic State in Iraq and Syria ought to pull away the shroud of post-9/11 confusion that has occluded the strategic vision of the United States and the West in general. By abstracting out a war on terror from the larger struggle for Middle East power, we have paralyzed ourselves into a kind of short-range target obsession. In doing so, we violate Clausewitz's first dictum: to understand the nature of the conflict.

Reuters

Conservatives need a goal. It should be universal coverage.

Michael R. Strain | Bloomberg View

The Affordable Care Act is in bad shape, with premiums increasing at an alarming rate, insurers leaving the exchanges, and a new

administration much less willing to prop it up. We aren't in a "death spiral," but some action will be needed, especially given the progress made on Capitol Hill this week. But Republicans don't seem to know what they want to achieve — other than being able to say that they repealed Obamacare.

Budget Plan Severely Limits EPA Climate Work With No Sign Of Expansion

The Trump White House's fiscal year 2018 budget proposal calls for steep cuts to EPA's climate change policy and research, limiting the agency's climate work to greenhouse gas reporting and some existing GHG regulations while signaling that the agency does not intend to strengthen the climate programs it does maintain.

Critics Say EPA's FY18 Cuts Undermine Trump Efforts To Boost Economy

The Trump administration's proposed budget for EPA is sparking push back from environmentalists and state officials who say the steep proposed cuts would actually impose significant costs on industries, communities and the broader economy, in contrast to administration promises that scaling back EPA rules would boost prosperity.

Lacking Unified Industry Stance, NAM Seeks To Leave Youth Climate Suit

The National Association of Manufacturers (NAM) is asking a federal district court to allow it to withdraw as an intervenor on the U.S. government's behalf in a landmark youth constitutional climate change suit, with the group saying it and two other industry intervenors cannot reach agreement on their detailed position in the litigation.

White House Rejects Calls To Maintain Popular EPA Programs In FY18 Budget

The White House is doubling down on its plans to slash popular EPA programs such as the voluntary Energy Star energy efficiency program in its just-released

Subject: Today on Climate Beat

May 30, 2017

Today on Climate Beat . . .

. . . we practiced our French, bringing you the latest on the Paris Agreement in our daily news roundup. President Donald Trump announced on Twitter over the weekend that he will make a decision this week, and he's reportedly told several people, including EPA Administrator Scott Pruitt, that he intends to say "au revoir" to the deal.

Speaking of Paris, the topic came up in a meeting between Pruitt and Trump today. "This is a subject that the president is spending a great deal of time on, and one that he spoke to the G7 members about during their meetings," White House press secretary Sean Spicer told reporters in announcing the meeting.

Out west, California Gov. Jerry Brown (D) has some harsh words for a newly introduced bipartisan bill to "harmonize" EPA vehicle greenhouse gas rules with Transportation Department fuel economy standards, suggesting the measure is a step toward gutting both programs.

And in regulatory news, EPA indicated in a court-required status report on its review of the Clean Power Plan that it could soon seek interagency review for a "proposed regulatory action" expected to repeal the existing power plant GHG rule, all but confirming reports last week that the agency has drafted a repeal rule.

Subject: You're Invited | POLITICO Pro Policy Summit

[redacted]

Dear Ryan,

[redacted]

We're excited to offer you an early invitation to the POLITICO Pro Policy Summit, a daylong event at which attendees will have the opportunity to interact with fellow policy experts and decision makers from across Washington D.C. The program will feature main stage keynote speakers and smaller breakout sessions focused on policy-specific discussion topics.

[redacted]

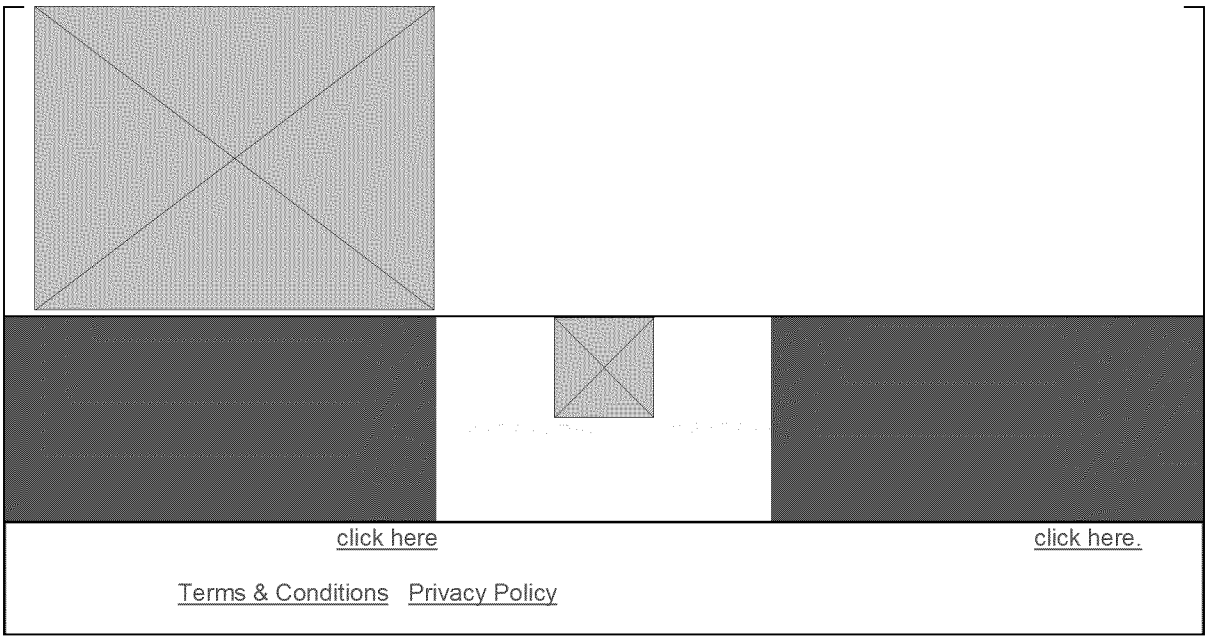
POLITICO Pro Policy Summit Details:

[redacted]

Date:	Sept. 14, 2017
Location:	Omni Shoreham Hotel 2500 Calvert St. NW Washington, D.C. 20008

[redacted]

Reserve My Spot



[redacted]

Please note: Attendance at the POLITICO Pro Policy Summit is limited exclusively to current POLITICO Pro customers at the director-level and above. Space is limited, so reserve your seat today!

This invitation is non-transferable.

Subject: Morning Media: Ivanka's positive press tour — Chelsea Manning's media rollout — Guardian going tabloid

By Joe Pompeo | 06/12/2017 05:39 AM EDT

With Alex Weprin

TWO IVANKA INTERVIEWS FOR THE PRICE OF ONE - The first installment is this morning at 7 a.m. on "Fox & Friends," in which the First Daughter "will discuss former FBI director James Comey's testimony before the Senate Intelligence Committee and the White House's workforce development program with co-hosts Steve Doocy, Ainsley Earhardt and Brian Kilmeade," according to Fox News. The second? Also on Fox & Friends: "Earhardt will also preview her upcoming interview with the first daughter, which will take place at the White House on Wednesday, June 14th and air on Thursday, June 15th during FOX & Friends."

Between this and last week's cover of Us Weekly, "Ivanka Takes a Stand: Why I Disagree With My Dad -- which was based on "Ivanka insiders" dishing to the supermarket tabloid now owned by Trump pal David Pecker -- are we seeing something of an Ivanka positive press tour in Trump-friendly media outlets?

TIPS AND COMMENTS: jpompeo@politico.com / @joepompeo. **Morning Media** is edited by **Alex Weprin** (@alexweprin / aweprin@politico.com) and produced with writing/reporting help from **Cristiano Lima**, who's on vacation this week. (clima@politico.com / @ludacristiano). **Hadas Gold** contributed to today's column. **Archives**. **Subscribe.**

CHELSEA MANNING MEETS THE PRESS - The New York Times Magazine this morning is promoting what's billed as "the exclusive first magazine cover story with Chelsea Manning since her presidential commutation and release. ... After serving seven years of a 35 year sentence for what was then the largest leak of classified records in American history, Ms. Manning sat down with contributing writer Matthew Shaer to tell her story for the first time. Though she has been the subject of numerous articles, Ms. Manning was forbidden from speaking directly to reporters during her incarceration." The print version will land in Sunday's issue. You can find it online here.

Vogue also is reportedly working on a big feature about the 29-year-old whistleblower formerly known as Bradley Manning, which will include a fashion spread, according to a WWD story last month. And ABC's "Nightline" said it will air an exclusive Manning interview sometime this week. The network released preview clips over the weekend, including one in which Manning tearfully thanks President Obama for his grant of clemency. Aside from being good gets, these interviews are also the first time most Americans will actually hear from Manning after hearing so much about her over the past seven years. The coverage is also particularly timely given the debate that's raging over the unauthorized disclosure of classified information to the press, and the arrest last week of another leaker.

ANOTHER HIGHLY ANTICIPATED INTERVIEW - On the second episode of her new weekly NBC show last night, Megyn Kelly previewed her sit-down with right-wing radio host and conspiracy aficionada Alex Jones, which is set to air this Sunday. Q: "They call you the most paranoid man in America, is that true?" A: "Absolutely not." You can watch the full clip here.

-- "Long Before It Lost Turf, ISIS Was Already Targeting Britain" [NYT]

-- "Gary Cohn Has Profited From Big Mistakes. So Why Not Go Work for Trump?" [New York]

-- "Dan Scavino is the other @realdonaldtrump" [POLITICO]

-- "Inside Ford's Top-Secret Campaign to Remake the Iconic GT" [Wired]

ON TRUMP'S NEGATIVE PRESS - From Margaret Sullivan's Monday WaPo column : "Trump's press coverage has been a political nightmare. Isn't that terribly unfair? Here's my carefully nuanced answer: Hell, no. That's because when we consider negative vs. positive coverage of an elected official, we're asking the wrong question. The president's supporters often say his accomplishments get short shrift. But let's face it: Politicians have no right to expect equally balanced positive and negative coverage, or anything close to it. If a president is doing a rotten job, it's the duty of the press to report how and why he's doing a rotten job. ... Should positive coverage be provided, as if it were a birthright, to a president who consistently lies, who has spilled classified information to an adversary, and who fired the FBI director who was investigating his administration?"

FROM MONDAY'S OTHER MEDIA COLUMN - Jim Rutenberg in The New York Times: "What would Watergate look like if it were to happen now? We no longer have to wonder. Forget Deep Throat ... We now have "the deep state," the scheming coterie in the intelligence community supposedly seeking to take down the president to protect its own power ... Once again, a senior F.B.I. official ... has played a central role in the drama by becoming a primary source for reporters covering an unfolding political scandal that is transfixing the nation and consuming a White House. ... Of course, Watergate unfolded in a much simpler time in the media industry. ... The Trump-Russia scandal is breaking during a time of informational chaos." More: "In Watergate, One Set of Facts. In Trump Era, Take Your Pick."

KATY TUR'S INEVITABLE SUNDAY STYLES MOMENT - We're surprised it took this long : "Just two years ago she was a foreign correspondent for NBC, living in London. But she happened to be in New York when the future president announced his candidacy, on June 16, 2015. ... A year or so later, she had captured national attention. Colleagues rallied around her, thousands tweeted #iamwithtur, magazines came calling, and HarperCollins engaged her to write a book on the 2016 campaign ... Then there is the afternoon anchor slot, which MSNBC gave her in January. In April, she received a Walter Cronkite Award for excellence. And this month she will become a contributor to the much publicized new NBC News program 'Sunday Night With Megyn Kelly.' But what she won't do is go to Washington."

The Times, as Poynter notes, caught flak for the headline, which it ended up changing twice on the web after facing criticism that the original display copy -- "Katy Tur Is Tougher Than She Looks" -- was sexist.

REVOLVING DOOR:

-- Hadas Gold has learned: The Associated Press is expected to name a new Washington Bureau Chief today. No word yet on who it is but our source suggests it's part of a larger shakeup at the bureau. Current acting bureau chief Wendy Benjaminson is not expected to get the role permanently. An AP spokesperson didn't immediately respond to a request for comment.

-- Kevin Roose is re-joining The New York Times' BizDay section, after detours through New York magazine and Fusion, to write a "reported column" that "will deal with the intersection of business, tech and power."

-- As expected, Noah Kotch is moving to a different corner of the Murdoch media empire, from News Corp's Heat Street to 21CF's Fox News Digital, where Kotch has been named editor-in-chief and vice president.

LETTER FROM LONDON - The Telegraph reports: "The Guardian newspaper will soon abandon its European-style 'Berliner' print format and go tabloid to help stem heavy losses. It is understood that an agreement to outsource printing to Trinity Mirror could be announced as soon as this week, although senior sources said it was not yet completely finalised. The plans mean The Guardian will be redesigned to fit smaller tabloid pages."

'MESSY' 10 MONTHS AT GIZMODO MEDIA GROUP FOLLOWING UNIVISION SALE - "Since the deal, the six former Gawker Media sites ... have struggled with indecision, a dysfunctional bureaucracy, and an exodus of top leadership and institutional knowledge that gave Gawker Media its editorial bite," Business Insider's Maxwell Tani reports . "[M]any GMG staffers wonder what will remain of the clever, fearless attitude that defined the sites for millions of readers. ... Conversations with more than a dozen current and former staffers over the past several weeks detailed a difficult integration that has chipped away the spirit and ethos of Gawker Media. ... [GMG CEO Raju Narisetti] rattled off top-line statistics that showed a company growing after a tumultuous multiyear legal battle ... Narisetti said last week that even after he had hired 53 new full-time staffers across the websites, the company remained under budget and on target to experience a 30% increase in revenue across the sites in one year."

Related: Here's a review, by Newsweek's Alexander Nazaryan, of "Nobody Speak: Trials of the Free Press," a new Netflix documentary about the Hulk Hogan sex tape trial that brought down Gawker. "The documentary, for the most part, treats the Gawker crew with unwavering sympathy, assuming perhaps too readily that viewers share a similar belief about the inherent rightness of its actions."

SOUNDTRACK: David Bowie, "China Girl"

EXTRAS:

-- A fake Time magazine cover calling Trump "Liar in Chief" was circulating on Twitter last night. [Mediaite]

-- President Trump is even having an impact on this year's Emmy push for the late night comedy shows. While the "Tonight Show" and "Late Show" chose to mail Emmy voters normal screeners, "Jimmy Kimmel Live" chose to submit an episode featuring former President Obama, with the outside box declaring "It'll feel good to vote for Obama again." Meanwhile, "Full Frontal Samantha Bee" designed their Emmy mailer to look like the "2008 Russian pee tape," and included an excerpt from the Steele dossier on the inside cover. [Alex Weprin]

-- ICYMI: James Comey's Senate testimony last week was a ratings bonanza, not that anyone expected otherwise. [POLITICO]

-- Insane: "A computer repairman from Las Vegas was charged on Friday in Manhattan with threatening to kill New York lawyers who have filed an anti-discrimination suit on behalf of 11 black employees at Fox News" [NYT]

--The memorial service for Zbigniew Brzezinski on Friday drew a crowd full of D.C. political types and TV news regulars. Brzezinski's daughter Mika was there, with her fiance Joe Scarborough. Chuck Todd, Bob Schieffer and Chris Licht were also in attendance. [TVNewser]

By Joe Pompeo | 06/09/2017 05:41 AM EDT

With Cristiano Lima and Alex Weprin

SO MUCH GROUND TO COVER, WHERE TO EVEN BEGIN? How about with Donald Trump's lawyer making headlines once again. You may remember Marc Kasowitz from his threat to sue The New York Times for libel last October. Or from his boxing on behalf of Bill O'Reilly during the sexual harassment scandal that cost the longtime cable news host his Fox News job earlier this year. Now, on the heels of James Comey's must-watch Senate testimony, all eyes are on Kasowitz's statement yesterday accusing the former FBI director of illegality based on Comey's leaking, via a surrogate, of details from his private conversations with President Trump.

There was at least one glaring factual inaccuracy: "The public record reveals that The New York Times was quoting from these memos the day before the referenced tweet." Not so, as Times White House correspondent Julie Pace pointed out on Twitter: "Kasowitz is mistaken re NYT stories on Comey memos. We never quoted memos prior to Trump's 5/12 tweet re tapes; 1st story doing so was 5/16."

Doh! "Awkward scene as Kasowitz tried to escape with no press questions," tweeted Bloomberg New White House reporter Jennifer Jacobs. "He and aides stood in elevator staring at us. Forgot to push down button."

You might also remember the name Kasowitz from this: His firm is the one that sent me - mistakenly, I was told - a private email conversation between several lawyers (including Kasowitz) and O'Reilly, as the group plotted a Hail Mary pass to try and save the anchor's job.

TIPS AND COMMENTS: jpompeo@politico.com / @joepompeo. **Morning Media** is edited by **Alex Weprin** (@alexweprin / aweprin@politico.com) and produced with writing/reporting help from **Cristiano Lima** (clima@politico.com / @ludacristiano). **Archives**. **Subscribe.**

COMEY V. NEW YORK TIMES - It was rather remarkable that Comey divulged how he leaked, through "a good friend of mine who's a professor at Columbia Law School" (later confirmed to be Prof. Daniel Richman), the contents of his bombshell Trump memo that became the basis of a big New York Times scoop on May 16. That's perhaps what also makes it particularly interesting that Comey trashed a separate Times story from February ("Trump Campaign Aides Had Repeated Contacts With Russian Intelligence "), of which he said, "in the main, it was not true."

As of last night, the Times was standing by its reporting, the basic facts of which were not in dispute. And there was no reason to think the Times would change its tune unless, as one Times

insider familiar with the matter told Morning Media, "the FBI or Comey elaborate."

Full statement: "The New York Times has published an examination of Mr. Comey's statements today, which reviews our previous coverage and found no evidence that any prior reporting was inaccurate. In fact, subsequent reporting by The Times and other media outlets has verified our reporting as the story makes clear. Neither the F.B.I., nor Mr. Comey would comment or elaborate."

From the Times story on the matter: "Multiple news outlets have since published accounts that support the main elements of The Times's article, including information about phone calls and in-person meetings between Mr. Trump's advisers and Russians, some believed to be connected to Russian intelligence. Mr. Comey did not say exactly what he believed was incorrect about the article, which was based on information from four current and former American officials, all of whom spoke on the condition of anonymity because the information was classified."

GOOD RUNDOWN OF THE MEDIA RELEVANCE OF COMEY'S TESTIMONY: "A Leaker's Admission: How the Media Covered, and Factored Into, Comey's Testimony," by Sydney Ember and Michael Grynbaum in the Times. An interesting point from the piece: "It is highly unusual in Washington circles for powerful officials to admit to being the source of a leak. But the reality, veteran journalists say, is that such leaks are a day-to-day occurrence -- perhaps even more so during the Trump administration."

TAKES:

-- **Margaret Sullivan:** "Flawed: yes. Fake: no. And, sometimes, extremely useful. That was the portrait of the mainstream news media that emerged from former FBI director James B. Comey's appearance Thursday before the Senate Intelligence Committee. At various times, Comey portrayed journalists as getting the story wrong. ... Yet much of Comey's testimony reinforced or confirmed the bulk of the reporting ... that has dominated the news."

-- **Paul Farhi:** "Something happened on Thursday that hardly ever happens any more: The news media stopped and collectively focused on one event. There was no other story in this otherwise fragmented news world; James B. Comey's congressional testimony was it and only it."

-- **Hadas Gold**: "Former FBI director Jim Comey's testimony on Capitol Hill either completely vindicated President Donald Trump or further implicated him. That depends on which media is reporting the story. ... That mainstream outlets and conservative outlets would focus on different aspects of the testimony isn't entirely surprising, but reflects the extent that conservative media is backing Trump when even some Republican senators are condemning his handling of Comey."

SOUND BITES:

-- "As an editor, when I tell a reporter I 'hope' he'll do something I expect him to Deride &ridicule me in private and ignore me." [Gene Weingarten]

-- "NB: Intriguing Comey had memos leaked to NYT in May given contempt he now expresses for NYT's reporting back in February." [David Folkenflik]

-- "Can't recall a public figure ever explaining how he leaked a story" [Ron Fournier]

-- "Hearing didn't get to another reported detail in memo -- Trump urging Comey to consider jailing journalists for publishing classified info." [Michael Calderone]

-- "Marc Kasowitz is wrong about leaks. Congress passed numerous laws to protect whistleblowers. We encourage whistleblowers to leak to press." [Rep. Ted Lieu]

JAMES COMEY, STUDENT JOURNALIST - via The Chronicle of Higher Education : "Trying to maintain a veneer of neutrality while investigating a potentially explosive topic, James B. Comey found himself at the center of a fight between a brash antagonist and a group of rank-and-file professionals desperate to protect themselves and their institution. The year was 1980, and Mr. Comey, the future director of the Federal Bureau of Investigation, was a student journalist at the College of William & Mary. Years later, after the release on Wednesday night of his sworn testimony to the U.S. Senate's Intelligence Committee, several people would applaud his prowess as a storyteller. But Mr. Comey's work at The Flat Hat, the college's student newspaper, received far less applause that fall semester." More: "The Story of James Comey's Most Explosive Investigation -- in College"

TODAY'S DAILY NEWS FRONT PAGE WAS GETTING A LOT OF ATTENTION LAST NIGHT - It's a picture of Trump with the word "LIAR" overlaid on his mug. It's a strong and damning cover with a critical point of view, but at the same time, it's still notably more even-handed than the newspaper's swashbuckling anti-Trump crusade of 2016. If you look at the display copy, the News is not calling Trump a liar, per se, but rather, "LIAR" refers to "Comey's explosive accusations." (If New York tabloid Kremlinology is your thing, there's lots more where that came from in my feature from March: "An anti-Trump tabloid pulls back .")

SIDENOTE: THE DAILY NEWS IS DOING A FICTIONAL TRUMP E-BOOK - It's written by News columnist and New York tabloid veteran Gersh Kuntzman, and it's called, "COUP! Mike Pence and a skeet-shooting pothead, Rick Perry's dance leotard, a waterboard and Ivanka save America from Donald Trump." According to the promo copy, which was shared with Morning Media: "Using the Constitution's obscure 25th Amendment, Pence secretly convinces a majority of cabinet members to overthrow the 45th President, setting off a hilarious battle for power that culminates with a civil war, a President in exile and a new Trump brand rising like a phoenix from the ashes." Available for download in the Kindle store on Monday, $3.99 a pop.

-- "5 Clues James Comey Just Left Behind" [The Daily Beast]

-- "What it Feels Like for a Woman and James Comey" [W]

-- "Security Breach" [Harper's]

-- "Oldest Homo sapiens bones ever found shake foundations of the human story" [The Guardian]

REVOLVING DOOR:

-- **The Atlantic's newest contributor** is "Face the Nation" moderator and CBS News Chief Washington Correspondent John Dickerson, who will write regularly for print and the web. His first piece landed right as James Comey began testifying on the Hill: "Donald Trump Is an Impossible Boss."

-- **Glamour has signed Washington Post White House reporter Ashley Parker** as a contributing editor covering Washington and politics. Per the mag's announcement: "Building on the brand's long history of political coverage, Parker will be responsible for bringing top politicians and coverage of important policy issues to Glamour's pages."

O'REILLY BACK ON TV - NewsmaxTV. Hat tip, Jim Rutenberg: "O'Reilly appears on Newsmax, which has been open about wanting to hire him post-Fox." You can watch the video and read the accompanying article, "O'Reilly: I Should Have Fought Back Like Sean Hannity," here. Newsmax CEO Chris Ruddy told us last month that he thinks "very highly" of O'Reilly and would be "very open" to working with him.

BLOOMBERG BUSINESSWEEK RELAUNCH SET FOR JUNE 15 - A Bloomberg rep revealed the street date to Morning Media last night, while declining to give us any specifics about what the makeover will entail. We have, however, confirmed one change: BW's quirky back-of-book "Etc." section, which is chock full of culture, fashion and lifestyle goodies, is going away. (I was a regular "Etc." contributor when it first launched with the initial Bloomberg-ified redesign of 2010. RIP.)

SOUNDTRACK: The Clash, "Straight to Hell"

EXTRAS:

-- Accused Intercept leaker Reality Winner pleaded not guilty and was denied bail. [CNN]

-- Al Jazeera says it came under cyberattack yesterday. [AJE]

-- Interview: "Ezra Klein Explains it All" [WWD]

-- Witnesses are being cross-examined in the ABC News "pink slime" lawsuit. Here's Eriq Gardner's latest dispatch from Elk Point, South Dakota. [THR]

Subject: POLITICO's Morning Transportation: TSA gets through Thanksgiving weekend without any major glitches — Lawmakers huddle this week on appropriations — Could infrastructure still make its way into the tax plan?

By Tanya Snyder | 11/27/2017 10:02 AM EDT

With help from Stephanie Beasley

SO LONG AND THANKS FOR ALL THE TIFIA LOANS: Marty Klepper resigned his post at the helm of DOT's Build America Bureau last month, pleased with all he'd been able to accomplish but frustrated by a slew of mixed messages from the administration and Congress on infrastructure. There's the cognitive dissonance created when an administration that's supposedly planning a major infusion of cash for infrastructure proposes to cut funding for infrastructure programs. Plus, the House tax bill seeks to eliminate the tax break for private activity bonds (which the administration has previously said it planned to expand). And who could forget Trump's bewildering statement that public-private partnerships are "more trouble than they're worth?" But worst of all is that the promised infrastructure initiative itself "appears to be stalled and the future is uncertain," he said. Klepper was tapped by the Obama administration in its waning days to take over the newborn Build America Bureau, created as a one-stop shop for federal infrastructure financing programs, but had been excited by the incoming Trump administration's apparent commitment to a $1 trillion infrastructure initiative, he told POLITICO in an interview.

KEEP HOPE ALIVE: With less than two weeks to strike a deal to continue funding the federal government, President Donald Trump and top congressional leaders will meet Tuesday afternoon "to try to hammer out a year-end agreement to avert a government shutdown," report Seung Min Kim, Heather Caygle and Andrew Restuccia. Democrats and Republicans have yet to agree on total government spending levels, much less actual appropriations for the rest of the fiscal year. "That means a short-term funding extension to keep the government operating beyond a Dec. 8 deadline is all but inevitable," the trio write. Remember: Republicans are also trying to pass their tax overhaul by Christmas, and Democrats are still trying to force a DACA fix into any short-term continuing resolution.

KEEP HOPE ALIVE PART II: The Senate GOP's third-in-command, Sen. John Thune (R-S.D.), told "Fox News Sunday" that he expected the tax bill to undergo significant changes as it proceeds through "an open process on the floor of the United States Senate, where people can offer amendments... so, there [will] be plenty of opportunities to change the bill in the direction that some of our senators want to see." Could that include an amendment directing a revenue stream toward infrastructure, or a change to the gas tax? We'll be watching this week as the Senate takes up the bill.

IT'S JUST ANOTHER MANIC MONDAY: Thanks for tuning in to POLITICO's Morning Transportation, your daily tipsheet on all things trains, planes, automobiles and ports. Tanya is your pilot. Send tips, feedback and song lyrics to tsnyder@politico.com or @TSnyderDC.

"Have to catch an early train / Got to be to work by nine / And if I had an aeroplane / I still couldn't make it on time."

GET LISTENING: Follow MT's playlist on Spotify. What better way to start your day than with songs (picked by us and readers) about lonely highways and south-bound trains?

WOMEN RULE WEEK! POLITICO is partnering with women-led businesses in the DC-metro area to offer a full week of exclusive perks in conjunction with the 5th annual Women Rule Summit! Join the fun at participating businesses during Women Rule Week **(Nov. 27 - Dec. 1)** for exclusive deals and tweet 5x using #WomenRule for a chance to win two free tickets to the Summit on Dec. 5!

THIS WEEK:

Tuesday - The National Transportation Safety Board holds a meeting on a July 2016 crash involving a semi-truck and a bus near St. Marks, Fla. The House Homeland Security Committee's Transportation and Protective Security Subcommittee holds a field hearing on "Securing Public Areas of Transportation Systems: Stakeholder Perspectives."

Wednesday - House Transportation Committee's Aviation Subcommittee holds a hearing on "Unmanned Aircraft Systems: Emerging Uses in a Changing National Airspace." The Committee on Small Business will meet for a hearing titled, "Highway to Headache: Federal Regulations on the Small Trucking Industry." The Association for Unmanned Vehicle Systems will host a webinar to outline the necessary steps to become a commercial drone pilot and discuss how companies can use drones to improve their business.

Thursday - House Homeland Security Committee holds a hearing on "World Wide Threats: Keeping America Secure in the New Age of Terror."

ALL'S WELL THAT ENDS WELL: TSA pulled through the busy holiday without a major hitch. As we reported last week, TSA chief David Pekoske predicted that air travelers could experience slightly longer wait times at security checkpoints due to the collision of high travel volumes and the agency's ongoing implementation of a new rule requiring passengers to remove large electronics from carry-on bags. TSA is expected to release official wait times statistics today, but, so far, Pekoske's assessment appears to have been spot on. Based on anecdotal reports, travelers saw the longest lines on Wednesday and Sunday, but nothing catastrophic. There was one headline-grabbing hold up at Denver International Airport, but it was caused by malfunctioning airport trains, not TSA.

Doesn't mean you didn't get delayed, though: CNN reported that at least 2,019 flights were delayed and 46 flights were canceled at major airports across the United States on Wednesday. Roads were busy on Sunday, but according to Jalopnik's analysis of Thanksgiving travel trends, Sunday's traffic is never as bad as Wednesday's. AAA was predicting the highest Thanksgiving travel volumes in 12 years across all modes of travel.

INFRASTRUCTURE RENDEZVOUS: The nonprofit Food and Water Watch group is suing the Trump administration for allegedly operating its infrastructure council in the dark well before it was formally established in violation of transparency laws. As Lauren Gardner reports , the group charges that the council "met on numerous occasions" to advise White House officials on infrastructure policy within the first two months of the administration - well before the White House issued an executive order creating it in July. That means the council could have had influence over the drafting of the administration's infrastructure principles without being subject to public scrutiny required by the Federal Advisory Committee Act.

Depends what the definition of the word 'is' is: "The administration has moved to dismiss the case by arguing that the infrastructure council never existed; in response, earlier this week the organization amended its complaint," Lauren writes. "The White House put the brakes on the council in August, after the business world revolted over Trump's comments about a white supremacist protest in Charlottesville, Virginia."

MORE EGG ON UBER'S FACE: While you were stuffing the turkey Thursday, news broke that Uber CEO Dara Khosrowshahi knew about the data breach since mid-September, and former CEO and founder Travis Kalanick found out about it in November 2016, a month after it took place. They didn't disclose it to customers until last Tuesday. Though the breach isn't the biggest one in recent memory, lawmakers were taken aback to learn of the measures Uber took to cover it up, including a $100,000 payoff to the hackers. Rep. Frank Pallone (D-N.J.), the ranking member of the House Energy and Commerce Committee, is calling for Uber to testify before the committee.

The big bucks: POLITICO Influence reports that Uber spent $510,000 on lobbying in the third quarter, its highest-ever total, retaining eight firms, though it's not clear whether any of them were working on data security issues. "Uber may decide to bolster its team in Washington if Congress does decide to hold hearings," PI's Theodoric Meyer reports. "When Congress hauled in Richard Smith, the former chief executive of Equifax, to testify last month after a massive data breach, Equifax brought on DLA Piper to help with the response. Former Sen. Saxby Chambliss (R-Ga.), who's now at DLA Piper but wasn't listed on the Equifax lobbying registration, could be seen advising Smith as he testified."

WHEELS ON WINGS: Paralyzed Veterans of America, which is suing DOT over its rollback on a rule increasing accountability for airlines that lose or damage passengers' wheelchairs, took advantage of the busy travel weekend to again urge DOT to revert to the original deadline for airlines to start reporting wheelchair damage or delays. "This must be the last Thanksgiving that airline travelers with disabilities will have to fly without knowing this critical information," said the group's president, David Zurfluh.

Remember when: The Trump administration delayed the rule's implementation by a year in March. In April, Sen. Tammy Duckworth (D-Ill.) - herself a veteran who lost both legs in Iraq - asked Transportation Secretary Elaine Chao to explain the delay. And the next day, Duckworth boarded a flight and had another wheelchair broken. "It was equivalent to them taking my legs away from me," she told POLITICO at the time.

CONGRATULATIONS... and Happy Birthday, and Happy Thanksgiving while we're at it, to Max Slutsky, special adviser to FAA Administrator Michael Huerta, who had an appropriately aviation-themed life milestone Wednesday when he proposed to his girlfriend, Emily Kaplan of the Glover Park Group, as she stepped off her flight at LaGuardia Airport. (She said yes.) Slutsky turned 30 the next day, on Thanksgiving. We hope the rest of the weekend was as awesome as the beginning.

THE AUTOBAHN:

- Coast Guard shooed more than 1,200 boats away from Mar-a-Lago during Trump's 2017 stays. Palm Beach Post.

- SVU subs airline industry for Hollywood Harvey Weinstein-themed episode. Hollywood Reporter.

- "Are robots better pilots? NASA pits human pilot vs. AI and here's what happened." Tech Times.

With help from Alex Guillén, Esther Whieldon, Eric Wolff and Annie Snider

ESCAPE PLAN FOR COAL PLANTS? EPA Administrator Scott Pruitt is ready to let coal-fired power plants off the hook for their contribution to climate change, based on a novel legal argument that the Clean Air Act bars him from further regulating carbon dioxide emissions from existing power plants because a separate Obama-era regulation on toxic mercury emissions already applies to them, Pro's Alex Guillén reports , citing multiple sources with knowledge of his plan. That approach echoes a novel interpretation of the statute Pruitt leaned into as Oklahoma attorney general, but it would avoid an all-out brawl over the established science on climate change.

The argument, known throughout Washington's legal circles as the "112 exclusion," says EPA cannot regulate carbon emissions from power plants under section 111(d) of the Clean Air Act because section 112 already goes after hazardous air pollutants from those sources. A federal appeals court never ruled on the matter before pausing the case in the wake of President Donald Trump's election, but several judges on the D.C. Circuit appeared skeptical of it during oral arguments last year. Environmental groups, meanwhile, are ready to fight the planned repeal of the Clean Power Plan, including the 112 exclusion argument, and Pruitt's broader claim that the Clean Air Act does not give EPA the proper tools to fight climate change.

Pruitt's approach won't be enough for some: Conservatives want Pruitt's EPA to go further still by overturning the agency's 2009 endangerment finding that classified carbon dioxide as a pollutant. That approach has divided coal companies, with one industry source saying entities are split over whether Pruitt should repeal the endangerment finding or pursue more lenient rules that would not force plants to shut down. "The more they look at it, the more they're going to realize they need to re-open and revise the endangerment finding," said Myron Ebell, director of the Center for Energy and Environment at the Competitive Enterprise Institute and the Trump administration's EPA transition team leader. Pruitt is not expected to repeal the endangerment finding in the near term, though he has announced plans for a "red team/blue team" debate of the consensus on climate change.

WELL FOLKS, IT'S THURSDAY! I'm your host Anthony Adragna, and former Rep. Kerry Bentivolio (a former reindeer rancher) won a general election while losing a special one on the same day back in 2014. For today: Who holds the record for shortest tenure as House Speaker? Send your tips, energy gossip and comments to aadragna@politico.com, or follow us on Twitter @AnthonyAdragna, @Morning_Energy , and @POLITICOPro.

NOT TOO SUBTLE: One day after Senate Energy Chairman Lisa Murkowski voted against beginning debate on Obamacare repeal, Interior Secretary Ryan Zinke called both Alaska

senators to warn their energy priorities were suddenly at stake, the Alaska Dispatch News reports. "I'm not going to go into the details, but I fear that the strong economic growth, pro-energy, pro-mining, pro-jobs and personnel from Alaska who are part of those policies are going to stop," Sen. Dan Sullivan said. "The message was pretty clear." Among the priorities now at risk, according to the paper: the nominations of Alaskans to Interior Department posts, a long-sought one-lane gravel road from the isolated southwestern Alaska village of King Cove, and expanded drilling opportunities throughout the state.

MOVING THAT MINI-BUS! Lawmakers moved their way through dozens of amendments on the Energy and Water-filed mini-bus package H.R. 3219 (115) late Wednesday night. Expect lawmakers to finish two remaining votes on Energy and Water amendments today ahead of a final vote on the mini-spending package on Friday. Among the measures of interest to ME readers:

— Lawmakers approved by voice vote Rep. Paul Gosar's amendment barring the development of any rule or guidance document related to the social cost of carbon.

— A bid by Democrats to strip a rider insulating the Trump administration's withdrawal of the Waters of the U.S. regulation from legal challenges failed by voice vote.

— Rep. Scott Perry's amendment adding $15 million to the Office of Energy Efficiency and Renewable Energy by taking away from DOE's administration fees and Rep. David McKinley's amendment restoring fossil energy funding to fiscal 2017 levels passed by voice vote. — A bid to add $921 million to EERE by pulling from the nuclear weapons program failed by voice vote, as did several smaller efforts.

— Ohio Republican Steve Stivers' push to block any funding for Cape Wind, the offshore wind project in Massachusetts' Nantucket Sound that has been stalled for years, passed by voice vote.

— Efforts by Nevada Democrats to remove language barring the closure of Yucca Mountain flopped by voice vote.

— Seventh time's the charm? Rep. Michael Burgess' perennial light bulb rider blocking enforcement of DOE efficiency standards passed by voice vote again.

Before they adjourned Wednesday night, lawmakers set up a vote on Rep. Marsha Blackburn's push for a 1 percent across-the-board discretionary cut and two Michigan Republicans withdrew an amendment barring the Corps from slow-walking a controversial study related to keeping Asian carp from reaching the Great Lakes.

LIKELY TRUMP WATER PICK HAS AG GROUP, RED STATE CRED: The likely nominee to run EPA's water office is David Ross, director of the Environmental Protection Unit at Wisconsin's Department of Justice, according to multiple sources close to the decision. Before heading to Wisconsin last year, Ross was in the Wyoming Attorney General's office, where he worked on the 13-state lawsuit challenging that Obama administration's Waters of the U.S. rule that won an early injunction from a North Dakota District Court judge in 2015.

Ross also spent more than a decade in private practice, largely in Crowell & Moring's environment and energy group, where he worked on a number of hot-button water lawsuits. He was part of the team that represented the American Farm Bureau Federation in its challenge to the landmark Chesapeake Bay cleanup plan — a suit that Pruitt joined as an intervenor while serving as Oklahoma's attorney general, although he now says he supports the effort — and represented agricultural groups and fertilizer companies in litigation brought by environmental groups in a bid to force stricter pollution limits in the sprawling Mississippi River basin.

** **A message from Chevron**: Advanced technology is helping us find safer ways to deliver energy. We're piloting a program that uses drones to monitor tanks and pipelines. Watch the video: http://bit.ly/2vFEzbX **

FROM 'MONEYBALL' TO... DOE? Financial writer Michael Lewis, known for books like "Moneyball" and "Flashboys," explores the convoluted past, present and future of the Energy Department in a lengthy piece for Vanity Fair. Much like we've explained the agency's many important — and thankless — tasks, Lewis tells the story of what DOE does, that no one seems to get it, and how fraught with risk it all is. And he hits the highlights: the loan program, nuclear security, physical and cyber threats to the electric grid, and (paging Sen. Maria Cantwell) an extended section on the Hanford nuclear cleanup. He interviewed Arun Majumdar to talk about DOE's ARPA-E program, which he launched and is under threat from Trump.

MASSIVE WIND FARM GOING UP: American Electric Power announced Wednesday it would invest $4.5 billion into a massive 2,000-megawatt wind farm that will provide power to customers in Arkansas, Louisiana, Oklahoma and Texas once completed. It would be the largest wind farm in the country, and AEP says customers will save $7 billion over 25 years once the wind farm is online. The effort includes a 350-mile dedicated, extra-high voltage power line designed to serve up to 1.1 million customers, according to developer Invenergy.

TRUMP TRANSITION OFFICIAL THINKS WHITE HOUSE SHOULD DO CLIMATE ASSESSMENT: Former Trump Transition official David Schnare argued in an op-ed for Inside EPA that the White house Office of Science and Technology Policy, and not EPA, should conduct a re-evaluation of climate science. Schnare, who decried the "alarmist" views he said dominated the Obama administration's approach, calls Pruitt's proposal for a red team/blue team debate "silliness" and "not how science works." He argues that under the 1990 Global Research Act, only OSTP, and not EPA, has the authority to conduct such a review. "EPA can play, but it isn't in charge and doesn't have the authority," he writes. Schnare was an attorney with EPA for 30 years, though he is now general counsel for the anti-climate action Energy and Environment Legal Institute.

E.U. TAMPED DOWN SANCTIONS BILL: The legislation still faces some obstacles before it reaches Trump's desk, but European officials actually managed to blunt the initial scope of the proposed Russian sanctions through last-minute tweaks last weekend, POLITICO Europe's Anca Gurzu and Lili Bayer report. Officials are especially worried provisions in the measure could deliver an economic blow to EU companies involved in Russian energy export pipelines or that partner with Russian companies on energy projects. "We do a lot under the radar because we

wanted to avoid the appearance that we are split with the U.S. on the sanctions," a Commission official said.

NOT SO FAST, REX: Critics are not down with Secretary of State Rex Tillerson's plan to slash dozens of positions known collectively as special envoys, POLITICO's Nahal Toosi reports. The administration has already indicated it plans to eliminate a special envoy for climate change. But today the Senate Foreign Relations Committee will consider legislation that will give lawmakers a greater say over how special envoy jobs are filled.

MAIL CALL! WE'RE WITH YOU ON OFFSHORE DRILLING PLAN: A group of 36 Senate Republicans, led by Lisa Murkowski, sent a letter to Zinke Wednesday voicing support for his agency's new Outer Continental Shelf Five-Year Oil and Gas Leasing Program for 2019-2024. "We encourage you to carefully review those areas that were not included in the 2017-2022 Five-Year Program to ensure that opportunities are not missed," they wrote. BOEM is currently accepting comment on a new five-year drilling plan through Aug. 17 that would replace the plan developed under the Obama administration.

PERRY'S BAD TUESDAY GETS WORSE: Top House Energy and Commerce Democrat Frank Pallone asked GAO Wednesday in a letter to probe whether Energy Secretary Rick Perry misused taxpayer funds in writing an op-ed criticizing the Affordable Care Act and if the agency improperly promoted that piece through social media channels. "I have significant concerns as to why DOE is using official agency resources to weigh in on the health care debate, and am troubled that recent DOE actions may represent a broader effort by the Administration to inappropriately use agency resources on matters well beyond an agency's jurisdiction," Pallone wrote, asking for an opinion on whether Perry's actions violated Antideficiency Act, the Anti-Lobbying Act, and the Consolidated Appropriations Act of 2017.

TASTE OF WHAT'S TO COME IN SEPTEMBER: House Energy and Commerce lawmakers today vote on Drinking Water System Improvement Act H.R. 3387 (115). The measure cleared subcommittee on July 13 after the addition of amendments requiring states to spend a minimum share of federal dollars on disadvantaged communities, boosting the popular Drinking Water State Revolving Fund's authorization to $8 billion over five years and encouraging removal of lead service lines. Be on the lookout for a manager's amendments with further tweaks when the session begins at 10 a.m. in Rayburn 2123.

ICYMI: The Senate Energy and Natural Resources shelved a vote originally planned for today at 9:30 a.m. on half a dozen Interior and DOE nominees "until a date and time to be determined," Pro's Esther Whieldon reports. A committee aide chalked it up as a casualty to the chamber's vote-a-rama on healthcare repeal.

PRUITT MET CANADA'S HARPER: The EPA confirmed late Wednesday that Pruitt met with former Canadian Prime Minister Stephen Harper back in March. "The purpose of the meeting was to extend a courtesy visit to the former Prime Minister of Canada and thank him for past bilateral cooperation on environment," a spokeswoman said. "It was not intended, nor was it, a policy meeting." The Huffington Post first reported the meeting, which it said was arranged by a top Comcast lobbyist.

MONUMENT REVIEW ROLLS ON: Zinke continues his visits to national monuments today as his swing takes him to New Mexico. He'll have a closed-press helicopter tour of the Organ Mountains Desert Peaks National Monument in the morning, followed by a meetings with local elected officials, ranchers, academics, border security experts, and others (also off-limits to the press).

It hasn't been announced yet but a rural Nevada county commissioner told the Las Vegas Review-Journal Zinke will be in the area next Monday to hear input on the Gold Butte and Basin and Range National Monuments in the state. Nye County Commission Chairman Dan Schinhofen told the paper Zinke would hear from him about former President Barack Obama's designation of the Basin and Range. "We don't object to national monuments, but to take 700,000 acres to protect private property that represents less than one percent of that land seems excessive," he said. "We think it can be pared down."

Speaking of monuments, the Commerce Department announced it would give the public an additional 15 days to comment on the status of 11 marine national monuments and sanctuaries through August 14, Pro's Esther Whieldon reports. A spokesperson declined additional comment on why the public comment period was extended.

REPORT: APPLIANCE EFFICIENCY COULD SAVE BIG BUCKS: The Appliance Standards Awareness Project and the American Council for an Energy-Efficient Economy released a report Wednesday recommending 21 appliance standards states could adopt on a variety of products, from computers to portable air conditioners. The groups say those standards would save $113 billion through 2035 assuming they go into effect by 2020.

MORE STATES JOIN GREEN CONTRACT TREND: Two states, Minnesota and Nebraska, this year joined the ranks of about a half dozen states that have allowed their utilities to offer direct-sale, long-term supply contracts for renewable generation, according to a report out today by the Advanced Energy Economy. Under these so-called green tariffs, big companies like Facebook and Google since 2012 have signed deals for more than 8 gigawatts of renewables.

CHANGING THE FACE OF THE GREEN MOVEMENT: Environmental advocates and lawmakers gather today at 10 a.m. in Cannon 421 for a discussion on the need for diversity in the mainstream environmental movement. Reps. Donald McEachin and Pramila Jayapal, along with representatives from Green 2.0, the Hip Hop Caucus, Defenders of Wildlife, LCV and GreenLatinos, participate.

MOVERS, SHAKERS:

Gwendolyn Keyes Fleming, chief of staff at EPA under Gina McCarthy from 2013 to 2015, has joined the law firm Van Ness Feldman in its environmental practice. She'll focus on environmental litigation and national security issues. Before becoming chief of staff, Fleming was EPA's regional administrator for the Southeast, and before that she was an elected district attorney in Georgia's DeKalb County. After leaving EPA, Fleming spent nearly two years as the top legal adviser for Immigration and Customs Enforcement. In recent months DeKalb County

had employed Fleming as a consultant to advise it on relations and negotiations with EPA and state regulators.

Cynthia Giles, EPA's top enforcement official during the Obama administration, has joined the University of Chicago's Energy & Environment Lab as executive fellow and director of strategic initiatives. The organization aims to work with governments to design and test environmental policies that can be scaled up.

Mike Godwin has joined the Niskanen Center as a senior fellow; He was most recently the director of innovation policy at the R Street Institute (h/t Playbook).

Stories from POLITICO Pro

EPA eyes plan to shield coal from future regulations Back

By Alex Guillén | 07/27/2017 05:00 AM EDT

The Trump administration may have found a way to let coal plants off the hook for their carbon emissions without relitigating the established science on climate change.

EPA Administrator Scott Pruitt, who has been tasked with undoing the Obama administration's landmark climate change regulation on existing power plants, is preparing to argue that the Clean Air Act bars him from setting any limits on carbon dioxide from their smokestacks, according to multiple sources with knowledge of the proposal. That's because a separate Obama-era EPA regulation on toxic mercury emissions already applies to coal plants, according to a novel interpretation of the law that Pruitt embraced when he was attorney general of Oklahoma.

Such a legal maneuver would effectively allow Pruitt to repeal the Clean Power Plan without having to impose new rules on coal plants, despite Supreme Court precedent and an underlying scientific finding that identified greenhouse gas emissions as a threat to public health.

Pruitt's proposal to undo the Clean Power Plan has been under review at the White House since June, and the administration has provided no target date for its release. It is separately expected to make a legal case that EPA cannot require states to shift away from coal power and toward natural gas and renewables, as the Obama administration sought to do with its rule, although that approach by itself would not alleviate Pruitt of the obligation to develop a narrower rule based on coal plant efficiency.

Pruitt's attempt to wipe out power plants' climate regulations altogether would go further than he suggested was possible at his confirmation hearing, but it still won't be enough for some conservatives. EPA declined to comment on the proposed Clean Power Plan repeal while it is still undergoing interagency review.

Testifying to the Senate Environment and Public Works Committee in January, Pruitt seemed to acknowledge a role for EPA in regulating carbon stemming from the 2009 endangerment finding classifying it as a pollutant. Since then, conservative activists and some coal executives like Bob Murray have urged Pruitt to repeal that conclusion, which would essentially require him to disprove the scientific consensus that climate change is a threat. Pruitt has announced plans for a "red team/blue team" debate of that consensus, but he has not said where he expects that exercise to lead.

Pruitt is not expected to repeal the endangerment finding in the near term, but the approach he is leaning toward would have the same practical effect for the hundreds of coal-fired power plants that would have been subject to the Clean Power Plan. A coal industry source, speaking on condition of anonymity, said companies are split over whether Pruitt should repeal the endangerment finding or pursue more lenient rules that would not force plants to shut down.

"At least for so long as this management is at EPA, it is a way to not regulate at all without having to revisit the endangerment finding," said Sean Donahue, an attorney working with the Environmental Defense Fund, which supported the Obama-era rule. But he argued the approach would face huge hurdles in court.

Known in legal lingo as the "112 exclusion," Pruitt's argument is that EPA cannot write rules for power plants under section 111(d) of the Clean Air Act — a catchall provision under which the Clean Power Plan was written — because those sources already are regulated under Section 112 of the law, which targets hazardous air pollutants from a variety of sources.

However, the 112 exclusion argument was muddied by a strange legislative "glitch" that occurred when Congress last revamped the Clean Air Act, in 1990. Two competing sections on this issue, one each from the Senate and the House, were inadvertently signed into law. The challengers seized on the language of the House version as a foundation for their exclusion argument, while the Obama administration said either version should allow it to regulate via the Clean Power Plan.

The D.C. Circuit never ruled on this or any of the other legal issues before the case was paused when the Trump administration took office.

EPA's 2012 mercury rule is a Section 112 rule covering coal plants, and Pruitt has previously argued that should be enough to overturn the climate rule.

In a 2014 report, Pruitt wrote, "EPA has no authority at all to require States to adopt CO2 performance standards for existing [power plant] CO2 emissions," citing the 112 exclusion argument.

But in oral arguments last year over the Clean Power Plan, several judges on the D.C. Circuit indicated they were skeptical of this argument, particularly since the exclusion would apply only when a 111 rule follows a 112 rule, but not vice versa.

Judge Brett M. Kavanaugh, a George W. Bush appointee, said at the hearing that he agreed with the challengers that the House version should supersede the Senate language — but that even then, he was "not sure the House amendment actually blocks this."

If courts ultimately invalidate the 112 exclusion argument — or if Pruitt decides not to pursue it — the Trump administration could choose to regulate on a much narrower path. That 2014 report from Pruitt outlined a proposal for a limited "inside the fence line" approach for power plants under section 111(d) if the agency were determined to implement such a climate rule.

Meanwhile, an array of more far-fetched possibilities have been the subject of think tank speculation for years.

However, conservatives pushing EPA to overturn the endangerment finding likely wouldn't be appeased even if EPA is successful here.

Myron Ebell, director of the Center for Energy and Environment at the Competitive Enterprise Institute and the Trump administration's EPA transition team leader, noted that the finding also provides a legal justification for a host of other EPA regulations, including vehicle emissions standards, methane regulations and permitting rules.

Ebell is a longtime critic of climate change science, and CEI is one of several groups currently petitioning the Trump administration to revisit the endangerment finding. He said CEI has no current plans to sue EPA to force it to respond to that petition, saying the group is waiting to see how the Clean Power Plan repeal works out. However, another petitioner, the Texas Public Policy Foundation, said it may sue EPA if the agency does not meet its late October deadline for a response.

"The more they look at it, the more they're going to realize they need to re-open and revise the endangerment finding," Ebell said.

Environmentalists are already gearing up to fight back against the planned repeal of the Clean Power Plan, including the 112 exclusion argument, and Pruitt's broader claim that the Clean Air Act does not give EPA the proper tools to fight climate change.

Adopting that legal justification "makes hash out of the Clean Air Act," said David Doniger, director of the Climate and Clean Air Program at the Natural Resources Defense Council.

"There's no way that in constructing these interlocking provisions ... there's no way that they intended to leave the gap or create a gap that Pruitt and his colleagues asserted," Doniger said.

The Supreme Court never said EPA had the best possible tool to combat climate change, he argued, but the agency must use what tools Congress has given it.

It's like wishing "you had a Phillips screwdriver but all you have is a flat one," Doniger said. "You still have to work on the screw."

Six takeaways from the D.C. Circuit over EPA's Clean Power Plan Back

By Alex Guillén | 09/27/2016 08:30 PM EDT

After nearly seven hours of legal arguments over EPA's Clean Power Plan, the Obama administration emerged with encouraging signs from the judges on some of the key issues — except the contentious debate over whether EPA can go beyond coal-fired power plants' fence lines to set emissions targets.

Predicting how the court will ultimately rule can be tea-leaf reading, and the comments made by judges in court may not indicate where they will each fall on the case. Still, several of the members of the 10-judge panel that heard the case offered hints about how they were leaning on specific issues. Here are POLITICO's list of 6 takeaways from Tuesday's arguments before the D.C. Circuit Court of Appeals.

1. The court appears on the fence about the fence line.

Several judges — primarily those appointed by Republican presidents — peppered the Obama administration with pointed questions about how EPA structured the rule, and in particular the agency's decision to use generation shifting to go "beyond the fence line."

Judge Brett M. Kavanaugh, named to the bench by George W. Bush, cited the 2014 Supreme Court ruling authored by late Justice Antonin Scalia, who, in striking down part of a different EPA rule, chided the agency by writing that the court would "expect Congress to speak clearly if it wishes to assign to an agency decisions of vast 'economic and political significance.'"

That ruling came around the time that EPA released its Clean Power Plan proposal, and the challengers have long considered it a shot across EPA's bow.

Scalia's ruling "might have been written with this case in mind," Kavanaugh said. The CPP is "fundamentally transforming an industry," even though Congress did not specifically call on EPA to reduce greenhouse gas emissions.

Justice Department attorney Eric Hostetler defended the CPP, saying that previous EPA rules have also relied on generation shifting. And Judge David Tatel, a Clinton appointee, said he didn't see Scalia's contention applying to CPP because EPA had used its existing authority — and it had received direction from the Supreme Court on greenhouse gases.

Still, some of the GOP-appointed judges also questioned the plaintiffs assertion, with Judge Thomas Griffith, another Bush appointee, hinting that EPA's "beyond the fence line" approach struck him as plausible.

How was rule was inconsistent with the Clean Air Act's requirement that EPA set a "best system of emission reduction?" he asked, adding that the electric power industry had been shifting away from coal and toward natural gas and renewables.

"They're just accelerating that," he said.

West Virginia Solicitor General Elbert Lin replied that EPA has always previously required technology installed on-site at power plants, not investments in new generating plants.

Other judges seemed to question EPA's use of generation shifting as well.

Judge Patricia Millett, an Obama appointee, at one point noted that such a practice would essentially require coal plant owners to subsidize their competitors.

But DOJ's Hostetler disputed that, saying sources can meet their obligations without doing that, such as by switching to gas co-firing. He also argued that the rule is about "investing" in renewable sources, not "subsidizing" them.

Even if all four of the Republican-appointed judges on the D.C. Circuit side with the challengers on this issue, they would still need two of the judges appointed by Democrats to overrule EPA.

2. Congress' rejection of cap and trade still looms large.

The Senate's failure to pass a cap-and-trade bill back in 2010 was a key event for the CPP challengers, who cited it as evidence that if Congress had wanted EPA to go this far to limit greenhouse gases, it would have passed that law.

That argument appealed to Kavanaugh, who said that although it was "laudable" to take action on climate change, that didn't give EPA the right to violate the separation of powers.

"Congress is supposed to make decisions," he said, and Congress could have helped out groups hurt by the rule, like the coal industry, if it had passed a cap-and-trade package. That is something EPA's Clean Power Plan cannot do.

"Why isn't this debate going on on the floor of the Senate right now," rather than in front of a panel of unelected judges, asked Griffith.

3. The 112 Exclusion argument is on thin ice.

The challengers had hoped to kill the CPP outright by arguing Section 111(d) of the Clean Air Act, under which the CPP was written, bars regulating power plants for carbon dioxide because EPA already regulated them for mercury emissions under Section 112.

It's an arcane argument reliant on an unusual 26-year-old legislative glitch and obscure legislative procedures.

But many of the judges from across the spectrum indicated they saw that argument as spurious, particularly since under the challengers' interpretation, EPA would have been on solid legal ground if it had regulated carbon dioxide first and mercury afterwards, but not the other way around.

"There was no debate by Congress to suggest they intended to create this giant loophole," said Judge Judith Rogers, a Clinton appointee.

"If Congress wanted to avoid double regulation, why is it just dependent on timing?" asked Judge Nina Pillard, an Obama appointee.

The challengers' argument relied on conflicting Senate and House provisions that were inadvertently signed into law back in 1990. The Senate version clearly would allow the Clean Power Plan, while the House version's meaning is more disputed — and the challengers say the House provision should be the one that counts.

But even Kavanaugh, who signaled he agreed that the House version should win out, said that might not be enough to overturn the Clean Power Plan, as the challengers argue.

"I'm not sure the House amendment actually blocks this," he said, admitting the issue and the law's language are "convoluted."

4. The constitutional challenges may not hold water.

Many of the judges appeared unconvinced on the constitutional challenges to the Clean Power Plan.

Griffith asked for details on exactly which state officials were being "commandeered" by EPA, referring to plaintiffs' arguments that the Obama administration had sought to force state lawmakers and regulators to take action on climate change under the regulation. And Griffith seemed skeptical that requiring the states to alter their resource planning or take action to assure grid reliability were any different that what they would have to do under myriad other environmental rules.

Judge David S. Tatel, a Clinton appointee, argued that the Clean Power Plan wasn't constitutionally different from the Americans with Disabilities Act.

"Compliance can only occur if states use their police power to issue permits" for disability accommodations, said Tatel, who is blind.

The ADA was meant to lead to changes in the private sector, replied attorney David B. Rivkin, Jr., representing state challengers. The Clean Power Plan "is far more profound," he added. "The goal is to change our energy infrastructure."

Even the star power brought by Laurence Tribe, the Harvard professor and liberal icon now advocating against the rule for coal producer Peabody Energy, didn't seem to sway the bench.

Millett said she was having trouble reconciling his arguments that the CPP is unconstitutional with the Supreme Court's previous rulings concluding that EPA is the proper entity to address greenhouse gas emissions.

Kavanaugh later added that while the CPP may go beyond what one DOJ lawyer called "bread-and-butter cooperative federalism," it is "not necessarily unconstitutionally more."

5. The judges seem ready to kick the can on other parts of the challenge.

The final two issues of the day saw the court wondering whether it can just leave those for later.

During a segment challenging whether the final rule was too different from the proposed rule, several judges pointed to court precedent that requires challengers to first petition EPA on any issues they feel they did not get a chance to comment on during the rulemaking process. If EPA rejects such petitions, the judges added, that is the appropriate time for the courts to get involved.

Thomas Lorenzen, a Bush-era DOJ environmental attorney now at Crowell & Moring who represented the challengers, said that at least four petitions on these notice issues were filed as far back as a year ago, but EPA has not yet responded. DOJ attorney Norman Rave replied that EPA received 38 petitions in total and is working its way through them.

The court seemed similarly interesting in punting on any broad decisions about whether the rule was feasible or how EPA calculated states' separate targets.

"It is simply too early in the game to address these state-specific objections," said Rogers.

Kavanaugh pointed to the Supreme Court's decision in 2014 upholding EPA's Cross-State Air Pollution Rule but allowing "as-applied" challenges to various states pollution budgets — challenges that partly succeeded.

He and Millett also sought assurances from EPA that if a state's target ultimately proves too difficult to achieve, the state would have legal avenues to lower its target. A DOJ lawyer replied that state planning processes or a petition to change a state's target based on new information would provide such options.

6. Judges have a low opinion of Congress, too.

The public overwhelming gives Congress a failing grade, and the D.C. Circuit isn't much better.

"Everyone understands frustrations with Congress," Kavanaugh admitted to laughter from the crowd at one point.

Maybe Congress' way of handling climate change, or lack of action "is proof it shouldn't be doing anything," Tatel later joked.

Alaska's long road war Back

By Andrew Restuccia | 04/04/2014 05:00 PM EDT

In the fall of 1998, Frank Murkowski took to the Senate floor to make an impassioned plea for the authority to build a one-lane gravel road from the isolated southwestern Alaska village of King Cove to a neighboring community with an all-weather airport.

"This is a road to life for the residents of King Cove," he said.

More than 15 years later, his daughter, Republican Sen. Lisa Murkowski — along with the rest of the Alaska congressional delegation — is still fighting for the road, insisting it's the only viable way to ensure that King Cove's 965 largely native Alaskan residents have access to emergency medical care.

(Also on POLITICO: Full transportation and infrastructure policy coverage)

What seems like a simple request is anything but. The proposed road would cut through federally protected wilderness land in the Izembek National Wildlife Refuge, a 315,000-acre sanctuary near the tip of the Alaska Peninsula. And the Interior Department says the road would threaten vulnerable plants and animals that rely on the area's unique ecology.

The oftentimes ugly fight has pitted Alaska politicians against the federal government for decades, sowing mistrust and frustration. It has also reinforced the view of many in Alaska that policymakers in the Lower 48 are out of touch with their needs.

At the same time, the battle has laid bare tensions between Alaskan leaders and conservation groups, which argue that approving the road could set a dangerous national precedent in other protected wilderness areas.

Lisa Murkowski and Alaska Democratic Sen. Mark Begich, who faces a tight reelection fight, are vowing to do everything in their power to win approval for the road, even though the Interior Department rejected the proposal late last year after a four-year analysis.

(PHOTOS: 10 tough Senate races for Democrats)

Murkowski is using her position as the top Republican on the Senate Energy and Natural Resources Committee to elevate the issue, expressing her outrage at hearings and in floor speeches and holding a series of news conferences with King Cove residents. She has also lambasted Interior Secretary Sally Jewell, who announced the most recent rejection of the road just two days before Christmas.

"I am not willing to let a day go by without raising this as an issue," Murkowski said in an interview.

The road would give King Cove residents access to the larger airport in the nearby community of Cold Bay when extreme weather grounds flights at the smaller King Cove airport. King Cove has a medical clinic, but residents often have to travel to Anchorage for major procedures and emergencies.

The road, proponents argue, is the best solution to the transportation problems that have long plagued isolated King Cove.

Besides its small airport, the town has access by boat across the Izembek Lagoon, but foul weather can make air and boat travel difficult, residents say. Supporters of the road say at least 19 deaths over the years have resulted from plane crashes or an inability to obtain adequate medical care.

(Sign up for POLITICO's Morning Transportation tip sheet)

Della Trumble, a King Cove resident and longtime advocate for the road, said its approval is a matter of life and death.

"I just feel strongly that the human factor far outweighs the wildlife," she said. "We will protect the wildlife. It's who we are."

Trumble and other residents have made dozens of trips to Washington to make their case, telling stories of family and friends who have been hurt or killed trying to get out of the community during storms. Trumble said she watched as her niece was flown out for a medical emergency amid winds of 70 to 80 mph. She said another niece was born on the galley table of a crab boat during an evacuation attempt.

Just this week, an injured fisherman was flown out of King Cove by the Coast Guard, marking the fifth medical evacuation of the year, according to King Cove officials.

But opponents say the road would wreak havoc on the refuge and its wildlife. The refuge hosts more than 200 species, including caribou, grizzly bear and, in the fall, about 98 percent of the world's Pacific black brant. It also has one of the largest eelgrass beds on the planet and was one of the first areas in the U.S. to be designated as a wetland of international importance.

"You can't punch a road through there without doing serious damage," said Don Barry, who served as Interior's assistant secretary for fish, wildlife and parks during the Clinton administration.

In addition, the proposed road faces major legal hurdles. In 1980, Congress designated most of the refuge as wilderness, the highest level of public land protection.

Barry, now a senior official at the conservation group Defenders of Wildlife, said it would be unprecedented to allow a road through a wilderness area. Though the refuge has some old military roads, they were built before the conservation laws were enacted.

Several opponents raised concerns that approving the road would lead to a push for development in other protected areas.

"Once you carve a road of this kind right through the middle of a national wildlife refuge, where

does it stop?" former Clinton administration Interior Secretary Bruce Babbitt asked.

Babbitt and other opponents have also suggested that the road could be used for commercial purposes, noting that Peter Pan Seafoods has a cannery in King Cove. "But despite pledges and promises to the contrary, the real purpose for building the road is the same as it ever was: moving fish and workers to and from King Cove's canneries," Babbitt wrote in the Los Angeles Times last month.

Peter Pan has rejected those accusations, and Murkowski notes that her legislation calling for approval of the road specifically bars using it for commercial purposes.

The fight over the road burst into public view in the late 1990s, when then-Sen. Frank Murkowski pushed legislation that would allow for approval of the road as part of a land exchange. The bill passed the Senate in 1998 but never passed the House. President Bill Clinton threatened a veto amid concerns about the road's effect on wildlife.

Soon after, then-Sen. Ted Stevens launched into a tense series of negotiations with the Interior Department. The resulting compromise was a $37.5 million appropriation approved by Congress to improve the King Cove medical clinic and airport and make accommodations for a hovercraft to transport residents to Cold Bay. The hovercraft was used until 2011, but it is being sold because, operators said, it was too expensive to operate.

"Finally it was settled — and now it turns out it isn't," said Babbitt, who worked with Stevens to negotiate the deal and strongly opposed the road.

Within several years, the issue was back on the table. Lisa Murkowski included a provision in a 2009 bill calling on the Interior Department to analyze the road and proposing another land exchange. In exchange for setting aside land in the refuge for the road, the federal government would receive more than 43,000 acres of Alaska state land and more than 13,000 acres of land owned by the King Cove Native Corp.

The provision set off a four-year analysis by Interior that culminated in December with the department's rejection of the road.

"While the proposed land exchange would bring many more acres of land into the Refuge System, the analysis indicates that the increased acreage could not compensate for the unique values of existing refuge lands, nor the anticipated effects that the proposed road would have on wildlife, habitat, subsistence resources and wilderness values of the Refuge," the department said in a statement at the time.

The decision infuriated the Alaska delegation and has strained Murkowski's relationship with Jewell.

After hearing about the decision, Murkowski said she told Jewell, "I cannot forgive the fact that you have delivered this, that you have dashed all hope for the people of King Cove, and the fact that you did this the week of Christmas is absolutely callous and cold-hearted."

Other Alaska lawmakers have similarly taken Jewell to task. "If someone dies out of King Cove, I want you to really think about it and be ashamed of yourself," Rep. Don Young told Jewell at a hearing Thursday.

The road's opponents say viable alternatives exist — a notion that Murkowski and others reject. Opponents also argue that the road, which would snake through isolated land often battered by extreme weather, would pose its own dangers.

At a recent Senate hearing, Jewell said she is committed to working with King Cove residents to find alternatives. During a recent meeting with Begich, she said she will again listen to the community's concerns.

"Jewell committed to reviewing the information that the community plans to provide on the issue and to provide a response to the senators, State of Alaska and the community on their request to reconsider the final decision," Interior spokeswoman Jessica Kershaw said in an email.

Alaska lawmakers face major hurdles toward changing Interior's mind but say they're not giving up.

Begich said in a recent interview that he hopes to attach his bill approving the road to upcoming Interior appropriations legislation. Murkowski vowed to continue hammering away as well.

"This secretary has made a decision, and I think she thought the people of King Cove were tucked far enough away that nobody would be making a big deal about this," Murkowski said. "But I'm not forgetting them, and it's not just an idle threat."

CORRECTION: A previous version of this story offered an incorrect name for the city where King Cove residents sometimes have to travel for major medical procedures.

Help wanted at DOE: Toil in the shadows — at least until a crisis Back

By Darius Dixon | 11/22/2016 05:03 AM EDT

Of the thousands of jobs President-elect Donald Trump will have to fill over the next few months, few are as misleadingly named as Secretary of Energy.

The Energy Department is not going to be the venue for Trump to follow through on his campaign promises to unleash an oil, gas and coal boom by dialing back Obama-era environmental programs, and most Americans are oblivious to what it does. Only about a third of DOE's budget supports energy research and development, the creation of efficiency standards

and the clean energy loan guarantee program that became a flashpoint in President Barack Obama's first term. But the bulk of any Energy secretary's attention gets yanked to the lower-profile but higher-stakes work of maintaining the U.S. nuclear stockpile and the cleanup of old Cold War weapons sites — which accounts for the remaining two-thirds of its budget.

It's a post fraught with endless frustrations, leading an agency that toils away in obscurity between episodes of crisis. Befitting DOE's broad profile, past secretaries have come to the job with a range of previous experience, including academics like Steven Chu, former elected officials like Bill Richardson or Spencer Abraham, and national security experts like Navy Admiral James Watkins or James Schlesinger, who had been Defense secretary before becoming the nation's first Energy secretary in 1977.

"I think and I pray that whoever influences the president on the selection ... looks for somebody who knows how to manage a sprawling enterprise — and has some bona fides in one or two of the areas that will cause you the most consternation," said Hazel O'Leary, President Bill Clinton's first Energy secretary.

Trump has not said much about the type of person he would like to lead DOE, and the transition team covering the agency just got turned over in the past few days. Last week, lobbyists Mike McKenna and Mike Catanzaro left the transition team established by Chris Christie after Vice President-elect Mike Pence took over the operation and forced registered lobbyists to either give up their clients or resign. But on Monday, Trump's team announced that Tom Pyle, president of the libertarian-leaning American Energy Alliance, was the new point man on DOE's transition.

A DOE spokesperson said Monday afternoon no one at the agency has spoken to anyone affiliated with the Trump transition.

Trump on Monday named members for landing teams to several executive branch agencies, including heavy hitters like the State and Treasury departments as well as smaller outposts like the Small Business Administration. Additional announcements are expected this week.

On the campaign trail, Trump said several eyebrow-raising things about nuclear weapons and nonproliferation in general, including suggesting that Japan could defend itself with nukes and questioned NATO, an underpinning of U.S. nonproliferation policy. Energy Secretary Ernest Moniz was meeting with the directors of DOE's weapons-focused national labs two days after the election and stressed the importance of letting Trump's team know about their work, recalled Jill Hruby, the director of Sandia National Laboratories.

"One of the comments he made is that we have to collectively make sure that this transition team understands that the Department of Energy has a national security mission," Hruby said of Moniz.

Other lab directors are churning over how to address the common misconception about DOE.

"I worry about the possibility of people coming into the department who don't appreciate just how much national security work the department is responsible for," Lawrence Livermore

National Lab director William Goldstein said. "It's not unusual for people to not have a good understanding" of DOE's role in emergency response and weapons of mass destruction. "People may think of the department as an energy place — it certainly is — [but] the amount of responsibility and work is something we have to make sure is well understood in this transition."

Part of the challenge is that DOE is all over the map, literally and figuratively. The agency's nearly $30 billion budget and more than 100,000 employees and contractors include 17 national labs, several field offices and other operations that give it a presence in more than a dozen states. Its mission is domestic and international, science and politics, and an advanced course in organization.

DOE sent nuclear experts to Japan after the Fukushima nuclear disaster in 2011, weapons specialists traveled to Switzerland with the U.S. delegation last year to help analyze aspects of the Iran nuclear deal. The agency also deployed a radiological team to Rio de Janeiro during the 2016 Olympics in case of a terrorist attack like a dirty bomb.

Researchers at DOE's Oak Ridge national lab, which is a science facility that also works on nuclear cleanup issues, spend about 20 percent of their time on work for other federal agencies, particularly for the Pentagon, Department of Homeland Security and the intelligence community, said Thom Mason, the lab's director since 2007. He said several DOE labs have similar breakdowns.

"One of the challenges of transition is it's a short period of time to go up a very steep learning curve," he said.

Past energy secretaries have learned that crises can erupt without warning — and may be present virtually from Day One. For Abraham, President George W. Bush's first Energy secretary, it was the Enron crisis roiling electricity markets across the West.

"I get sworn in during the Inaugural parade and then informed that there was a rolling blackout in California happening the moment of my arrival," Abraham said in an interview. Two days later, he was in the White House trying to figure out whether to extend an emergency order signed by his predecessor compelling power sales in California.

On her first week on the job, O'Leary had to decide what to do about two leaking tanks of radioactive nuclear waste at DOE's Hanford site in Washington state, where problems persist to this day. Just last month, the site made headlines when a work crew was accidentally exposed to radiation.

"Boy, did I come up to speed on waste management and I didn't get out of it for six months," O'Leary recalled in a recent interview.

For all the high praise Moniz enjoyed from both Republicans and Democrats, even he has been dogged by troubled multibillion dollar projects few Americans are even aware exist: a waste treatment project in Washington state, accidents at a radioactive waste storage site in New Mexico and the uncertain future of two nuclear processing facilities in South Carolina.

In July 2012, peace activists — including an octogenarian Catholic nun — broke into the Y-12 National Security Complex, an ostensibly high-security uranium processing facility. There were concerns at DOE headquarters that Chu, Obama's first Energy secretary, may have to consider resigning over the incident. Instead, aside from the occasional tongue-lashing on the Capitol Hill, GOP lawmakers proved to be more concerned with the agency's imbroglio involving a $535 million federal loan guarantee to the ill-fated solar manufacturer Solyndra.

Despite the decades of headaches and the trail of embarrassments sprinkled throughout the agency, presidents tend not to lose much sleep over the job. Energy secretary was one of the last Cabinet posts Bush filled on his way into office, in part, Abraham said, because the new president considered appointing a Democrat to the job.

"There's always going to be a focus on [the departments of] Defense, State, Justice and Treasury because they're the oldest agencies and they're the ones that are responsible for all of the top issues of the day," Abraham said.

Sometimes the confusion over DOE's mission becomes a waste of everyone's time.

Halfway through his tenure, Chu, a Nobel Prize-winning physicist and aggressive thinker on climate issues found himself on CNN being interviewed about high gasoline prices frustrating commuters — an issue far-afield for his job description. Moniz has been pelted with misfired questions about oil and gas permitting on Capitol Hill.

Former Alaska governor and Republican vice presidential nominee Sarah Palin also made a brief pitch for heading DOE in a Donald Trump administration by talking about oil, gas and minerals — apparently mistaking DOE's job description with that of the Interior Department.

Despite the lack of public clues, Trump is said to be considering a variety of possibilities to lead DOE.

Continental Resources CEO Harold Hamm, who had been advising Trump's energy policy on the campaign and some view him as a top contender, likely has the management skills to grapple with a large bureaucracy. But his understanding of DOE's nuclear mission is an open question.

Former Texas Gov. Rick Perry famously proposed eliminating the Energy Department when he was a presidential candidate in 2012, but he met with Trump Monday, reportedly to discuss a possible appointment as Energy secretary.

Rep. Kevin Cramer (R-N.D.), a former state utility regulator and a Trump energy adviser, seemed interested in the post but many of the energy policy levers that states are accustomed to only have parallels with FERC, an independent subdivision of DOE.

Meanwhile, James Connaughton, a former utility executive who was Bush's head of CEQ, and the Chamber of Commerce's Karen Harbert, a former DOE assistant secretary, have as good a snapshot of the agency's mission statement as anyone being widely discussed. Venture capitalist

Robert Grady, another rumored candidate, was an adviser on energy and environment issues in the George H. W. Bush White House.

It may be several more weeks until Trump taps someone to run DOE.

"It's a tough place," a former Energy Department official said. "Anyone who really says they want to go there I wonder if they really know what they're getting into."

Inside Moniz's mission to reshape the Energy Department Back

By Darius Dixon | 03/25/2016 05:00 AM EDT

The clock is ticking down on Ernest Moniz's three-year campaign to reshape the Energy Department's mammoth bureaucracy.

Even as he helped negotiate last year's Iranian nuclear deal and pressed the global effort to fight climate change, the energy secretary has sought to streamline the agency and improve how it oversees the national labs and approves new projects.

Unlike his predecessor, Steven Chu, who ran a department flush with $35 billion in stimulus funding, Moniz has faced the budget sequester, a divided Congress and an agency bruised by bad press after the Solyndra solar imbroglio. And he's had to cope with that all while grappling with the still-unsolved problem of where to store much of the nation's nuclear waste.

"Some of these things are bigger and longer term than anybody who's in for a political term has the time and/or energy to deal with," said Dan Arvizu, who stepped down as director of the National Renewable Energy Laboratory last fall. "So, you pick your battles, pick what you're gonna do — your two or three things — and then recognize that your clock's going to run out before you know it."

Certainly Moniz, a high-ranking DOE official in the Clinton administration, entered the job knowing the challenges he faced. John MacWilliams, now a top official at the agency, recalled meeting with then-nominee Moniz at his Massachusetts Institute of Technology office in April 2013, while Cambridge was still under "shelter in place" restrictions after the Boston Marathon bombing.

"I walked in and every whiteboard in the office was filled with a detailed depiction of what became the reorganization of the department," MacWilliams said. By July of that year, Moniz unveiled his reorganization plan to the agency staff.

Many current and former DOE officials said Moniz's biggest agenda item was a relatively

unheralded one: creating the role of undersecretary for management and performance. That job focused on what Moniz and his advisers saw as their most difficult task: project management.

DOE projects tend to come in one size: massive, not only in their dimensions but in delays and cost overruns. Project management problems have kept the department on the Government Accountability Office's infamous High Risk List for a quarter-century, soured its relationship with Congress and frustrated the network of research labs that report to it.

The Management and Performance office went over well with the White House, a former DOE official said. It also appealed to lawmakers on Capitol Hill, who hoped it might address the agency's terrible record on nuclear waste cleanup.

Many of the frustrations over waste stem from the political stalemate over the Yucca Mountain project, as well as criticisms that DOE's weapons cleanup mission has progressed at an painfully slow pace, allowing costs to spiral higher.

"Everyone thinks Moniz is so great, but he will be leaving the biggest mess I have ever seen for his successor," one former senior DOE official said in an email. "By the time the real liability for nuclear waste is revealed, the cost estimate for refurbishing H Canyon [a nuclear chemical separations plant] is revealed, and every other mess he has left behind, Moniz will likely be the president of some prestigious university somewhere."

The official added: "I wonder if after a while all we'll be doing is paying fines and not doing any research, cleanup or management of fuels and [high-level waste]."

One conservative critic of the agency says waste cleanup, called environmental management, is DOE's single most important task.

"And the spectacularity with which it fails at it should give pause to anyone supporting any DOE activity beyond that, as far as I'm concerned," said Jack Spencer, an executive with the Heritage Foundation's Institute for Economic Freedom and Opportunity. "DOE should be focusing on that mission and not worrying about reducing the cost of solar panels, nuclear reactors or anything else that the market is perfectly capable of taking care of."

Much of the agency's work to overhaul its project management falls to MacWilliams, now an associate deputy secretary focused on tackling some of DOE's thorniest quagmires. He is also the agency's first chief risk officer.

A former investment banker who worked at Goldman Sachs and JP Morgan Partners, MacWilliams created a risk committee stacked with some of the agency's most senior project managers — people, he said, who know the "ground truth."

But some of those decisions have generated political heat, such as the effort to defund the MOX project in South Carolina.

Moniz's confirmation was held up for several weeks while Sen. Lindsey Graham (R-S.C.) sought

assurances about the administration's commitment to the project, which would process weapons-grade plutonium into nuclear fuel. But after Moniz came to power — and the release of several studies — he had to explain that the MOX project, which was billions of dollars over budget and decades behind schedule, was a mistake. The state has since sued DOE for not collecting nuclear material from the unfinished facility on time and this week Republican Gov. Nikki Haley pressed Moniz to halt a shipment of weapons-grade plutonium from entering South Carolina.

Moniz and MacWilliams have pushed for a cheaper alternative to move the plutonium out of the state about two decades ahead of schedule. But that would likely mean laying off of hundreds of contractors, and the state opposes it.

To MacWilliams, MOX is emblematic of a flawed DOE review process. It was a first-of-its-kind project that was approved with only 25 percent of its design completed, so it wasn't a surprise when it soon fell behind its deadlines. DOE's new Risk Committee now requires designs to be 90 percent completed for large nuclear projects, and forces managers to address the panel at each critical decision point, so MacWilliams said these problems are unlikely to recur. "We'll make mistakes but not these kinds of mistakes," he said.

The goal, Moniz says, is "staying ahead of the projects before they turn into big problems" — addressing "little alligators" before they turn into "big alligators," as he is fond of telling his staff.

While it's critical to make structural changes to how projects are reviewed, Moniz told POLITICO, federal spending is another issue.

"We have the funding to make serious progress," he said in an interview in his office. "We don't have all the funding we could use effectively to fast-track projects and ultimately save life-cycle costs substantially."

However, the Senate hasn't confirmed either of the people Obama nominated for the Management and Performance undersecretary post.

Another priority for Moniz has been to improve relations with the 17 national labs — some of which felt they had been pitted against each other under Chu — and improve their collaboration.

"Before we leave here, it is our intent to do a major integrative report on the laboratories," Moniz said. "That will be part of providing something that we can hand over to the next administration."

The labs have operations in 14 states, so their directors can be some of Moniz's best salespeople with the Senate if the department can gain the labs' trust and generate results.

"You have really smart people and for a while they felt like they weren't in the circle of trust," said Jonathan Levy, who helped manage the transition between the two secretaries and eventually became a deputy chief of staff to Moniz.

The labs have long felt put upon by both Congress and DOE headquarters — "One of us gets cancer, and all of us get chemotherapy," was how one former director of Sandia National Lab was known to describe the backlash from Washington. And although Chu had led a national lab himself, he didn't embrace the agency bureaucracy the way Moniz has, said Arvizu, who says he's briefed eight energy secretaries during his roughly 40 years in the lab system.

"Steven Chu's a brilliant scientist. Certainly though, one of his favorite things is not to manage a bureaucracy," Arvizu said. Where Moniz uses collaboration, Chu unintentionally fostered a competition that was "absolutely destructive" for the labs.

Moniz also instituted a tonal change that was "huge" among lab employees by insisting that no one at DOE headquarters call them "contractors," preferring instead "strategic partners," Arivizu said.

Arvizu said the lab directors see their relationship with headquarters as better than ever, but they fear that ties with Washington will erode under the next secretary. So the lab directors are looking to make permanent the councils and meetings that have been set up under Moniz.

"Institutionalize," he said, has "been the watchword for the last year or so."

Moniz is similarly boastful of how relations have improved with the labs.

"If you look out there you will see that the laboratories are doing a lot more work together now, collaboratively trying to be more than the sum of the parts," he said.

Moniz has also tried to bring together the Energy Department's agency's "applied" and basic science offices, and he executed a long-expected merger between the science and energy undersecretaries.

That built on Chu's efforts, said Brandon Hurlbut, Chu's former chief of staff, who is now consults on energy-sector investing. But Chu also had to focus on carrying out a new president's priorities and rolling out billions of stimulus dollars.

Also, changing the relationship between the applied and basic research runs counter to traditional roles inside the agency bureaucracy, said David Garman, who served as an energy undersecretary under George W. Bush, in an email.

"[T]he renewable energy interests, the nuclear interests, and the fossil interests each like having their own assistant secretary as their inside-the-administration cheerleader," Garman said. "They would all probably oppose a rational reorganization, and they would incite their allies in Congress to fight it as well."

Garman argues that DOE offices should be organized by energy use, like transportation or buildings, rather than by energy source, such as nuclear, and he helped write a proposal for DOE reform in 2013.

Though he praised many of Moniz's changes, Garman argued that both Obama's energy secretaries took a path of least resistance.

"Neither Secretary Chu nor Secretary Moniz wanted to take that fight on, so instead they implemented ARPA-E, the Innovation Hubs, the Energy Frontier Research Centers, and the Lab Councils while launching crosscutting initiatives on issues such as grid modernization," he wrote. "These are essentially workarounds that overlay the organizational stovepipes. Is it wasteful and duplicative? Yes. But it avoids upsetting the stakeholders and is thus politically convenient."

House panel approves bipartisan update to Safe Drinking Water Act Back

By Annie Snider | 07/13/2017 11:49 AM EDT

A House measure to update the Safe Drinking Water Act is gaining bipartisan momentum after lawmakers approved a slate of amendments during subcommittee markup this morning.

Among the changes made to the Drinking Water System Improvement Act by the House Energy and Commerce Committee's environment subpanel is a boost to the popular Drinking Water State Revolving Fund's authorization, allowing $8 billion in spending over five years. Also approved were amendments supported by Democrats to require states to spend a minimum share of federal dollars on disadvantaged communities, encourage removal of lead service lines and require projects supported with federal funds to use American-made iron and steel.

Rep. Paul Tonko (D-N.Y.), the top Democrat on the subcommittee, said the measure that will now go to the full committee was a compromise after his party pushed for major increases in federal funding and changes to the process EPA must follow in order to set new drinking water standards.

"This bill reflects compromise. It is not the bill Democrats would have written on our own," Tonko said. "We have met halfway to get this bill on the path to being able to be supported by every or nearly every member of this committee."

WHAT'S NEXT: The measure heads to the full House Energy and Commerce Committee for consideration.

Senate panel cancels Thursday votes on DOE, Interior nominees Back

By Esther Whieldon | 07/26/2017 03:10 PM EDT

The Senate Energy and Natural Resources Committee today canceled its scheduled Thursday morning vote on a half dozen Energy and Interior Department nominees.

The panel had been slated to vote on Mark Wesley Menezes to be DOE undersecretary, David Jonas for DOE's general counsel, Paul Dabbar to be DOE undersecretary for science, Brenda Burman to lead Interior's Bureau of Reclamation, Susan Combs to be Interior's assistant secretary of policy management and budget, and Douglas Domenech to be Interior's assistant secretary of insular affairs.

WHAT'S NEXT: The committee did not state the reason for holding off on a vote but on its website said the business meeting is "postponed until a date and time to be determined."

Commerce extends marine monuments review comment deadline Back

By Esther Whieldon | 07/26/2017 06:00 PM EDT

The Commerce Department is giving the public through Aug. 14 to comment on its review of 11 marine national monuments and sanctuaries.

NOAA this afternoon announced it would extend the comment window due to "public interest and requests for additional time."

Per an executive order President Donald Trump signed in April, the Commerce Department, in consultation with the secretaries of Defense, Interior and Homeland Security, has until Oct. 25 to send the White House its analysis of the monuments and sanctuaries. The report will include the costs of managing the monuments and sanctuaries, the extent to which state, tribes and other agencies were consulted before those designations were made and the potential for offshore fossil fuel production on the Outer Continental Shelf in those areas.

Because the original comment deadline ends today, the agency is technically going to re-open the comment period for another 15 days starting July 31 but said it will accept any comments submitted in the meantime.

WHAT'S NEXT: The agency will continue to accept comments through Aug. 14.

TRUMP'S EPA: Agency at a crossroads -- Complete coverage

May 24, 2017

Latest News

States Eye Reduced Environmental Programs To Absorb FY18 Budget Cuts

State officials are signaling openness to cutting or significantly scaling back their environmental programs in order to absorb EPA's proposed massive fiscal year 2018 cut to grants that help states implement federal environmental laws and rules, with some states even weighing returning delegated EPA programs back to the agency.

Critics Say EPA's FY18 Cuts Undermine Trump Efforts To Boost Economy

The Trump administration's proposed budget for EPA is sparking push back from environmentalists and state officials who say the steep proposed cuts would actually impose significant costs on industries, communities and the broader economy, in contrast to administration promises that scaling back EPA rules would boost prosperity.

Amid Sea Of Cuts, FY18 Budget Seeks To Boost Funds For Reshaping EPA

Even as the White House is proposing to slash much of EPA's budget in fiscal year 2018, it is seeking an almost $70 million increase compared to FY17 to encourage early retirements and cut the agency's workforce, as well as a smaller increase to implement its deregulatory efforts, which some observers have said could be threatened by the proposed cuts.

Budget Plan Severely Limits EPA Climate Work With No Sign Of Expansion

The Trump White House's fiscal year 2018 budget proposal calls for steep cuts to EPA's climate change policy and research, limiting the agency's climate work to greenhouse gas reporting and some existing GHG regulations while signaling that the agency does not intend to strengthen the climate programs it does maintain.

Seeing Appeal, Judge Rejects DOJ Bid To Stay Suit On Trump's 2-for-1 Order

U.S. District Judge Randolph Moss has denied the Justice Department's (DOJ) motion to stay litigation filed by environmentalists and other groups challenging the legality of President Donald Trump's executive order (EO) which requires EPA and

other agencies to identify two rules to repeal for every one new rule issued.

BOSC Chair Says Dismissals Show EPA 'Marginalization' Of Science Input

The chairman of EPA's Board of Scientific Counselors (BOSC) told a House Science Committee panel that the agency's decision not to reappoint nine of the board's 18 members is part of a broader pattern of "marginalization of science" by the Trump administration that goes beyond EPA, while conceding that the move was lawful.

White House Rejects Calls To Maintain Popular EPA Programs In FY18 Budget

The White House is doubling down on its plans to slash popular EPA programs in its just-released fiscal year 2018 budget proposal, offering justifications for the cuts that reject growing calls from lawmakers, industry and other groups who have been lobbying hard to preserve the funds.

Daily Feed

EPA defers to Ohio on Lake Erie impairment

EPA already approved some of Michigan's waters impaired but its failure to require similar listings for neighboring Ohio waters opens the door to litigation from environmentalists.

EPA delays landfill methane rules to reconsider select provisions

EPA will reconsider several provisions of the rules it says were added "without the benefit of public comment."

EPA, industry pursue settlement in waste generator rule case

EPA plans talks with industry groups to resolve their concerns about various provisions of the regulation, which generators have identified as a top deregulatory priority.

EPA further delays portions of Obama-era formaldehyde rule

EPA says the delay of various compliance deadlines in the formaldehyde air rule is necessary to give industry more time to meet the rule's requirements.

EWire: A daily news roundup

Some budget day news to start your morning. Plus: California is pushing ahead on climate policy, heightening tensions between Gov. Jerry Brown (D) and EPA Administrator Scott Pruitt.

Lawmakers seek to open EPA scientific integrity meeting

"We can think of no scientific or policy-based rationale for limiting invitations to a meeting on EPA Scientific Integrity to a relatively small number of individuals and organizations whose overall mix skews decidedly toward pro-regulation environmental activism," the lawmakers say.

Subject: Perry: DOE grid study to ferret out policies hostile to coal

By Eric Wolff

06/27/2017 11:47 AM EDT

Energy Secretary Rick Perry said the grid reliability study his agency is conducting will look for ways to reverse policies he claimed were motivated by a desire to harm the coal industry.

Perry didn't specifically mentioned the Obama administration in his speech today to the Energy Information Administration annual conference, but he made it clear that he would pursue a different course.

"Over the last few years, grid experts have expressed concern about the erosion of critical baseload resources, specifically how it is dispatched and compensated," he said. "These are politically driven policies driven by a hostility to coal."

The Obama administration looked for ways to promote low-carbon energy sources in the name of fighting climate change. President Donald Trump, Perry and other Cabinet secretaries have questioned climate science and vowed to reinvigorate the coal industry.

"No reasonable person can deny the thumb — no the hand — that's been put on the scale in favor of certain political outcomes," Perry said.

Perry did not mention economic factors such as competition from cheap natural gas among the problems facing coal and nuclear generators. DOE's reliability study will focus on the "regulatory burden placed on baseload generation," he said.

At the same time, he stressed that DOE would "ensure that renewable energy finds its way into the grid," but that reliability would not be "tossed aside in the name of some political favorite."

Two climate protesters interrupted Perry's EIA speech, both demanding that Perry acknowledge that he was "a climate denier."

WHAT'S NEXT: Perry's grid study is expected in July.

Subject: CORRECTED: Sources: Biofuel volume proposal could be released as soon as today

By Eric Wolff

06/15/2017 10:16 AM EDT
Updated 06/15/2017 10:57 AM EDT

EPA could release a proposed rule setting the biofuel volume mandates for 2018 as soon as this afternoon, industry sources tell POLITICO.

An ethanol and an oil industry source said the agency will keep the conventional ethanol volumes at 15 billion gallons, and increase the requirement for advanced biofuels to 4.38 billion gallons, up 100 million gallons from 2017.

The release of the proposal could slip to Friday, the sources said.

EPA did not immediately respond to a request for comment.

The mid-June release could make it difficult for EPA to issue the final rule by the deadline of Nov. 30, something Administrator Scott Pruitt has said he wants. EPA sent the proposal to OMB last month.

The oil industry had hoped EPA might lower the volumes from the statutory maximum set for 2017, but government projections for higher gasoline consumption next year made that unlikely.

WHAT'S NEXT: EPA will take take public comment after release of the proposal.

CORRECTION: An earlier version of this alert incorrectly stated the year for which EPA is proposing biofuel volume mandates. It is 2018.

Subject: Today on Climate Beat

November 15, 2017

Today on Climate Beat . . .

. . . we looked at the impacts, highlighting a new report finding that air pollution from oil and gas development disproportionately affects African-American communities, conclusions environmentalists hope will help fight Trump administration efforts to undo the Obama EPA's first-time limits on the greenhouse gas methane from new oil and gas drilling.

And our daily news roundup took another look at ongoing international climate talks, where several other countries and domestic climate advocates appear to be breathing a sigh of relief that administration officials are not actively trying to undermine the Paris climate agreement.

Summaries

AIR
Illuminated Exit Signs Test Procedure Waiver Request
AIR

Notice of the Department of Energy, Office of Energy Efficiency and Renewable Energy, announces the receipt of a petition from Acuity Brands, of Atlanta, requesting a waiver from test procedures for determining the energy consumption of illuminated exit signs under 10 CFR 431.401. The company seeks to use an alternate test procedure to address issues involved in testing certain basic models of illuminated exit signs identified in its petition. The agency has proposed alternate test procedures that provide methods to test and rate the basic models at issue without the rated wattage of the light source or sources due to a finding that rated wattage of light sources had not been well documented in Acuity's product literature. Comments are due July 7, 2017. Contact: Bryan Berringer; DOE, Building Technologies Program; 202-586-0371; AS_Waiver_Requests@ee.doe.gov

AIR
Nevada SIP/Lake Tahoe CO Maintenance Plan
AIR

Final rule of the EPA amends regulations under 40 CFR 52.1470 to approve a revision to the Nevada SIP. The revision consists of a second 10-year maintenance plan for the eight-hour carbon monoxide (CO) NAAQS for the Lake Tahoe area, including the 2011 emissions inventory, the 2024 projected emissions inventory, and a revised alternative monitoring strategy and contingency plan. The rule also postpones the effective date of a March 10, 2017, direct final rule (82 FR 13235) that added these revisions to the SIP to provide a response to adverse comments prior to the rule's effectiveness. The rule is effective July 7, 2017. Contact: John Kelly; EPA Region 9, Air Planning Office; 415-947-4151; kelly.johnj@epa.gov

AIR
Tennessee SIP/Reid Vapor Pressure Requirements
AIR

Final rule of the EPA amends regulations under 40 CFR 80.27 to approve a request from the state of Tennessee to revise the summertime federal Reid vapor pressure (RVP) standards for gasoline. The rule revises the RVP standard to 9.0 pounds per square inch for gasoline sold from June 1 to Sept. 15 each year for the Middle Tennessee area, which includes Davidson, Rutherford, Sumner, Williamson and Wilson counties. In a Feb. 24, 2017, proposed rule (82 FR 11517), the EPA proposed to approve the easing of the federal RVP requirement as a revision to the SIP. The rule is effective June 7, 2017. HAZARDOUS WASTE CLEANUP
Puerto Rico/Palo Seco Superfund Site
HAZARDOUS WASTE CLEANUP

Notice of the EPA announces a proposed cost recovery settlement agreement under CERCLA with the Puerto Rico Electric Power Authority (PREPA) for response costs incurred by the EPA at the Palo Seco Superfund Site in Toa Baja, Puerto Rico. The agreement requires PREPA to pay $1 million to reimburse assessment costs and cover cleanup actions at the site. The proposed agreement also includes a covenant from the EPA not to sue or to take administrative action against PREPA with regard to the response costs. Comments are due July 7, 2017. OIL AND GAS INDUSTRY
Puerto Rico/Oil Pollution Act Consent Decree
OIL AND GAS INDUSTRY

Notice of the Department of Justice announces a proposed consent decree in United States v. Port Stewart GmbH&Co. Kg of Germany (Civil Action No. 3:17-cv-01742), lodged on June 1, 2017,

with the U.S. District Court for the District of Puerto Rico. The consent decree resolves claims under the Oil Pollution Act for damages to a coral reef habitat resulting from alleged discharges of oil due to the grounding of the T/V Port Stewart oil tanker at the entrance of the Yabucoa Channel. The consent decree requires the defendant to pay $550,000, including $412,000 for restoration, $128,000 of NOAA costs, and $10,000 of the Puerto Rico Department of Natural and Environmental Resources costs. Comments are due July 7, 2017. Contact: DOJ, Environment and Natural Resources Division; 202-514-2701

Subject: Italian minister: G-7 'distant' on climate change

By Sara Stefanini

06/11/2017 11:06 AM EDT

BOLOGNA, Italy — G-7 ministers are in "complete agreement" on all the environmental issues they're discussing today and Monday — except for climate change, Italian Environment Minister Gian Luca Galletti told reporters today.

The two-day G-7 environment ministers gathering comes 10 days after President Donald Trump confirmed that he would withdraw the U.S. from the Paris climate agreement.

But even before his announcement, American resistance to tackling climate change emerged as a sticking point at the G-7 leaders' summit last month and the G-7 energy meeting in April, where the ministers failed to agree on a communiqué.

"The positions, especially on Paris, are distant positions," said Galletti, host of the environment meeting.

"Here in Bologna we're doing very important work, we're mending. We'll only know at the end what result it will have, but we have already obtained a result because we continue to talk, to identify solutions and common objectives," he added. U.S. Environmental Protection Agency Administrator Scott Pruitt is in Bologna representing the U.S. but is leaving this afternoon.

Galletti said his early departure was always planned because of a meeting with Trump.

"The administrator has had bilateral meetings with a number of our G-7 partners discussing the importance of engagement and environmental issues including conservation, food waste, climate, marine litter and resource efficiency," Lincoln Ferguson, Pruitt's spokesman, told POLITICO by email.

Patricia Espinosa, head of the United Nations' climate change secretariat, told reporters that Pruitt said the U.S. wants to continue to make efforts to combat climate change and engage with the secretariat.

White House Team Differs on Trump Support for Russia Sanctions

Posted July 24, 2017, 12:17 P.M. ET

By Ros Krasny

The Trump administration supports the current version of a bill to sanction Russia, the new White House press secretary said, although her boss, Anthony Scaramucci, wouldn't guarantee that President Donald Trump will sign it.

The legislation, which would affect energy projects abroad and may soon land on Trump's desk for a signature, wasn't the only area where Trump's hand-picked communications director differed from others in the administration on July 23, two days after taking the job.

Scaramucci and press secretary Sarah Huckabee Sanders, also named to her role on July 21, along with Jay Sekulow, one of Trump's lawyers, were the administration's collective face on Sunday's political talk shows. The interviews came days after both teams were shaken up in an effort by Trump to impose order on his White House in the face of a widening Russia probe.

Sanders' comments on sanctions followed a tentative deal reached by Republican and Democratic leaders in the House to move ahead this week on a measure that, among other things, would prevent the president from acting unilaterally to remove sanctions on Russia for its involvement in the 2016 election and other actions.

"The original piece of legislation was poorly written, but we were able to work with the House and Senate. And the administration is happy with the ability to do that and make those changes that were necessary," Sanders said on ABC's "This Week." "We support where the legislation is now."

'Decision Shortly'

Scaramucci, brought on board to reset the administration's communication's strategy as Trump enters his second six months in office with record-low approval ratings, said on CBS's "Face the Nation" that "I don't know the answer to whether the president will sign" the sanctions bill. On CNN's

"State of the Union," Scaramucci suggested that Trump is "going to make that decision shortly."

If the president were to veto the bill, "we will override his veto," Sen. Ben Cardin (D-Md.), the top Democrat on the Senate Foreign Relations Committee, said on "Fox News Sunday."

Heading into a week of congressional action on the investigations into Russian election meddling, including testimony behind closed doors to two committees by his son-in-law and senior adviser Jared Kushner, Trump said on Twitter July 22 that "all agree the U.S. President has the complete power to pardon."

House to Vote Soon

Republican and Democratic leaders in the House reached a tentative deal over the weekend to fix procedural concerns, add measures against North Korea, and modify provisions that would restrict the participation of U.S. energy companies in some international projects.

A version of the bill released by House Republican leaders includes changes sought since the Senate passed legislation in June that would prohibit U.S. businesses from working on or supporting energy projects that include any participation by Russian companies, even outside Russia's borders.

The new version would also set a threshold for Russian involvement, applying that restriction to projects where sanctioned Russian entities have at least a 33 percent interest.

A separate procedural impasse would be resolved by allowing leaders from both the majority and minority parties in the Senate or House to force their respective chamber to consider an objection to White House action on sanctions. The original bill allowed any member of Congress in either chamber to force consideration of sanctions waivers. Senators can still introduce resolutions, with leadership approval.

The bill is expected to be considered in the House on July 25 using an expedited process that requires two-thirds of all members voting for passage.

The modified House bill represents a modest victory for oil companies, manufacturers and oilfield service firms that had argued the earlier, Senate-passed bill could jeopardize projects around the globe—even those that weaken Russia's ability to use its own natural gas as a political weapon. They had warned that under the Senate measure, Russia would be empowered to elbow U.S. companies out of energy projects globally simply by making small investments in them.

The 33 percent threshold that would be established under the compromise legislation likely is high enough to avoid disruptions at the giant Shah Deniz project in Azerbaijan, a chief alternative to Russia-sourced natural gas for Turkey. That project could have been swept up by the Senate-passed bill because Russia's Lukoil owns a 10 percent share in an ongoing expansion, even though BP Plc is the lead operator.

The White House had argued that it needs flexibility to adjust economic sanctions against Moscow. Administration officials were on Capitol Hill earlier this month asking lawmakers to reconsider the Russia provisions that the Senate added to an Iran sanctions bill and passed 98-2.

EU Mulls Retaliation Against U.S. Over New Russia-Sanctions Plan

Posted July 24, 2017, 9:10 A.M. ET

By Jonathan Stearns

The European Union said it would be prepared to retaliate against the U.S. should Washington hit Russia with new sanctions that affect EU-based energy companies, risking a deeper trans-Atlantic split over economic and security policies.

The European Commission, the bloc's executive arm, made the threat as U.S. lawmakers prepare to give the green light as soon as this week to economic penalties against Russia over its meddling in last year's American presidential election. The draft U.S. measures would prohibit American businesses from being involved in energy projects that include Russian companies, including ventures outside Russia.

"The EU is always ready to respond adequately and imminently should the case be needed," Margaritis Schinas, the commission's chief spokesman, told reporters on July 24 in Brussels. "I will not speculate on any retaliation."

The latest trans-Atlantic tensions follow sharp disagreements over U.S. President Donald Trump's "America First" agenda, including his anti-trade stance, his withdrawal from an international treaty to fight climate change and his criticism of European nations for failing to spend more on defense. The fresh friction also contrasts with close cooperation between the EU and former U.S. President Barack Obama over sanctions against Russia for its encroachment in Ukraine.

Expanded Sanctions

The commission, led by President Jean-Claude Juncker, is echoing concerns expressed by German Chancellor Angela Merkel, whose spokesman said in June that the U.S. Congress's plan for expanded sanctions against Russia posed a threat to European economic interests. One casualty could be the planned $10 billion Nord Stream 2 natural-gas pipeline between Russia and Germany, a project that to some extent would compete with U.S. exports of liquefied natural gas to Europe.

Schinas said the adequacy of energy supplies for the EU is at stake and the commission is engaged in a diplomatic offensive to limit the impact of any U.S. measures on the bloc, expressing "hope" that no European countersteps will be necessary.

"We are activating all diplomatic channels to address these concerns—from these U.S. measures—with our U.S. counterparts," he said. "We expect" Europe's "interests to be addressed by the ongoing, pre-legislative process."

The Financial Times and Politico reported on July 24 that Juncker planned to put retaliation against the U.S. on the agenda of a regular meeting of EU commissioners on July 26, citing an internal commission note. Both reports said the goal is for the 28-nation bloc to be able to react "within days."

Separately, the commission is preparing for possible retaliation against the U.S. over a threat by

Trump to curb steel imports on national security grounds. In June, EU Trade Commissioner Cecilia Malmstrom said she was "extremely worried" about the possibility of such American trade restrictions, saying they could trigger protectionist reactions around the globe.

Flood Risks Prompt Massachusetts Review of Enbridge Gas Facility

Posted July 24, 2017, 7:51 A.M. ET

By Adrianne Appel

Massachusetts Gov. Charlie Baker (R) bowed to public pressure and ordered his administration to scrutinize a natural gas facility planned by Enbridge for its Pennsylvania to Canada pipeline.

Enbridge Inc. wants to build a 7,700-horsepower natural gas compressor station in Weymouth, Mass., as part of an expansion to its 60-year-old Algonquin Gas Transmission pipeline. The expansion, called Atlantic Bridge, will deliver natural gas from Pennsylvania up to Maine and Eastern Canada.

Enbridge received permission (a Certificate of Public Convenience and Necessity) from the Federal Energy Regulatory Commission Jan. 25 for the expansion, including the compressor station, following years of protests by local residents who say the plant would pose health and safety risks.

The plant still needs local and state permits before it begins operating, and those permits could be stymied depending on the outcome of studies ordered by Baker July 14.

"Although the siting of compressor stations is primarily regulated by the Federal Energy Regulatory Commission, the Commonwealth need not and will not remain silent during this process," Baker said in a July 14 letter to Weymouth Mayor Robert Hedlund.

Air, Storm Safety

The compressor facility would be built directly on the coast south of Boston, near Quincy, and therefore is subject to review by the state Office of Coastal Zone Management.

Baker ordered the coastal zone office to obtain more information from Enbridge "in an effort to achieve a conclusive and definitive understanding of what the specific flooding and inundation risks are," as sea level rises and storms increase in the future due to climate change.

The plant site "is susceptible to flooding and waves during storm events under present and future conditions," Baker said. Enbridge must show that it will mitigate any potential climate change impacts, Baker said.

Public Health

Baker also directed the Massachusetts Department of Environmental Protection and Department of Public Health to prepare an assessment of any impact the facility would have on air quality. The assessment will be completed and potential air quality considered before any air permits are issued by the DEP, Baker said.

Baker instructed his secretary of public safety and secretary of energy and environmental affairs to help bring the concerns of the public about the plant's safety to the federal Department of Transportation's Pipeline and Hazardous Materials Safety Administration.

FERC granted the certificate to Enbridge after a comprehensive, 23-month review, Marylee Hanley, an Enbridge spokeswoman, said in a July 21 email to Bloomberg BNA. More than 600 public comments were considered.

"The Atlantic Bridge facilities are designed and will be constructed, operated and maintained to meet or exceed federal safety standards and regulations," she said.

Visited Baker's Office 76 Days

Public opposition to the compressor facility has been fierce for years, and Baker is a relative latecomer to the debate.

Baker is "committed to ensuring the community's concerns are heard fully," Baker spokesman Brendan Moss told Bloomberg BNA July 21 in an email.

Local groups, Hedlund and U.S. Sens. Elizabeth Warren (D) and Edward Markey (D) have expressed opposition to the planned compressor station. One Weymouth resident, Andrea Honore, visited the governor's office for 76 straight days about her concern about the Weymouth plant before Baker agreed to visit the plant site and meet with her. Days later, Baker issued his directives about the plant.

Baker, a popular moderate Republican in a state that mostly votes Democratic, is up for re-election in 2018. Democratic gubernatorial candidates Setti Warren and Jay Gonzalez both issued statements against the plant before Baker took action.

U.K. Seeking to Fill Climate Leadership Void Left by Trump

Posted July 24, 2017, 02:57 P.M. ET

By Jessica Shankleman

Britain should seek to fill the leadership void created by Donald Trump's decision to pull the U.S. out of the landmark Paris Agreement, Climate Change Minister Claire Perry said July 24.

While Prime Minister Theresa May has been criticized by some environmental groups for failing to speak out over the U.S. president's June 1 decision to step back from the 2015 Paris deal, Perry said U.K. ministers "haven't missed an opportunity" to express their disappointment over the news.

Perry said that as well as head-of-state discussions, she has also been having talks with "other players" in the U.S. who are seeking to ensure the U.S. delivers on its carbon reduction commitments. Last week the mayor of Houston visited the U.K. and discussed climate opportunities, she said.

"The U.K. is ranked third in the world in tackling climate change. I think we need to exploit and take that leadership position because we can change the world doing this and we can also generate highly productive jobs," she said while visiting a green housing project at Nottingham University, in the East Midlands of England.

Perry's department on July 24 unveiled policies designed to make it easier for homeowners to install battery systems that can store renewable energy created by solar panels or wind turbines. That includes updating a 28-year-old Electricity Act that doesn't recognize batteries as part of the power system.

Perry said the U.K.'s green economy already employs about 400,000 people and could provide a source of growth through research and exports for certain technologies as the country quits the European Union.

"I look at this and see it's the way the world is going, so it's not just about British businesses, it's about global mega-trends, so how do we seize that opportunity to decarbonize our own economy and help other countries," she said.

U.K. Braced for Record-Breaking Wet Winters, Blames Climate Shift

Posted July 24, 2017, 9:38 A.M. ET

By Jessica Shankleman

Britain faces a future of record-breaking wet winters, potentially leading to more of the widespread flooding seen in recent years, according to new modeling that incorporates changing climate patterns.

England and Wales now have a 34 percent chance of record rainfall between October and March, the study by the government's Met Office said July 24. In 2013, heavy rain deluged parts of Cornwall and the south east. That was followed by three named storms that flooded some of Cumbria, Lancashire and Yorkshire in December 2015, while Storm Angus battered parts of Britain last November.

Changing weather patterns caused by increasing global temperatures means meteorologists can no longer rely on historical rainfall records to predict future weather events. Instead, a new supercomputer at the Met Office simulated thousands of possible scenarios using current climate patterns.

"This gave many more extreme events than have happened in the real world, helping us work out how severe things could get," Adam Scaife, lead researcher on the study, said in a statement.

The simulations could help insurers and governments to assess risks and plan for future extreme weather events, Vikki Thompson, lead author of the report, said in a video released by the Met Office. The Association of British Insurers estimated floods in December cost about 1.3 billion pounds ($1.7 billion) in claims.

"This is important research and reinforces our call for the government to prepare for and expect a significant flood event to take place somewhere in the country almost every year," said Daniel Johns, head of adaptation at the U.K. Committee on Climate Change, which advises the government on its response to global warming.

Conservative Party Merger Alters Landscape in Canada's Oil Patch

Posted July 24, 2017, 9:18 A.M. ET

By Doug Alexander and Josh Wingrove

The merger of Alberta's two main conservative parties creates a new political force in the heart of Canada's oil patch that threatens to unseat Premier Rachel Notley and kill the province's carbon tax.

Members of the Wildrose and Progressive Conservative parties voted July 22 to create the United Conservative Party. Combined, those parties hold 30 of 87 districts, though they received 52 percent of the vote in the last election.

In recent polls each has outpaced Notley's New Democratic Party, which won a surprise majority in 2015 and benefited heavily from a split among right-leaning voters in the province with Canada's highest median household income. The next election is due in 2019.

For the NDP, unification "is their worst-case scenario," Duane Bratt, a political scientist at Mount Royal University in Calgary, said in an interview. While an improving economy or a divide over social policies could still help Notley hold power, "a unified conservative party at this stage would be tough to beat."

Some 95.4 percent of Wildrose members who voted backed the merger, while it won 95 percent support from the PCs, according to the July 22 results.

Carbon Tax

While the merger agreement doesn't specify a plan to repeal the carbon tax, its key figures have all campaigned against it. Notley's carbon measures include a hard cap on emissions from Alberta's oil sands, the world's third-largest proven oil reserve, though the province isn't near its self-imposed cap. Repeal of that will set up a collision course with Prime Minister Justin Trudeau, who has imposed a minimum carbon price nationally as of 2018.

Alberta is Canada's heaviest carbon emitter, though only its fourth-most populous, and a frequent target of environmental and anti-oil campaigns.

"I'm not convinced that the carbon tax will disappear, and for evidence of that, all you have to do is look south of the border with repeal-and-replace of Obamacare," Bratt said. "Once you bring in a program and it runs for a couple of years, it is tough to get rid of."

The parties had also pledged to balance the budget and slash Alberta's ratio of debt to nominal gross domestic product, which has more than doubled in the past two years, to 13.8 percent from 6.1 percent, with the slump in oil prices. Alberta draws 8 percent of its revenue from oil and other non-renewable resources, down from 18 percent just three years earlier, government budget documents show.

Disapproval Rating

The unified party will pick its leader on Oct. 28, with an interim leader serving in the meantime. The

leading candidates are expected to be Wildrose leader Brian Jean, a former federal lawmaker who hails from Fort McMurray, the hub of the oil sands region, and Progressive Conservative leader Jason Kenney, a former federal lawmaker and cabinet minister who largely led the unity push. Doug Schweitzer, a Calgary lawyer, announced his interest in the leadership position in June.

"If anybody other than myself is elected by the members they will have my total enthusiastic support because this unity project will only work if we are prepared to park our egos --- and I'm certainly prepared to do that," Kenney said in his July 22 speech.

Notley has one of the highest disapproval ratings among Canada's provincial leaders, though the premier's numbers remain relatively strong in each of the two major cities, where about two-thirds of electoral districts are clustered, polling from Mainstreet Research shows.

"It's going to be a tough road for Rachel Notley and the NDP if the PCs and Wildrose unite—not impossible," Mainstreet President Quito Maggi said in an interview. The merger could still spur further splintering, both among staunch conservatives and centrists. "It's not a guarantee of that unified party forming government. They're still going to have to do some work."

VW, Daimler Workers Step Up Pressure to Come Clean on Collusion

Posted July 24, 2017, 9:00 A.M. ET

By Elisabeth Behrmann

Germany's carmakers are coming under pressure from their employees to come clean on allegations that they colluded on technology for decades, as investors continued to sell the stocks on concern the industry faces another major scandal following the diesel emissions crisis.

Prodded by labor leaders, Volkswagen AG Chairman Hans Dieter Poetsch is convening a special supervisory board meeting on July 26 "given the current situation," Michael Brendel, a spokesman at the Wolfsburg-based manufacturer, said in a July 24 email. Daimler AG's "workers are rightly horrified and angry" by antitrust allegations that emerged last week, and "there must obviously be consequences" if they're confirmed, Michael Brecht, head of that company's works council, said separately.

Shares of Volkswagen, Daimler and BMW AG have fallen at least 5 percent since Spiegel magazine reported July 21 that the carmakers had held talks since the 1990s on coordinating automotive technology, including development of combustion engines, emissions systems, brakes and transmissions. In conjunction with Germany's antitrust regulator, the European Union's competition overseer said July 22 that it's studying possible collusion among auto manufacturers.

Worker representatives are a powerful presence on major German companies' supervisory boards, holding half of the seats, and Volkswagen's meeting was prompted by a demand for an extraordinary session from labor representatives.

Management 'Duty'

"Management has the duty to thoroughly inform the supervisory board. That hasn't happened yet," the Volkswagen works council said in a statement. "We also expect the management board to give an explanation to the workforce. Trust in company leadership is dwindling more each day." Its

counterpart at Munich-based BMW said separately that it "expects to be informed of the situation promptly."

Stuttgart-based Daimler doesn't plan to hold a special meeting, said Ute Wuest von Vellberg, a spokeswoman. The company is due to report its quarterly results June 26, and Volkswagen publishes figures a day later. Boards usually convene shortly before those numbers are released to give final approval to the reports.

"I advise the car industry to clear the air now, to say what has happened, and then we can look to the future together again," Volker Kauder, caucus leader of German Chancellor Angela Merkel's Christian Democrat-led bloc in parliament, said July 24 on ARD television. "If the antitrust violations were to prove true—and there's a lot to suggest that—then one must really say the clear sentence: the rule of law also applies to the car industry."

Diesel Cheating

The antitrust allegations emerged a little less than two years after Volkswagen's revelation that it rigged diesel engines to cheat on emissions tests, an admission that has prompted governments to scrutinize the entire industry's technology. BMW sought on July 23 to defuse concerns about possible collusion as well as allegations of manipulating diesel emissions by downplaying the talks with rivals as being focused on promoting exhaust-treatment technology in Europe.

"In the aftermath of the diesel scandal, illicit collusion would be a catastrophe for the credibility of the German auto industry," said Stefan Bratzel, director of the Center of Automotive Management in Bergisch Gladbach, Germany. A potential cartel could lead to billions of euros in fines and comes as the industry already faces threats from the shift to self-driving electric cars.

Photos of Melted Fuel at Japan's Fukushima to Help Cleanup

Posted July 24, 2017, 8:58 A.M. ET

By Stephen Stapczynski

Japan's likely discovery of melted fuel inside the wrecked Fukushima nuclear power plant is seen as a critical step in hastening the $72 billion, 40-year cleanup of one of the worst atomic disasters in history.

Images released on July 22 by Tokyo Electric Power Co. Holdings Inc.—Japan's biggest utility and owner of the plant—showed for the first time what is likely melted fuel at the bottom of the containment vessel of the No. 3 reactor at Fukushima. Pictures released July 21 showed fuel possibly hanging from the top of the pressure vessel inside the same reactor.

"The recent investigation results are significant early signs of progress on the long road ahead to safely decontaminate and decommission the Fukushima Dai-Ichi facility," said Lake Barrett, a former official at the U.S. Nuclear Regulatory Commission who was involved with the cleanup at the Three Mile Island nuclear power plant in the U.S.

While TEPCO, as the utility is known, said some of the debris captured on film is "highly likely" to contain melted fuel, the company noted that definitive confirmation will take time.

For Tokyo Electric, which bears most of the cleanup costs, the discovery could help the utility design a way to remove the highly radioactive material, according to Takahiro Kimoto, an official at the company.

Melted Fuel Removal

The company aims to decide on the procedure to remove the melted fuel from each unit as soon as this summer, with fuel removal slated to begin in 2021.

"This is a continuous step-wise program of gathering unit-specific engineering data so that engineers can develop the various engineering approaches and specific remote-controlled equipment to remove the melted fuel and other highly radioactive materials," Barrett, the former U.S. nuclear official, said by email.

With only a handful of nuclear meltdowns ever occurring around the world, TEPCO must come up with new technology for its cleanup. New tools, such as long-handled devices guided by a television monitor system, were developed for removing fuel core debris at Three Mile Island after its meltdown in 1979. In Chernobyl, a concrete sarcophagus was used to entomb the wrecked plant with no attempt to remove its fuel.

Decommissioning the reactors in Japan will cost 8 trillion yen ($72 billion), according to an estimate in December from the Ministry of Economy, Trade and Industry. Removing the fuel is one of the most important steps in a cleanup that may take as long as 40 years.

The pictures taken over the weekend were made possible with the help of a Toshiba Corp.-designed robot sent to explore the inside of the reactor for the first time. The 30-centimeter (12 inches) long swimming robot was tasked with surveying the damage and finding the location of corium—a mixture of the atomic fuel rods and other structural materials formed after the meltdown.

TEPCO must still confirm the location of melted fuel inside the No. 1 and 2 reactors at Fukushima.

In January, the company took photographs of what appeared to be black residue covering a grate under the Fukushima Dai-Ichi No. 2 reactor, which was speculated to have been melted fuel. A follow-up survey by another Toshiba-designed robot in February failed to confirm the location of any melted fuel in the reactor after it got stuck in debris.

A robot designed by Hitachi-GE Nuclear Energy Ltd. also failed to find any melted fuel during its probe of the No. 1 reactor in March.

"This could be a very early step, with many more hard steps to go, on the path to eventual decommissioning," M.V. Ramana, a professor at the Liu Institute for Global Issues at the University of British Columbia, said by email. "In the more short term, if some of these fragments can be brought out of the reactor and studied, it would allow nuclear engineers and scientists to better model what happened during the accident."

PODCAST: Trump Rhetoric Gives Border Town Mayor Headaches

Posted July 24, 2017, 7:01 A.M. ET

By David Schultz

Small town mayor Serge Dedina has an international environmental problem: water pollution originating in Mexico flows across the border and into his Southern California town, hurting the ecosystem and causing health problems for residents.

Dedina, the mayor of Imperial Beach, Calif., has for years been working closely with federal, state, and local officials in Mexico to try to curb these pollution flows. But now, as he tells us in the latest episode of our environmental podcast Parts Per Billion, the rhetoric of President Donald Trump is making it harder and harder to sustain this cross-border cooperation.

To listen to our conversation with Dedina on the latest episode of Parts Per Billion, click here.

Daily Environment Report for EPA

To: Jackson, Ryan[jackson.ryan@epa.gov]
From: Morning Energy
Sent: Mon 11/27/2017 3:03:32 PM
Subject: POLITICO's Morning Energy: U.S. backs Obama-era HFC deal — Scores descend on West Virginia for Clean Power Plan hearing — Upton vows to stay on Enbridge's case

By Anthony Adragna | 11/27/2017 10:00 AM EDT

U.S. BACKS HFC REDUCTION DEAL: While you were munching on turkey and mashed potatoes, the Trump administration pledged its support for an international accord aimed curbing emissions of hydrofluorocarbons, highly potent greenhouse gases. "The United States believes the Kigali Amendment represents a pragmatic and balanced approach to phasing down the production and consumption of HFCs, and therefore we support the goals and approach of the amendment," Judith Garber, the State Department official who led the delegation to Montreal Protocol conference, said in remarks on Thanksgiving Day. It's a big deal because the agreement, which enters into force in 2019, is expected to avoid a temperature increase of 0.5° C [0.9° F] by 2100.

And the U.S. ponied up, too: The U.S. agreed to pour $36.67 million annually from 2018 through 2020 into the Multilateral Fund, through which rich nations help developing ones to phase out HFCs. That's part of a broader $540 million countries agreed to contribute over the three-year period. Look for Congress to be a lot more willing to contribute for this than it has been for other international climate efforts given both industry and environmentalists strongly back the broader agreement.

Limping toward Senate consideration: Garber told diplomats the U.S. had "initiated the process" for putting the Kigali agreement to the Senate for its advice and consent, though she cautioned there was "no timeline currently determined" for formally sending it over to Congress. "There are a number of steps in our domestic process that we would need to complete before reaching a final decision," she noted.

WELCOME TO MONDAY! I'm your host Anthony Adragna, and NRDC's Ed Chen was first to identify the Saturday Evening Post as landing spot for Norman Rockwell's iconic Thanksgiving painting. For today: Within two percentage points, what percentage of Americans hold valid passports? Send your tips, energy gossip and comments to aadragna@politico.com, or follow us on Twitter @AnthonyAdragna, @Morning_Energy, and @POLITICOPro.

WOMEN RULE WEEK! POLITICO is partnering with women-led businesses in the DC-metro area to offer a full week of exclusive perks in conjunction with the 5th annual Women Rule Summit! Join the fun at participating businesses during Women Rule Week **(Nov. 27 - Dec. 1)** for exclusive deals and tweet 5x using #WomenRule for a chance to win two free tickets to the Summit on Dec. 5!

HEADS TURN TO WEST VIRGINIA: Washington's attention will be trained on what will be a critical week in Congress for the GOP's tax package, but the eyes of the energy and environmental world turn to Charleston, W.Va. for the lone public hearing on EPA's proposed repeal of the Obama-era Clean Power Plan. Preliminary lists of witnesses on Tuesday and

Wednesday include numerous heavy-hitters: coal magnate Robert Murray, West Virginia Attorney General (and Senate candidate) Patrick Morrisey, Rep. Evan Jenkins, as well as dozens of environmental, health and public interest advocates vocally opposing the regulation's repeal. Remember EPA continues to accept comment on its proposed repeal through Jan. 16.

Oversight hearings from Appropriators: As they work to stave off a government shutdown, House Appropriators will check in with the U.S. Forest Service and Army Corps of Engineers on Wednesday before hearing from Deputy Interior Secretary David Bernhardt on Thursday. Bernhardt, who will be joined by officials from EPA and Energy, is also due to provide an update to the House Oversight Committee on their regulatory reform initiatives on Wednesday.

Taking stock: POLITICO's Seung Min Kim looks at the daunting remainder of the year for Congress.

EPW to move more nominees: The Senate Environment and Public Works Committee is scheduled to vote on the nominations of Kathleen Hartnett White to run the White House Council on Environmental Quality and Andrew Wheeler to be EPA deputy administrator on Wednesday at 10 a.m.

Brownfields bill hits the floor: The House is slated to vote Thursday on legislation H.R. 3017 (115) that reauthorizes and revamps EPA's Brownfields program, which helps promote the redevelopment of contaminated sites.

MAKING PROGRESS: TransCanada said it's removed 44,400 gallons of oil from the site of a spill from the Keystone pipeline in South Dakota in its most recent update on the situation. The company said it has 170 people "on-site, working around-the-clock" to clean up the spill and that "there have been no significant" environmental impacts from the incident. Preliminary inspections were supposed to be completed Sunday, and the company has not given any estimate of when the pipeline will begin operations again.

UPTON STAYING ON ENBRIDGE'S CASE: House Energy and Commerce Energy Subcommittee Chairman Fred Upton told Michigan radio on Sunday that he, along with Gov. Rick Snyder's office, met "at length" with representatives from Enbridge about its troubled Line 5 pipeline, and he vowed to continue seeking greater transparency from the company about the status inspections and repairs. "There is no room for an accident here," Upton said. "We're going to stay on their case."

More on why he passed on a Senate run. "I've never lost an election - didn't think that I would - but it's a tough sledding that's for sure, so at the end we just said, 'No, not gonna do it.'"

QUITE AN INTERESTING RECOMMENDATION: Interior Secretary Ryan Zinke has recommended the creation of a new national monument in Montana that would protect more than 200 square miles of federal land from any fossil fuel development, a move some see as politically shrewd given the former Montana congressman's whispered future ambitions, NPR reports . "I think the secretary has talked about wanting to come back to Montana after he's done being secretary and potentially run for governor," said Land Tawney, president of the Montana-

based sportsmen's group Backcountry Hunters and Anglers. During an April executive order signing, Trump described national monument designations made under prior administrations as "massive federal land grab[s]" and Zinke has suggested shrinking a handful of them.

DEFENDING GAETZ IN CLIMATE CAUCUS: Rep. Matt Gaetz 's joining the Climate Solutions Caucus raised more than a few eyebrows in Washington given his legislation earlier this year to abolish the EPA, but the Citizens Climate Lobby actually sees it as a major sign of progress. "We think his joining (which happened at the invitation of a fellow freshman Congressman from across the aisle) signals a big shift in the way climate change is being approached in Congress," Flannery Winchester, a spokeswoman for the group, wrote in an email. "Gaetz's membership on the caucus shows that the issue is becoming less politicized, and his exposure to the other Republicans in the group will likely bring him closer to bipartisan climate legislation that's actually viable."

BACK ON THE JOB: In a Thanksgiving statement, Whitefish Energy said it resumed efforts to repair Puerto Rico's electric grid after receiving enough of a payment to indicate a "good faith intent" from the island's beleaguered utility to pay the Montana-based company. The amount of the payment was not specified. Government figures Sunday showed more than 42 percent of the island remains without electricity.

DON'T DO IT! Eleven state attorneys general sent a letter last week to the National Park Service voicing strong opposition to proposed fee increases at high-profile parks around the country. "The Service has not offered a reasoned explanation for its proposed fee increases and its actions are inconsistent with the laws that govern our national park system," the letter, led by California's Xavier Becerra, says.

NOW LOBBYING: Former Sen. Byron Dorgan has been hired by the Wilderness Society to lobby on "conservation issues relating to the Arctic National Wildlife Refuge," according to records posted last week.

OBSTACLES AHEAD: Keeping energy consumption in check is crucial if the European Union intends to meet 2020 targets for renewables and energy efficiency, POLITICO Europe's Kalina Oroschakoff reports, citing an European Environment Agency warning. The agency also urged countries to speed up cutting fossil fuel use in their energy systems to meet the 2030 renewable and energy efficiency targets.

TRUMP'S EPA: Agency at a crossroads -- Complete coverage

July 14, 2017

Latest News

Bodine Backs Centralized OECA, Squelching Talk Of New Program Function

EPA enforcement chief nominee Susan Bodine is dismissing earlier discussion that the Trump administration is planning to close down the agency's Office of Enforcement and Compliance Assurance (OECA) and disperse its functions to program offices, embracing its mission as a centralized entity in EPA headquarters, according to her written response to senators' questions.

Communities Ready Task Force To Resist Pruitt Superfund Reform Effort

Grassroots community groups are forming a task force to help them push back against EPA Administrator Scott Pruitt's efforts to reform the Superfund program, arguing that his endeavor raises significant concerns about curtailing cleanup oversight and planning to come up with alternative approaches to offer the administrator.

Court Recalls Mandate In Methane NSPS Suit, But Only For 'Limited Period'

The federal appellate court panel that last week vacated EPA's stay of portions of the Obama-era oil and gas new source methane rule is granting the agency's motion to recall its immediate mandate to lift the stay, though it gives the agency only two weeks -- well short of the almost two months EPA was seeking -- before it must implement the rule.

Pruitt Sets Longer-Term Plans To Remake EPA, Secure Deregulatory Agenda

Even as EPA Administrator Scott Pruitt works to roll back a host of Obama-era rules as a relatively short-term priority, he is preparing a set of medium-term plans for the agency's budget and policy agenda that would remake the agency and institutionalize the Trump administration's deregulatory agenda.

EPA Sees Potential For Long-Term RFS Obstacle With Ethanol 'Blend Wall'

EPA's proposed rule setting renewable fuel standard (RFS) blending goals for 2018 indicates that the agency sees the potential for a progressively worsening long-term

obstacle to increased ethanol use in the "blend wall," the limit on how much ethanol can be blended into the fuel supply given infrastructure and vehicle constraints.

EPA's 2018 RFS Targets Biofuel Fraud But Avoids 'Obligation' Point Debate

EPA in its proposed renewable fuel standard (RFS) volumes rule for 2018 is seeking public input on potential steps it could take to avoid fraud in the program and improve the RFS' market for biofuels credits, but avoids taking a position in the contentious debate over which stakeholders should be subject to the rule's compliance "obligation" point.

Daily Feed

EPA releases first SNURs since TSCA reform enactment

EPA's release of significant new use rules for 29 chemicals is part of an effort to cut the backlog of new chemical reviews since last year's overhaul of the federal toxics law.

EPA denies iron foundry air permit objection petition

EPA has denied a petition by a private citizen asking it to object to a Clean Air Act operating air permit that Wisconsin issued to an iron foundry.

Senate panel advances controversial judicial nominee but ENRD pick stalls

The Senate Judiciary Committee advanced the nomination of Damien Schiff to the Court of Federal Claims in a party-line vote, though Democrats delayed a vote on the nomination of Jeffrey Clark to head the Justice Department's environment division.

4th Circuit declines coal ash CWA appeal

The appeals court will not review Clean Water Act liability for groundwater pollution from coal ash until district court proceedings finish -- a process that could reach into or beyond 2018.

Environmentalists oppose relaxed cement plant air monitoring

EPA's plan to indefinitely lift continuous air monitoring requirements for cement plants could trigger a legal challenge.

Ewire: The surge in environmental litigation

From today's Ewire: Litigation over Trump deregulatory efforts is heating up but one former EPA official says: “Their legal reasoning in some of these cases is so bare bones that it just seems experimental.” Plus: Pruitt on Europe's climate “hypocrisy.”

Environmentalists fault Pruitt's 'closed mind' to attack RMP delay

EPA Administrator Scott Pruitt's past opposition to facility safety rule revisions undermines his lengthy stay of the regulatory changes, according to environmentalists.

Subject: Morning Media: Sean Spicer's next (dance?) steps -- Fox Newsers at the White House -- Local coverage may be hurting ACA repeal and replace

By Hadas Gold | 07/27/2017 05:42 AM EDT

With Alex Weprin and Cristiano Lima

SEAN SPICER TO DANCE WITH THE STARS? Maybe! Yesterday Tara Palmeri and I started getting tips that the ABC reality show was interested in Spicer joining their next season. The New York Post scooped us but we soon followed with our own version. We also learned that multiple agencies are fighting to rep Spicer, but that he hasn't signed on with anyone yet. Spicer didn't respond to our request for comment and ABC said they don't comment on casting.

-- Spicer also made the rounds at the "Fake News" media to kick the tires about possible jobs. We know he talked to ABC News, CBS, NBC and Fox. No one would comment about the meetings, but Fox has previously said they talk to "all the major players" and another source said ABC News doesn't seem that interested in hiring him. CNN publicly said last week they weren't interested. Another network source warned that networks would be smart to take a meeting with Spicer because he'd be a big interview get as well.

TOP FOX NEWSERS WERE AT THE WHITE HOUSE YESTERDAY -- Sean Hannity, Kimberly Guilfoyle and former Fox News president Bill Shine dined with the president, first lady and Anthony Scaramucci, Ryan Lizza reported last night. Scaramucci is a former Fox contributor and was on Hannity's show last night. He's also said to be personally close to Shine, who as we all know is very close to Hannity. CNN's Dylan Byers added that Kimberly Guilfoyle was also at the dinner -- she was once in talks to join the White House at one point, though she recently signed a long term contract with the channel.

-- So why was Shine there? The recently ousted Fox News president does have time on his hands since leaving the network in May. Could he be angling for a White House job? Scaramucci has previously floated the idea of a daily administration "television" broadcast at 7 a.m., complete with a desk on the White House lawn, and Shine sure would have the credentials for such a job. Or maybe he could get another position, perhaps a loftier gig like an ambassadorship? Or perhaps as Undersecretary for Public Diplomacy, the position former Fox News chief Roger Ailes was rumored to be in the running for months ago?

Related: Thanks to Scaramucci's financial disclosure,which my colleague Lorraine Woellert obtained yesterday, we learned he made $88,461 as a contributor for Fox Business. (Scaramucci is not happy about that financial disclosure being leaked and late last night said he wants the FBI and DOJ to look into Chief of Staff Reince Priebus for leaking).

Tucker Carlson also made an appearance at 1600 Pennsylvania Ave yesterday. A tipster pinged me on Wednesday afternoon to tell me they spotted Carlson at the White House gates checking in with security at the gate used to enter the West Wing. As I went searching for why,

Vice President Mike Pence tweeted that he had been interviewed by Carlson. A few minutes later, Fox News announced that the Pence interview would air on Wednesday evening and had just been filmed in the Eisenhower Executive Office Building. Sources tell me after his interview in EEOB Carlson made the rounds in the West Wing.

Good morning and welcome to Morning Media! I always want to hear from you -- hgold@politico.com / @Hadas_Gold. **Morning Media** is edited by **Alex Weprin** (@alexweprin / aweprin@politico.com) and produced with writing/reporting help from **Cristiano Lima**. (clima@politico.com / @ludacristiano). Archives. Subscribe.

IS MATT DRUDGE THROWING WARNING SHOTS AT TRUMP? That's what CNN's Oliver Darcy reported yesterday: "Over the past several weeks, Drudge's website has covered the White House with a more critical eye, more frequently drawing attention to news not exactly flattering to the president." Darcy also reports Drudge is at the White House "all the time" but that he's starting to grow "impatient" with the president.

FORMER BREITBART SPOX SAYS THEY'RE NOT FULLY DEFENDING ATTORNEY GENERAL JEFF SESSIONS, Kurt Bardella wrote in an op-ed yesterday. Bardella said he knows from experience what it's like when Breitbart goes to #war over someone or something, and their coverage of Sessions' issues with Trump recently aren't it. While they've been plenty critical of the president for harping on one of his most important cabinet secretaries (and his first Senate endorsement), Bardella says the "full-tilt combat with Breitbart" doesn't look like those few articles. "Substitute Donald Trump with any other political figure, and I guarantee you these relentless, one-sided attacks against Sessions would be met with all-out open warfare, not warnings that 'Sessions could endanger the administration and the split the critical coalition that helped Trump to the presidency.'"

LOCAL MEDIA MAY BE HELPING TO KILL THE REPEAL AND REPLACE OF OBAMACARE. Local media still has a big influence on voters, and the Wesleyan Media Project has been tracking local coverage of the healthcare debate, which they say may be contributing to the backlash some Senators are getting from their constituents. One thing they've found is that coverage of the repeal and replace has focused on the policies, what might substantially change and what would be lost. Drafting the bill behind closed doors caused local coverage to fall dramatically, they found.

-- This all plays into the White House's increasing efforts to connect with media outside of the national bubble. I told you last week how local affiliates from Washington and New York met with the White House to discuss coverage and how they could book more administration people. **Earlier this week the White House invited 19 talk radio hosts -- all from the conservative leaning Salem Media Group -- to broadcast live from the White House,** and made many high-ranking administration officials available for interviews including top White House officials like Seb Gorka and Kellyanne Conway, as well as EPA administrator Scott Pruitt, Education Secretary Betsy Devos, HUD Secretary Ben Carson, Transportation Secretary Elaine Chao, Secretary of Commerce Wilbur Ross, Chief Economic Advisor Gary Cohn, Communications Director Anthony Scaramucci and SBA Administrator Linda McMahon.

POLL: 45% OF REPUBLICAN VOTERS SUPPORT CLOSING 'BIASED OR INACCURATE' OUTLETS: President Donald Trump isn't alone in his disdain for the so-called "fake news media." A new The Economist/YouGov poll found that 45 percent of Republicans support "permitting the courts to shut down news media outlets for publishing or broadcasting stories that are biased or inaccurate," highlighting the ongoing tension between the party and the press. Yet neither the media nor the Republican president came out with favorable views with the population at large, with a plurality of Americans disapproving of the way each one is treating the other. And for prominent outlets -- like The New York Times, the Wall Street Journal, Fox News and MSNBC -- trustworthiness ratings were down slightly across the aboard from two months ago, showing a continued erosion of faith in the media.

SOUNDBITE: "At the Pentagon, the first of the three tweets raised fears that the president was getting ready to announce strikes on North Korea or some other military action." [BuzzFeed]

BEN SHAPIRO, ADAM CAROLLA TO TESTIFY ON CAPITOL HILL for a hearing about free speech on college campuses. Per my colleagues at Morning Education, conservative commentator Shapiro will talk about the concept of "micro-aggressions" which he says have been used to justify violence against speakers who voice views that some find offensive. "All of this destroys free speech, he writes. "But just as importantly, it turns students into snowflakes, craven and pathetic, looking for an excuse to be offended so they can earn points in the intersectional Olympics and then use those points as a club with which to beat opponents."

-- Comedian Carolla will rail against "safe spaces" on campuses. "Instead of fostering the development of young adults, colleges are providing coloring books, play-doh, puppies, and stuffed animals," the testimony says. "It's basically your four-year-old daughter's bedroom where one can shut out the challenges and facts of the outside world. Providing this bubble wrapped type of education does not prepare the next generation for the challenges of life. It prepares them for failure."

NIEMAN HAS AN IMPORTANT REPORT ON MOTHERS IN MEDIA: "If news organizations want to attract and retain millennial journalists, newsrooms must better meet the needs of parents with young children-and create better work-life balance for everyone." Read it here.

REVOLVING DOOR:

-- The San Francisco Chronicle's 98-year-old science editor David Perlman is retiring after nearly seven decades (!)

--Former NBC "Today" anchor Ann Curry will return to TV with a show on PBS, "We'll Meet Again."

TIL: Energy Secretary Rick Perry was duped by a Russian radio prankster duo who spoke with Perry for 22 minutes as they impersonated the prime minister of Ukraine. [Washington Post]

EXTRAS:

-- New York Times' Bret Stephens says the White House Director of Social Media lied about him unmasking the name of a CIA agent, and hasn't corrected it. [New York Times]

-- Viacom has dropped out of the bidding for Food Network and HGTV owner Scripps Networks, leaving Discovery Communications as the only possible suitor. [Reuters]

-- A Breitbart editor said his Twitter account was briefly suspended. [Facebook]

-- "Megyn Kelly Today" will be the name of the former Fox News anchor's morning program on NBC. [Page Six]

-- In op-ed published by his own outlet, Michael Bloomberg blasted Trump's transgender ban for offending "on both moral and practical grounds, in both style and substance. [Bloomberg]

-- Trump may be "failing" as president but he's succeeding as reality television. [BuzzFeed]

-- Cheddar is forging partnerships with local TV offering stations one- to two-minute market updates each day on a taped and live basis. [Poynter]

Subject: BREAKING NEWS: 18 states sue Betsy DeVos over delay of student loan protections

Eighteen states and the District of Columbia have filed suit against Education Secretary Betsy DeVos over her delay of regulations meant to provide new protections for federal student loan borrowers, particularly those at for-profit colleges.

The lawsuit, led by Massachusetts and joined by 18 other Democratic attorneys general, accuses DeVos of illegally delaying the regulations, which were finalized by the Obama administration and had been set to take effect on July 1. The rules made it easier for defrauded student loan borrowers to have their loans forgiven. They also prohibited colleges from requiring students to resolve complaints through arbitration rather than in court.

Subject: Cheney and Pruitt draw attention to $850k EPA grant for Wyoming water protection

THE CASPER STAR TRIBUNE

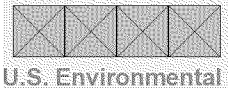
Cheney and Pruitt draw attention to $850k EPA grant for Wyoming water protection

The Casper Star Tribune
Heather Richards
June 24, 2017
http://bit.ly/2t5hpOM

Wyoming will receive nearly a million federal dollars to address water pollution, an award praised by U.S. Rep. Liz Cheney and EPA Administrator Scott Pruitt.

The $850 million grant will be used for seven state projects that include stream restoration and the reduction of pollutants like selenium in rivers to lakes. That type of pollution occurs from runoff, when rain and snowmelt carry contaminants from cities, bacteria or pesticides from ranches and pollutants from mines and drilling activities down to Wyoming's waterways.

Cheney praised Wyoming regulators for their work in a statement Friday.



"Wyoming's waters are a precious natural resource that have tremendous impact on our local economy and every facet of our way of life," Cheney said in a statement Friday. "The Wyoming Department of Environmental Quality deserves to be recognized for crafting effective, efficient and actionable watershed plans worthy of this funding that will help to improve the quality of our impaired waters today and for generations to come." ...

Trump appointee Pruitt said the grant reinforces the idea that states are the best managers of environmental standards.

"Providing funds directly to Wyoming is an excellent example of EPA partnering with states to help address their unique and critical environmental challenges," EPA Administrator Scott Pruitt said in a statement. "EPA is making investments like this grant to help empower states who know best how to protect resources, and grow their economy while solving real environmental problems in local communities."

The Manchester bombing highlights terrorism hypocrisy

Michael Rubin | Washington Examiner

What happened Monday night in Manchester is a tragedy. It's terrorism, and it's evil. There can be neither moral justification of the act nor any mitigating factors for those who indoctrinated, trained, and equipped the terrorist; they are just as guilty. On a broader level, it's essential that policymakers see terrorism as a black-and-white issue. To allow any terrorist group to reap reward from its violence only legitimizes murder.

To reform NATO, use clearer messaging and less bullying

Dalibor Rohac | The Hill

Tomorrow, as part of his trip to Europe and the

Middle East, President Trump will attend the annual NATO summit in Brussels. Since he called the alliance obsolete — and presented German Chancellor Angela Merkel with a "bill" for what Germany supposedly owes the United States — there's no wonder Europeans are queasy. But President Trump's central message is a reasonable one. What matters now is how it's delivered.

Reuters

Losing the House is not a preexisting condition for the Republican Party

Joseph Antos and Peter J. Wallison | Real Clear Politics

Should Republicans be worried that they'll lose control of the House if they repeal Obamacare? Don't bet on it. We've seen this movie before. Last time, it was called Occupy Wall Street, which the media celebrated as a progressive answer to the Tea Party. The public furor over preexisting conditions is predictable, but that doesn't make them an existential threat to the GOP's 2018 chances.

AEI

Hensarling: Deregulation didn't cause the crisis — nor did it even happen.

Peter J. Wallison | AEI event video

The Financial Choice Act is expected to see a vote by the full House of Representatives soon. Years in the making, the bill is a comprehensive response to the Dodd-Frank Act of 2010. "The regulatory burden for the decade prior to the crisis actually increased by almost 20 percent," said House Financial Services Chairman Jeb Hensarling at AEI yesterday. "[Financial] deregulation is actually a myth." (Clip begins at the 0:39 mark.)

Subject: Sources: Biofuel volume proposal could be released as soon as today

By Eric Wolff

06/15/2017 10:16 AM EDT

EPA could release a proposed rule setting the biofuel volume mandates for 2019 as soon as this afternoon, industry sources tell POLITICO.

An ethanol and an oil industry source said the agency will keep the conventional ethanol volumes at 15 billion gallons, and increase the requirement for advanced biofuels to 4.38 billion gallons, up 100 million gallons from 2017.

The release of the proposal could slip to Friday, the sources said.

EPA did not immediately respond to a request for comment.

The mid-June release could make it difficult for EPA to issue the final rule by the deadline of Nov. 30, something Administrator Scott Pruitt has said he wants. EPA sent the proposal to OMB last month.

The oil industry had hoped EPA might lower the volumes from the statutory maximum set for 2017, but government projections for higher gasoline consumption next year made that unlikely.

WHAT'S NEXT: EPA will take take public comment after release of the proposal.

Subject: Senate Democrats ask Interior IG to probe career staff reshuffle

By Esther Whieldon

07/24/2017 03:49 PM EDT

Senate Energy and Natural Resources ranking Democrat Maria Cantwell and seven of her colleagues today asked the Interior Department's inspector general to investigate the agency's recent reassignment of a number of senior executive staff.

Interior Secretary Ryan Zinke in June reassigned about 50 senior executive employees, including Joel Clement, who was moved from a managerial position involving climate change issues to a job collecting royalties from oil and gas companies.

Moving senior executives from the positions in which they may best use their expertise to jobs "where their talents are wasted would constitute a serious act of mismanagement, a gross waste of public funds, and an abuse of authority," the senators said in the letter to Deputy Inspector General Mary Kendall.

The senators acknowledged that Zinke is allowed to shuffle senior executives around. But they argued the law requires for reassignments to be made to best accomplish the agency's mission, promote program continuity and to provide for an executive system that is free from improper political interference.

"Any suggestion that the department is reassigning SES employees to force them to resign, to silence their voices or to punish them for the conscientious performance of their public duties is extremely troubling and calls for the closest examination," the letter said.

The letter was also signed by Senate Finance ranking member Ron Wyden and Sens. Mazie Hirono (D-Hawaii), Martin Heinrich (D-N.M.), Bernie Sanders (I-Vt.), Tammy Duckworth (D-Ill.), Debbie Stabenow (D-Mich.) and Al Franken (D-Minn.)

WHAT'S NEXT: It remains to be seen whether the IG will launch an investigation.

Subject: POLITICO's Morning Score: McSally internal poll shows tie with Ward — Conyers allegations put Pelosi in tight spot — Group opposing tax reform bill targets Murkowski, Capito

By Maggie Severns | 11/27/2017 10:00 AM EDT

With Kevin Robillard, Scott Bland and Daniel Strauss

The following newsletter is an abridged version of Campaign Pro's Morning Score. For an earlier morning read on exponentially more races - and for a more comprehensive aggregation of the day's most important campaign news - sign up for Campaign Pro today. (http://www.politicopro.com/proinfo)

EARLY POLLING DATA - FIRST IN SCORE - McSally internal poll shows tie with Ward: An internal polling memo from Arizona Rep. Martha McSally 's campaign, obtained by Morning Score, has the congresswoman essentially tied with former State Sen. Kelli Ward in the state's GOP Senate primary. The survey has McSally earning 38 percent of the vote to Ward's 36 percent, with 26 percent undecided. Public polling in the race, mostly IVR surveys, has shown Ward with a significant lead over McSally, who has yet to officially launch her campaign. "Contrary to what some public polls suggest, Kelli Ward does not hold a strong position in the Primary race for United States Senate in Arizona. The limitations of these poorly-conducted surveys have created a misleading dialogue about the state of the nomination contest," WPA Intelligence pollsters Chris Wilson and Alex Muir write. **Read the full memo here.**

SEXUAL HARASSMENT FALLOUT - "Conyers allegations put Pelosi in tight spot," by POLITICO's Kyle Cheney and Heather Caygle: "Rep. John Conyers said Sunday he was stepping down from his post as the top Democrat on the Judiciary Committee amid accusations of sexual harassment that have put his party's leaders in a bind. The decision by the Michigan lawmaker - who has held his seat since 1965 and who denies the harassment allegations - followed several days of internal deliberation and pressure from Democratic colleagues, including Minority Leader Nancy Pelosi, who wanted Conyers to leave the high-profile post but didn't want to be seen as forcing him out. Congressional Black Caucus Chairman Cedric Richmond (D-La.) and assistant Democratic leader Jim Clyburn (D-S.C.) reached out to some CBC members over the Thanksgiving recess to take the temperature of the caucus, according to multiple sources. The group is arguably the most powerful bloc within the House Democratic Caucus and is fiercely protective of its members, particularly Conyers, who was a founding member."

- "In an interview Sunday on NBC's 'Meet the Press,' Pelosi seemed to underscore the cautious approach by taking pains to praise Conyers' record and call for 'due process,' even as she said she believed 'he will do the right thing.' She also referred to Conyers as an 'icon' for his lengthy service and work 'to protect women.' ... After criticism on social media of her use of the word 'icon,' Pelosi quickly endorsed Conyers' decision to step aside from the committee post. 'No matter how great an individual's legacy, it is not a license for harassment,' she said in a statement." **Full story.**

- Primary politics note: Conyers has faced contested primaries in each of the last three elections, getting less than 61 percent of the Democratic vote twice. If Conyers does decide to run for reelection, don't sleep on the prospect of him losing this time around despite his "safe" district.

AIR WARS - FIRST IN SCORE - Not One Penny targets Murkowski, Capito in new ads: Not One Penny, a coalition of Democratic groups fighting the GOP plan for tax reform, is out with new television ads pressuring Sens. Shelley Moore Capito of West Virginia and Lisa Murkowski of Alaska to vote against the plan. The ad aimed at Capito notes the plan "cuts access to affordable health care, including coverage for opioid addiction treatment," while the ad encouraging voters to call Murkowski says the "congressional Republican tax plan delivers tax breaks to billionaires, millionaires and wealthy corporations." The ads are part of a seven-figure national ad buy, which also includes spots aimed at Maine Sen. Susan Collins and Nevada Sen. Dean Heller. **Watch the ads here and here. Full story here.**

-American Chemistry Council backs Heitkamp, Barrasso with TV ads: The American Chemistry Council, which began airing ads backing Michigan Democratic Sen. Debbie Stabenow and the GOP's Heller last week, also plans to air ads supporting North Dakota Sen. Heidi Heitkamp and Wyoming Sen. John Barrasso , according to FEC disclosures. Heitkamp faces a tough fight for reelection, while Barrasso may face a GOP primary challenge. The group is spending $571,000 on ads supporting Stabenow, $590,000 on ads supporting Heller, $153,000 on ads supporting Heitkamp and $133,000 on ads backing Barrasso. The 30-second spot ad boosting Heitkamp says "she fights to provide a strong safety net for our agriculture industry while working to lessen regulations for our farmers and small businesses." **Watch the ad here.**

CASH CRISIS - NRSC raises $2.1M, spends $2.7M in October: The NRSC spent $2.7 million and raised just $2.1 million in October, according to FEC records, the fourth month in a row the group spent more than it brought in. The committee has about $14.3 million on hand, but still has $10.3 million in debt. Its counterpart, the DSCC, raised $4.1 million, spent $2.4 million and has $17.5 million on hand. The DSCC has about $8 million in debt, which includes the mortgage on its Capitol Hill offices. **Full report here.**

Days until the 2018 election: 344.

Join the fun at participating businesses during Women Rule Week **(Nov. 27 - Dec. 1)** for exclusive deals and tweet 5x using #WomenRule for a chance to win two free tickets to the

Summit on Dec. 5!

UH OH - "The time to hack-proof the 2018 election is expiring - and Congress is way behind," by POLITICO's Martin Matishak: "Lawmakers are scrambling to push something - anything - through Congress that would help secure the nation's voting systems ahead of the 2018 elections. But it might already be too late for some critical targets. By this point during the 2016 election cycle, Russian hackers had already been in the Democratic National Committee's networks for at least three months. ... Voters in Texas and Illinois will take to the polls in the country's first primaries in just over three months - a narrow timeline for implementing software patches, let alone finding the funds to overhaul creaky IT systems, swap out aging voting machines or implement state-of-the-art digital audits." **Full story here.**

ICYMI - "Moore communications director resigns": "Embattled Alabama GOP Senate nominee Roy Moore has lost his campaign communications director with only three weeks to go before the Dec. 12 special election, Moore's campaign announced. ... The statement did not include a reason for Rogers' departure." **Full story here.**

- "Pro-Jones super PAC touts Democrat's Christian values and support for gun rights," by POLITICO's Daniel Strauss: "A new ad by the pro-Doug Jones super PAC Highway 31 argues that the Democratic Senate nominee in Alabama would be led by his Christian convictions and is a strong defender of gun rights. 'He's the tough prosecutor who brought the [1996 Atlanta] Olympics bomber, Eric Rudolph, to justice,' the narrator in the ad says." **Full story here.**

- Trump weighed in on Jones over the weekend: "The last thing we need in Alabama and the U.S. Senate is a Schumer/Pelosi puppet who is WEAK on Crime, WEAK on the Border, Bad for our Military and our great Vets, Bad for our 2nd Amendment, AND WANTS TO RAISES TAXES TO THE SKY. Jones would be a disaster!" Trump wrote on Twitter. **More from POLITICO's Matthew Nussbaum here.**

FLIPPING 24 SEATS - March On's Fight Back PAC announced a new fundraising campaign for 2018 called $24 for 24. Per a press release, "the campaign is centered around impeachment and the concern that the Republican Congress would not initiate impeachment proceedings no matter what Special Counsel Robert Mueller reports. The only way we can be sure any potential allegations against Donald Trump and his cronies are handled correctly is to flip the 24 Congressional seats needed to take back the majority in Congress. ... Andi Pringle, Executive Director of March On's Fight Back PAC, said, 'Flipping Congress is no easy task. Whether you're a committed activist or not, *$24 for 24* is a way everyone can participate in the vitally important work of reclaiming our country from the extreme Right. That is the only way we'll be able to turn the tide on issues of importance to our community, whether that's women's reproductive health, climate change protections or impeachment.'"

FLORIDA MAN - "John Morgan: I'm leaving Democratic party, Nelson should run for governor," BY POLITICO Florida's Matt Dixon: "John Morgan tossed a bomb Friday into the 2018 political landscape, saying in a post-Thanksgiving message he is leaving the Democratic Party, and that Democratic Sen. Bill Nelson should not run for re-election, but rather seek the governor's mansion so he can leave a 'legacy.' ... Morgan did not close the door on the

idea of running for governor himself - a notion supported by many in his party - but said in his message, if he did, he would do so as an independent." **Full story here . Read Morgan's Facebook post here.**

QUOTE OF THE DAY: "I'm not aware of a single senator of either party who was elected for supporting leadership, and I know there hasn't been a candidate elected by opposing Mitch McConnell," said GOP strategist Josh Holmes, a former McConnell chief of staff, downplaying the notion that candidates stand to gain by avoiding McConnell this year in POLITICO.

Driving the Day

BULLETIN at 6:16 a.m.: "PARIS (AP) - French president thanks the US for coming to its aid 100 years ago during WWI, saying 'nothing will ever separate us.'"

Good Friday morning. QUITE THE MOMENT. NYT's Maggie Haberman, who is in Paris with the president, was tweeting that President Donald Trump was pulling up to the viewing stand at the Bastille Day parade as Trump was tweeting about the progress -- or lack thereof -- on repealing and replacing the health care law in the Senate.

-- WHAT THE PRESIDENT SAID: at 3:57 a.m.: "Republicans Senators are working hard to get their failed ObamaCare replacement approved. I will be at my desk, pen in hand!" ... **at 4:05 a.m.:** "So impt Rep Senators, under leadership of @SenateMajLdr McConnell get healthcare plan approved. After 7yrs of O'Care disaster, must happen!" ... **at 4:07 a.m.:** "After all of these years of suffering thru ObamaCare, Republican Senators must come through as they have promised!" ... **at 4:09 a.m.:** ".@VP Mike Pence is working hard on HealthCare and getting our wonderful Republican Senators to do what is right for the people."

-- ONE THOUGHT, before we quickly hand it over to Burgess Everett and Jen Haberkorn: When we were up in the Capitol yesterday, an influential conservative House Republican was skeptical this would sail through his chamber if it passes the Senate. So we'd suggest, Mr. President, that you don't wait at your "desk, pen in hand" for a bit. We're not saying it will not pass the House, but it's not yet even on the floor of the Senate.

WHERE HEALTH CARE STANDS ... "Senate Republicans one vote away from

Obamacare repeal failure," by Burgess Everett and Jen Haberkorn: "Senate Republican leaders are praying that their fragile whip count holds over the weekend, as just one more 'no' vote would doom the party's Obamacare repeal effort from even coming up for debate. Two GOP senators, Susan Collins of Maine and Rand Paul of Kentucky, said Thursday afternoon they will oppose a procedural vote next week to bring the bill to the floor.

"GOP leaders are putting immense pressure on about half a dozen other Republican senators not to join them and topple the entire effort. Another 'no' is enough to kill the bill, and would also likely lead to mass defections. ... Undecided Republicans include Lee and Sens. Jeff Flake of Arizona, Rob Portman of Ohio, John Hoeven of North Dakota, Dean Heller of Nevada, Lisa Murkowski of Alaska and Shelley Moore Capito of West Virginia." http://politi.co/2sWmnd2

-- JUST LIKE WE TOLD YOU YESTERDAY, the procedural vote to allow debate on the GOP health care is the real game. In other words: if Republicans are able to begin debate on the bill, most people think it will pass. Senate Majority Leader Mitch McConnell has been pressing Republicans to get on board and amend the package on the floor. If the bill reaches the floor, McConnell is expected to offer a manager's amendment, which could change parts of the bill in one fell swoop.

WASHINGTON POST'S THE FIX has a cool whip list page http://wapo.st/2uq37ZA

SHOW ME THE MONEY -- THE 'POLAR PAYOFF' -- "GOP Health Bill Steers Cash to the Home State of a Reluctant Senator," by Bloomberg's Anna Edney, Hannah Recht and Laura Litvan: "Call it the Polar Payoff. Changes made to the Republican legislation to repeal large parts of Obamacare would send hundreds of millions of extra federal dollars to Alaska, whose Republican Senator Lisa Murkowski has been holding off from giving her much-needed vote to the bill. Under formulas in the revised legislation, only Alaska appears to qualify for the extra money. The money comes from the legislation's $182 billion in funding meant to help stabilize insurance markets and help states provide coverage. Under the formulas, states -- in this case just Alaska -- with disproportionately higher premiums would get extra funds from that account." https://bloom.bg/2tStd4D

TOP TWEETS -- @jmartNYT: "Wow, Trump on AF 1: 'What I'd like to do is a comprehensive immigration plan. But our country&political forces are not ready yet.'" ... **@NBCNews**: "President Trump tells the French first lady that she's 'in such good shape'" http://bit.ly/2tPrXRb

ARTICLE OF THE DAY -- "Trump's legal team faces tensions -- and a client who often takes his own counsel," by WaPo's Phil Rucker, Ashley Parker and Devlin Barrett: "The challenge for President Trump's attorneys has become, at its core, managing the unmanageable - their client. He won't follow instructions. After one meeting in which they urged Trump to steer clear of a certain topic, he sent a tweet about that very theme before they arrived back at their office. He won't

compartmentalize. ... Compounding the challenges have been tensions between Trump's and Kushner's legal teams in a frenzied, siege-like environment. Senior White House officials are increasingly reluctant to discuss the issue internally or publicly and worry about overhearing sensitive conversations, for fear of legal exposure. ... Trump's eldest child, Donald Trump Jr., hired his own criminal defense attorney this week ... [and] also is considering hiring his own outside public relations team. ...

"Another question is who will pay the legal fees for the president and administration officials involved in the Russia inquiries. Some in Trump's orbit are pushing the [RNC] to bear the costs ... Although the RNC does have a legal defense fund, it well predates the Russia investigations and is intended to be used for legal challenges facing the Republican Party, such as a potential election recount. The RNC has not made a decision, in part because the committee is still researching whether the money could legally be used to help pay legal costs related to Russia. But many within the organization are resisting the effort, thinking it would be more appropriate to create a separate legal defense fund for the case." http://wapo.st/2uYhbGX

PROPUBLICA'S JUSTIN ELLIOTT: "Trump Lawyer Marc Kasowitz Threatens Stranger in Emails: 'Watch Your Back , Bitch'": "Kasowitz, President Trump's personal attorney on the Russia case, threatened a stranger in a string of profanity-laden emails Wednesday night. The man, a retired public relations professional in the western United States who asked not to be identified, read ProPublica's story this week on Kasowitz and sent the lawyer an email with the subject line: 'Resign Now.' Kasowitz replied with series of angry messages sent between 9:30 p.m. and 10 p.m. Eastern time. One read: 'I'm on you now. You are f***ing with me now Let's see who you are Watch your back , bitch.' In another email, Kasowitz wrote: 'Call me. Don't be afraid, you piece of shit. Stand up. If you don't call, you're just afraid.' And later: 'I already know where you live, I'm on you. You might as well call me. You will see me. I promise. Bro.'" http://bit.ly/2tSEult

--KASOWITZ LATER APOLOGIZED: A spokesman sent ProPublica this statement: "Mr. Kasowitz, who is tied up with client matters, said he intends to apologize to the writer of the email referenced in today's ProPublica story. While no excuse, the email came at the end of a very long day that at 10 p.m. was not yet over. 'The person sending that email is entitled to his opinion and I should not have responded in that inappropriate manner,' Mr. Kasowitz said. 'I intend to send him an email stating just that. This is one of those times where one wishes he could reverse the clock, but of course I can't.'"

JARED WATCH -- "Kushner pushed for more aggressive defense of Trump Jr. meeting," by Tara Palmeri: "Jared Kushner has been pressing other White House aides to more vigorously defend the meeting between Donald Trump Jr. and a Kremlin-linked lawyer that Kushner also attended, but has faced resistance from some of Trump's top press aides, according to six sources familiar with the matter. Four White House officials and two outside advisers say Kushner wants the White House to more aggressively push out surrogates and talking points to change the narrative around the latest twist in

the Russia scandal. ...

"A source close to Kushner ... said that while he doesn't have an exact plan for an overall Russia response, he was angry that there wasn't a more robust effort from the communications team. Kushner wanted them to complain about chyrons on cable news, call reporters to update stories with White House statements, and unleash surrogates immediately. He was angry that there were no talking points offered to surrogates, the source said. One senior administration official suggested that two aides from the communications shop be dedicated to updating chyrons." http://politi.co/2ulbPI0

****** **A message from BMA: HEALTH CARE POLICY ALERT:** We can all agree that high need, high cost patients deserve the right care. And with Medicare Advantage, seniors and people with disabilities are getting the high-value care they need through flexible benefits and specialized care. PERFECT TIME FOR AN IVANKA/JARED GETAWAY! -- CLICKERS - RECODE: "Photos: Jeff Bezos, Tim Cook and Ivanka Trump are hanging out this week at an exclusive mogul retreat" - *12 pix* http://bit.ly/2uYku0J

--THE DAILY MAIL -- "Ivanka Trump beams as she networks with new billionaire friends at mogul summit while Jared hides from the cameras - and Rupert Murdoch attends without his vacationing wife" - *63 pix on one page* http://dailym.ai/2ugbx5v

NOT SO FAST -- "Co-founder of firm behind Trump-Russia dossier will not testify before Senate next week," by Josh Dawsey and Kyle Cheney: "The co-founder of a political and corporate intelligence firm behind an explosive dossier alleging Russian intelligence influence over President Donald Trump will not testify next week before the Senate Judiciary Committee, according to two sources familiar with his plans. The committee on Wednesday announced a July 19 hearing that listed Fusion GPS co-founder Glenn Simpson, a former Wall Street Journal investigative reporter, as a witness. ... But the request for Simpson to appear was voluntary, and it's unclear whether the committee will seek to compel his testimony." http://politi.co/2uYsxe5

COMING ATTRACTIONS -- "House Dems plot to force Republicans to cast Russia votes," by Austin Wright: "House Minority Leader Nancy Pelosi and other senior Democrats on Friday will announce a new, coordinated strategy to force Republicans to cast votes on issues related to President Donald Trump's and his campaign aides' alleged ties to Russia. Pelosi and senior Democrats on several key House committees will hold a news conference to announce the strategy, which is to introduce a series of so-called resolutions of inquiry, according to a Democratic leadership aide. Resolutions of inquiry are a rarely used tactic for forcing House votes. The resolutions are introduced in the House and request information from the executive branch." http://politi.co/2vjqUqJ

CLINTON AND BUSH TALK ABOUT THE PRESIDENCY -- Via Reuters in Dallas: "'He (Clinton) was humble in victory, which is very important in dealing with other people,' Bush said at the event to mark a graduation at the Presidential Leadership Scholars program, a partnership among the Bush, Clinton, Lyndon Johnson and George H.W. Bush presidential centers. Clinton said: 'If you want to be president, realize it's about the people, not about you. 'You want to be able to say 'things were better off when I quit, kid's had a better future, things were coming together.' You don't want to say, 'God, look at all the people I beat.'" http://reut.rs/2t9L7Tc

BREAKING EARLY THIS MORNING -- NYT'S ISABEL KERSHNER: "In an extraordinarily brazen assault, three men armed with guns and knives killed two Israeli police officers early Friday in the vicinity of what Jews call the Temple Mount, known to Muslims as the Noble Sanctuary, Jerusalem's holiest site for both faiths and an emotional and volatile focal point of the Israeli-Arab conflict. ...

"Initial police reports said that the three assailants, assumed to be Palestinians, fled into the compound of Al Aqsa Mosque after the attack and were killed by police officers. The police announced that they had evacuated the compound of worshipers and closed it, and helicopters circled above the area after the attack." http://nyti.ms/2tPJB7v

THE JUICE ...

-- WHAT TRUMP AND MACRON ATE LAST NIGHT -- @markknoller: "What was for dinner at the Jules Verne tonight? Looks like the six course selection:" "Selection of pate ... Tomato, Eggplant, Zucchini ... Dover sole, spinach, Hollandaise ... Filet of beef, brioche, souffle potato, truffle sauce ... Warm strawberry w/ yogurt sorbet ... Hot Chocolate souffle with chocolate ice cream".

-- SPOTTED LAST NIGHT AT CAFE MILANO: At three separate tables: Kellyanne Conway dining with Linda McMahon ... Wilbur Ross with his wife Hilary and L.A. power lawyer Tom Gerardi and Erika Jayne, who's on the "Real Housewives of Beverly Hills" ... Bret Baier and Tripp Donnelly

-- SPOTTED: MICHAEL FLYNN waiting for the 10:20 p.m. American flight from DCA to Providence, Rhode Island. Former HHS Secretary Tom Ridge was also on the flight, but our tipster says the two didn't make eye contact as Flynn passed Ridge and boarded the flight.

ISAAC DOVERE talks with Jake and Anna about how Trump is changing the Washington game, their takeaways from the past year working on Playbook and their upcoming book in the latest "Off Message" podcast. http://politi.co/2tPNoS5 ... ***Subscribe and listen*** http://apple.co/2e2dLvm

-- AND THERE'S MORE: Jake and Anna talk with our producer Zach Montellaro about what it's like to work on Playbook in a bonus audio briefing. Plus, a special message from Daniel. http://bit.ly/2vjMKuf

Playbook Reads

PHOTO DU JOUR: President Donald Trump, first lady Melania Trump, French President Emmanuel Macron his wife Brigitte Macron, sit for dinner at the Jules Verne Restaurant on the Eiffel Tower in Paris, Thursday, July 13, 2017. | Carolyn Kaster/AP Photo

SNEAK PEEK: NEW YORKER COVER - BARRY BLITT illustrated next week's magazine's cover, titled "Grounded," which shows President Trump twisting the ear of Don Jr. as they walk down Air Force One (with Jared making an appearance too). Blitt: "Tolstoy said that 'happy families are all alike, but every unhappy family is unhappy in its own way.' Somehow this seems to apply to the Trumps, particularly lately." http://bit.ly/2ugoyvP

IN BEDMINSTER -- "Eric Trump: President Donald Trump's visit to U.S. Women's Open is 'TBD,'" by NJ Advance Media's Matt Stypulkoski: "[D]espite saying he did not have time to speak with reporters, he did answer a brief questions about the golf course, the tournament and the possibility of a visit from the elder Trump before being whisked away by his staff. So will the president pay a visit? That's still 'TBD,' Eric Trump said. ... Back in May, Eric Trump - who serves as an executive vice president within the Trump Organization - promised that this year's U.S. Women's Open will be the 'best tournament [the USGA] has ever had.' And as of Thursday afternoon, he believed Trump National was living up to his word. 'The week's going great,' Eric Trump said. 'The course is beautiful. People are happy.'" http://bit.ly/2tSqvMu

WILD STORY -- "'Private' video of Virgin Islands Democratic delegate posted online," by John Bresnahan and Alex Isenstadt: "A 'private' videotape of the Virgin Islands' delegate to Congress, Democratic Rep. Stacey Plaskett, which showed her husband naked and wearing makeup, was posted online Wednesday night but later removed, the freshman lawmaker said in a statement Thursday. A topless 'selfie' of Plaskett also was being circulated. Plaskett said in the statement that her computer had been hacked and someone copied personal 'photographs and a private family video' of her and her husband, Jonathan Buckney-Small. ... One of the couple's children makes an appearance in the video as well." http://politi.co/2upM9L8

-- DOJ PRESS RELEASE: "Two Former Employees of House Member Indicted On Federal Charges in Cyberstalking Case": "Juan R. McCullum, 35, of Washington, D.C., was indicted by a grand jury on two counts of cyberstalking, and a co-worker, Dorene Browne-Louis, 45, of Upper Marlboro, Md., was indicted on two counts of obstruction of justice. ... According to the indictment, McCullum worked from April 2015 until June 2016 in the House member's legislative office in Washington, D.C. Browne-Louis worked in the same office from January 2015 until April 2016. The indictment

alleges that, during the course of his employment, McCullum offered in March 2016 to assist the House member in repairing the member's malfunctioning, password-protected cellular iPhone by taking the device to a local Apple store. ...

"The iPhone contained the private, nude images and videos. As alleged in the indictment, in July 2016, after McCullum left the House member's staff, he engaged in a course of conduct that included creating a Hotmail account and a Facebook social media account, using a fictitious name, to distribute and post the private images and videos. Further, according to the indictment, he encouraged others on social media to redistribute the images and videos in the member's congressional district." http://bit.ly/2upLuJo

THE LATEST ON THE TRAVEL BAN -- "New directive may expand Trump travel ban," by Nahal Toosi and Ted Hesson: "President Donald Trump's travel ban may soon extend to many more countries under new visa procedures described in a State Department cable to consulates. The new consular guidance, which the State Department sent out Wednesday, follows through on Trump's March 6 executive order, which called for a worldwide review of visa security measures by the Department of Homeland Security. It's unclear whether the cable's strict vetting procedures will eventually supplant the administration's ban on travel from six majority-Muslim countries ... or whether even more restrictive vetting will be devised for those countries. ... The tighter standards for granting visas will be implemented over a 50-day period, according to the cable. If nations do not comply after that time, 'designated categories' of travelers from those countries could be banned from the U.S., the cable said." http://politi.co/2upTWIX

GARY D. COHN and H. R. McMASTER in the NYT, "The Trump Vision for America Abroad": "Perhaps most important, President Trump affirmed on this trip that America First is grounded in American values - values that not only strengthen America but also drive progress throughout the world. America champions the dignity of every person, affirms the equality of women, celebrates innovation, protects freedom of speech and of religion, and supports free and fair markets. ... America First is rooted in confidence that our values are worth defending and promoting. This is a time of great challenge for our friends and allies around the globe - but it is also a moment of extraordinary opportunity. The American delegation returned from the trip with tremendous optimism about the future and what the United States, our allies and our partners can achieve together." http://nyti.ms/2uYvZFI

****** **A message from BMA: MEDICARE ADVANTAGE TAILORED CARE MEETS THE NEED OF HIGH COST, HIGH NEED CARE SENIORS:** 18.5 million seniors and people with disabilities choose Medicare Advantage for one reason: it gives them the affordable, robust, and individualized health care they need. And with health needs in this country becoming more complex, it's clear that innovative, holistic solutions are required.

Under Medicare Advantage, Special Needs Plans (SNPs) specializes care for the health

care system's fastest growing and most costly and complex care beneficiaries - frail, disabled, and chronically-ill Medicare beneficiaries. SNPs tailor benefits, provider networks, and prescription drug coverage to best meet the needs of the beneficiaries they serve. In addition to providing Traditional Medicare benefits, SNPs also provide reduced cost sharing and enhanced benefits related social services, wellness and home care. SNPs are designed to address complex conditions by providing better access to specialized care for those who need it most. Learn more: http://www.bettermedicarealliance.org/special-needs-plans ******

FUN READ - NYT Business Day cover, "At Goldman, He's David Solomon. At the Club, He Goes by D.J. D-Sol," by Kate Kelly: "On a sunny afternoon in the Bahamas this month, dozens of beachgoers mingled and danced to a soundtrack mixed by a man using a Pioneer sound system on a platform at the local tiki bar. Nothing was unusual about this island scene - except, perhaps, the disc jockey: David M. Solomon, the co-president of Goldman Sachs, possibly the most powerful investment bank in the world, was the man at the controls. 'Great fun this weekend spinning at Nipper's in Great Guana Cay,' Mr. Solomon, 55, wrote in a recent Instagram post accompanying video of the performance under his stage name, D.J. D-Sol. ...

"Mr. Solomon's love of spinning music suggests a youthful, unguarded side that is rare in the wealthy, button-down world of high finance. In recent years, he has performed regularly as a D.J., according to associates, mixing and tweaking electronic dance music for a live audience. ... Mr. Solomon's hobby has become a more or less monthly gig, with recent stops in New York, Miami and the Bahamas, all noted on the Instagram page. ... Shortly after The New York Times called, the Instagram page was made private." http://nyti.ms/2t9lFgC

MEDIAWATCH -- "Leaked Documents Suggest Secretive Billionaire Trump Donors Are Milo's Patrons," by BuzzFeed's Joseph Bernstein: "Leaked documents, including a promissory note and emails, as well as conversations with several people familiar with the matter, strongly imply that the Mercers funded [Milo] Yiannopoulos following his resignation from Breitbart News after video surfaced in which he appeared to condone pedophilia. Together, they suggest that the financiers of the new conservative politics aren't simply interested in protecting their money, but in winning a brutal new culture war waged largely online." http://bzfd.it/2uYsVcH

-- "Trump's off-the-record on-the-record toggle vexes reporters," by Hadas Gold: "President Donald Trump has not held a wide-ranging news conference since February, instead choosing to keep his media interactions limited to handpicked interviews and short, four-question news conferences with foreign leaders. But ... as he flew from Washington to Paris, Trump sat with reporters and held a roughly hourlong conversation. The reporters on the plane had been told it was off the record, and that's how it was conveyed to the larger White House press pool.

"But during a photo spray with French President Emanuel Macron on Thursday, New York Times reporter Maggie Haberman asked a question which had apparently been

asked during the flight. 'POTUS asked your pooler why she didn't use what he has said last night. Your pooler reminded him last night was off the record. POTUS asked if I had heard him say it could be on-record; your pooler replied truthfully no (co-poolers also were not under impression it was on-record, since [White House deputy press secretary] Sarah Sanders had declared it off record),' Haberman wrote in her pool report. ... A couple hours after Trump asked for the conversation to be put on-record, the White House released some excerpts. But they did not include two portions the pool had requested, which Haberman later provided separately to the email list." http://politi.co/2t9V03h

-- NYT: "Excerpts From Trump's Conversation With Journalists on Air Force One": ON CHINA AND NORTH KOREA: "A big thing we have with China was, if they could help us with North Korea, that would be great. ... They have an 8,000 year culture. So when they see 1776 - to them, that's like a modern building. The White House was started - was essentially built in 1799. To us, that's really old. To them, that's like a super modern building, right?"

-- COMPARES HEALTHCARE TO MIDEAST PEACE: "We have a thing called healthcare. I'm sure you haven't been reading about it too much. It is one of the -- I'd say the only thing more difficult than peace between Israel and the Palestinians is healthcare."

-- THE 'SOLAR WALL': "Q: 'You were joking about solar, right?'": **TRUMP:** "No, not joking, no. There is a chance that we can do a solar wall. We have major companies looking at that. Look, there's no better place for solar than the Mexico border -- the southern border. And there is a very good chance we can do a solar wall, which would actually look good. ... One of the things with the wall is you need transparency. You have to be able to see through it."

--LENGTH OF THE BORDER WALL: "[I]t's a 2,000 mile border, but you don't need 2,000 miles of wall because you have a lot of natural barriers. You have mountains. You have some rivers that are violent and vicious. You have some areas that are so far away that you don't really have people crossing. So you don't need that. But you'll need anywhere from 700 to 900 miles."

-- HIS MEETING WITH PUTIN: "What I said, I asked him, were you involved? He said, very strongly -- said to him a second time -- totally different -- were you involved? Because we can't let that happen. ... I told him. I said, look, we can't -- we can't have -- now, he said absolutely not twice. What do you do? End up in a fistfight with somebody, okay?"

-- INVITING PUTIN TO 1600 PENN: "Q: 'Do you think you'll invite Putin to the White House?'" **TRUMP:** "I would say yes, yeah. At the right time. I don't think this is the right time, but the answer is yes I would. Look, it's very easy for me to say absolutely, I won't. That's the easy thing for me to do, but that's the stupid thing to do. Let's be the smart people not the stupid people. ... It would be the easiest thing for me to say to Maggie

and all of you, I will never speak to him, and everybody would love me. But I have to do what's right." ***The rest of the excerpts*** http://nyti.ms/2tSltiZ

Climate Change
How Climate Change Can Get You Sued
The climate is changing and are so are the legal risks it will pose.

Mining
Hardrock Miners Want to Trade Royalties for Faster Permits
Hardrock mining companies are considering breaking with almost 150 years of history, saying they're willing to start paying federal royalties on the minerals they extract in exchange for faster environmental permitting.

News

Air Pollution
China's Air Pollution Crackdown Could Close 176K Businesses
Up to 176,000 businesses in the Beijing, Tianjin and Hebei province could be forced to shut down because of air pollution violations if they do not address the problems by the end of September, the Chinese government says.

Biofuels
Trump Is Selling Out the Midwest, Biofuel Industry Says
As a presidential candidate, Donald Trump spent a lot of time currying the favor of the ethanol industry, barnstorming its rural Midwest base and repeatedly expressing his support for biofuels made from corn and soybeans. He was rewarded in November: Of the 184 counties with an ethanol plant in the U.S., 95 percent voted for Trump, according to data compiled by the Renewable Fuels Association. As president, Trump has continued to pledge that he'll protect the Renewable Fuel Standard, ...

Brownfields

Minnesota Brownfields Get $4.6 Million in Redevelopment Funds

A Minneapolis industrial site polluted with petroleum and other contaminants will receive the largest chunk of $4.6 million in grants from a Minnesota agency seeking to clean up and redevelop non-Superfund sites.

Chemical Safety Board

Causes of ExxonMobil Explosion Detailed in Coming Report

The cause of a November 2016 explosion at an ExxonMobil refinery in Baton Rouge, La. will be revealed in a U.S. Chemical Safety Board report to be released in the next month, according to Vanessa Sutherland, the board's chair.

Chemicals

Products With Flame Retardants in Foam Face San Francisco Ban

Upholstered furniture and children's products treated with chemical retardants could be gone from San Francisco stores if a new local ordinance passes.

Climate Change

Children's Climate Lawsuit Paused Pending Ninth Circuit Review

A novel lawsuit by a group of young people seeking to force the federal government to act on climate change may be in jeopardy after a federal appeals court stepped in to halt the case.

Coal Mining

Environmental Group Widens Suit Over Secrecy on Coal Leasing

An environmental group is widening its legal case against the Trump administration over its allegation that the administration kept secret its bid to reopen the federal coal leasing program.

Coal Mining

Interior's Reclamation Order Open to Legal Challenge

An Oklahoma coal mining company can move forward with its legal challenge to an Interior Department decision without first exhausting all its mandatory remedies, a federal court ruled.

Emissions Trading

Now California Needs to Cap Costs While it Caps Carbon

Now that California has extended its carbon dioxide trading program through 2030 businesses are waiting to see how state regulators plan to keep compliance costs down.

Energy

Petronas Deals Fresh Blow as World Exits Canada's Energy Patch

Petroliam Nasional Bhd.'s decision to back out of a giant gas-export project on Canada's Pacific Coast is the latest hit to the country's energy sector—and to Prime Minister Justin Trudeau's plan of balancing energy exports and climate action.

Forests

Brazil Directive Could Fuel Land Grabbing, Deforestation in Amazon

A new government directive will paralyze the creation of new indigenous reserves in Brazil and fuel land-grabbing and deforestation, especially in the Amazon rainforest, environmental and Indian rights groups say.

Import Policy

Brazil Postpones Decision on Imposing Tariffs on Imported Ethanol

Brazil postponed a decision on whether to impose tariffs on ethanol imports, with the country's Chamber of Foreign Trade (Camex) choosing to discuss the matter in 30 days, a spokeswoman at the Ministry of Development, Industry, and Foreign Trade told Bloomberg BNA July 25.

Liable Parties

City's 'Disregard' of Hazmat Site Leads to Superfund Hit

The City of Fairbanks, Alaska, knew about contamination at a former dry cleaning site as early as 1999 and must share cleanup costs for failing to correct it, the District of Alaska ruled July 25 (Gavora, Inc. v. City of Fairbanks, 2017 BL 256894, D. Alaska, No.15-cv-00015, 7/25/17).

Motor Vehicles

Daimler Vows to Fight for Diesel's Survival Amid Disruption

Daimler AG is conducting a thorough investigation into allegations of diesel cheating as the German automaker seeks to burnish the technology's battered reputation amid an onslaught of negative news for an industry reeling from scandals.

Subject: BREAKING NEWS: Trump delays moving U.S. embassy in Israel to Jerusalem

President Donald Trump on Thursday signed a waiver that delays moving the American embassy in Israel from Tel Aviv to Jerusalem - kicking the can down the road in the hopes that the delay will give him momentum to broker peace in the Middle East.

On the campaign trail, Trump vowed to move the embassy to Jerusalem - a priority for the Republican evangelical base as well as many of his Jewish supporters - on Day One of his administration. A senior administration official said on Thursday that Trump is still committed to moving the embassy down the line, but that he could not squander what he sees as a "hopeful moment for peace."

Press Secretary Sean Spicer reiterated in a statement that the president was still committed in his support for Israel and for the eventual embassy move. "The question is not if that move happens, but only when," Spicer stated.

Subject: Morning Media, presented by the National Confectioners Association: Scenes from a press freedom fete — Hannity 'not discussing' Seth Rich conspiracy theory 'at this time' — Manchester coverage

By Joe Pompeo | 05/24/2017 06:16 AM EDT

With Cristiano Lima and Alex Weprin

LOTS OF MEDIA HEAVYWEIGHTS AT LAST NIGHT'S REPORTERS COMMITTEE DINNER - And as you can imagine, the Fourth Estate's fraught relationship with our current administration was heavy in the air at fancy Manhattan hotel The Pierre. "I am honored ... more than anything to be a journalist in these times," said Washington Post executive editor Marty Baron, bringing the curtain down with his closing remarks, which prompted a standing ovation. The co-writers of "Spotlight" were on-hand to present Baron with the evening's fourth and final Freedom of the Press Award. The other recipients were First Amendment law practice Davis Wright Tremaine; ProPublica executive chairman Paul Steiger; and former AP executive editor Kathleen Carroll. Steiger: "Publishing the secrets threatens the secret-keepers. It protects the public interest." Carroll: "I just can't wait to see what *holy sh-t* stories break tomorrow."

Let's see, what else? Atlantic editor in chief Jeffrey Goldberg gave a tribute to his friend, the late Gwen Ifill, who was originally supposed to be one of this year's honorees. CNN's Wolf Blitzer said a few words, including the following about the president's attacks on the press: "We must fight this, and we must fight this hard." Also, who knew that New York Times deputy general counsel David McCraw was such a comedian? (One of his zingers: "The Times vs. Sullivan," he said, referring to the landmark 1964 Supreme Court case, "doesn't just protect The New York Times. Breitbart needs it as much as we do." Punchline: "In fact, they need it more!") Charlie Gibson filled in as host for his ABC colleague David Muir, who'd made an unexpected trip to the U.K. to cover the aftermath of Monday night's Manchester bombing.

News: Washington Post owner and Amazon founder Jeff Bezos donated $1 million to the Reporters Committee, the largest gift in the organization's 47-year history.

Spotted: Sally Quinn, Dean Baquet, Arthur Gregg Sulzberger, Bill Keller, Lydia Polgreen, Ben Smith, Margaret Sullivan, Laura Poitras, Mark Whitaker, Steve Adler, Stephen Engelberg, Tim O'Brien and many more.

HANNITY IS BACKING OFF HIS SETH RICH CRUSADE (SORT OF) - Following Fox News Channel's retraction of a controversial story about the DNC staffer's unsolved murder, the 10 p.m. anchor said on his show last night: "Out of respect for the family's wishes for now, I am not discussing this matter at this time." Hannity has perhaps been the media's biggest booster of conspiratorial claims that Rich was killed because he was allegedly the person who slipped thousands of private DNC emails to Wikileaks. Speaking on his radio show earlier in the day, Hannity had initially refused to stand down. But the host said last night he'd been convinced to back off from his coverage after speaking directly with Rich's brother. "My heart, my soul, my prayer goes out to [the family] during this very difficult time." Cristiano Lima has more.

FNC's full statement: "On May 16, a story was posted on the Fox News website on the investigation into the 2016 murder of DNC Staffer Seth Rich. The article was not initially subjected to the high degree of editorial scrutiny we require for all our reporting. Upon appropriate review, the article was found not to meet those standards and has since been removed. We will continue to investigate this story and will provide updates as warranted." (For what it's worth, Washington's local Fox affiliate told us they are not retracting their similar story, but rather standing by a clarification that was added to it last week.)

Margaret Sullivan: "The Seth Rich lie has become the new Comet Ping Pong -- another Washington-based conspiracy theory that ended in January with a gunman walking into a family-friendly pizza joint and firing shots as he 'self-investigated' a supposed child-molestation plot involving Hillary Clinton. Crazy, baseless and dangerous."

POLL: VOTERS SPLIT ON TRUMP'S MEDIA TREATMENT, by (POLITICO polling guru) Steven Shepard - A new POLITICO/Morning Consult poll out this morning finds voters evenly divided on whether President Donald Trump is getting a fair shake from the news media - 43% say he is being treated fairly, compared to 42% who say he's being treated unfairly. It splits, predictably, along party lines: 75% of Democratic voters say the media are treating him fairly, but 76% of Republicans say he's getting the shaft.

Also in the poll: 35% of voters say they are checking the national news (whether online, on TV or on social media) multiple times a day, and another 35% say they are checking once or twice per day. More Democrats (78%) are checking the news at least daily than Republicans (72%). Full results here.

QUESTION OF THE DAY - "Showing Screaming Teens After a Terror Attack May Be Compelling TV. But Is It Bad Journalism ?" That's Slate's Will Oremus, who writes: "As news broke Monday night of the deadly blasts at a concert in Manchester, England, you could flip to any major news network and see similar visuals: shaky cellphone videos of people on the scene -- many of them teenage girls -- screaming and running for their lives. ... [T]here's ... a ring of naiveté to suggestions that the answer is for cable news to simply stop playing such footage. TV producers aren't the ones who made the attacks scary or dramatic. That's the nature of the act, and to try to strip that dimension from the news coverage would verge on the dishonest and unjournalistic."

Speaking of which: The attack drew millions of viewers to cable news. It also reset the ratings trendlines of recent weeks, with Fox News leading CNN and MSNBC in both total viewers and viewers ages 25-54; and with MSNBC slipping to third in both categories behind CNN. Between the three channels, an average of around 6.7 million people were tuned in during primetime, according to data from Nielsen.

SOUND BITES:

-- "Freedom of the press is not a liberal value, it's an American value." [David McCraw]

-- "If a journalist can be arrested for asking a loud question in a public place, we had better be ready for much, much worse." [Kathleen Carroll]

-- "Ok TO BE CLEAR, I am closer to the TRUTH than ever. Not only am I not stopping, I am working harder. Updates when available. Stay tuned!" [Sean Hannity]

-- "The big q for Fox News: does @seanhannity have a future at the network if he covers the Seth Rich story again?" [Matthew Garrahan]

"As Fox diminishes in ratings the extreme liberalism and anti-American lefitism is going to get louder." [Rush Limbaugh]

JON STEWART'S HBO SHOW A NO-GO - HBO and Jon Stewart have decided not to move forward with their planned animated current events show, originally announced more than a year ago. The program was originally expected to debut in advance of the 2016 election. The New York Times' John Koblin reports that "the project was significantly more complicated than both sides anticipated." Stewart signed a four year deal with HBO, and will develop other programs for the channel.

FCC WON'T TAKE ACTION AGAINST COLBERT - No surprise here, but the Federal

Communications Commission made it official on Tuesday: It will not be taking any punitive action against the CBS "Late Show" host over a crude joke he made about President Trump. An FCC spokesman said they "concluded that there was nothing actionable under the FCC's rules." Colbert's show airs after 10 PM, when FCC rules are more lenient, and the dirty word in his Trump-Putin joke (rhymes with "smock") was bleeped out, making any enforcement action unlikely from the start.

In other Colbert news: He has another victory under his belt. This time, the "Late Show" is poised to win the entire 2016-2017 TV season in total viewers, barely edging out "The Tonight Show starring Jimmy Fallon." Colbert has been on a resurgent winning streak in recent months, and now it's beginning to show in the longer-term ratings.

RATINGS ARE IN FOR THE 'TWIN PEAKS' REVIVAL - Sunday's two-hour, two-chapter premiere at 9 p.m. delivered 506,000 viewers for Showtime. Consider this: 34 million tuned in to ABC for the original series premiere on April 8, 1990. But then consider this: "In the world that we live in now, offering original programming that attracts new subscribers is our primary business objective," said Showtime chief David Nevins in a statement. "By that standard, the 'Twin Peaks' premiere is the biggest single-night driver we've ever had." Deadline and The New York Times have more.

Bonus: Here's a piece I did for Mental Floss magazine a few years ago, "How Twin Peaks Made Modern Art of the Soap Opera"

REVOLVING DOOR:

-- **At Esquire**, Robert P. Baird has been bumped up to features director. The Paris Review/Harper's/New Yorker alum will "work closely ... on the development and execution of ... features, including investigative pieces, as well as fiction," per a spokeswoman. "He will also work to bring new voices to the magazine."

-- **Jessica Valenti, the feminist author/writer**, has been named a contributing editor for Marie Claire's website, where she will do a weekly column.

THE NEXT FRONTIER? SNAPCHAT SHOWS - Among those getting in on the millennial social media app's video mojo is NBC News, which later this year "is expected to launch the first Snapchat Show that will offer daily news reports," according to Variety. "[T]here's a line forming ... that's made up of at least a dozen major media companies ready to place bets ... on Snapchat Shows." The list also includes ABC, CBS, the BBC, ESPN, Vice and Discovery.

CBS announced a James Corden Snapchat series yesterday: "JAMES CORDEN'S NEXT JAMES CORDEN will debut exclusively as a Snapchat Show ... in fall 2017. ... [It] will take Corden from late night to the world of a fictional reality competition show to find a young up-and-comer to be his LATE LATE SHOW successor. While Corden is by no means leaving THE LATE LATE SHOW anytime soon, he knows that someday, years and years from now, he'll have to hand over the reins to a new host, and he wants ample time to select and groom a worthy successor."

SOUNDTRACK: Joy Division, "Atmosphere"

EXTRAS:

-- "Fox News is losing its mojo." [Bloomberg]

-- Can you guess which outlets have the leakiest paywalls and which ones have the most airtight paywalls? [CJR]

-- Comedy Central has ordered more episodes of Anthony Atamanuik's Trumpersonation, "The President Show." [Variety]

-- Gay hookup app Grindr is getting into the news business. [Advertising Age]

** **A message from the National Confectioners Association - #AlwaysATreat:** We've always created transparent, fun, and great-tasting treats. By 2022, Mars, Wrigley, Nestlé USA, Ferrero, Lindt, Ghirardelli, Russell Stover, and Ferrara Candy Company will work together to make half of their individually wrapped products available in sizes that contain 200 calories or less per pack. And, 90 percent of the best-selling treats made by these companies will have calorie information printed right on the front of the pack. During the same time period, the newly established AlwaysATreat.com will evolve into a digital resource full of easy-to-use information for consumers to better understand the unique role that chocolate and candy can play in a happy, balanced lifestyle. Subject: POLITICO's Morning Energy, presented by Exelon: What's new for Energy Week? — Zinke takes Montana — Pruitt returns to Capitol Hill

By Ben Lefebvre | 06/27/2017 10:00 AM EDT

With help from Darius Dixon Alex Guillen and Eric Wolff

ENERGY WEEK ROLLS ON: We've heard the rah-rah but ME is still wondering if and when something substantive may come. So far it's been hinted that Interior Secretary may have something new to say when he speaks in Montana today (more below), but at first blush Energy Week may shape up to be old hydrocarbons in new barrels.

Enticing India with LNG: Following a meeting at the White House with Indian Prime Minister Narendra Modi on Monday, Trump played up the possibility of selling more liquefied natural gas to India, which is trying to bring electricity to more of its population, Pro Trade's Doug Palmer reports. Trump said oil and gas contracts are "right now being negotiated and we will sign them. We're trying to get the price up a little bit." But India has been in the market for U.S. gas at least since 2011, when its state-owned gas company, GAIL India, was among the first customers to sign a 20-year contract with then-fledgling Cheniere Energy. India has said it will increase its oil and gas purchases from the U.S., but the country is notorious for being price-sensitive. GAIL earlier this year reached a deal with Swiss trading company Guvnor to save on shipping costs by swapping some of its Cheniere cargoes for closer supplies.

Wait 'til tax reform: When it comes to questions of new policy, Energy Secretary Rick Perry mostly sidestepped questions when he briefed reporters on energy week plans earlier Monday. But he said answers would likely come in the president's tax plan. "I don't think the administration is going to be wildly supportive of government subsidies for sectors of the energy industry," Perry said when asked whether to expect continued federal support for renewable energy research. He then added: "Whenever we get this healthcare bill passed and we get into tax reform, at that particular point in time we'll have a good healthy conversation on the energy sector and tax subsidies."

Nuclear happens: Perry did say the White House is keenly aware that nuclear power operators are facing an increased threat of bankruptcy because of competition from cheap natural gas and renewables. "There's a lot of reasons we need to have the conversation about keeping our nuclear industry viable...whether it's Gen 4 plant or modular reactors," he said. Perry did not weigh in on specific issues such as the fate of a nuclear energy tax credit extension being debated in Congress or programs aimed at propping up existing reactors in states like New York and Illinois, but he warned that the U.S. risked losing ground to competitors like China and Russia in developing the next generation of nuclear technology. "Most Americans will say nuclear energy will occur," Perry continued. "Who controls it and is most supportive, I'm sure that will be America."

If you'd like to hear more from Perry, he's up for the keynote address at the 8:30 a.m. plenary

session today at EIA's Energy Conference at the Washington Hilton. He also is tentatively scheduled to talk at 9:45 a.m. today with Piyush Goyal, of India's ministry of power, coal, new and renewable energy and mines at U.S.-India Business Council's 42nd Annual Leadership Summit.

Going local: One possible new avenue the administration may follow may come when President Donald Trump will meet tribal leaders on Wednesday to discuss local energy. This is in line with the administration's line that wouldn't mind for Native American tribes to get in on the oil boom. Energy and Interior department officials met with tribes in May to discuss energy development, and the topic popped up in Senate subcommittee hearings on Interior's budget.

GOOD MORNING, MORNING ENERGY! I'm your host, Ben Lefebvre, filling in for Anthony Adragna, who is away on matrimony. No applause - just throw tips and comments to blefebvre@politico.com, please. Anthony will be back Wednesday. You can find him at aadragna@politico.com, or follow us on Twitter @bjlefebvre, @aadragna, @Morning_Energy and @POLITICOPro.

THE DOI ABIDES: Zinke is slated to speak at the Western Governors' Association today in Whitefish, Mont., his old stomping grounds. While there, he'll make a "bigly onshore energy announcement," a department source tells ME. The WGA, which is giving the secretary of the Interior twin billing with actor and hometown hero Jeff Bridges, will not stream Zinke's speech. They do promise to live-Tweet it at #WGA17.

Say what you want about the tenets of national monuments: Whatever Zinke may have his sleeve, it's his Trump-ordered review of national monuments that seems to be getting the most attention from locals in Whitefish, where Zinke served as state lawmaker from 2009 to 2011 (he also tried to open a bed and breakfast and brewery there around the same time). Whitefish Mayor John Muhlfeld has joined environmentalists and sportsmen in the area calling on Zinke to resist the urge to eliminate or shrink national monuments under his review. "As a friend of Ryan Zinke, I urge him to respect and protect America's public lands, in Montana and across the country," Muhlfeld says in a press release sent by the Center for Western Priorities.

PILT paychecks: Zinke was in Nevada Monday, where he announced that nearly $465 million is headed to local governments as part of the Payments in Lieu of Taxes program. PILT payments compensate jurisdictions that are home to large swaths of federal land they cannot tax. Details on who's getting how much here.

** **A message from Exelon:** Innovation always begins with the spirit of discovery-the search for new ideas and answers to our biggest questions. As America's largest clean energy provider, what happens when 34,000 Exelon engineers, analysts, and innovators put their heads together to tackle the energy industry's biggest challenges? Find out here: http://bit.ly/2szvZN4 **

ROUND 2 FOR PRUITT ON BUDGET: EPA Administrator Scott Pruitt is on the Hill today to testify for the second time on the administration's proposal to massively slash his agency's funding, and if his first hearing is any guide, Pruitt is in for some tough questions from both parties.

What to expect today: Sen. Lisa Murkowski, who chairs the Senate's Interior-EPA spending panel, is already on the record as not being a big fan of EPA's proposed cuts. She's noted before that recent years have already seen Congress significantly reduce EPA's budget and personnel, and she's likely to raise objections to the administration's proposal to zero out a water infrastructure program aimed at Alaska Native villages. Expect one or more senators, including possibly Steve Daines , to complain about the proposed Superfund cuts. The hearing starts at 9:30 a.m. in Dirksen 124.

Hands across the Capitol: The Sierra Club, Union for Concerned Scientists and more than a dozen other environmental groups plan to protest the 31 percent cut to the EPA that Trump's budget calls for. They'll meet at Lower Senate Park ahead of the hearing.

Coincidentally: Today marks the end of the 60-day stay on the Clean Power Plan lawsuits put in place in April by the D.C. Circuit Court of Appeals. The court took comment on whether to remand the rule to EPA (as environmentalists wanted) or keep the lawsuit in abeyance indefinitely while EPA works on its review, as advocated for by the agency and the rule's challengers. Click for a refresher on who wanted what and why. It's not clear what exactly might happen today, if anything; the court could decide on the remand-versus-abeyance issue today, or extend its stay and decide later.

SCIENTIST SPEAKS UP: Look for Pruitt to also face questions today about his agency's treatment of independent science advisers, especially in the wake of Monday night's New York Times report that his chief of staff pressured one of them to alter her testimony to a separate congressional committee last month. EPA Chief of Staff Ryan Jackson asked Deborah Swackhamer, who chairs EPA's Board of Scientific Counselors, to stick to the agency's "talking points" about why board members were not being reappointed before she testified to the House Science Committee, according to the paper, which cited emails she had shared with committee Democrats. Science Chairman Lamar Smith told the Times that Democrats are "politicizing" an attempt by EPA to make sure her testimony was accurate. Swackhamer was testifying as a private citizen and not on behalf of EPA, and it does not appear that she changed her written testimony. In it, she warns that changes to the board "may lead to the perception that science is being politicized and marginalized within EPA."

NATURE ABHORS A VACUUM AND RGGI FILLS A SPOTLIGHT: The nine-state Regional Greenhouse Gas Initiative meets today to discuss whether to modify its carbon cap, whether and how to link with other cap programs, and how to manage new participants. Emissions reductions from the northeastern states have gone faster than expected, and green groups hope to see some carbon cap tightening from the meeting. If you go: It's at 1 p.m. at Jerome Greene Hall Room 701, Columbia Law School, in New York. You can also stream it here.

Be! Aggressive! B! E! Aggressive!: Emissions reductions have come faster than expected, so green groups are looking for deeper reduction requirements. The Natural Resources Defense Council and 50 other green groups have asked the program to set caps lower to push for more carbon reductions, and to raise the price floor so as to ensure that there's a cost to emissions.

ON HER WAY OUT: FERC Commissioner Colette Honorable plans to leave the agency Friday, Pro's Darius Dixon reports. She will formally announce the news today when she speaks to the EIA conference. That will leave acting Chairwoman Cheryl LaFleur as the only remaining commissioner, meaning both of Trump's pending nominees will have to be confirmed before FERC can conduct any major business again. Honorable tells ME she doesn't have a job lined up but "I have some irons in the fire."

THE ROAD TO RECLAIM: The RECLAIM Act is going before the House Natural Resources Committee for markup today. The bill as currently written would take money from the Abandoned Mine Land Fund to pay laid-off coal miners to work cleaning up abandoned mines.

EPW HEARING ON HOLD: A Senate EPW subcommittee meeting that had been scheduled for 2:45 p.m. today on clean energy technologies has been postponed. A committee spokeswoman tells us no new date planned yet.

NOMS ON PARADE: Two more former George W. Bush appointees are in line to return to the Interior Department, the White House said Monday. Trump plans to nominate Brenda Burman as commissioner of reclamation. She was the deputy commissioner for reclamation and assistant secretary for water and science under Bush; now she is the director of water strategy at the Salt River Project. Douglas W. Domenech, a senior adviser to Zinke, will be nominated as assistant Interior secretary for insular affairs. His positions in the Bush administration included deputy assistant Interior secretary for insular affairs and White House liaison.

SVINICKI SECURES SENATE NOD: The Senate voted 88-9 Monday to confirm Nuclear Regulatory Commission Chairwoman Kristine Svinicki to a third term at the agency, just days before her tenure had been set to expire. Nevada Sen. Dean Heller was the only Republican to vote against Svinicki; fellow dissenters included Sens. Catherine Cortez Masto, Kirsten Gillibrand, Cory Booker, Elizabeth Warren and Bernie Sanders, among others.

CALLING CARTER PAGE: The FBI interviewed Carter Page, an energy consultant who traveled to Moscow last year while advising the Trump campaign, Pro's Austin Wright reports. The interviews occurred in May and were part of the FBI's investigation into Russia's meddling in the 2016 Presidential election, Page said in a statement.

WATCHDOG TAKES NATIONAL PARK SERVICE OFF THE HOOK: The unlikely spat between the National Park Service and Trump may have broken toward the NPS, POLITICO's Matthew Nussbaum reports. Interior's Inspector General said Monday that NPS employees did not alter crowd size records, which Trump complained had low-balled the number of people attending his inauguration. The IG also said NPS wasn't the one who leaked info about a phone call in which Trump allegedly ordered the acting NPS director to release additional photos of the crowd. Will this end the feud? ME will keep an eye on a certain Twitter account in the coming days.

CRUDE HACK: Those "dipping donkey" pump jacks that dot the Texas and Oklahoma oil field landscape are a great entryway for hackers looking to disrupt America's fuel production, Deloitte

says in a new study. Cyber-attacks on oil and gas companies are growing in frequency, sophistication, and impact, the study finds, and the production part of the business is the most vulnerable to attack and the most potentially damaging if exploited. "Thus, the consequence of a cyber-attack on oil and gas production could be severe, promptly affecting both the top and bottom lines," Deloitte says in its report.

COUNTDOWN FOR KEYSTONE: A judge in the U.S. District Court in Montana will hear arguments on Aug. 31 whether to dismiss the case the Northern Plains Resource Council and other environmental groups brought against the Keystone XL pipeline, according to a new court filing. White House lawyers argued earlier that the case should be thrown out as the plaintiffs don't have standing to challenge the executive branch's authority in granting permits for pipeline border crossings.

SUNIVA DISPUTES GTM'S SOLAR IMPACT REPORT: Suniva is disputing GTM Research's findings Monday that the trade tariffs the company seeks for imported solar panels and cells could wipe out nearly two-thirds of U.S. solar projects slated to be built by 2022. "GTM's conclusions are based on faulty and unsupported assumptions, and demonstrate a fundamental misunderstanding" of what Suniva seeks, the company said in a press release.

MOVER/SHAKER: Washington lawyer Dennis Lee Forsgren has been named EPA's deputy assistant administrator in the Office of Water, a job that does not require Senate confirmation but gives him a significant role in the agency's efforts to rewind the Waters of the U.S. rule and other key regulations. Forsgren's appointment was revealed in a blog post from the Association of State Drinking Water Administrators. Forsgren most recently was a lawyer at HBW Resources, where his lobbying clients since 2011 have included GE and a subsidiary of the nuclear company Babcock & Wilcox.

QUICK HITS:

Congress
House Vote Possible This Summer on Four Environment Bills: Shimkus
The House could pass four major environmental bills before Congress's August recess, including one delaying implementation of 2015 ozone standards, a key House Republican told Bloomberg BNA.

Energy
Canadian Oil Production to Rise 33% by 2030, Straining Pipelines
Canada will churn out 33 percent more oil by 2030, exceeding the capacity of existing pipelines to ship the product to market and threatening producers' competitiveness, according to the industry's main trade group.

Energy
European Parliament Greenlights Energy Labeling Law
The European Parliament June 13 ratified a European Union regulation that will simplify the energy-efficiency labeling of refrigerators, washing machines and other domestic appliances sold in the bloc.

Energy
Lines Drawn in Fight on Increased Ethanol Sales Before Hearing
The battle lines are drawn on the eve of a Senate hearing on transportation fuel with higher ethanol blends.

Energy
Senate Committee to Move Nuclear Regulator Nominees Quickly
Leaders of the Senate Environment and Public Works Committee stressed their commitment to vote soon on three Nuclear Regulatory Commission nominees, weeks before the commission is set to lose its quorum unless at least one nominee is confirmed.

Energy
The Energy Agency Trump Aims to Kill Could Instead Be a Model
A congressionally mandated study determined that an Energy Department agency the budget of President Donald Trump aims to kill should instead serve as a model for the entire department.

Enforcement
EPA Enforcement Office Nominee Says Federal Role Remains
The EPA's enforcement office will manage proposed budget cuts by focusing on high-profile

pollution cases and leaving the day-to-day work to state regulators, the nominee to lead the division told senators June 13.

Forests

Brazil's Most Degraded Woodland Sees Deforestation Spike

The deforestation rate in Brazil's most degraded woodland spiked nearly 58 percent between 2015 and 2016, the largest increase in a decade, according to an environmental nonprofit.

International Climate

EU Set to Commit to Climate Deal, Free Trade in Rebuff to Trump

European Union leaders are planning to use a summit next week to declare their commitment to global free trade and the Paris climate accord in a rebuff to U.S. President Donald Trump.

Natural Gas

Blast Backlash Hangs Over Drillers as 'Fractivists' Seek Limits

Two months after a Colorado home exploded near an Anadarko Petroleum Corp. well, the reverberations are still rattling the oil industry, driving down driller shares and raising fears of a regulatory backlash.

Oil & Gas

Concerns About Water Keep Australia From Getting at Gas Reserves

In the tight-knit Outback town of Narrabri, the cold-shoulder treatment farmer Peter Gett has felt over the natural gas wells on his property has shown him that promoting Australia's energy security comes at a cost.

Renewable Energy

Apple issuing a Second Green Bond to Finance Green Energy

Apple Inc., which issued the biggest green bond ever sold by a U.S. corporation last year to finance projects fighting global warming, is doing it again.

Renewable Energy

Brazil's Biggest Wind Farm Starts Spinning Turbines

The largest wind farm in Brazil has started operation as the research arm of the Mines and Energy Ministry predicts wind power will grow in the nation's energy mix over the next year.

Renewable Energy

Canadian Investor Applies for Chernobyl Solar Project in Ukraine

Canadian investor Refraction Asset Management Ltd. is seeking permission to install 100 megawatts of solar panels inside the radioactive exclusion zone surrounding Ukraine's defunct Chernobyl nuclear plant.

Subject: POLITICO's Morning Score: Virginia memos: Gillespie says governor's race deadlocked, DGA claims momentum — Stewart mulls Senate race vs. Kaine — Another Democrat jumps in vs. Rohrabacher

By Scott Bland | 06/15/2017 10:00 AM EDT

With Daniel Strauss and Kevin Robillard

The following newsletter is an abridged version of Campaign Pro's Morning Score. For an earlier morning read on exponentially more races - and for a more comprehensive aggregation of the day's most important campaign news - sign up for Campaign Pro today. (http://www.politicopro.com/proinfo)

UPDATE FROM LATE WEDNESDAY - "House Majority Whip Steve Scalise was in critical condition in a Washington hospital Wednesday night," POLITICO's Louis Nelson, John Bresnahan and Jake Sherman report, "and will require additional surgeries after a bullet pierced his hip, injured organs and caused 'severe bleeding,' according to a statement." **Full story.**

MEMO ITEMS - Gillespie campaign says the Virginia governor's race is tied: In a memo released Wednesday morning, the Gillespie campaign said Public Opinion Strategies had conducted a poll of 600 likely voters from June 6-8. The poll showed Gillespie earning 46 percent of the vote to Northam's 45 percent, and leading him among independents 49 percent to 37 percent. The survey contradicts most public polling, which has shown Northam with a substantial lead. "It is clear that as the general election campaign begins, it opens as a dead heat," campaign manager Chris Leavitt writes. "But one candidate positioned himself well for a competitive general election campaign in the Commonwealth, while the other moved far to the left of the state's electorate. And that will have major ramifications."

- FIRST IN SCORE - DGA argues Northam has advantage: DGA communications director Jared Leopold argues his party's candidate is position to swamp Republican Ed Gillespie. "Republicans remain deeply divided. Their hand-picked insider candidate barely squeaked out a primary victory over an underfunded Confederate flag enthusiast, who bluntly refused to unite behind Gillespie," he writes. "Democrats have a head of steam: More than 542,000 Democrats turned out to vote in Virginia's open primary, compared to just 366,000 Republicans. Democratic primary turnout in 2017 reached nearly 70% of 2016 presidential primary figures, while Republican turnout hit just over 35%. And Republican nominee Ed Gillespie finished nearly 80,000 votes behind Democratic runner-up Tom Perriello." **Read the full memo here.**

- NARAL argues abortion rights gave Northam the win: NARAL is out with a memo arguing Lt. Gov. Ralph Northam's career-long support of and emphasis on abortion rights was crucial to his victory over former Rep. Tom Perriello in Tuesday night's Virginia primary. "The issue quickly [became] the most salient point of contrast between the two Democratic campaigns," NARAL Pro-Choice America political director Joel Foster wrote. "While both campaigns emphasized their plans to defend abortion access, the candidate who focused his campaign and

much of his career on the fight for reproductive freedom won handily." **Read the full memo here.**

BACK IN THE SADDLE? - "Republican Corey Stewart is eyeing Senate run against Tim Kaine in 2018," by The Washington Post's Laura Vozzella: "Corey Stewart said he might challenge Sen. Tim Kaine in 2018 on Wednesday, one day after he nearly won the GOP primary for Virginia governor in a surprisingly strong showing. 'Kaine is vulnerable,' said Stewart, who on Tuesday finished a little over 1 percent behind former Republican National Committee chairman Ed Gillespie. The Prince William County chairman ran a provocative, Donald Trump-style campaign that focused on the preservation of Virginia's Confederate monuments. He also took a hard line on criminal illegal immigrants, promising to 'lock them up.'" **Full story.**

NEW HOUSE CANDIDATE - Democratic medical researcher Hans Keirstead launches bid against GOP Rep. Dana Rohrabacher: Keirstead, a stem cell researcher and businessman whose work has included treatments for spinal cord injuries and cancer, is kicking off a campaign for CA-48 today. "I'm running for Congress because I believe that innovative thinking and a people-first attitude matter to the constituents of this district," Keirstead said in a release. Rohrabacher's CA-48 went narrowly for Hillary Clinton (48 percent to 46 percent) in 2016. He's not the first Democrat to launch in the district, though: Real estate businessman Harley Rouda is already in the race, too.

Days until the 2017 election: 145.

Days until the 2018 election: 509.

Thanks for joining us. You can email tips to the Campaign Pro team at sbland@politico.com, eschneider@politico.com, krobillard@politico.com and dstrauss@politico.com.

You can also follow us on Twitter: @politicoscott, @ec_schneider, @politicokevin and @danielstrauss4.

YOUR DAILY GEORGIA - "U.S. Chamber plans final push for Handel," by the Atlanta Journal Constitution's Greg Bluestein: "The U.S. Chamber is pumping another $150,000 into the race for Georgia's 6th District with plans to target about 42,000 likely supporters of Republican Karen Handel in the final days before Tuesday's vote." **Full story.**

- NEW POLL - Ossoff 50, Handel 47 in Trafalgar survey: The GOP firm's latest IVR survey (June 10-13, 2.9 percentage point margin of error) shows Democrat Jon Ossoff with a narrow 3-point edge. **See the poll results here.**

FIRST IN SCORE - Let America Vote opens first field office in Virginia: The Democratic voting-rights group headed by Jason Kander will announce today that it is opening an office in Manassas "as part of a field operation that will span multiple states supporting voting rights champions running for office. The Manassas office will host field staff who will work to elect challengers and incumbents who support voting rights in state legislative races ... in addition to supporting Ralph Northam for governor. Virginia House of Delegates districts currently being

targeted by Let America Vote include districts 2, 13, 31, 32, 34, 40, 50, 51, 67, and 87."

- ALSO - Progressive Turnout Project announces overlapping set of Virginia targets: The Democratic group will spend $600,000 on turnout efforts in 10 GOP House of Delegates districts carried by Hillary Clinton last year: 2, 13, 21, 31, 42, 50, 67, 72, 73, and 94. PTP is opening three field offices and hiring 25 field organizers dedicated to "turning out likely Democrats who are inconsistent voters." The program will be run as "randomized control trial experiments," per a release.

DONOR MAINTENANCE - "Trump huddled with donors on day of Comey testimony," by POLITICO's Tara Palmeri and Kenneth P. Vogel: "On the same day last week that fired FBI Director James Comey delivered his damaging Senate testimony, President Donald Trump's team summoned about a dozen top donors to the White House to rally support for Trump's agenda. The donors - including Ken Griffin, Doug DeVos, Tom Hicks, Jr., Rebekah Mercer, Todd Ricketts, Tom Saunders, Paul Singer and Dick Uihlein - gathered in the Roosevelt Room on June 8 for a briefing from Trump's legislative director Marc Short, according to a senior administration official and other people familiar with the event. ... It took place just days after Short acknowledged to reporters that the Russia investigations were 'detract(ing) from our legislative agenda' ... a senior administration official said that topics covered during the briefing included health care, tax reform, the confirmation of Supreme Court justice Neil Gorsuch, pending judicial nominations, the Paris climate accord and the Saudi arms sale. '[It was a] "here's what we see as the legislative calendar and how you can be helpful" type of meeting,' the official said." **Full story.**

POLL POSITION - "Quinnipiac poll: Murphy 55-26 Guadagno, Christie approval at 15 percent," by POLITICO New Jersey's Matt Friedman: "New Jersey Gov. Chris Christie now has the lowest approval rating of any New Jersey governor in recorded history, and it's hurting his lieutenant governor's campaign to replace him, according to a poll released Wednesday . The Quinnipiac University poll shows Christie's approval rating among New Jersey voters at just 15 percent, with 81 percent disapproving. Christie's approval rating is the lowest Quinnipiac found for any governor it measured in any state in more than 20 years. ... The poll found [Democrat Phil] Murphy leading [Lt. Gov. Kim] Guadagno by a huge margin, 55 percent to 26 percent," in the gubernatorial race. **Full story.**

TRANSITIONS - EMILY's List hires Emily Cain as executive director: For the first time ever, an Emily will help lead EMILY's List. Emily Cain, a former Maine state legislative leader who lost congressional bids in 2014 and 2016, will replace now-DNC CEO Jessica O'Connell as the group's executive director. "Emily is a leader for progressive change at a moment when the rights, security and well-being of women and American families are under unprecedented assault by the radical and dangerous policies of the Trump administration and GOP," EMILY's List president Stephanie Schriock said. "Emily knows how to fight back. She has been a candidate in tough races and an effective minority leader in the state legislature."

CODA - QUOTE OF THE DAY: "It is clear to me, based on eyewitness accounts, that without these heroes, Agents Bailey and Griner, many lives would have been lost." - House Speaker Paul Ryan, speaking Wednesday about the Capitol Police officers who intervened during the shooting

at the congressional GOP baseball practice early Wednesday morning.

Subject: State power regulators oppose hefty solar tariffs

By Eric Wolff

11/15/2017 05:50 PM EDT

The National Association of Regulatory Utility Commissioners today approved a measure asking the Trump administration to go easy on trade tariffs for imported solar panels.

The group, a trade association for public utility regulators, approved a resolution at its annual meeting in Baltimore that said it "does not dispute" the U.S. International Trade Commission's finding that cheap imports from China and elsewhere harm U.S. manufacturing, but was concerned about potential trade barriers.

"NARUC is concerned that at least some of the requested trade protections could significantly increase the price of solar panels and therefore the cost of solar electricity generation," the resolution said.

The ITC sent its recommendations for tariffs and quotas to President Donald Trump on Monday. The Office of the U.S. Trade Representative is now taking comments on proposed remedies that it will present to Trump, who will make the final decision.

NARUC "urges the USTR, in its consideration of potential action, to carefully weigh the harm that could result to energy customers from increasing the costs of solar inputs across the country, and the potential challenges to achieving state renewable energy and greenhouse gas goals that may result from higher solar energy prices," the group said.

WHAT'S NEXT: The USTR will take comment until Nov. 20. Trump has until January to make a decision.

Emily Holden contributed to this report.

Subject: Ebell: EPA eying Koonin for 'red team' climate science review

By Alex Guillén

07/24/2017 03:22 PM EDT

EPA is considering picking Steven Koonin, a top DOE official during former President Barack Obama's first term, to run its "red team" review of climate science, according to Myron Ebell of the Competitive Enterprise Institute.

Koonin suggested the formation of a red team in an April Wall Street Journal piece, where he said such a review "would shine much-needed light on the scientific debates" surrounding climate change. Koonin has long been a critic of climate change science, writing in the Journal in 2014 that the science "is not settled."

Some climate scientists and environmentalists have criticized such a review as giving a minority scientific opinion an outsized voice and laying the groundwork for revoking the 2009 endangerment finding that underlies all of EPA's greenhouse gas regulations.

EPA Administrator Scott Pruitt, who called Koonin's idea "very exciting," has raised the idea of a televised debate.

Ebell, who briefly led President Donald Trump's transition effort at EPA, said today that he is not directly involved in the search but has been told by an "impeccable" source that Koonin is the top choice to lead the climate red team.

A theoretical physicist by training, Koonin was undersecretary for science at the DOE from 2009 to 2011, and since 2012 has been director of the New York University Center for Urban Science and Progress. He previously was chief scientist for BP and provost of the California Institute of Technology.

Koonin did not respond to requests for comment. EPA did not immediately respond to a request for comment today.

Subject: Pruitt: 'Red team' climate review may be televised

By Alex Guillén

07/11/2017 03:53 PM EDT

EPA Administrator Scott Pruitt said his plans for a "red team" review of climate change science may be televised, according to an interview with Reuters, in which he also accused climate scientists of not answering key questions.

"It is a question about how much we contribute to it. How do we measure that with precision? And by the way, are we on an unsustainable path? And is it causing an existential threat?" he told the wire service.

Pruitt did not elaborate on how scientists would be chosen, but said there should be "a robust discussion for all the world to see." That could include via television, he said, arguing that "the American people would be very interested in consuming that."

The red team review is "not necessarily" the first step toward undoing the 2009 endangerment finding that declared climate change a threat and led to a number of Obama-era climate regulations, Pruitt told Reuters. The service reported that Pruitt believes "there may be a legal basis to challenge the finding but would prefer Congress weigh in on the matter." There are currently at least three pending petitions with EPA seeking to overturn the finding.

Several noted climate scientists have scoffed at the idea of participating in a red team review, saying it would lend unearned legitimacy to the review. The peer-review scientific process and decades of research have provided the necessary review, scientists say.

Subject: Morning Media: Trump tangles with the media again -- NPR nears strike -- Anti-Trump late night shows dominate Emmy nominations

By Hadas Gold | 07/14/2017 06:16 AM EDT

With Alex Weprin and Cristiano Lima

TRUMP AND THE MEDIA, THE SAGA CONTINUES. Thursday was another day of adventure in the ongoing saga of President Donald Trump's relationship with the media. It started with an hour long off-the-record conversation with reporters aboard Air Force One which was later turned on-the-record, because apparently the President did not realize he was speaking off the record. "This was a group effort - but it began with POTUS asking why his remarks hadn't been published," pooler for the day Maggie Haberman of the New York Times tweeted late Thursday. But only certain excerpts were made available by the White House, which led to the poolers sending out two extra snippets that weren't originally included. In a separate incident, the press were not allowed to witness the President and First Lady give remarks to U.S. embassy staff, while White House staff tweeted out video. At the press conference with French President Macron, President Trump called on a Chinese journalist instead of a second American reporter, as would be customary.

-Trump turning an off-the-record conversation on-the-record, over the objections of his aides, is nothing new. In fact, he's done it with POLITICO reporters during an April Oval Office conversation and with conservative outlets at a reception, also in April. Check out my rundown on the latest Trump-media tiff here.

NPR UNION CONTRACT EXPIRES TODAY AND A STRIKE COULD BE COMING: Becky Sullivan, a producer on All Things Considered and a member of the bargaining team told me that has the situation has not been so dire in recent history at the radio network. "They're setting up the stage for [Friday] to be a dramatic day," Sullivan said. Management came out "swinging for the fences" trying to rewrite the SAG-AFTRA contract line by line, reducing new hire salaries, bringing in a culture of negotiations and more. A federal mediator was brought in this week. Meanwhile, Sullivan said the staff are confused with the harsh approach when management praises them for revenue and audience numbers that are at record levels.

-Staff morale at NPR is "in the dumps," according to White House correspondent Tamara Keith, and for weeks, staffers have taken to the internet in in support of the labor group, highlighting their work through the hashtag #WeMakeNPR and website. It's not clear what will happen to NPR shows if a deal is not worked out tomorrow and there is a strike.

-NPR's statement: "NPR and SAG-AFTRA are having productive discussions with the assistance of a federal mediator and continue to work toward a mutually satisfactory agreement that meets the needs of NPR's employees and our operations. Our goal is to make this organization economically sustainable for the long-term - and, importantly, enable NPR to invest more resources in expanding audiences, innovating its multi-platform journalism, and adding

newsroom staff to meet that growth and support current staff."

Good morning, happy Friday, and welcome to Morning Media! Thank you for all of your welcome notes and tips this first week -- keep them coming! **hgold@politico.com** / **@Hadas_Gold**. **Morning Media** is edited by **Alex Weprin** (**@alexweprin** / **aweprin@politico.com**) and produced with writing/reporting help from **Cristiano Lima**. (**clima@politico.com** / **@ludacristiano**). **Archives**. **Subscribe.**

BBC PARTNERS WITH CBS, ENDING ABC DEAL: The BBC and CBS News unveiled a new partnership Thursday that'll allow the two networks to pool resources and share content across their global platforms. "There's no better partner to strengthen and extend our global coverage than BBC News," said CBS News chief David Rhodes in a statement. The deal, effective immediately, will replace BBC's existing agreement with ABC News, its previous U.S. newsgathering and content-sharing partner. BBC head James Harding praised the network's "long and fruitful" relationship with ABC in announcing the shift.

WOULD CBS BUY CNN? CBS CEO Les Moonves said his company would take a long, hard look at the cable news channel were it to come up for sale... for example if AT&T decided it didn't want to be in the news business after it completed its acquisition of Time Warner. "CNN is a very worthy news organization... it's something that could enhance CBS," Moonves said in an interview with CNBC. "But I don't think that's on the table right now. If it came up later on, it would be something we would look at."

PETER BEINART: TUCKER CARLSON IS A 'GLIMPSE' INTO AN INTELLECTUALLY INTERESTING FOX NEWS: Talk about some backhanded compliments from The Atlantic's Peter Beinart, as he weeds out what he sees as redeeming debates from the newest Fox News' newest primetime star: "In his vicious and ad hominem way, Carlson is doing something extraordinary: He's challenging the Republican Party's hawkish orthodoxy in ways anti-war progressives have been begging cable hosts to do for years ... " [Carlson is] moderating a debate between the two strands of thinking that have dominated conservative foreign policy for roughly a century." And yet, Beinart finds issue with Carlson's dismissing the Trump-Russia issue as a non story saying: "Tucker Carlson can be a provocative, necessary voice on foreign policy. Or he can be an apologist for Donald Trump. He can't be both."

SPEAKER RYAN ASKS FOR NEW DRESS CODE: In case you missed the drama the other week, a report about the strict dress code for the Speaker's Lobby (the area off the House floor where reporters often catch members for interviews) went viral. The dress code for both sexes is rather strict -- no jeans, men must have ties, women must have shoulders covered, etc. I've spoken with reporters who were technically within the rules but were still turned away because they don't look "nice" enough. These rules have been in effect for years, but the uproar over the article has apparently caused House Speaker Paul Ryan to rethink the dress code, my colleague Rachael Bade reports:

-The Wisconsin Republican said in a press conference Thursday he has asked the House Sergeant at Arms to revisit and "update" business dress requirements that bar women from

wearing sleeveless and open-toed shoes. The dress code also requires men to wear jackets and a tie, though that requirement has largely escaped recent criticism ... "Decorum is important, especially for this institution, and a dress code in the chamber and in the lobby makes sense," Ryan said. "But we also don't need to bar otherwise accepted contemporary business attire, so look for a change on that soon."

ANTI-TRUMP LATE NIGHT SHOWS DOMINATE EMMY NOMS: It has been a good year to be a late night comedy host. The Trump administration has reshaped the late night landscape, propelling Stephen Colbert to the top of the heap, and rejuvenating the 42 seasons old "Saturday Night Live" with sharp impressions from Alec Baldwin and Melissa McCarthy. Now the shows are reaping the rewards, or, rather, the awards. Nominees for the 69th Emmy Awards (to be host by Colbert in September) were announced Thursday, and the shows that stuck the sharpest jabs at the president were at the top of the heap. Baldwin, for example, received a nomination for his Trump impression on the late night show.

-"SNL" was in fact tied with HBO's "Westworld" for the most nominations for any TV show, with 22. Colbert was nominated for both his 2016 election night special on Showtime as well as the "Late Show." Among late night talk shows, Colbert was joined by the very political "Last Week Tonight with John Oliver," "Full Frontal with Samantha Bee" and "Real Time with Bill Maher," as well as the less political "Jimmy Kimmel Live" and "Late Late Show with James Corden." "SNL" also had three of the six nominees in the comedy supporting actress category, and three of the six nominees in both guest actor and actress in a comedy. You can see all the nominees here.

NO, THERE WON'T BE A BILLY BUSH SHOW ON FOX - at least not yet. A network spokesperson quickly shot down a report in the Daily Mail on Thursday afternoon that the former NBC host, famous for being the only one who lost a job as a result of the Access Hollywood tape (the other guy is our president), is getting a deal with them. Daily Mail claimed he was going to be hosting a "Top 30" show that would air on Fox broadcast stations, but a spokeswoman for Fox said it wasn't true. Daily Mail later updated their story to say that he was in talks with Fox for another role, but we're also being told that's not true.

ARE THE MERCERS FUNDING MILO? A BuzzFeed investigation says possibly: "Leaked documents, including a promissory note and emails, as well as conversations with several people familiar with the matter, strongly imply that the Mercers funded Yiannopoulos following his resignation from Breitbart News after video surfaced in which he appeared to condone pedophilia. Together, they suggest that the financiers of the new conservative politics aren't simply interested in protecting their money, but in winning a brutal new culture war waged largely online."

-And despite dumping him, Breitbart is back in love with Milo, The Daily Beast reports. The site excerpted his book, hosted him on their radio show and on and on.

SOUNDBITE: "A number of you have asked me about whether POTUS said "cray" or if it was a typo and was actually 'crazy.' It was a [White House] typo. He did not say "cray." [Maggie Haberman pool report]

REVOLVING DOOR:

-- The New Yorker has tapped Dan Oshinsky to lead their growing newsletter platform. Oshinsky has has led BuzzFeed's expansion into the popular daily emails since 2012.

-- New York Magazine is adding Ezekiel Kewku and Benjamin Hart to its news and politics team over at the Daily Intelligencer. Kweku, recently with MTV News, will help expand the Intelligencer's coverage as a politics editor, while Hart will cover national politics as a writer.

-- **National Journal's Andrea Drusch is getting back in touch with her roots,** and will soon cover politics from Washington for the Ft. Worth Star-Telegram (she's also a POLITICO alumna, congrats Andrea!) [Twitter]

TIL: There's a war going on over Gwyneth Paltrow's lifestyle brand Goop.

EXTRAS:

-- ProPublica got their hands on some wild emails from Trump's lawyer, who later said he'd be apologizing for what he said in them. [ProPublica]

Trump Is Selling Out the Midwest, Biofuel Industry Says

As a presidential candidate, Donald Trump spent a lot of time currying the favor of the ethanol industry, barnstorming its rural Midwest base and repeatedly expressing his support for biofuels made from corn and soybeans. He was rewarded in November: Of the 184 counties with an ethanol plant in the U.S., 95 percent voted for Trump, according to data compiled by the Renewable Fuels Association. As president, Trump has continued to pledge that he'll protect the Renewable Fuel Standard, ...

The climate is changing and are so are the legal risks it will pose.

Coal Mining

Environmental Group Widens Suit Over Secrecy on Coal Leasing

An environmental group is widening its legal case against the Trump administration over its allegation that the administration kept secret its bid to reopen the federal coal leasing program.

Emissions Trading

Now California Needs to Cap Costs While it Caps Carbon

Now that California has extended its carbon dioxide trading program through 2030 businesses are waiting to see how state regulators plan to keep compliance costs down.

Energy

New York Nuclear Subsidies Upheld by Federal Court

Dynegy Inc., NRG Energy Inc. and certain other power generators have lost their bid in federal court to overturn New York's controversial nuclear subsidies and plan to appeal.

Energy

Petronas Deals Fresh Blow as World Exits Canada's Energy Patch

Petroliam Nasional Bhd.'s decision to back out of a giant gas-export project on Canada's

Pacific Coast is the latest hit to the country's energy sector—and to Prime Minister Justin Trudeau's plan of balancing energy exports and climate action.

Forests

Brazil Directive Could Fuel Land Grabbing, Deforestation in Amazon

A new government directive will paralyze the creation of new indigenous reserves in Brazil and fuel land-grabbing and deforestation, especially in the Amazon rainforest, environmental and Indian rights groups say.

Import Policy

Brazil Postpones Decision on Imposing Tariffs on Imported Ethanol

Brazil postponed a decision on whether to impose tariffs on ethanol imports, with the country's Chamber of Foreign Trade (Camex) choosing to discuss the matter in 30 days, a spokeswoman at the Ministry of Development, Industry, and Foreign Trade told Bloomberg BNA July 25.

Oil & Gas

Fisheries Service Hears Pros, Cons on Atlantic Seismic Surveys

Five oil and gas service companies are awaiting decisions by the National Marine Fisheries Service on their proposals for Atlantic offshore seismic surveys that could harm whales and other marine life.

Renewable Energy

Bill to Speed Wind, Solar Licensing Clears House Committee

Wind and solar projects on public lands could get quicker federal approval under legislation approved by the House Natural Resources Committee July 26.

Renewable Energy

Israel Boosts Green Energy After Missing 2014 Targets

Israel hopes to boost its solar power industry after its parliament approved tax breaks for companies that manufacture photovoltaic panels and trimmed away bureaucratic hurdles.

Leading the News

Chemicals
EPA Risk Rules Give Parties More Time to Submit Chemical Data
Two final chemical rules the EPA issued June 22 gave manufacturers and other parties more time to submit information to influence whether the agency reviews a chemical's risks and the conclusions it reaches.

Courts
Property Rights Curbed by Top U.S. Court in Development Case
The U.S. Supreme Court dealt a blow to property-rights advocates June 23, ruling that regulators didn't violate the U.S. Constitution when they refused to allow separate houses on adjoining riverfront lots owned by four siblings.

General Policy
Week Ahead: Alaska Senator Has Dual Clout on Environment, Energy
Sen. Lisa Murkowski (R-Alaska), who chairs the Energy and Natural Resources Committee, also has clout on environmental matters—and she'll make her influence felt at a Tuesday hearing that's one of numerous events in those areas during the week of June 26.

News

Chemical Security
Groups Seek Injunction to Halt Chemical Facility Rule Delay
Labor unions and environmental and public health organizations are asking a federal judge to issue an emergency injunction blocking an EPA move to delay new chemical facility safety regulations until 2019.

Chemicals

Better Coordination on Risk Review Tools Needed at EPA: Watchdog

The EPA's Office of Chemical Safety and Pollution Prevention needs better coordination with agency researchers on computer-based tools that are urgently needed to assess chemical risks, the Office of the Inspector General found.

Duty to Indemnify

ASARCO Can't Recoup for Lead Paint Cleanup at Superfund Site

ASARCO can't recover from its insurer any of its costs of cleaning up soil contaminated with lead under a Superfund settlement with the federal government, a New York appeals court ruled (ASARCO LLC v. Superintendent of Fin. Servs. of N.Y., 2017 BL 214178, N.Y. App. Div., 41294/864357N, 6/22/17).

Endangered Species

German Bill May Ease Construction on Land With Protected Species

The lower house of the German Parliament, the Bundestag, passed a bill late June 22 amending the country's Federal Act for the Protection of Nature, making it easier for construction projects to move forward even if they threaten protected species.

Energy

U.K. Told Nuke Plant Subsidies May Spiral Past $38 Billion

Britain's first new nuclear plant in a generation may cost consumers 30 billion pounds ($38 billion) or more in higher electricity costs, five times more than ministers had expected, the government's auditor warned.

Enforcement

Ohio Refiner to Pay $13 Million for Air Pollution Violations

An Ohio petroleum refinery will pay $1 million in penalties and spend nearly $12 million on pollution controls and environmental projects for alleged violations of the Clean Air Act.

Enforcement

Plea Bargains Top Agenda of Brazil's New Antitrust Regulator

Ensuring legal security to plea bargain deals signed with companies is the top priority for Brazil's antitrust regulator, its new boss told Bloomberg.

Forests

Norway Slashes Contribution to Anti-Deforestation Amazon Fund

Norway, which has donated more than $1 billion in the past decade to the Amazon Fund to fight deforestation, will significantly scale back its contribution this year, arguing that Brazil's commitment to environmental protection "might be in retreat."

Mergers and Acquisitions

EnergySolutions, Waste Control Specialists Won't Appeal Merger Block

Valhi Inc., the owner of Waste Control Specialists LLC, said in a statement June 23 that it won't appeal a federal trial court judge's decision to block its merger with rival radioactive waste disposal firm EnergySolutions Inc.

Motor Vehicles

Deal Ending Ford Explorer Exhaust Suit Gets Final OK

Ford Motor Co's nationwide class settlement with owners of 2011-15 Ford Explorers with exhaust problems received final court approval (Knutson v. Ford Motor Co., S.D. Fla., No. 0:14-cv-61344-WPD, 6/20/17).

Pesticides

Arkansas Board Passes Dicamba Ban

The Arkansas State Plant Board voted June 23 to pass a proposed emergency rule to ban the use of in-crop dicamba, with an exemption for pastureland, and to expedite the rule increasing civil penalties for misuse of the common pesticide.

Pesticides

Monsanto Says Roundup False Label Suit Meritless

Monsanto Co. said June 23 it will zealously defend a proposed class suit alleging it falsely advertises Roundup by saying the weed killer's active ingredient, glyphosate, doesn't affect humans or pets (Blitz v. Monsanto Co., W.D. Wis., No. 17-00473, complaint filed 6/20/17).

Renewable Energy

Tembo Power Proposes New Hydro Solution for Congo Copper Mines

Africa-focused energy company Tembo Power Ltd. is proposing a new approach to address the electricity shortfall in the Democratic Republic of Congo.

Renewable Energy

World's Biggest Wind Turbine Maker Sets Sights on New Markets

The chief executive officer of Vestas Wind Systems A/S says the world's biggest wind turbine maker wants to expand in the Middle East and the Asia Pacific region as it taps into growing demand for renewable energy in new markets.

Water Pollution

Pennsylvania Lawmakers Target Water Commission Over Fees

An interstate agency overseeing Susquehanna River water quality is under fire by a group of Pennsylvania State House Republicans who accuse it of regulatory overreach and have vowed to reduce its power and funding.

White House

Tech in One Hand, Overhaul in Other, Trump Tackles Government

President Donald Trump's plans to use new technology to modernize the federal government—claiming $1 trillion in savings and better services—may outstrip his proposal to overhaul agencies to make them more effective.

Subject: Morning Energy, presented by POET: Will climate change pop up as Trump, Pope meet? — Fiat sued in latest emissions cheating scandal — Trump taps another for DOE role

By Anthony Adragna | 05/24/2017 05:42 AM EDT

With help from Anca Gurzu and Esther Whieldon

ON THE ROAD TO ... ST. PETER'S: All eyes turn to Vatican City this morning where Pope Francis and President Donald Trump are meeting for the first time. Of course, the two hold starkly different views is climate change — Francis wrote an entire encyclical urging action to confront the problem while Trump has dismissed it as a Chinese hoax — and many observers expect the issue to come up in their discussions as U.S. weighs whether to pull out of the Paris agreement. Archbishop Marcelo Sánchez Sorondo, chancellor of the Pontifical Academy of Sciences, told an Italian news agency last week he thought the pope might be able to influence Trump on the issue. "This president has already changed about several things, so perhaps on this as well," he said. The pope, for his part, said he didn't have a strategy to sway Trump on any political issue: "We'll talk, each of us will say what he thinks. Each of us will listen to the other," Francis said on May 13, according to Bloomberg.

ME FIRST — Democrats urge Trump to stick with Paris: Forty Senate Democrats, led by Senate Minority Leader Chuck Schumer, are sending a letter to Trump this morning urging him not to abandon the 2015 Paris agreement on climate change. "Backing out of the Paris Agreement now, after the years of painstaking negotiations and strong U.S. leadership it took to get the world to this point, would be a self-inflicted injury to America's credibility and influence on the world stage," they wrote. Schumer, as well as Democratic Sens. Tom Carper, Maria Cantwell, Ben Cardin, Sheldon Whitehouse, Brian Schatz, and Ed Markey, will hold a press conference in the Capitol at 10 a.m.

Meanwhile, the European Union, China and Canada have agreed to co-host a global ministerial gathering in September to move the Paris agreement foward, Climate Action and Energy Commissioner Miguel Arias Cañete tweeted Tuesday evening. "The three parties agree on the need for urgent climate action and are ready to lead the way," he said in a statement. "No one should be left behind but our message today is very clear: we are moving ahead."

U.S. allies are frustrated by Trump's vague stances on climate change and trade in the days preceding the G-7 summit in Taormina, Italy on Friday and Saturday this week, POLITICO's Tara Palmeri reports. The lack of clarity on those matters is holding up the crafting of the formal statement usually released at the end of the conferences. "Trade and climate are holding up the communique," a senior French official said.

BUDGET URGES EVEN CHEAPER ENERGY: Don't expect many oil, natural gas and power producers to jump aboard the Trump budget's calls for even lower energy costs as they continue to struggle with the soft prices for their products and as the U.S. energy burden for most households is at its lowest level in decades, Pro's Ben Lefebvre and Darius Dixon report .

Tuesday's document explicitly makes the call "for strengthening our national security, lowering the price of electricity and transportation fuels, and driving down the cost of consumer goods so that every American individual and business has more money to save and invest."

But oil producers are just regaining their footing after prices rebounded from lows in the mid-$20s per barrel early last year. "Closing your eyes and keeping your fingers crossed that the market will always move in one direction with fossil fuels — which, in essence, is what the Trump administration proposes with this budget — is not what any smart business person or political leader would pin their future economic hopes to," Josh Freed, Third Way's vice president for clean energy, said. Not to mention that if oil price do sink, sustained low prices could stall the deployment of new technologies, such as electric cars, potentially putting the U.S. at risk of falling behind the rest of the world.

WELCOME TO WEDNESDAY! I'm your host Anthony Adragna, and the Nuclear Energy Institute's Robert Powers was first to identify Rep. Darrell Issa as the wealthiest current member of Congress. For today: Just two U.S. vice presidents have ever resigned. Who are they? Send your tips, energy gossip and comments to aadragna@politico.com, or follow us on Twitter @AnthonyAdragna, @Morning_Energy, and @POLITICOPro.

NON VA BENE: Fiat Chrysler faces potentially billions of dollars in fines after DOJ accused the company of selling almost 104,000 diesel vehicles equipped with software designed to cheat on emissions testing, Pro's Alex Guillén reports. Fiat Chrysler faces fines of $37,500 to $45,268 per vehicle sold, along with further penalties for each undisclosed software device and reporting violations.

The automaker flatly denied the accusations. "The company intends to defend itself with strength especially against the accusations that it has deliberately planned to install manipulative technology to apply to U.S. emission tests," Fiat said in a statement. As POLITICO Europe's Joshua Posaner reports, Fiat said it has cooperated with an ongoing investigation by EPA and the California Air Resources Board.

TRUMP TAPS ANOTHER FOR DOE POST: David Jonas, a partner at the Virginia law firm Fluet, Huber and Hoang since 2016, has been tapped by the Trump administration to be general counsel at DOE, Pro's Alex Guillén reports . He was previously general counsel for the National Nuclear Security Administration, DOE's nuclear security arm, from 2001 to 2010, and then general counsel for the Defense Nuclear Facilities Safety Board, an independent agency that advises DOE on nuclear defense facilities, from 2012 to 2014. Expect a confirmation hearing in the Senate Energy and Natural Resources Committee sometime after the Memorial Day recess.

** **A message from POET - one of the world's largest ethanol producers:** With scientists and engineers, POET operates 30 biofuel facilities & America's first cellulosic biofuel plant. We produce a cleaner fuel for millions of drivers, every day. We're POET and we're driving innovation, from the ground up. Learn more here. **

PRUITT SPEAKS: Look for EPA Administrator Scott Pruitt to deliver keynote remarks today at noon during an energy symposium hosted by Faegre Baker Daniels Consulting. Also worth

flagging: Pruitt's expected No. 2 EPA pick, Andrew Wheeler, is slated to deliver closing remarks at 3 p.m., after FERC Commissioner Tony Clark speaks on a panel entitled "The Future of the Electric Grid" at 2 p.m.

This is weird: Pruitt tweeted he met with Rep. Fred Upton, chairman of the Energy and Commerce Energy Subcommittee, about "the importance of protecting the Great Lakes" during a Wednesday meeting. That came after Trump's budget zeroed out the $300 million program cleaning up the Great Lakes. In addition to Upton, Pruitt also mentioned meetings with California Democrat Rep. Jim Costa and the Congressional Western Caucus.

TOP DEMOCRAT PUSHES FOR ETHICS WAIVERS: Schumer said on Tuesday he pressed OMB Director Mick Mulvaney to releases copies of waivers the Trump administration granted to former lobbyists to get around their ethics pledge. That came after the White House sent a letter to Walter Shaub Jr., the head of the Office of Government Ethics, asking him to withdraw a request for those waivers. "There is absolutely no excuse for the Administration to keep these waivers from the OGE or the American people," Schumer said in a statement. "[Mulvaney] assured me that he would take my concerns under consideration — I hope they make this change for the good of our country."

PESTICIDES BILL ON THE FLOOR: Expect House floor action today on legislation — the Reducing Regulatory Burdens Act (H.R. 953) — that would exempt pesticide applicators from needing a Clean Water Act permit for spraying over water. It's broadly opposed by most Democrats as well as the environmental and public health communities. Similar legislation cleared the House in May 2016.

ZINKE TEES UP INTERIOR REORG: Look for proposals in the next couple of months aimed at reorganizing the Interior Department, Secretary Ryan Zinke said Tuesday. As Pro's Esther Whieldon and Annie Snider report, he hopes to increase coordination on issues like wildlife corridors, watersheds and trail systems that span multiple federal agencies, as well as state and local ones. "I view this as a century reorganization to look at how best to manage, protect, use our public lands in the next 100 years given that we have a number of challenges," Zinke said during a conference call.

ANOTHER PUBLIC KEYSTONE MEETING SCHEDULED: The Nebraska Public Service Commission announced Tuesday it would hold an additional public meeting on June 7 on the Keystone pipeline's proposed route through the state. That meeting will be held in O'Neill, Neb., from 1 to 8 p.m. "We recognize the emotion and conviction surrounding this application," Jeff Pursley, executive director of the commission, said in a statement. The notice said even more meetings are possible and a public hearing on the application will be held sometime during the week of Aug. 7-11 at the Lincoln Marriott Cornhusker Hotel.

TAKING AIM AT SUE AND SETTLE: Two House Oversight subcommittees today receive testimony on "sue and settle" agreements, in which federal agencies agree to regulatory actions as part of settlement deals with outside groups. Republicans have long contended that Democrats and greens engaged in the practice, which they say imposes significant economic burdens on regulated industries without giving them an opportunity to participate in the process. The hearing

gavels in today at 2 p.m. in Rayburn 2154.

PANEL EXAMINES NATURAL RESOURCES LAWS: The House Natural Resources Subcommittee on Oversight and Investigations holds a hearing this morning on the implementation of the Indian Reorganization Act of 1934, the Wilderness Act of 1964, and the Federal Land Policy and Management Act, paying special attention to "instances where federal agencies' application of these three federal laws has strayed beyond their original purposes and intent." Chairman Raul Labrador kicks things off today at 9 a.m. in Longworth 1324.

SOLAR PANEL TRADE PROBE LAUNCHED: The U.S. International Trade Commission announced Tuesday it would take the first step in investigating U.S.-based solar cell manufacturer Suniva's request for trade tariffs to protect the manufacturing sector, Pro's Esther Whieldon reports . Suniva argues a flood of cheap solar panel modules and cells, mainly from Chinese companies, are severely harming its business. In a statement, the Solar Energy Industries Association pledged to "remain at the forefront of the opposition to Suniva's requested remedies."

INTERIOR REVIEWING PAST MOUs: The Interior Department late Monday ordered assistant secretaries to have their agencies report by June 2 on any memorandum of understanding or memorandum of agreement they signed last year and until Trump's January inauguration that "are high level and national or regional and represent a commitment of resources or memorialize policy direction," according to a copy of the email obtained by ME. Zinke has ordered a full review of the agency's actions under the last administration. Among those that could be targeted are Interior's MOU with Mexico on resource management, its MOU with California to coordinate on renewables and a multi-agency MOU creating a wildland fire leadership council.

FERC LOOKS FOR MORE INPUT ON MARKET DESIGN: FERC staff is asking for additional comments following up on an early May technical conference on how the agency should design long-term solutions to problems facing the three Eastern power markets. FERC will be accepting comments for 30 days.

LAWSUIT SEEKS CLIMATE CENSORSHIP RECORDS: The Center for Biological Diversity filed another lawsuit against the Trump administration Tuesday seeking public records showing federal employees at DOE, EPA, Interior and State have been barred from using climate change-related terms in official communications. "Just as censorship won't change climate science, foot-dragging and cover-ups won't be tolerated under the public records law," CBD's Taylor McKinnon said in a statement.

MAIL CALL! SENATORS URGE CAREFUL MONUMENT REVIEW: Twenty-three Republican senators urged Zinke to "keep all remedies on the table as you consider how to correct past abuses of the Antiquities Act" and ensure a "more measured approach" is taking moving forward with monument designations. Meanwhile, Sen. Cory Gardner and Rep. Scott Tipton urged Zinke in their own letter not to make any changes to the designation of the Canyons of the Ancients National Monument in Southwest Colorado.

RELEASE THE FUNDS: Fifty-eight Democratic congressmen, led by Don Beyer, Paul Tonko and Anna Eshoo, sent a letter to Energy Secretary Rick Perry Wednesday seeking the immediate release of funds for previously approved ARPA-E projects and more information on existing procedures for approving and funding grants. "Agencies may not thwart the intent of Congress by withholding or impounding funds directed for a specific purpose," they wrote.

REPORT: GOVERNMENT GIVING BILLIONS IN DRILLING SUBSIDIES: A collection of environmental groups led by Oil Change International today released a report finding the government provides at least $7 billion per year in subsidies to support fossil fuel production on federally held lands and offshore waters. It argues the fossil fuel leasing program on public lands should be phased out, among other recommendations.

REPORT: CLIMATE LITIGATION ON THE RISE: The number of countries with active litigation over climate change has tripled since 2014 and there are three times as many cases involving the issue in the U.S. than the rest of the world combined, according to a report out Tuesday from the United Nations Environment Programme and Columbia Law School's Sabin Center for Climate Change Law. "Judicial decisions around the world show that many courts have the authority, and the willingness, to hold governments to account for climate change," Michael Burger, executive director of the Sabin Center, said in a statement.

MOVER, SHAKER: Andrew Malcolm has become a manager of public advocacy at Exelon; he was previously with Rep. Greg Walden for seven years.

SEEN AROUND TOWN: At the Hall of States for the Large Public Power Council's 30th Anniversary reception Monday: Sen. Cory Gardner (R-Colo.); acting FERC Chairman Cheryl LaFleur; former Sen. Mary Landrieu (D-La.); former Rep. Norm Dicks (D-Wash.); Tom Kuhn, president of Edison Electric Institute; Sue Kelly; president and CEO of the American Public Power Association; and John Di Stasio, president of the LPPC (h/t POLITICO Influence).

Stories from POLITICO Pro

Trump's budget calls for even cheaper energy Back

By Ben Lefebvre and Darius Dixon | 05/23/2017 06:47 PM EDT

President Donald Trump's budget proposal released Tuesday says lowering energy costs must be a national priority to benefit U.S. households — but that call's likely to fall flat with many oil, natural gas and power producers that have been struggling with the weak prices for their products in recent years.

And the call to lower energy prices, which follows Trump's campaign promises to boost U.S. oil and gas output, seems to overlook data that shows the energy burden for most households is at its lowest level in at least 25 years.

Since taking office, the Trump administration has moved to open up new lands and offshore areas for drilling, approved the Keystone XL and Dakota Access pipelines and removed Obama-era rules that the industry has complained stood in the way of its growth.

And Tuesday's budget calls for increasing energy production explicitly "for strengthening our national security, lowering the price of electricity and transportation fuels, and driving down the cost of consumer goods so that every American individual and business has more money to save and invest."

But U.S. oil producers have been breathing a sigh of relief since oil prices rebounded from lows in the mid-$20s per barrel early last year. That selloff triggered a wave of bankruptcies and tens of thousands of layoffs in the industry. Now, with oil prices hovering near $50, oil producers have resumed drilling new wells, raising expectations that production could reach record levels next year — even as retail gasoline prices hover near $2.36 a gallon.

"When oil prices were high and U.S. economy was weak — at $100 a barrel and 10 percent unemployment — upstream jobs made a big difference," said Kevin Book, an analyst at ClearView Energy Partners. "Now that oil prices are low and the economy is stronger — $50 a barrel and 5 percent unemployment — policy emphasis appears to have returned to its usual focus: end-users."

The White House is also seeking to sell much of the nation's Strategic Petroleum Reserves. Trump's budget would put 270 million barrels of oil on the market, a move the White House says could shave $16.6 billion off the federal deficit over the coming decade by selling half the inventory the Energy Department holds for emergencies. However, in this case, the budget takes a bullish stance for oil prices: To reach the deficit reduction goal, DOE would have to sell the oil at more than $61 a barrel, 20 percent higher than the current price.

In the power sector, retail electricity prices in the U.S. have been rising steadily over the past two decades — but they have lagged inflation, shrinking their hold on household budgets.

In fact, Americans in 2015 spent the smallest share of their income on energy since the Energy Information Administration started tracking the number in 1992. U.S. consumers are spending less than 6 percent of U.S. GDP to buy electricity, gasoline, natural gas and other fuels, according to EIA statistics, down from nearly 10 percent in 2008.

Many power producers have struggled as demand growth for electricity flattened out in recent years, and as cheap wind and solar power — as well as plentiful natural gas — cut deeply into the profits of nuclear and coal-fired power over the past decade. In the West, solar power has made electricity in California so inexpensive that it's even thrown the economics of some gas-fired power plants there into question and the state has resorted to shipping excess electricity across state lines.

Meanwhile, several states across the Midwest to the East Coast have seen power prices fall to their lower point since the decade began, fueled in large part by the rising flow of natural gas. The prices are so low that some utilities and power companies with large "baseload" facilities have pressed states and federal regulators to craft new market rules the industry hopes will provide more cash for those big plants.

The American Petroleum Institute, American Fuel and Petrochemical Manufacturers and the Edison Electric Institute declined to comment on the Trump budget call for lower prices.

While voters and lawmakers alike lament spikes in gasoline prices, sustained low prices can also stall the deployment of new technologies, such as electric cars, potentially putting the U.S. at risk of falling behind the rest of the world and missing a big trade opportunity.

"There's an enormous emerging market in China for electric vehicles. Do we want to be exporting to China?" said Josh Freed, Third Way's vice president for clean energy. "It wouldn't appear so from this budget."

Trump's budget also leans too heavily on cost factors while ignoring the need to sustain a mix of energy sources on the electric grid that are also clean, Freed said.

"Leaving it to one or two cheapest-at-the-moment commodities is a very, very risky bet for the future of the American economy, our ability to create jobs and American security," he said. "Closing your eyes and keeping your fingers crossed that the market will always move in one direction with fossil fuels — which, in essence, is what the Trump administration proposes with this budget — is not what any smart business person or political leader would pin their future economic hopes to."

EPA sues Fiat Chrysler over emissions cheating allegations Back

By Alex Guillén | 05/23/2017 03:49 PM EDT

The Justice Department and EPA today sued Fiat Chrysler, contending the automaker sold almost 104,000 diesel vehicles equipped with software designed to cheat on emissions testing, threatening the Italian-owned company with billions of dollars in fines.

The agencies first went public with their allegations in January, when Obama-era officials demanded Fiat Chrysler explain whether its "auxiliary emission control devices" were acting as defeat devices on Ram 1500 and Jeep Grand Cherokee models.

Those defeat devices, consisting of at least eight software features that were undisclosed to EPA during the company's certification process, boost performance under real-world driving conditions by increasing nitrogen oxide emissions, according to DOJ.

Fiat Chrysler faces fines of $37,500 to $45,268 per vehicle sold, along with further penalties for each undisclosed software device and for reporting violations, which could add up to billions of dollars.

Fiat last week said it was in talks with the DOJ to settle the allegations, though today's filing does not indicate the parties have reached a deal. DOJ said in a release the talks continued but that timing was unclear.

Fiat on Friday announced it has taken a first step toward getting its 2017 model year diesel vehicles approved by EPA and the California Air Resources Board, and will install updated emissions software in 2014-2016 vehicles.

The Fiat allegations come after Volkswagen settled its own emissions cheating scandal for a record $4.3 billion.

Trump to tap nonproliferation expert as DOE's top lawyer Back

By Alex Guillén | 05/23/2017 05:55 PM EDT

President Donald Trump plans to nominate David Jonas to be the Energy Department's general counsel, the White House announced today.

Jonas, a partner at the Virginia law firm Fluet, Huber and Hoang since 2016, was also a DOE landing team member and is an expert on nuclear nonproliferation.

He previously served as the general counsel for the National Nuclear Security Administration, DOE's nuclear security arm, from 2001 to 2010, according to his LinkedIn page. From 2012 to 2014, Jonas was general counsel for the Defense Nuclear Facilities Safety Board, an independent agency that advises DOE on nuclear defense facilities.

Jonas's resume also includes a year as DOE's director of legal strategy and analysis and a year as a vice president at the Pentagon Federal Credit Union. He holds advanced law degrees in military law and international law.

Jonas's wife, Tina Jonas, served as chief financial officer for the FBI under Robert Mueller and later as CFO and under secretary of Defense from 2004 to 2008.

WHAT'S NEXT: The Senate Energy and Natural Resources Committee likely will schedule a hearing on his nomination for sometime after Congress returns from its Memorial Day recess in early June.

Sources: Trump expected to tap Wheeler as EPA deputy Back

By Andrew Restuccia, Alex Guillén and Anthony Adragna | 03/16/2017 08:00 PM EDT

President Donald Trump is expected to tap Andrew Wheeler, a coal lobbyist and former aide to Sen. Jim Inhofe, to be deputy administrator of the Environmental Protection Agency, sources familiar with the hiring process told POLITICO.

Sources cautioned that the decision has not yet been finalized, but they said Wheeler is expected to get the job. It's unclear when Trump will make the announcement, but one source said it could be weeks before Wheeler is officially tapped.

Wheeler worked as an EPA staffer earlier in his career. He later joined Inhofe's Senate office and then spent more than a decade as a Republican staffer on the Senate Environment and Public Works Committee, where he worked on several major pieces of legislation, including the 2005 and 2007 energy bills.

He has worked at the law firm Faegre Baker Daniels since 2009. He now co-leads the firm's energy and natural resources practice.

Wheeler is a registered lobbyist for Murray Energy, the nation's largest privately owned coal company, which regularly filed lawsuits against the Obama administration over its environmental regulations.

As a lobbyist, Wheeler may need to obtain a waiver to serve at the EPA.

Trump signed an executive order in January that bars registered lobbyists from participating in "any particular matter" on which they lobbied in the past two years. Those lobbying restrictions last for two years from the time the person joins the administration.

But the executive order says the administration can grant "any person a waiver of any restrictions" in its ethics and lobbyist requirements. Unlike an order signed by former President Barack Obama in 2009, Trump's executive order doesn't require public disclosure of the waivers.

Aside from Murray, Wheeler also lobbies on unspecified energy and energy efficiency issues for Underwriters Laboratories, an Illinois-based lab company, and on agricultural issues for cheese maker Sargento. His former clients include Xcel Energy and Bear Head LNG, as well as a cooking oil-recycling company, an auto auctioner and a medical isotope coalition.

Wheeler won't be the only energy lobbyist to join the Trump administration. Mike Catanzaro, a lobbyist at the firm CGCN Group whose clients included several fossil fuel companies, took a job at the White House last month as an energy and environmental adviser at the National Economic Council. Catanzaro is a former EPW staffer to Inhofe.

Meanwhile, EPA Administrator Scott Pruitt, a fellow Oklahoman, has also brought former Inhofe aide Ryan Jackson on as chief of staff. Byron Brown, a former Inhofe aide, is EPA's deputy chief of staff and Mandy Gunasekara, a former EPW counsel, is now a senior policy adviser to Pruitt.

More aides with ties to Inhofe are expected to join the EPA in the coming weeks. Susan Bodine and Brittany Bolen, two EPA staffers, are widely expected to be offered jobs at EPA.

Wheeler, a White House spokeswoman and an EPA spokesman did not immediately respond to a request for comment.

Zinke to unveil Interior 'century' reorganization plan Back

By Esther Whieldon and Annie Snider | 05/23/2017 03:00 PM EDT

Interior Secretary Ryan Zinke said today he will begin releasing proposals in the next couple of months to reorganize the agency.

"I view this as a century reorganization to look at how best to manage, protect, use our public lands in the next 100 years given that we have a number of challenges," Zinke said in a conference call about the fiscal 2018 budget proposal.

Zinke said the reorganization will be aimed at coordinating on issues like wildlife corridors, watersheds and trail systems that span multiple federal agencies, as well as state and local ones.

He said his staff has already begun exploring ways of applying military models, he said, and for natural resources, the concept could be based around different watersheds to push more authority down to the "front lines."

Zinke has met with White House officials and interest groups including from the energy industry and environmental sectors about a reorganization options. And he met with Agriculture Secretary Sonny Perdue to discuss fighting forest fires. POLITICO in January reported Zinke was mulling proposing congress move USDA's Forest Service to the Interior.

WHAT'S NEXT: With a few exceptions, Zinke will need congressional approval for any major reorganization of the Interior's nine bureaus or for bringing over bureaus from other agencies.

U.S. trade commission launches investigation into Suniva solar trade complaint Back

By Esther Whieldon | 05/23/2017 06:10 PM EDT

The U.S. International Trade Commission has initiated an investigation into the request by U.S.-based solar cell manufacturer Suniva that the Trump administration create temporary trade tariffs to protect the manufacturing sector.

The move, announced today, clears the first first hurdle in the process.

In April, Suniva filed a petition with the USITC asking the agency to recommend Trump grant for temporary relief under Section 201 of the Trade Act of 1974 and to impose trade restrictions for four years on imported solar cells and modules. Suniva is going through a bankruptcy proceeding and agreed to file the Section 201 petition in exchange for an additional line of credit.

The company contends that an influx of cheaper solar panel modules and cells largely from China are putting it out of business.

WHAT'S NEXT: The commission said it will accept pre-hearing briefs on the case through Aug. 8. It hopes to determine the extent to which the cheaper solar panels are causing injury by Sept. 22 and to send recommendations to Trump by Nov. 13.

Doug Palmer contributed this report.

Subject: POLITICO's Morning Score: Senate Obamacare repeal on brink of defeat — Koch network donors eye Trump and Congress warily on health care, taxes — POLITICO Pro Q&A with CO-07 Democrat Andy Kerr

By Elena Schneider | 06/27/2017 10:00 AM EDT

With Maggie Severns and Scott Bland

The following newsletter is an abridged version of Campaign Pro's Morning Score. For an earlier morning read on exponentially more races - and for a more comprehensive aggregation of the day's most important campaign news - sign up for Campaign Pro today. (http://www.politicopro.com/proinfo)

ON THE HILL - "Senate Obamacare repeal on brink of defeat," by POLITICO's Burgess Everett and Jennifer Haberkorn: "Senate Republicans' Obamacare repeal effort is on track to blow up before it even gets started. The GOP is well short of the votes needed to bring its bill to the floor, and party leaders and President Donald Trump are kicking into overdrive to save their imperiled health care overhaul. At least four Republican senators, Susan Collins of Maine, Rand Paul of Kentucky, Dean Heller of Nevada and Ron Johnson of Wisconsin, have signaled they could oppose a key procedural vote that will occur either Tuesday afternoon or Wednesday. A number of other senators, like Shelley Moore Capito of West Virginia and Marco Rubio of Florida, are undecided. Senate Majority Leader Mitch McConnell (R-Ky.) and his team are working furiously to round up 50 of the caucus's 52 senators to even bring the bill to the floor, let alone pass it by week's end." **Full story.**

- "CBO: 22 million more uninsured under Senate health bill," by POLITICO's Adam Cancryn. Read the full story **here.**

MONEY MEN - "Koch network donors eye Trump and Congress warily on health care, taxes," by Campaign Pro's Kevin Robillard in Colorado Springs: "Conservative donors see a major opportunity this year to achieve years-old Republican goals of reforming the tax code and passing a new health care law. But they are also consumed with worry that the GOP will somehow blow the chance it has been waiting for - whether because of an unfocused President Donald Trump or fretful congressional Republicans. That combination of hope and concern infused the summer seminar meeting of the Koch brothers' network of conservative groups. Before a gathering of over 400 donors at the luxury Broadmoor Resort, Koch officials spoke of an enticing but narrow window to pass major tax and health care legislation, even though Republicans control the presidency and both chambers of Congress." **Full story.**

WHEN POLITICS AND POLICY ATTACK - "Heller's hesitance on Obamacare repeal opens Dem divide," by POLITICO's Kyle Cheney and Elana Schor: "Dean Heller's harsh critique of the Republican effort to kill Obamacare has broken open a Democratic divide - between those who want to unseat him and those who prefer to lock in his 'no' vote first to save the health law. The Nevada Republican senator gave Democrats a gift on Friday when he issued

a stinging analysis of the Senate's GOP health plan and signaled he may vote against it. His reward: vicious reviews from Democrats who sense a chance to defeat him in 2018." **Full story.**

ONE ON ONE - "POLITICO Pro Q&A: CO-07 Democrat Andy Kerr," by Campaign Pro's Elena Schneider: "State Sen. Andy Kerr is on the front lines of Democratic primary politics. The Democratic Party is trying to figure out what it wants to be, and next year's primaries will be a major opportunity for primary voters to have their say before the 2020 presidential race. In front of that backdrop, Kerr is squaring off against a Democratic statehouse colleague, EMILY's List-backed state Rep. Brittany Pettersen, in the race to replace Rep. Ed Perlmutter , who's running in his own competitive primary for governor.Republicans are already eyeing Colorado's open 7th District, but while the seat isn't the bluest in the country, it has trended to the left since Perlmutter first won it. That could next year's Democratic primary especially interesting. Kerr weighed in on family fights in primaries, his relationship with Perlmutter and whether he supports a single-payer health care system." **Full story.**

Days until the 2017 election: 133.

Days until the 2018 election: 497.

WATCH LIST - "Democrats' Best Chance to Retake the House? 8 Types of G.O.P. Districts to Watch," by The New York Times' Nate Cohn: "Democrats have debated extensively over whether their path to power goes through the white-working-class Rust Belt states or the diverse, well-educated Sun Belt. In 2018, this debate is moot. The Democrats don't have the luxury of choosing where to compete in House races. They'll have to target all of these areas. The problem for Democrats is simple: There just aren't many great opportunities for them to pick up seats in Democratic-leaning areas. Instead, they'll have to compete in a lot of districts where they're competitive but not favored." **Full story.**

- POST MORTEM - "Lessons for Democrats from the Georgia election," by Jon Ossoff in The Washington Post: He's still not mentioning Trump by name, but, "On Nov. 9, Americans awakened to a startling reality: In the absence of broad, enduring citizen engagement, the door is left open for darkness to creep in and gain a foothold in our democracy. Amid that awakening, I launched my improbable campaign for Georgia's 6th Congressional District. It grew into something bigger than I could have imagined." Ossoff credits the "right wing's national apparatus fully mobilized to defend the status quo in Washington" for his loss. But he also puts out a warning for Democrats, "intraparty disputes that dominate national commentary on Democratic politics were nowhere to be found in the 6th District." **Full story.**

MONEY UPDATE - CLF raised over $1.5M in first two weeks of June: "Congressional Leadership Fund, the Republican super PAC aligned with House leadership, has spent more than

$10 million so far this year, according to a new FEC report. The group reported raising over $1.5 million and spending over $797,000 during the first two weeks of June." **Full story.**

- Priorities USA Action reports little fundraising in 2017: "Priorities USA Action, the Democratic super PAC that raised close to $200 million during the 2016 election cycle to support Hillary Clinton for president, has raised little money from donors so far in 2017, according to a new FEC filing . Priorities USA Action brought in $1.6 million and spent $2.1 million between Jan. 1 and Jun. 14, the filing shows. But the bulk of the receipts came from $1.6 million in refunds from two vendors, Targeted Platform Media and Precision Network. The super PAC had nearly $1.3 million in the bank on Jun. 14. ... Priorities also has increasingly active 501(c)(3) and 501(c)(4) nonprofit groups." **Full story.**

2018 WATCH - Ted Kennedy Jr. passes on Connecticut gubernatorial run: "Ted Kennedy Jr., a Connecticut state senator and the son of the late senator from Massachusetts, has decided not to run for governor of Connecticut in 2018. ...Kennedy likely would've been the Democratic front-runner to succeed Gov. Dan Malloy, who has low approval ratings and opted not to run for reelection. Middletown Mayor Dan Drew, Lt. Gov. Nancy Wyman and Comptroller Kevin Lembo are among a slew of candidates considering bids on the Democratic side of the aisle." **Full story.**

- "Wagle weighing run for either governor or Congress," by The Wichita Eagle's Jonathan Shorman: "Senate President Susan Wagle is weighing a run for governor along with a run for Congress, her office said Monday. Wagle, a Wichita Republican, had already been considering a primary challenge of U.S. Rep. Ron Estes. But she is also thinking of a bid for governor, according to spokeswoman Morgan Said." **Full story.**

- Daily Kos endorsed IL-03 Democrat Marie Newman, who is challenging longtime Democratic Rep. Dan Lipinski in 2018.

NEW FIRM - Kevin Collins, formerly of the Analyst Institute, announced his new firm ChangePoint Analytics on Monday. He's focused on spreading a methodology for creating good online panels "for smaller constituencies such as congressional districts and state primary electorates," according to the announcement in his newsletter.

INTERNET STAR - GQ profiles Randy Bryce, the ironworker "America met and fell in love" with: Bryce, on his opponent House Speaker Paul Ryan, "People here are working harder and getting less as a result. But he's not even around. It's been over 600 days since he's held a local town hall. It's just horrible. He's not doing his job. We need somebody who cares." **Full story.**

ETHICS WATCH - "Conyers and Lujan face Ethics Committee scrutiny," by POLITICO's John Bresnahan and Rachael Bade: "Democratic Reps. John Conyers of Michigan and Ben Ray Lujan of New Mexico are under scrutiny by the House Ethics Committee for alleged violations, although both men strongly deny any wrongdoing. The allegation against Lujan is tied to the Democratic "sit-in" on the House floor in June 2016. Conyers has come under review for his interaction with a former top aide who pleaded guilty to receiving stolen

property." **Full story.**

ADMINISTRATION SPEED READ - "FBI has questioned Trump campaign adviser Carter Page at length in Russia probe," by The Washington Post's Devlin Barrett: "FBI agents have repeatedly questioned former Trump campaign adviser Carter Page about his contacts with Russians and his interactions with the Trump campaign, according to people familiar with the investigation. Over a series of five meetings in March, totaling about 10 hours of questioning, Page repeatedly denied wrongdoing when asked about allegations that he may have acted as a kind of go-between for Russia and the Trump campaign, according to a person familiar with Page's account. The interviews with the FBI are the most extensive known questioning of a potential suspect in the probe of possible Russian connections to associates of President Trump." **Full story.**

CODA - QUOTE OF THE DAY: "Battulga campaigned on a 'Mongolia First' policy, borrowing the language of President Donald Trump." - The Associated Press, reporting on Mongolia's runoff-bound presidential election.

EPA Regulatory Review Floodgates Open, Leaving Pruitt to Mop Up

Posted May 30, 2017, 7:01 A.M. ET

By Andrew Childers

When asked which EPA regulations stifle economic growth and should be reconsidered or rescinded, industry groups responded, "All of them."

High-profile Obama-era regulations limiting carbon dioxide from power plants or establishing the reach of the Clean Water Act, which Environmental Protection Agency Administrator Scott Pruitt had opposed, will certainly be targeted. However, businesses are left wondering whether the agency, which so far lacks political appointees to run the EPA's water, chemicals and air pollution offices, will have bandwidth to tackle a host of other, less splashy regulatory fixes that could reduce costs or ease burdens.

"We're in new territory. It's a process that has no clear precedent within the federal system," Randall Lutter, a professor of public policy at the University of Virginia and a former senior economist at White House Office of Management and Budget under President Barack Obama, told Bloomberg BNA.

Open the Floodgates

The EPA has received a barrage of requests from regulated industries to open and reconsider regulations from every sector the agency touches. The requests range from drastic changes to the way the agency regulates air pollution—Ameren suggested replacing the agency's ambient air standards with pollution trading programs—to the more targeted—the American Water Works Association recommended that the EPA streamline its application process for loans to improve drinking water systems.

While a host of industries are looking ease their regulatory burdens, chemical manufacturer Chemours Co. actually went to bat for Obama-era rules that approved new chemicals to replace ozone depleting substances and clamped down on leaks from refrigeration equipment. The chemical company recommended that Pruitt retain those rules.

Environmental and public health groups, of course, vow to fight any attempt to weaken EPA protections, with Earthjustice, the Sierra Club, and Clean Air Task Force calling the regulatory review process "an illegal and arbitrary sham."

The Sierra Club has received funding from Bloomberg Philanthropies, the charitable organization founded by Michael Bloomberg, founder of Bloomberg L.P.Bloomberg BNA is an affiliate of Bloomberg L.P.

The Waterkeeper Alliance also dismissed the process as rushed and opaque, calling on the EPA to provide more details about how it will manage the review process and decide which regulations will be reevaluated.

Who's Driving the Process?

Every new administration takes office vowing to streamline the regulatory process, but Trump has taken that further than ever before, requiring agencies to repeal two regulations for every new directive issued and capping costs that can be imposed on industries. It's an ambitious plan to transform the regulatory state, but seeing that process through will require coordination and planning. Right now the EPA is short of the political appointees necessary to make those decisions.

"In any one of these big rulemakings, there are dozens of intermediate decisions made along the way," Jeffrey Holmstead, a partner at Bracewell LLP in Washington, D.C., who previously served as the EPA's assistant administrator for air pollution in the George W. Bush administration, told Bloomberg BNA. "If you have the administrator sign off on every one, you can only do two or three."

Trump lags behind his predecessors in staffing the EPA, according to data provided by the Center for Presidential Transition. So far only Pruitt has been confirmed, and Susan Parker Bodine, Trump's pick for the agency's enforcement office, is awaiting confirmation. The Trump EPA lacks nominees to head the water, air and chemicals offices who will be central to the regulatory review process.

Unlike past administrations, though, Trump has made easing burdens on businesses central to his domestic priorities.

"The biggest single difference is that Trump has appointed someone to be EPA administrator whose primary focus is on reducing the regulatory burden," Holmstead said.

When President George W. Bush took office, his EPA preferred legislative rather than regulatory approaches, Holmstead said. But when bills such as the Clear Skies Act faltered in Congress, that's when the Bush administration attempted to regulate pollutants such as mercury emissions from power plants.

"In the air office, we were not as ambitious as the Trump administration when it comes to regulatory reform," Holmstead said.

What's unknown is how the EPA will make decisions on which regulations it will target and when that process will get started. An EPA spokesman could not be reached for comment.

Without assistant administrators to guide the process, Pruitt has appointed a regulatory reform task force of Ryan Jackson, the chief of staff; Byron Brown, the deputy chief of staff for policy; and

Brittany Bolen, deputy associate administrator of the Office of Policy, to oversee the effort. All three previously served on the Senate Environment and Public Works Committee with past Chairman James Inhofe (R-Okla.), who was a vocal critic of the Obama EPA's regulations.

"They are certainly knowledgeable enough to be looking for more regulations to be going after," Inhofe told Bloomberg BNA. "And they are doing the job pretty well."

While agencies are tasked with implementing the regulatory reform efforts, the White House will still play a significant role in reducing compliance costs through the Office of Information and Regulatory Affairs, which reviews regulations, said Tracy Mehan, executive director of the American Water Works Association's government affairs office.

"No doubt in a Republican administration, OIRA is very much empowered—not that they were pushovers in the Obama administration, but it's fair to say they're going to be more empowered," Mehan, who previously served as the EPA assistant administrator for water under President George W. Bush, told Bloomberg BNA.

However, Neomi Rao, Trump's pick to head that office, also hasn't been confirmed.

Smaller Fixes Have Big Benefits

While rolling back the Clean Power Plan and replacing the Waters of the U.S. rule are top priorities for Pruitt, more modest updates to the EPA's various regulations could provide the biggest long-term boons for businesses. Many industry groups in their comments are targeting smaller adjustments to existing regulations that they say can be quickly updated to reduce costs and make them more efficient.

For example, the Class of '85 Regulatory Response Group, a coalition of 30 utility companies, suggested the agency eliminate unnecessary air pollution monitoring requirements. The Association of Air Pollution Control Agencies recommended streamlining a variety of air pollution permitting provisions to ease burdens on both businesses and state permitting officials.

"Those [smaller fixes] would be valuable investments of time," Megan Berge, a partner at Baker Botts LLP who represents utilities and other industries, told Bloomberg BNA. "Those are the investments that have the possibility of having a lasting good in terms of making these programs efficient."

Taking on the EPA's largest regulations will spark an inevitable battle with environmental groups, which could bog down the entire effort. But tackling some of the smaller changes sought by businesses could be a way for the Trump administration to claim some quick victories.

"The good news is that, at least from EPA and the administration's perspective, these slight deregulatory acts are somewhat quicker than the big rules," Sam Batkins, director of regulatory policy at the American Action Forum, which has argued many EPA regulations have costs that exceed benefits, told Bloomberg BNA. "Maybe to some extent they can prioritize the small, minor tweaks to the rules and generate some savings."

—With assistance from Dean Scott in Washington.

Trump Decides Next Week If He'll Quit Paris Climate Accord

Posted May 27, 2017, 03:06 P.M. ET

By Joe Ryan and Josh Wingrove

Donald Trump continued to distance himself from fellow world leaders over climate change at the G-7 summit, and said he'll determine next week whether to pull the U.S. out of the landmark Paris climate accord.

"I will make my final decision on the Paris Accord next week!" the president told his almost 31 million Twitter followers on Saturday.

Trump, who for months has delayed a decision on the climate agreement, made his announcement at the conclusion of the Group of Seven summit in the resort town of Taormina, Italy.

In an unprecedented step, the U.S. broke from the other six nations in a joint statement issued at the summit's conclusion, saying America is reviewing its climate policies while the G-7 members others remain committed to the Paris Agreement.

Climate was among the most disputed issues separating Trump from other leaders at the two-day meeting on the Sicilian coast. A top White House adviser said the president's views were evolving on the issue, but Trump wasn't immediately swayed by arguments from Chancellor Angela Merkel of Germany, France's President Emmanuel Macron and others to honor the Paris Agreement, brokered in 2015 by almost 200 nations to slash fossil fuel emissions and boost funding to ease impacts of global warming.

"The whole discussion about climate has been difficult, or rather very unsatisfactory," Merkel told reporters after the summit. "Here we have the situation that six members, or even seven if you want to add the EU, stand against one."

'Stark Isolation'

Diplomats spent days trying to hammer out language for the G-7 joint statement. Past communiques, which are painstakingly crafted to reflect common goals and values of all seven nations, have dedicated lengthy sections to climate change. At one point this week, the words "Paris Agreement" were nearly excluded from the statement, underscoring how contentious the issue became in Taormina, said a Canadian government official who spoke on the condition on anonymity to discuss private deliberations.

Trump, who once said the concept of global warming "was created by and for the Chinese in order to make U.S. manufacturing non-competitive," repeatedly vowed to pull out of the Paris deal during his election campaign, but has sidestepped the issue since taking office.

Delaying a decision about the accord provided opportunity for G-7 leaders and Pope Francis to press Trump to honor U.S. environmental commitments. Now the president heads back to Washington, where much of his party is pushing him to do the opposite.

Issue Deadlock

Last week, 22 Republican senators, including Majority Leader Mitch McConnell, sent a letter to Trump urging him to exit the Paris accord. Members of his administration, meanwhile, are deadlocked on the issue. Environmental chief Scott Pruitt and top strategist Steve Bannon are pushing for a pullout. Secretary of State Rex Tillerson, White House adviser Jared Kushner and

Ivanka Trump, the president's son-in-law and daughter respectively, have urged the president to stay in the deal.

John Kirton, director of the University of Toronto's G8 Research Group, said Trump's trip home may not bode well for those in favor of Paris. "If you let him go back to the civil war within the White House, Pruitt might win," he said.

Trump has criticized efforts to cut emissions, saying they limit U.S. economic competitiveness. The president's views on the Paris accord, however, are evolving, White House National Economic Council director Gary Cohn told reporters Friday in Italy. Trump may be willing to stay in the agreement, Cohn said, if the U.S. can scale back commitments made by former President Barack Obama.

"His views are evolving, and he came here to learn," Cohn said. "His basis for decision is ultimately going to be what's best for the United States."

The Paris Agreement is broader than any previous climate accord. It calls for reducing pollution in hopes of limiting global warming to 2 degrees Celsius (3.6 degrees Fahrenheit) above temperatures at the outset of the industrial revolution.

Hundreds of corporations and investors have endorsed the pact, including oil majors Royal Dutch Shell Plc, BP Plc and Exxon Mobil Corp., which was previously led by Tillerson. Alden Meyer, who's followed climate talks for two decades as director of policy at the Union of Concerned Scientists, said Trump's reluctance to support it puts him at odds with much of the world.

"He stands in stark isolation," Meyer said. "The leaders from Europe, Canada, and Japan have made it crystal clear that they intend to fully implement their national commitments under the Paris Agreement."

Climate `Danger Zone' Seen If Trump Pulls U.S. Out of Paris Deal

Posted May 30, 2017, 02:53 P.M. ET

By Jessica Shankleman

Donald Trump wasn't exaggerating when he said during his election campaign that the U.S. could "cancel" the Paris Accord on climate change.

A decision due from the president this week on whether to pull the U.S. out of the deal involving almost 200 nations could have a domino effect on the participation of other countries in limiting fossil-fuel pollution, making it almost impossible and extremely expensive to stop catastrophic climate change.

That's the conclusion of researchers and scientists evaluating the impact of Trump on the health of the climate. While forecasting the state of the environment more than 80 years into the future is a notoriously inexact exercise, academics gathered by the the United Nations at the Intergovernmental Panel on Climate Change are concerned the world is headed for "extensive"

species extinctions, serious crop damage and irreversible increases in sea levels even before Trump started to unpick the fight against global warming.

"Four years of the Trump administration may have only modest consequences, but eight years of bad policy would probably wreck the world's chances of keeping warming below the international target of 2 degrees Celsius," Michael Oppenheimer, professor of geosciences and international affairs at Princeton University, said by email. "The odds of our avoiding the climate-danger zone would fade to zero."

While a 2-degree shift wouldn't be noticeable during the course of a day, it would represent a historic change for the Earth as a whole that's faster than any change in the climate since the last ice age ended some 10,000 years ago. The scenarios that scientists are looking at depend on measurements of air and water temperatures taken at hundreds of sites around the world, as well as complex models about how trends will evolve in the coming decades.

Trump's move would clearly make the outlook worse, according to Climate Interactive, a team of modelers backed by institutions such as MIT Sloan School of Management and the Rockefeller Brothers Fund. They estimate that the world would warm by 3.6 degrees Celsius (6.4 degrees Fahrenheit) by 2100 when compared with pre-industrial levels if Trump quits Paris, more than the 3.3-degree baseline scenario.

As the world's second-biggest polluter after China, a move by the U.S. to scrap the accord involving almost 200 nations would pour hundreds of billions of tons of carbon dioxide into the atmosphere and speed up the warming trend already taking place. It also would threaten a $100 billion-a-year stream of funds that industrial nations have pledged to persuade developing nations to cut back their own emissions, endangering the political foundations of the global fight against climate change.

"The loss of U.S. finance would be the biggest headache, and of course the symbolism is not good," said Michael Grubb, a professor at University College London who has advised the European Union on climate policy.

The Paris Agreement sealed in 2015 brought together the U.S. and European Union with big developing nations from China to India to Brazil in pledging limits on fossil-fuel pollution and funds to help poorer countries adapt to climate change.

Longer term, the impact of a U.S. withdrawl depends on how other countries and investors respond. Trump, who for months has delayed a decision on the climate agreement, told his almost 31 million Twitter followers to expect his verdict this week, and the signs are pointing toward a withdrawal.

G-7 Statement

In an unprecedented step, the U.S. broke from the other six nations May 27 in a joint statement issued at the Group of 7 summit, saying America is reviewing its policy. The political news website Axios reported that he'd told confidants he plans to pull the U.S. out of the deal.

"The big question is whether a U.S. withdrawal would lead to U.S. investors and utilities actually starting to build new plants that commit to high future emissions," Myles Allen, professor of geosystem science at the University of Oxford's Environmental Change Institute, said by phone.

So far, no other country, not even China or India, has said they'd follow the U.S. in pulling out of Paris. Instead, it's catalyzed support for the deal.

The key variables are what policies Trump enacts and how long they remain in force. The targets agreed on global warming through the UN are for 2100, and shifts in the energy industry take decades to play out. U.S. inaction on greenhouse gases may eventually discourage other countries from continuing their own efforts to cut back, said Oppenheimer at Princeton.

The Paris agreement was designed in such a way that legally, no other country's action would be impacted by a withdrawal. Paris effectively sets up the reporting framework and the temperature goals, but each country's individual target is voluntary.

In reality, an eight-year delay on climate action would be accompanied by cuts to renewable energy research that could, in turn, harm emissions reductions rates. Those policies may encourage the use of polluting fuels such as coal.

All told, each of these changes could add a total of 350 billion to 450 billion tons of CO2 into the atmosphere, if the rest of the world followed Trump, according to climate modelers, Ben Sanderson of the National Center for Atmospheric Research in Boulder, Colorado, and Reto Knutti of ETH, Zurich. The chances of meeting the UN target of staying well below 2 degrees of warming would drop to about 10 percent, from two-thirds now, they say.

"Delay is the worst enemy for any climate target and can only be made worse by cutting research and energy technologies that would be crucial to get back on track again for target," they wrote in the journal Nature earlier this year.

EU Parliament, Nations at Odds Over Vehicle Emissions Testing

Posted May 30, 2017, 02:01 P.M. ET

By Stephen Gardner

The European Parliament and European Union national governments are at odds ahead of talks to finalize a reform of the 28-nation bloc's system for testing air pollution emissions from passenger vehicles.

The Council of the EU, which represents the bloc's national governments, would leave national authorities much of the responsibility for ensuring no repeat occurs of Volkswagen's rampant cheating on emissions tests for its diesel vehicles, according to position reached May 29. That's in contrast to the European Parliament, which backed a more centralized system in which the European Commission, the EU's executive arm, would have more power to fine automakers that violate the standards and to intervene in the compliance programs of EU countries.

Following the adoption of their respective positions, the council and parliament must negotiate over the final form of the regulation before an agreed text is put to ratifying votes.

Enforcement Among Differences

Among the chief differences to be worked out is whether individual countries or the broader European Commission should take the lead on enforcement.

The council's favored approach would let national authorities fine automakers up to to 30,000 euros

($33,500) per vehicle for violations. The commission would be able to step in and organize tests of vehicles if EU national authorities were seen to be failing in their market surveillance duties, but would not be able to impose fines in cases in which a national fine had already been levied. The European Parliament's proposal would give the EU's regulatory arm a more central role in enforcement.

Consumer advocates said the council's approach would water down the enforcement powers favored by the European Parliament.

"The commission will be prevented from issuing a penalty when a member state has already acted, even if the member state issues a completely insignificant penalty," the European Consumer Organization said in a May 29 statement.

While both the council and European Parliament agree that manufacturers should fund the emissions testing program, details of the payment system will need to be negotiated. The parliament advocated a system in which national authorities levy fees on manufacturers to cover testing costs and distribute the fees to test centers. That would avoid manufacturers directly paying the testing centers to ward off the appearance of impropriety. The council said instead that EU countries should be able to choose how they organize the financing of their market surveillance systems. European Consumer Organization Director General Monique Goyens said the council's position was "a package of half-baked measures that risk turning the entire reform into a paper tiger."

The council agreed that EU countries should check the emissions of at least one in every 50,000 new vehicles they register each year, and that checks should verify that the emissions of vehicles in everyday driving conditions comply with legal standards. Currently, EU vehicle emissions tests take place in laboratories, producing levels of emissions that are often significantly exceeded in real driving conditions. About 14 million new vehicles were registered in the EU in 2015.

Progress Welcomed

The European Commission, however, welcomed the council's agreed-on position and said a strengthened system for checking compliance of vehicles with emissions norms would complement changes to the way cars are tested in the EU. Tests that more accurately gauge emissions from cars in real driving conditions are being introduced.

EU Internal Market Commissioner Elzbieta Bienkowska said May 29 that the council's position was "a huge step in the right direction to the final legislation." The EU needed to act because nearly two years after the exposure of Volkswagen's emissions cheating in the U.S., "we continue to hear of new allegations, revelations and investigations," Bienkowska said.

Chris Cardona, economy minister of Malta, which presently chairs the Council of the EU, said the reform of the vehicle surveillance system would improve health and air quality. Once the new system is in place, "emission irregularities that occurred in the past will not happen again," he said.

No date has yet been agreed for the start of talks between council and parliament negotiators to finalize the market surveillance regulation.

EU Panel Seeks Deeper Cuts For Non-Emissions Trading Sectors

Posted May 30, 2017, 12:49 P.M. ET

By Stephen Gardner

A panel of European Parliament lawmakers May 30 backed changes to proposed binding greenhouse gas emissions cuts through 2030 for parts of the European Union economy not covered by the bloc's emissions trading system (ETS).

The lawmakers backed a proposal for sectors such as construction, waste management, agriculture and transportation to cut their emissions by 30 percent by 2030 compared to 2005, but said the starting point for the linear reduction of emissions should move forward from 2021 to 2018, resulting in a significant emissions saving over the whole 2018 to 2030 period.

Gerben-Jan Gerbrandy, a Dutch liberal lawmaker who proposed the changes, said that by adjusting the starting point of the linear reduction, the EU would emit 300 million metric tons less carbon dioxide through 2030, with the highest levels of avoid emissions in the early 2020s.

Gerbrandy added that the savings would increase to 390 million tons by limiting the use of carbon credits from forestry and other carbon sinks to offset emissions. An overall 390 million-ton emissions reduction compared to the original proposal would be equal to the annual emissions of 80 coal-fired power plants, he said.

The changes were made to a draft regulation, published in July 2016 by the European Commission, that specifies the non-ETS emissions cuts to be achieved through 2030 by each EU country. The 30 percent emission cut from non-ETS sectors would contribute to an overall EU reduction of 40 percent by 2030 compared to 1990.

Hurdles Ahead

The European Parliament environment committee approved Gerbrandy's proposed changes in a 42-4 vote with 20 abstentions. The large number of abstentions was caused by the center-right European People's Party European Parliament group not agreeing internally on the details of the proposed legislation.

The environment committee's position on the draft regulation must be approved by the full European Parliament, and a final version of the regulation must then be negotiated with representatives of EU member countries.

Caroline Westblom, climate policy coordinator with campaign group the Climate Action Network Europe, told Bloomberg BNA May 30 that bringing forward the starting point for linear emissions reductions from non-ETS sectors was possible because most EU countries have overachieved against the emission reductions they are required to reach by 2020. The bloc has an overall reduction goal for 2020 of 20 percent compared to 1990.

If the start of the linear reduction is not brought forward, the EU would be "rewarding the ones that have not met their targets," Westblom said.

However, it is unclear if EU countries will accept the change when it comes to final negotiations on the draft regulation, she added. "Many countries do not like this," she said.

The governments of EU countries, which meet in the Council of the EU, have not yet adopted a position on the non-ETS cuts. EU environment ministers will meet June 19 and could approve their position then.

Only Place in America Where Coal Demand Has Risen Is Nebraska

Posted May 30, 2017, 9:21 A.M. ET

By Tim Loh

Looking for a rare bright spot in U.S. coal?

Consider Nebraska, the only state producing more electricity from the fossil fuel than it did a decade ago, according to a Bloomberg analysis of U.S. government data.

While America's slashed its coal-fired electricity generation by more than a third between 2006 and 2016—creating havoc for the coal sector, which once dominated the country's utility space—Nebraska raised its coal-fired power output by 6 percent, according to data from the U.S. Energy Information Administration.

Nebraska's better known for corn. But it's home, too, to some of America's newest coal-fired power plants. In 2009, the Omaha Public Power District opened the almost 700-megawatt Nebraska City Station Unit II coal-fired facility. In 2011, the 220-megawatt Whelan Energy Center Unit 2 plant came online. Meanwhile, the Fort Calhoun nuclear power plant shut down for good last year.

"That will bump up our reliance on coal a little bit," said David Bracht, director of the Nebraska Energy Office, in a phone interview.

While Nebraska doesn't mine its own coal, it's located conveniently close to Wyoming, which is home to the Powder River Basin, America's largest and cheapest coal-producing region. Nebraska is also unique in that all of its utilities are publicly owned—a result of Great Depression-era legislation—which may have slowed its buildout of alternative energy sources, according to Bracht.

That said, Nebraska's love affair with coal may have peaked in 2013, when it generated more than 26,000 gigawatt-hours of electricity from coal, according to the EIA. In 2016, it only generated about 22,000 gigawatt-hours from the mineral. Meanwhile, the state's roughly doubled the electricity it's generating from wind.

"We have significant wind resources to be developed," Bracht said. "We expect that to be increased as well."

EPA Appeals Deadlines for Toxic Air Pollution Reviews

Posted May 30, 2017, 03:34 P.M. ET

By Andrew Childers

The Environmental Protection Agency wants more time to evaluate 13 air pollution standards that are overdue for review and is appealing the deadlines set by a federal judge (Blue Ridge Envtl. Def. League v. Pruitt, D.C. Cir., No. 17-5124, 5/30/17).

The EPA faces a Dec. 31, 2018, deadline to complete the review for seven standards for hazardous air pollutants with the remainder to be completed by June 30, 2020. The Clean Air Act requires the

agency to periodically review its toxic air pollution standards to determine whether any residual risks remain that must be addressed, but the agency missed the deadlines for those evaluations, drawing lawsuits from environmental groups.

The deadlines set by the U.S. District Court for the District of Columbia in March did not allow the EPA enough time to complete the required reviews, the agency had said, citing inadequate staffing. The EPA is now appealing the case in which the deadlines were set to the U.S. Court of Appeals for the District of Columbia Circuit.

Exelon to Close Three Mile Island Nuclear Plant in 2019

Posted May 30, 2017, 10:00 A.M. ET

By Jim Polson

Exelon Corp.'s Three Mile Island atomic power plant, site of the worst U.S. commercial nuclear accident in 1979, will close in 2019 after losing money for five years.

The Pennsylvania plant, with one reactor still in operation, has lost revenue as power prices fell, Chicago-based Exelon said May 30 in a filing. For the third consecutive year, the plant failed to win generating capacity payments last week in an auction held by PJM Interconnection LLC, the largest U.S. power market. Meanwhile, the generator has failed to win government subsidies or market reforms to enhance its viability, Exelon said.

The announcement underscores challenges facing U.S. nuclear power generators from plants burning cheap natural gas and rising output of wind and solar power. At least five nuclear power plants have retired in the past five years including Fort Calhoun in Nebraska, which closed in October. Entergy Corp. in December announced plans to close its Palisades plant in Michigan.

Pennsylvania "has an opportunity to take a leadership role by implementing a policy solution to preserve its nuclear energy facilities," Exelon Chief Executive Officer Christopher Crane said in a statement. "We are committed to working with all stakeholders to secure Pennsylvania's energy future, and will do all we can to support the community, the employees and their families during this difficult period."

Three Mile Island, about 90 miles (145 kilometers) west of downtown Philadelphia, was at risk of early retirement after failing to win capacity payments in this year's auction, Exelon said on May 24. The plant will close on or about Sept. 30, 2019. With the sector reeling from lower power prices and flat demand, plants have become more dependent on capacity payments for revenue to cover their costs.

Exelon will record one-time costs of as much as $110 million in the second quarter to retire the plant before its license expires in 2034, according to the filing. Charges of as much as $25 million a year may be recorded in 2018 and 2019. Cash costs related to the closing may reach $70 million, mostly for employee-related expenses. The plant employs about 675 people, the company said in a separate statement.

Exxon Squares Off with Shareholders in Annual Climate Showdown

Posted May 30, 2017, 9:14 A.M. ET

By Joe Carroll

This week will be a public trial by fire for new Exxon Mobil Corp. CEO Darren Woods.

Presiding over his first annual meeting since predecessor Rex Tillerson left to become U.S. secretary of state, Woods will be tested May 31 on everything from climate change to his own paycheck. Analysts and investors will be watching to see if he proves as adept as his mentor in striking a welcoming tone with restive activists while gently disagreeing with just about everything they say.

So far, Woods has been a stabilizing presence.

"He represents a continuation of what Mr. Tillerson was doing and so far we've seen no strategic shift," said Brian Youngberg, an analyst at Edward Jones & Co. In St. Louis with a "hold" rating on Exxon's stock. That's comforting "for long-term holders who own Exxon for the dividend and not much else."

Woods faces a vote on a resolution requiring Exxon to provide a detailed analysis of whether the energy giant can prosper under strict greenhouse-gas limits. Backers of the measure, which are as diverse as the California Public Employees' Retirement System and the Church of England's investment fund, are striving to improve upon the 38 percent support a similar proposal received from shareholders last year. Exxon opposes the resolution because it says it already discloses enough data.

For Exxon, the shareholder-centered event it stages every May in a Dallas symphony hall has become a donnybrook over the environment and corporate governance. Activist groups have shifted in recent years from rowdy bullhorn protests on the sidewalks outside to delivering measured shareholder appeals inside the meeting hall arguing for more prudent financial stewardship.

Woods, an electrical engineer by training who's spent his entire career at Exxon, will be confronted by investors demanding that Exxon cut new spending on oil fields and hand the cash over to shareholders in dividends instead. And less than five months after his promotion to the jobs of chairman and chief executive officer, Woods and the board he leads will face rising opposition to his $16.8 million pay package and the way it was calculated.

Activist shareholders are hitting Exxon, which produces about 2 percent of the world's crude oil, with a version of the climate change accounting proposal for a second straight year. Despite the company's steadfast opposition, the measure attracted more investor support than any of the four other environmental proposals put to a vote last year. This year there are almost 90 Exxon investors planning to support the measure, according to data compiled by investor advocacy group Ceres.

"Exxon's business is extremely vulnerable to changes in climate regulation and consumer demand," said New York State Comptroller Thomas P. DiNapoli, a lead sponsor of the climate impact resolution. The company "puts itself and its long-term investors at risk by failing to acknowledge this reality."

Disclosures Sufficient

Exxon says its current disclosures, which include forecasts of how caps on carbon emissions will affect long-term petroleum demand, are sufficient.

Even with the strictest scenarios envisioned under the 2015 Paris Agreement, global population growth and economic expansion will need vast quantities of oil and natural gas to fuel power plants, vehicles and industrial society, Exxon said in a May 19 letter to shareholders. The Paris accord calls on nations to prevent worldwide temperatures from rising more than 2 degrees Celsius (3.6 Fahrenheit) from pre-industrial levels by slashing fossil-fuel pollution.

"The world will continue to require significant quantities of hydrocarbons for which Exxon Mobil is well-situated to compete," according to the letter. "Substantial upstream oil and gas investment will be required through 2040, even assuming a 2-degree Celsius scenario."

Thus far, this annual-meeting season has been bruising for oil producers seeking to beat back activists on the climate and compensation fronts.

Occidental Surprise

A majority of investors in Occidental Petroleum Corp. broke with company leaders and approved a climate impact proposal on May 12 that was almost-identical to the Exxon resolution. Calpers, representing California state retirees, and other backers persuaded fellow investors to validate the resolution by a 58 percent margin, compared to a 40 percent "yes" vote in 2016.

Such shareholder votes are advisory, and aren't binding on the company.

In a significant change, the proposal was supported by Occidental's largest shareholder, BlackRock Inc. The $5.4 trillion asset manager voted in favor of a climate-change resolution for the first time ever after Occidental exhibited a "lack of response" on the issue after last year's vote, BlackRock said in a statement on its website.

Occidental's result was historic because it was the first time a proposal of this type succeeded despite company opposition, according to Gregory Elders, a Bloomberg Intelligence analyst.

BlackRock hasn't yet made a decision on its Exxon vote, Zach Oleksiuk, head of Americas for BlackRock Investment Stewardship, said in an email May 25. Vanguard Group is considering voting for the proposal, Glenn Booraem, the firm's investment stewardship officer, said in an email May 25.

Executive Pay

At ConocoPhillips, the world's largest independent crude explorer, a majority of shareholders rejected CEO Ryan Lance's pay package, even after his total 2016 compensation was cut almost 10 percent to $19.2 million. It was the first time Conoco investors said 'no' on executive pay.

Sixty-eight percent of shareholders participating in the Houston-based company's annual meeting either abstained or voted against the executive pay resolution.

Exxon holders have been urged to follow the lead of Conoco investors and turn thumbs down on executive pay. Proxy adviser Institutional Shareholder Services Inc. cited a mismatch between pay and performance as reasons to vote against the package. Exxon's long-standing compensation system has remained unchanged even as "investors' expectations around executive compensation" have evolved, ISS wrote in a May 18 report to clients.

"Our compensation program ensures that executives focus on the long-term performance of the

business and is aligned with shareholder interests," Scott Silvestri, an Exxon spokesman, said in a May 19 email. "Exxon continues to demonstrate strong business performance relative to industry peers."

Daimler Said to Seek U.S. Lawyers for Executives in Diesel Probe

Posted May 30, 2017, 9:46 A.M. ET

By Tom Schoenberg and Elisabeth Behrmann

Daimler AG is conducting a search for U.S. criminal defense lawyers to represent company executives who may be swept up in the Justice Department's investigation of possible diesel-emissions cheating, according to people familiar with the matter.

The outreach suggests that prosecutors have identified people at the company they plan to interview as they examine whether the Stuttgart, Germany-based automaker installed devices in its Mercedes-Benz diesel models in an attempt to evade U.S. environmental laws, said two people, who spoke on the condition of anonymity. It's unclear whether the executives seeking counsel are based in the U.S. or Germany.

The developments at Daimler are part of a widening diesel-cheating scandal that has shaken the auto industry and cost Volkswagen AG more than $24 billion in government penalties and owner restitution. Last week, truck owners filed a lawsuit against General Motors Co. and the Justice Department sued Fiat Chrysler Automobiles NV over similar allegations. Also last week, police and prosecutors in Germany raided nearly a dozen Daimler facilities as part of an emissions-rigging investigation that began in March.

Daimler spokeswoman Ute Wuest von Vellberg in Stuttgart, Germany, said the company wouldn't comment on a pending investigation. Justice Department spokesman Wyn Hornbuckle declined to comment.

VW Admission

U.S. regulators have put greater scrutiny on diesel models after Volkswagen admitted in 2015 to using software that turned on emissions controls to pass tests but then turned them off during driving. The Clean Air Act requires carmakers to obtain certification from the EPA that a vehicle meets federal emission standards before selling it. Those applications require that automakers list all emission controls on the vehicle and guarantee that they don't contain any so-called defeat devices, which are prohibited.

Daimler hinted in a filing last month that the U.S. investigation might be gaining traction. "It is possible that further civil and criminal investigative and enforcement actions and measures relating to Daimler and/or its employees will be taken," Daimler said in the filing, in which it noted that subpoenas and other information requests could be forthcoming.

In another sign of an intensifying U.S. criminal investigation of Daimler, the Justice Department last month sought to intervene in a private lawsuit in New Jersey that alleges fraud involving Daimler's BlueTEC diesel technology. Prosecutors sometimes ask judges to hit the pause button in a civil

matter if it might interfere with a criminal investigation.

Daimler Probes

Daimler disclosed in April 2016 that federal and state authorities in Europe and the U.S., including the Justice Department, the Environmental Protection Agency, the California Air Resources Board and the Securities and Exchange Commission, were investigating test results and emissions-control systems used in Mercedes-Benz diesel models.

The company hired investigators from Deloitte Touche Tohmatsu to help gather documents and emails on its diesel-engine emissions after the Justice Department asked it to conduct an internal investigation.

Daimler's Mercedes-Benz unit this month gave up an attempt to get U.S. approval for some 2017 diesel models. It cited an arduous certification process and said there wasn't enough demand for the vehicles to justify the certification effort.

In addition to the carmakers, Germany's Robert Bosch GmbH, which supplied software for Daimler's diesel engines, is also under investigation by the Justice Department for its role in the emissions rigging scandal, people familiar with the matter have said. Bosch, which has said it's cooperating with authorities, supplies Volkswagen and Fiat Chrysler, among other carmakers. The truck owners who sued General Motors last week over its emissions claims also named Bosch.

World Carbon Price Seen Needing to Increase Sevenfold by 2020

Posted May 30, 2017, 8:51 A.M. ET

By Mathew Carr

Carbon prices need to jump sevenfold by 2020 from current rates in the world's biggest market to meet climate goals cost-effectively, according to a commission of economists and scientists.

A price of about $40 a ton along with adoption of other policies that encourage emission cuts would achieve targets in the 2015 climate deal agreed in Paris, according to a report published May 29 by a commission of economists and scientists. Under the Paris agreement, almost 200 countries will try to limit the global temperature increase to "well below" 2 degrees Celsius (3.6 Fahrenheit) above pre industrial levels.

Costs from the higher carbon prices would not hurt ordinary consumers much, said Joseph Stiglitz from Columbia University, who led the High-Level Commission on Carbon Prices with fellow economist Nicholas Stern.

"Businesses are already using prices in the range that we're talking about," Stiglitz said on a call with reporters.

New carbon prices in seven jurisdictions including China and South Africa will take the portion of global emissions covered to more than 20 percent in 2017, the World Bank said last week in a

separate report. In Europe, which has the world's biggest greenhouse-gas market, lawmakers are meeting May 30 to deal with an accumulated glut that's driven down prices by more than four-fifths in the past decade.

The commission concluded that a $40 to $80 a ton range in 2020, rising to $50 to $100 a ton by 2030, would be consistent with the Paris target.

EU carbon settled Friday at 5.19 euros ($5.80) a ton on ICE Futures Europe in London.

From the report:

"Carbon pricing makes sense in all countries, but low-income countries, which may be more challenged to protect the people vulnerable to the initial economic impacts, may decide to start pricing carbon at a lower level and gradually increase over time": commission member Harald Winkler of the University of Cape Town, South Africa

Commission analyzed national emissions and development pathways, technological road maps and global economic models to reach its conclusions

Eliminating fossil-fuel subsidies would mean lower carbon prices are needed

"A well-designed carbon price is an indispensable part of a strategy for efficiently reducing greenhouse gas emissions while also fostering growth."

Report was put together starting last year by The Carbon Pricing Leadership Coalition, a voluntary partnership of national and sub-national governments, businesses, and civil society organizations that agree to advance carbon pricing through the global economy. It's housed in the Washington-based World Bank Group.

Brazil Green Bond Sales Seen Reaching Record $5 Billion in 2017

Posted May 30, 2017, 8:49 A.M. ET

By Vanessa Dezem and Gerson Freitas Jr.

Brazil is set to sell a record $5 billion of green bonds this year, even as the country's markets reel from growing political turmoil, according to the Climate Bonds Initiative.

The sales will raise funds mainly for sustainable agriculture and infrastructure projects, said Sean Kidney, chief executive officer of the Climate Bonds Initiative, a U.K.-based organization that seeks to mobilize capital market toward financing low-carbon solutions.

"We have talked to pension and investments funds and they're interested in green bonds," Kidney said in an interview in Sao Paulo. "There's a lot of distractions in Brazil, such as corruption and political problems, but the country will soon have its momentum."

Brazilian sustainable projects have raised $1.76 billion through green bonds so far this year, led by a $1 billion sale of seven-year debt by the country's development bank. Globally, the green-bond market is expected to almost double this year, reaching $150 billion, according to estimates from the

Climate Bonds Initiative.

Brazilian stocks, bonds and currency slumped this month after Prosecutor General Rodrigo Janot said President Michel Temer helped obstruct the ongoing Carwash corruption probe.

"There's not enough capital in Brazil now to reach its transition to a green economy, and green bonds are an opportunity to attract money for it," Kidney said.

Russia Starts Largest Renewable Energy Auction in Bid for Jobs

Posted May 30, 2017, 8:24 A.M. ET

By Anna Hirtenstein and Stephen Bierman

Russia is pressing ahead with its biggest-ever auction for renewable energy, seeking to award contracts to purchase 1.9 gigawatts of clean electricity as well as attracting foreign investment to support jobs at home.

The government tender, which started May 29, has attracted the interest of Fortum Oyj, Finland's largest energy company, which is prequalified to participate in the auction. Enel SpA of Italy may also participate.

"Russia has had a long history of leadership in the energy sector and now has the opportunity to extend that leadership into renewable energy," said Adnan Amin, director-general of the International Renewable Energy Agency. Developing the country's renewable resources, he said, "can significantly contribute to the country's economic objectives such as economic growth and employment."

The Russian government enacted strict local-content rules in 2012 and 2014 in a bid to stimulate job creation. Clean energy plants aren't allowed to be installed unless a certain percent of the equipment is made locally, and that portion rises every year. Since no company makes wind turbines in Russia, this has hampered the industry. In 2017, the portion is fixed at 40 percent.

The auction is from May 29 to June 9, in two stages, according to Victoria Cuming, head of policy analysis in Europe, the Middle East and Africa at Bloomberg New Energy Finance. Participants will begin to submit their bids on Monday, with the decision from the government expected for a later date.

"You bid to build a project of a certain capacity in a given year," said Cuming. "This year it's for 2018 to 2021. It takes time to build manufacturing capacity so even with a 2021 project, you'd be hoping that someone makes a move into Russia very soon."

State-owned nuclear company Rosatom Corp. recently said it will retool existing factories to make turbines, marking a turning point for the industry. It sought to establish partnerships with some of the leading European manufacturers. Siemens AG, General Electric Co. and Vestas Wind Systems A/S have also shown interest, according to Rosatom. It made an agreement in February with Lagerwey Wind BV, a smaller Dutch manufacturer. Vestas declined to comment. Siemens and GE did not reply to requests for comment.

Oil Producers

Other oil-producing nations such as Saudi Arabia and the United Arab Emirates are also making moves into renewable energy. Both countries burn vast amounts of their oil and natural gas domestically for power generation, with Saudi Arabia consuming about 1 million barrels a day to keep its lights and air conditioners on.

Russia's environment is more conducive to wind and hydro than solar, although some small-scale projects are being built in rural areas. Its appeal as a renewable energy market lies in the electricity prices it might pay, according to Fortum. It has previously signed a power purchase agreement with a fixed price significantly higher than in other markets, according to Fortum's Chief Financial Officer Markus Rauramo.

The Finnish energy company is building a 35-megawatt wind project in Ulyanovsk, east of Moscow. It received the right to build the project in 2015, when the local content rules were less stringent. It's using Chinese-made turbines from Dongfang Electric Corp.

"For our project in Ulyanovsk, the price was very considerable," Rauramo said. "It depends on what the ruble-euro exchange rate it is, but it was more than 150 euros per megawatt hour."

That's about 70 percent higher than the comparable average cost of onshore wind across Europe, data from Bloomberg New Energy Finance showed.

Fortum recently entered into a joint venture with Rusnano OAO, a state-owned Russian investment firm. The Finnish company said its long-term plan is to build approximately 500 megawatts of wind in the country. Fortum is in talks with European turbine makers on how to "match the local content requirements," Rauramo said.

Rosatom has applied to build 610 megawatts by the end of 2020.

Modi Signals India Will Hold to Paris Climate Deal If U.S. Quits

Posted May 30, 2017, 9:18 A.M. ET

By Arne Delfs

Indian Prime Minister Narendra Modi signaled that he'll stick to agreements made under the Paris climate accord even if the U.S. pulls out.

Asked in Berlin May 30 what he'll do if the U.S. decides to abandon the Paris Agreement, Modi stressed the importance of the fight against global warming, including Indian efforts to build out solar power. Politicians have "absolutely no right" to put in jeopardy the environment for future generations, he said.

"It becomes a morally criminal act on our part," he told reporters alongside German Chancellor Angela Merkel. "We have to accept this philosophy. And unless we do that, we won't be able to understand the climate issue."

Subject: POLITICO's Morning Energy: Judge hands tribes major Dakota Access victory — Pruitt returns to Hill today — Uphill challenge seen for E15 bill

By Anthony Adragna | 06/15/2017 10:00 AM EDT

With help from Esther Whieldon, Darius Dixon, Eric Wolff and Alex Guillén

THIRD TIME'S THE CHARM! Opponents of the Dakota Access pipeline received a major legal victory late Wednesday as a federal judge ruled the government's environmental review of the project was inadequate and that the U.S. Army Corps of Engineers must redo its analysis under the National Environmental Policy Act. In his 91-page ruling, U.S. District Court Judge James Boasberg said the government "did not adequately consider the impacts of an oil spill on fishing rights, hunting rights, or environmental justice, or the degree to which the pipeline's effects are likely to be highly controversial."

But he stopped short of immediately ceasing the pipeline's operation, calling that a "separate question" subject to additional briefing to be discussed at a status conference next week. Tribal opponents of the pipeline, which began operating this month, had failed twice before in legal challenges seeking to block its completion. But they hailed Wednesday's decision: "We applaud the courts for protecting our laws and regulations from undue political influence, and will ask the Court to shut down pipeline operations immediately," Standing Rock Sioux Chairman Dave Archambault II said in a statement.

In a statement, the Grow America's Infrastructure Now coalition said the outstanding claims in the case "do nothing to impact the ongoing operation of the pipeline" and expressed confidence the Corps would allay the judge's concerns. "While we have little doubt that the Corps will ultimately be successful in satisfying the Court's concerns, tonight's decision continues the public saga of the project and jeopardizes ongoing infrastructure investment," Craig Stevens, a spokesman for the group, said.

PRUITT RETURNS TO THE HILL: Capitol Hill is still reeling after Wednesday's shocking shooting of House Majority Whip Steve Scalise and four others at a congressional baseball practice, but House appropriators plan to move forward as scheduled and hear testimony from EPA Administrator Scott Pruitt on President Donald Trump's fiscal 2018 budget request for the agency. That request sought a 31 percent cut for the agency, from $8.2 billion to $5.6 billion, though even fellow GOP lawmakers have bristled at such steep proposals. Look for lawmakers from both parties to press Pruitt - offering his first congressional testimony since being confirmed - on cuts to their pet programs but for Democrats to also press him on ongoing efforts to roll back a number of Obama-era regulations.

One key issue to watch: Whether Pruitt gives a full-throated defense of the budget that not only slashes climate change spending but does not spare his favored programs - including Superfund and brownfields. If he does, he's chaining himself to Trump's proposal and signaling even his own priorities are at risk. If not, he may double-cross the boss. On the other hand, Pruitt is

talented at sidestepping thorny issues and returning to his comfort zone, a high-wire act he could pull off once more.

Ahead of his appearance, Pruitt's critics will hold a "resistance rally" outside the Independence Avenue entrance to Rayburn at 10 a.m. Participating groups include Hip Hop Caucus, Green for All, Sierra Club, Environment America, Moms Clean Air Force, WE ACT for Environmental Justice, Sojourners, Green Latinos, Climate Action Campaign, the Union of Concerned Scientists and Franciscan Action Network, among others.

WELCOME TO THURSDAY! I'm your host Anthony Adragna, and NRDC's Edwin Chen was first to name President Gerald Ford as the last sitting chief executive to testify before Congress. For today (and in honor of the awesome Congressional Baseball Game): What congressman hit the first known grand slam during the game back in 1957? Send your tips, energy gossip and comments to aadragna@politico.com, or follow us on Twitter @AnthonyAdragna, @Morning_Energy, and @POLITICOPro.

ARIZONA REGULATOR JOINS EPA: Henry Darwin, Arizona's former environmental chief, has been named EPA's assistant deputy administrator, where he will help manage day-to-day operations. He's been the state's chief operating officer since 2015 but before that served five years as director of the Arizona Department of Environmental Quality, Pro's Alex Guillén reports . Darwin "will deploy the same Lean Management System that he successfully deployed" in Arizona, EPA spokesperson Liz Bowman said. "He will focus the Agency on providing value to taxpayers by helping us measure performance, improve our processes and solve the issues that matter to Americans."

In 2014, Darwin testified before Congress that he did not believe EPA had the legal authority to regulate carbon emissions as it did with the Clean Power Plan. Darwin's position at EPA does not require Senate confirmation.

NUCLEAR ENERGY CREDIT BILL GETS A VOTE: The House Ways and Means Committee is set to vote today on legislation extending the nuclear energy production tax credit program that Southern Co. and SCANA need to keep their nuclear projects on sound financial footing. The credits - worth billions of dollars to the companies - currently require new reactors be in service by the end of 2020 to qualify, a timeline made just about impossible given the bankruptcy of contractor Westinghouse. The bill would open the credits to projects that power up after 2020. The markup is scheduled for 10 a.m. in Longworth 1100.

YUCCA, OZONE, BROWNFIELDS BILLS ON THE MOVE: House Energy and Commerce Environment Subcommittee members are expected today to advance their first three major environmental measures of this Congress. Chairman John Shimkus gets a vote on his draft bill rewriting the nation's nuclear waste policy. The measure contains language on interim storage sites, but seeks to advance Shimkus' long-held priority of completing Yucca's licensing process. Also on the docket is the Ozone Standards Implementation Act (H.R. 806), which would delay implementation of the 2015 ozone standard through 2025 and stretch the regular air quality standard review period from five years to 10. And the panel will consider a draft bill reauthorizing and tweaking the brownfields program to raise the cap on federal grant amounts

for individual sites. Similar versions of all three bills have been considered in prior Congresses, though none have come close to passage. The markup kicks off at 10 a.m. in Rayburn 2123.

NRC CHAIRWOMAN GETS PANEL VOTE: Moving quickly just two days after her confirmation hearing, NRC Chairwoman Kristine Svinicki gets a vote this morning at 10 a.m. at Senate EPW. Time is of the essence because her term expires June 30, and Svinicki would have to step down, at least temporarily, if the Senate fails to confirm her by then. Her biggest hurdle may be securing time on the Senate's floor schedule, with ranking member Tom Carper telling reporters after the hearing Tuesday that she'd have little trouble clearing the Senate.

LONG WAY TO GO FOR E15: Sen. Deb Fischer got her promised hearing Wednesday on a bill to promote sales of 15 percent ethanol gasoline, but she's going to need a lot of help to get the legislation out of the Senate Environment and Public Works Committee. Five cosponsors of the bill, S. 517, sit on the panel, but no other EPW members have declared their support, leaving it six votes short of a committee majority.

As Pro's Eric Wolff reports, Chairman John Barrasso, top Democrat Tom Carper, and Republican former chairman Jim Inhofe all opposed the bill or would require significant changes to win their support. GOP Sens. John Boozman and Richard Shelby told ME they oppose the E15 bill, and Republicans Roger Wicker and Shelley Moore Capito have sponsored anti-ethanol legislation in the past. The last Republican on the committee, Alaska Sen. Dan Sullivan , appears to have no public position on the RFS. Among EPW Democrats, Illinois Sen. Tammy Duckworth is the bill's only cosponsor. ME caught up with Sen. Ed Markey, who said he hadn't made up his mind, and Sen. Cory Booker told Eric he has "negotiations underway."

Markup? Two ethanol sources who have had conversations with Senate staff said they expect a committee vote on Fischer's bill in July, but everyone agreed that the timing was in flux.

X MARKS THE MOX: Top lawmakers on the Senate energy appropriations panel seem more prepared than ever to defund the controversial MOX nuclear project after years of holding back their frustrations. The Obama administration spent years urging Congress to put the project, which was designed to dilute weapons-grade plutonium into reactor fuel, into cold standby before it eventually called for killing MOX outright in favor of a "dilute and dispose" program last year. Interestingly, Trump's budget last month agreed. "I think the fact that successive administrations have come to the same conclusion is very important," Sen. Lamar Alexander, the energy spending chief, said of MOX at a hearing Wednesday afternoon, after noting that a special "red team" said the dilution effort would be faster and cheaper. "I think we have a formula," said Sen. Dianne Feinstein, the top Democrat on the energy spending panel. Last year, Alexander, faced with opposition from South Carolina Sen. Lindsey Graham, extended MOX's life so other committees could discuss it.

WAITING FOR REG REFORM: Sen. Rob Portman told ME the regulatory overhaul he and Sen. Heidi Heitkamp sponsored will get to the floor, "Soon now, I hope!" The bill advanced out of committee last month, but Heitkamp was the only Democratic backer. Sen. Claire McCaskill , a centrist Democrat whose support Portman and Heitkamp probably need, promised her own bill that day with the hopes she'd have it out by Memorial Day. Wednesday she told ME she said

reviewed a draft last week, but that it still needed work. She hopes she'll release it before the July 4 break.

Appreciate the scene: Portman gave his answer to ME while sitting on a Senate subway after a gaggle of reporters bombarded him with questions on the upper chamber's secretive healthcare bill. He called out his response on reg reform, a topic he would much rather discuss, as the train pulled away from the platform, almost as if the moment had been shot for a movie. ME would like to be played by Chris Pratt, thanks for asking.

ANOTHER KEYSTONE MEETING SCHEDULED: The Nebraska Public Service Commission has added a third public meeting on TransCanada's application for the controversial Keystone XL pipeline route through the state on June 28, Pro's Ben Lefebvre reports. Comments during the meeting at the Divots Conference Center in Norfolk will be on a first-come, first-served basis. The commission expects to make a final decision before the end of the year.

PAST EPA CHIEFS PAN TRUMP: Former EPA administrators Carol Browner and Gina McCarthy got off a few jabs at President Trump during appearances at Wednesday night's League of Conservation Voters dinner. McCarthy said Trump's solar wall idea makes him "the definition of 'desperado,'" adding: "It's an interesting tactic, trying to pass a terrible idea by linking it with a good one. What's next? A wind-powered oil derrick?" Browner, meanwhile, joked that Trump's "covfefe" tweet "sounds like something EPA would regulate."

MAINE MONUMENT STILL IN SPOTLIGHT: Interior Secretary Ryan Zinke swings through Maine for a second day and again will focus on the controversial Katahdin Woods and Waters National Monument. Zinke today meets with tribal leaders, Gov. Paul LePage and other local elected and business representatives of varying opinions about the monument, according to the agency.

GRIJALVA QUESTIONS METHANE PULLBACK: House Natural Resources Ranking Member Raul Grijalva sent a letter to Zinke Wednesday questioning whether Interior violated the Administrative Procedures Act by suspending key parts of the methane waste rule. "Extending those compliance dates without another notice-and-comment period, and with only a cursory rationalization that is in large part based on written requests from oil and gas industry groups, is arbitrary and capricious," he wrote.

RECORDS SOUGHT OVER DOE GRID STUDY: The Center for Biological Diversity filed a FOIA request Wednesday seeking records of DOE communications with energy companies and other outside entities related to its ongoing electric grid reliability study. "We hope our request will shed light on the administration's communications with the dirty companies that would benefit most from hampering wind and solar," Howard Crystal, a senior attorney with the group, said in a statement.

PRO-WIND GROUP LAUNCHES CAMPAIGN IN D.C.: American Wind Action launched a multimillion-dollar digital, TV and radio advertising issue advocacy campaign Wednesday in Washington that features workers at an Iowa wind turbine manufacturing facility who say the industry "powers American jobs."

REPORT: CLEAN ENERGY MOMENTUM CONTINUES: A report released Wednesday by Deloitte finds renewable energy sources are competitive with conventional energy and 63 percent of residential consumers said they're very concerned about climate change and their carbon footprints. "Green energy no longer solely means environmental concerns, 'green energy' also means the dollars that can be saved by investing in wind, solar and other clean energy sources," Deloitte's Marlene Motyka said in a statement.

CLIMATE CAUCUS GROWS AGAIN: There are now 42 members of the bipartisan Climate Solutions Caucus with the addition of four more lawmakers: Reps. Jimmy Panetta (D-Calif.), Scott Taylor (R-Va.) and Barbara Comstock (R-Va.), as well as Del. Stacey Plaskett (D-V.I.).

MOVER, SHAKER: James Schindler, a member of the Trump administration's Interior beachhead team and prior legislative aide to former Sen. David Vitter, took an official job as special assistant in the Bureau of Ocean Energy Management effective May 28, according to a Public Financial Disclosure Report obtained by ME.

YOU'RE HIRED: Akin Gump has signed four new clients, including Gulfport Energy Corporation and Otis Eastern Service (h/t POLITICO Influence).

Subject: EPA started hiring process for Dourson ahead of hearing, document shows

By Alex Guillén

11/15/2017 05:18 PM EDT

EPA began laying the groundwork to get Michael Dourson onto the agency payroll without waiting for him to be confirmed — even before his nomination hearing occurred, according to documents obtained by POLITICO via a Freedom of Information Act request.

Dourson joined EPA as a senior adviser to Administrator Scott Pruitt sometime last month. On Sept. 20, Pruitt and EPA chief of staff Ryan Jackson signed Dourson's "position description coversheet," outlining his duties advising Pruitt on legislative and regulatory issues related to chemicals and pesticides. That was two weeks before Dourson's Oct. 4 hearing before the Senate Environment and Public Works Committee, though President Donald Trump nominated him in July as the assistant administrator for toxic substances. (In an apparent error, the document does not include Dourson's name, but was identified by EPA as Dourson's paperwork.)

The committee approved his nomination along party lines Oct. 25, but a Senate floor vote has not yet been scheduled. Dourson has drawn criticism over his past toxicology work for various companies, and some Republicans have indicated they have reservations.

EPA last month pointed out that previous administrations had hired nominees to begin working before their confirmation. The agency did not immediately respond to a request for a comment today.

Susan Bodine, who is awaiting a confirmation vote to become EPA's enforcement chief, also has already started at EPA. Pruitt and Jackson signed off on her job description July 12, according to a copy of the document obtained by POLITICO.

WHAT'S NEXT: It is unclear when Dourson may receive a final floor vote in the Senate.

Subject: Trump EPA moves closer to reversing Pebble Mine proposed veto

By Alex Guillén

07/11/2017 03:46 PM EDT

The Trump administration is moving forward with a plan that could let the developers of the planned Pebble Mine in Alaska reapply for permits in the Bristol Bay region.

EPA is taking the first formal step toward reversing the Obama administration's effort to preemptively veto Clean Water Act permits for the mine. The agency will take public comment for 90 days on its proposal to withdraw the previously proposed veto and accompanying analysis, according to a pre-publication notice posted today on the agency's website.

The announcement is part of a court-approved deal EPA reached in May with the company behind the proposed gold, copper and molybdenum mine. Pebble's developers had alleged EPA's prior work on the matter, which halted in 2014, violated an open government law.

Senate Energy and Natural Resources Chairwoman Lisa Murkowski (R-Alaska) last month asked EPA Administrator Scott Pruitt to accept comments for at least 90 days because of the current commercial fishing season in Bristol Bay, which she said would limit the ability of local fishers to comment.

EPA's withdrawal is the first step of carrying out the settlement agreement struck with Pebble's developers. The agency has agreed not to study related water quality issues for at least four years or until the Army Corps of Engineers finishes its own environmental study. Pebble has until late 2019 to apply for a permit.

WHAT'S NEXT: The 90-day comment period will commence once the notice is published in the Federal Register.

This health care tax could spark a Republican civil war

James Pethokoukis | The Week

The spark that could explode a political powder keg is a little-known investment tax. This tax has long divided the two parties — but now it's dividing Republicans, too. Many conservatives, especially "supply-siders," have long made axing this tax a top priority. They view it as anti-growth and one big cause for the lethargic economic recovery. But GOP Senate leaders, struggling to marshal 50 "yes" votes, are fighting to keep it.

Reuters

The president's defense of the West is not alt-right

Marc A. Thiessen | The Washington Post

The president praised Poland as a country "at the center of European civilization." He warned that the West is threatened by "totalitarian forces in the world." He called on the West to defend "great civilized ideas: individual liberty, representative government, and the rule of law under God." The president in question was not Donald Trump, whose Warsaw speech has drawn irrational criticism. It was Ronald Reagan.

Reuters

Testimony: Al Qaeda strengthens in the shadows

Katherine Zimmerman | Statement before the House Subcommittee on Counterterrorism and Intelligence

American strategy is setting the stage for al Qaeda to lead the Salafi-jihadi movement again at a time when that movement is the strongest it has ever been globally. The rise of the Islamic State has galvanized Salafi jihadism globally. Despite this development, US strategy in this area has remained relatively unchanged since 2001.

President Trump throws a lifeline to former prisoners

Gerard Robinson | US News & World Report

"My first introduction to Donald Trump occurred in 1987 when a college roommate showed me his copy of 'The Art of the Deal,'" writes Gerard Robinson. In the opening lines of chapter one,

Trump states, "I don't do it for the money. I've got enough, much more than I'll ever need." Most Americans will never have all the money they'll ever need, but President Trump's recent order may help many of them get closer than they are now.

Sent: Thur 6/1/2017 2:06:28 PM
Subject: POLITICO's Morning Transportation, presented by Delta Air Lines: Gas tax whiplash continues — Tolling door cracked open? — Shuster to talk FAA with Trump

By Tanya Snyder and Lauren Gardner | 06/01/2017 10:00 AM EDT

With help from Brianna Gurciullo

GAS TAX WHIPLASH CONTINUES: There's a new chapter in the Trump administration's ongoing gas tax saga - White House infrastructure adviser Richard LeFrak saying Wednesday that he's in favor of raising the gas tax. Though, he argued it wouldn't really be a raise since "you'd be leveling it to where it would have been had they adjusted it for inflation in 1993." He said the 18.4-cent gas tax is worth far less now than it was when it was imposed, and improved fuel economy has also eaten away at revenues.

This again? Last month, all on the same day, Treasury Secretary Steve Mnuchin threw cold water on the idea of including anything for infrastructure - like, for example, a gas tax - in the administration's tax overhaul plan; President Donald Trump said a gas tax increase was "something that I would certainly consider," noting that truckers are in favor of raising the gas tax "if we earmarked money toward the highways;" and press secretary Sean Spicer insisted that Trump "did not express support for it." LeFrak waded in that day too, praising Trump for his "political courage" in raising the issue.

The permitting 'horror': LeFrak also echoed the administration's favorite infrastructure talking point, noting that the red tape around project permitting has "morphed into a horror over the last 30 years." He said states provide the lion's share of infrastructure funding in the country, and the federal government provides a small contribution but a lot of "interference" in terms of "the morass" of permitting and requirements a project is subject to when it uses federal dollars. LeFrak said the administration is considering making agencies use "simultaneous review" - an idea he acknowledged got its start "a little bit" during the Obama administration.

Don't know when: LeFrak said he thought more would be coming from the administration soon on the infrastructure plan but that he's "not involved in how and when they're going to trot it out."

IT'S THURSDAY (AND IT'S JUNE!): Thanks for tuning in to POLITICO's Morning Transportation, your daily tipsheet on all things trains, planes, automobiles and ports. Hold up - Lauren's back in the saddle for a little while. Send us tips, feedback and lyrics to tsnyder@politico.com or @TSnyderDC and lgardner@politico.com or @Gardner_LM.

"I'm a female rebel, can't you see? / Riding 'round your backyard, who could it be? / Pulling out the steering wheel right from the seat / Pumping his brakes to the sound of the beat."

Want to keep up with MT's song picks? Follow our Spotify playlist.

TOLLING DOOR CRACKED?: In an interview with the Herald-Mail, House Transportation Committee Chairman Bill Shuster (R-Pa.), who has previously said expanding tolling on existing Interstates is a political nonstarter, appeared to nudge the door open a bit, saying there "may be some targeted tolling happening around the country in really congested areas" and suggesting those areas won't get fixed unless we "let them toll, at least temporarily, let them build out and do what they have to do."

FAA chat at 1600 Penn next week: Shuster also said he may meet with Trump Monday to talk overhauling the FAA. Additionally, he told the Herald-Mail that Trump might "want to travel to see proposed infrastructure projects in the coming weeks."

FOR YOUR RADAR: Transportation Secretary Elaine Chao will be testifying Wednesday morning at a Senate Commerce Committee hearing on the FAA reauthorization. It will be senators' best chance to date to quiz her on the administration's position on separating air traffic control from the FAA - a plan still encountering substantial trepidation among senators on the Commerce Committee.

SHOW ME THE MONEY: FRA and FTA announced nearly $200 million in long-awaited grant money Wednesday for commuter railroads aiming to implement positive train control by the Dec. 31, 2018 deadline, Lauren reports. The money is being spread out over 17 projects in 13 states, and recipients range from those that are nearly done implementing the technology - like Metrolink in Southern California and Philadelphia's SEPTA - and others that are lagging behind, like Boston's Massachusetts Bay Transit Authority.

SOME FUNDING FOR THOSE 'THIRD WORLD' AIRPORTS: Hundreds of airports will receive grants totaling almost $528 million to upgrade their infrastructure, DOT said Wednesday. Some of the airports will receive discretionary funding totaling more than $213 million, which will come on top of the money they receive through entitlement funding. The Airport Improvement Program discretionary grants include a total of $60 million for Chicago O'Hare International Airport and $20 million for Fort Lauderdale-Hollywood International Airport, which both have planned or completed runway projects. (Those grants were announced May 19, according to DOT.) Trump's fiscal 2018 budget asked for $3.35 billion for AIP - a status quo request.

YA, YOU BETCHA: Transportation Secretary Elaine Chao was in Fargo, N.D., Wednesday, proclaiming May 31 the first-ever National Autonomous Vehicles Day at the Drone Focus Conference. In a speech, she plugged the administration's proposal to split air traffic control operations from FAA into a "non-profit cooperative." "A key goal is to increase the capacity of our national airspace with the latest technology, so it can accommodate the expected increase in traffic as well as new entrants like drones," she said.

CRAM IT ALL IN: Sens. Ed Markey (D-Mass.) and Richard Blumenthal (D-Conn.) sent a letter to Homeland Security Secretary John Kelly Wednesday asking for more information about how checked-bag fees impact aviation security. The letter follows on comments Kelly made on "Fox News Sunday" this weekend, where he indicated that people trying to avoid checked-bag fees are stuffing carry-ons so full that TSA agents "can't tell what's in the bags anymore."

** **A message from Delta Air Lines:** Our daily briefing: At Delta we're constantly innovating to make your travel smoother. We tapped RFID technology to keep your bags in check at all times. Giving you more peace of mind from check-in to baggage claim. Learn more: delta.com/dca **

WAIVE THE SWAMP: Chris Liddell, a former General Motors executive who Trump appointed to be his assistant and director of strategic initiatives, was one of more than a dozen the White House quietly released last night as having received an ethics waiver to allow him to participate in policy matters he once lobbied on. The waiver was temporary pending "disposition of certain trust assets," and no longer is in effect. (Reminder: In March CREW accused Liddell of having broken ethics laws by participating in meetings with Trump and executives from businesses in which he had a financial interest.)

LOST AT SEA: Recreational boating fatalities rose to 701 last year, the highest number since 2011 and a 12 percent increase over the year before, according to Coast Guard statistics . A top Coast Guard safety officer stressed the importance of boating safety education and vessel safety checks and reminded boaters that wearing a life jacket "is the single greatest factor in preventing death from drowning." Alcohol was the leading known contributing factor in fatal boating accidents, the Coast Guard said, having factored in to 15 percent of deaths. Operator inattention and inexperience, excessive speed and machinery failure were other factors.

WILL HE STAY OR WILL HE GO?: Tesla CEO Elon Musk drew a "line in the sand" in front of Trump Wednesday, warning the president via Twitter that he'll abandon advisory councils he's participated on for the White House if Trump pulls out of the Paris climate change deal, Pro Technology's Nancy Scola reports. "Musk's threatened break with Trump comes as the White House is trying to bring tech CEOs and other executives to Washington for a summit next month on modernizing government technology, cybersecurity, immigration and other topics," she writes.

EYE SCANNING AND VOICE RECOGNITION MUST BE NEXT: Delta Air Lines is testing a "biometric boarding pass" at Ronald Reagan Washington National Airport, allowing a select group of passengers to use their fingerprints as proof of identity without having to produce a boarding pass or photo ID. The airline is currently using the system at the entrance to its Sky Club lounge, exclusively for SkyMiles members enrolled in the CLEAR airport security program. In the next phase of testing, those passengers will be able to check a bag and board a flight the same way.

AUDIT BEGINS: After nearly a decade of attention to the problem of sexual assault and harassment at the United States Merchant Marine Academy, the DOT's inspector general has initiated an audit to determine how much progress has been made. Various policies and action plans have been only partially implemented and the Academy's attempts at "culture change" so far appear to have fallen flat, the IG suggested. The IG's office was required by statute to take up this audit, which should be completed by March 31, 2018.

SHIFTING GEARS: Four lobbyists who oversee the drone practice at Akin Gump are reportedly moving over to McGuireWoods Consulting. They include Michael E. Drobac, a

senior policy adviser and executive director of the Small UAV Coalition; Gregory Walden, a lobbyist and senior counsel at Akin Gump who specializes in aviation and government ethics; Amanda Armistead, a policy adviser at Akin Gump for nearly two years; and Casey Duggan, a public policy specialist and former House staffer.

A MAP OF THE MAZE: A new white paper from the Signal Group, a lobbying and PR firm, maps out the difficult path to passage of an infrastructure plan in Congress. "The House must wrangle with the 40-member strong Freedom Caucus," the report notes, while Democrats want to see more direct public investment and are "wary of giving Republicans and the Trump administration a significant legislative victory" ahead of the midterms. Still, lawmakers whose districts would benefit from such a plan could likely be swayed, the group said.

GROUP SEEKS REVIEW OF HARLEY SETTLEMENT: The free-market Cause of Action Institute is taking aim at a settlement the Obama administration reached with Harley-Davidson over after-market "super tuner" devices the company sold to boost motorcycles' performance that allegedly led to Clean Air Act Violations. The August 2016 settlement with EPA required the motorcycle manufacturer to fund a program to replace or retrofit wood-burning stoves with cleaner appliances. But Cause of Action says that approach violates the agency's own guidance, and the group says EPA Administrator Scott Pruitt ought to take another look at the settlement. "EPA is overstepping its authority by requiring Harley-Davidison to implement an emissions mitigation project that lacks such a sufficient nexus to the underlying violation," the group wrote today in a letter to Pruitt, along with a FOIA request for documents related to the settlement negotiations.

THE AUTOBAHN:

- "JetBlue will test facial recognition for boarding." CNN Money.

- "'Money out of your pocket': New Yorkers tell of subway delay woes." The New York Times.

- "Amazon's delivery drone system is getting parachutes for your packages." Mashable.

- "Amtrak sues Union Station over Delta Air Lines ads." NBC Washington.

- "Maryland suspends some pre-construction work on purple line, pending appeal." WAMU.

- "Trump targets German trade, and the South grimaces." The New York Times.

- "Trump considers rolling back Obama's opening with Cuba." The New York Times.

- "Boeing finds an Ex-Im Bank alternative." Wall Street Journal.

- Peep the Stratolaunch, a twin-fuselage airplane with six engines, 28 wheels and a payload capacity of half a million pounds. It's also the world's largest plane. CNN.

THE COUNTDOWN: DOT appropriations run out in 122 days. The FAA reauthorization

expires in 122 days. Highway and transit policy is up for renewal in 1,218 days.

** **A message from Delta Air Lines:** Our daily briefing: At Delta we're constantly innovating to make your travel smoother. We tapped into RFID technology to keep your bags in check at all times. Giving you more peace of mind from check-in to baggage claim.

Our pursuit of constantly solving problems doesn't stop there. Turbulence is notoriously difficult to predict. That's why we developed our industry-leading Flight Weather Viewer app. It helps our pilots better spot and avoid unexpected turbulence with real-time graphics of observations and forecasts on the flight deck. Making your journey smoother while also reducing our carbon footprint.

Today's PLAYBOOK presented by Samsung
06/11/2017 10:55 AM EDT

By ANNA PALMER (anna@politico.com; @apalmerdc) and JAKE SHERMAN (sherman@politico.com; @JakeSherman) with DANIEL LIPPMAN (daniel@politico.com; @dlippman)

Driving the Day

FIRST IN PLAYBOOK -- WE HEAR ... There is a chance Congress will stay in session for part of August. There has been political pressure from some members of the House and Senate to stay in town and try to get some things done instead of take a five-week recess. The pressure will only increase if the Obamacare repeal and replace isn't done in the next few weeks. Congress has just 27 days in session until the summer break. Maybe it's a blessing in disguise: many lawmakers have had to face angry constituents on trips home.

STATEMENTS FROM PRESIDENT DONALD TRUMP from Trump National Golf Club in Bedminster, New Jersey -- **at 8:22 a.m.:** "The #FakeNews MSM doesn't report the great economic news since Election Day. #DOW up 16%. #NASDAQ up 19.5%. Drilling & energy sector.....way up. Regulations way down. 600,000+ new jobs added. Unemployment down to 4.3%. Business and economic enthusiasm way up- record levels!" ... **at 8:29 a.m.:** "I believe the James Comey leaks will be far more prevalent than anyone ever thought possible. Totally illegal? Very 'cowardly!'" ... **at 8:49 a.m.:** "The Democrats have no message, not on economics, not on taxes, not on jobs, not on failing #Obamacare. They are only OBSTRUCTIONISTS!"

-- TWO QUICK THINGS : Many Democrats will privately agree with Trump that they oftentimes lack a coherent message. But Trump's presidency has unified Democrats for the first time in a long time ... Trump has majorities in the House and Senate, and he's blaming Democrats for obstructing him.

BREAKING OVERSEAS -- TRUMP PUTS OFF U.K. VISIT -- THE GUARDIAN: "Donald Trump's state visit to Britain put on hold: U.S. president told Theresa May he did not want trip to go ahead if there were large-scale public protests": "Donald

Trump has told Theresa May in a phone call he does not want to go ahead with a state visit to Britain until the British public supports him coming. The U.S. president said he did not want to come if there were large-scale protests and his remarks in effect put the visit on hold for some time. The call was made in recent weeks, according to a Downing Street adviser who was in the room. The statement surprised May, according to those present." http://bit.ly/2reskVQ

Good Sunday morning. Jake will be on Steve Hilton's new Fox News show "The Next Revolution" live from Los Angeles tonight at 9 p.m. East Coast time.

TRUMP stopped by a wedding at his country club in New Jersey last night. http://bit.ly/2t98Uhy

YOU'LL HEAR THIS QUOTE A LOT -- Donald Trump Jr. on Fox News, via the Washington Post: "'When he tells you to do something, guess what? There's no ambiguity in it, there's no, 'Hey, I'm hoping," Trump said. 'You and I are friends: 'Hey, I hope this happens, but you've got to do your job.' That's what he told Comey. And for this guy as a politician to then go back and write a memo: 'Oh, I felt threatened.' He felt so threatened -- but he didn't do anything.' Trump also said that Comey's testimony 'vindicated' the president and that everything in it was 'basically ridiculous.'" http://wapo.st/2t9eJf5

ALEX ISENSTADT in **DEER VALLEY, UTAH -- "Romney stokes speculation he's weighing another political run** : The 2012 GOP nominee is plotting how to help Republicans in the midterms, and he's being coy about his own political future": "Mitt Romney is once again testing his political power - critiquing President Donald Trump, raising money and campaigning for fellow Republicans, and not ruling out another run for office for himself. The 2012 GOP nominee is returning to the spotlight, six months after Trump -- the man Romney once savaged as unfit for the presidency -- nearly picked him to be secretary of state. ...

"Spencer Zwick, a longtime Romney adviser and political gatekeeper, said he'd been inundated with appeals from Republican candidates asking the former GOP nominee to help them. Last week, Romney held his first fundraiser for a 2018 hopeful, an event benefiting Arizona Sen. Jeff Flake, a Republican who has been fiercely critical of the president. Over the coming days, Romney is also expected to release a robo-call boosting Georgia Republican Karen Handel, who has been losing ground in a high-stakes June 20 special House election she had once been favored to win.

"'All I can tell you is that the number of requests that Mitt has gotten in the last month to come to a district or to come to a state for a sitting senator - it's like he's a presidential candidate again, which I was surprised by,' said Zwick, who doubles as a top political aide to House Speaker Paul Ryan. 'There are only so many people in the party that can headline these things.'" http://politi.co/2rZkZ9X

-- THERE IS A BIG DIFFERENCE between Republicans wanting to take advantage of

Romney's fundraising prowess, and his running for office and garnering the support he needs to win.

SUNDAY BEST -- JOHN DICKERSON speaks with **SEN. JAMES LANKFORD (R-OKLA.)** on **CBS'S "FACE THE NATION" -- DICKERSON:** "On the question of influencing the investigation, again, thinking about the scale, on the one hand the president might have done something that was a little bit crossing a line but he's a new guy to the job all the way to this question of obstruction of justice. Where do you put, knowing what you know about the president's behavior, where do you put what he did on that scale?" **LANKFORD:** "I would say it's very inappropriate. As Jim Comey said, it's awkward to be able to have the president of the United States sitting down with someone in the F.B.I., the leadership of the F.B.I., to be able to have direct questions. And for the issue to come up about the Michael Flynn investigations, inappropriate. But the way that it was handled, with no follow-up, with no other press, with no other return to that topic, it looks like what I called a pretty light touch. If this is trying to interfere in a process of any investigation, it doesn't seem like it was number one, very effective, and number two, came up more than once in a conversation. So this looks more like an inappropriate conversation than obstruction."

-- SEN. JACK REED (D-R.I.) tells **CHRIS WALLACE** on **"FOX NEWS SUNDAY"** that Trump needs to be deposed on all Russia-related questions -- "[T]he deposition is not just about his conversations with Mr. Comey. There are issues with respect to his conversation with director of national intelligence Dan Coats, Admiral Rogers, the NSA director, his relationships with Manafort. By the time the special prosecutor Mr. Mueller is ready to depose or ask the president to speak under oath, there are a myriad of questions. So what I don't want to see is simply, we'll I just said I talk about Comey, I'm not talking about anything else. To resolve this situation he has to be prepared to speak on all these matters."

-- PREET BHARARA speaks to **GEORGE STEPHANOPOULOS** on **ABC'S "THIS WEEK" -- STEPHANOPOULOS:** "The president's defenders, like Alan Dershowitz, say there's no grounds for obstruction. You talked about that. And he, in fact, says that presidents have the constitutional right to fire FBI directors and investigations as much as they want. One of the president's attorneys, Jay Sekulow, is coming up next. He says there's no there there, no basis for obstruction. You're a former prosecutor. Are -- is there evidence there ... to begin a case for obstruction?" **BHARARA** : "I think there's absolutely evidence to begin a case. I think it's very important for all sorts of armchair speculators in the law to be clear that no one knows right now whether there is a provable case of obstruction. It's also true I think from based on what I see as a third party and out of government that there's no basis to say there's no obstruction."

-- SEN. SUSAN COLLINS (R-Maine) talks to **BRIANNA KEILAR** on **CNN's "STATE OF THE UNION" -- KEILAR:** "I want to ask you about something the president has been cagey about, and that is these tapes, of course. So, I wonder if you would support issuing a subpoena to the White House. Right now, it's just a request coming from Congress. Would you support issuing a subpoena for the recordings or any documents

that might come from that?" **COLLINS:** "This is an issue that the president should have cleared up in his press conference. He should give a straight yes or no to the answer -- to the question of whether or not the tapes exist. And he should voluntarily turn them over not only to the Senate Intelligence Committee, but to the special counsel. So, I don't think a subpoena should be necessary. And I don't understand why the president just doesn't clear this matter up once and for all."

****** **A message from Samsung:** Samsung is committed to creating high-skilled jobs, investing in cutting-edge manufacturing and R&D, and forming trusted partnerships nationwide. Samsung's footprint in the U.S. has been growing for nearly 40 years, with 18,500 employees across the country. Our Austin, TX semiconductor facility is one of the single-largest U.S. FDI's. Visit Samsung.com/VisionForTomorrow for more. ******

THE NEXT MAIN EVENT -- "Sessions will testify before Senate in Russia investigation," by Kyle Cheney and John Bresnahan: "In a letter to his former colleagues in the House and Senate, Sessions canceled a planned appearance before Congress' appropriations committees. Sessions said he instead plans to appear on Tuesday before the Intelligence panel to respond to questions stemming from FBI director James Comey's bombshell testimony last Thursday. ...

"If this is an open session ... Sessions will likely face a barrage of questions over his role in Comey's dismissal, his independence from President Donald Trump, and allegations of additional unreported meetings with Russian Ambassador Sergey Kislyak. Sessions has already recused himself from the Russia probe after failing to tell the Senate Judiciary Committee during his confirmation of two meetings with Kislyak, and there have been reports of additional sessions." http://politi.co/2rOVc5P

-- SEN. DIANNE FEINSTEIN (D-CALIF.) told Brianna Keilar on "State of the Union" that she didn't know if the hearing will be open.

INQUIRING MINDS WANT TO KNOW -- "What's next for Comey? Maybe law, corporate work, politics," by AP's Eric Tucker: "So what's next for James Comey? The former FBI director boldly challenged the president who fired him, accused the Trump administration of lying and supplied material that could be used to build a case against President Donald Trump. But after stepping away from the Capitol Hill spotlight, where he's always seemed comfortable, the 56-year-old veteran lawman now confronts the same question long faced by Washington officials after their government service.

"His dry quip at a riveting Senate hearing that he was 'between opportunities' vastly understates the career prospects now available to him - not to mention potential benefits from the public's fascination with a man who has commanded respect while drawing outrage from both political parties." http://apne.ws/2sQlkMb

EYE-POPPING NUMBERS FROM WAPO'S KAREN TUMULTY in **SANDY SPRINGS, GEORGIA -- "Trump looms over Georgia special election, a proxy battle for 2018":** "It is an arms race of money and organization. The latest fundraising report, filed

Thursday, showed Ossoff raising an additional $15 million in the past two months, nearly quadruple what Handel brought in. With outside groups weighing in, the race has thus far cost more than $40 million -- far outpacing the previous record for a congressional race of nearly $30 million for a Florida contest in 2012.

"Polls indicate there are few voters still undecided. 'The next 10 days are about turning out the base. There are more of us than them in the district. The more people who vote, the better,' said Corry Bliss, who heads the Congressional Leadership Fund, a super PAC affiliated with House Speaker Paul D. Ryan (R-Wis.). That organization alone plans to spend about $7 million in the race." http://wapo.st/2rjhPM4

FASCINATING READ -- "Palantir goes from Pentagon outsider to Mattis' inner circle," by Jacqueline Klimas and Bryan Bender: "The Trump era has brought a change of fortune for a Silicon Valley software company founded by presidential adviser Peter Thiel - turning it from a Pentagon outcast to a player with three allies in Defense Secretary Jim Mattis' inner circle. At least three Pentagon officials close to Mattis, including his deputy chief of staff and a longtime confidante, either worked, lobbied or consulted for Palantir Technologies, according to ethics disclosures obtained by POLITICO. That's an unusually high number of people from one company to have such daily contact with the Pentagon leader, some analysts say.

"It also represents a sharp rise in prominence for the company, which just months ago could barely get a meeting in the Pentagon. Last year, Palantir even had to go to court to force its way into a competition for a lucrative Army contract. Thiel was one of the only Silicon Valley titans to openly support Trump during the campaign, a role that gave him a prime speaking slot at last summer's Republican convention. He has since acted as a key adviser arranging meetings among the president and other tech executives. While there's no evidence he had a direct hand in these specific Pentagon hires, analysts say they absolutely show his growing influence in the administration, where he holds no formal role." http://politi.co/2sqMdbS

DEMOCRATS' NEW PLAYBOOK -- "Democrats bet on Trump in Virginia governor's race," by Kevin Robillard: "Virginia's Democratic primary on Tuesday is shaping up to be the first real test of liberalism in the Trump era, with both candidates lurching for increasingly leftward policies to position themselves in contrast with President Donald Trump. ...

"Virginia's gubernatorial elections often develop into contrasts with a new president, but there's a stark difference between now and how Republican candidate Bob McDonnell handled then-President Barack Obama in 2009. While critical of the Obama's economic record, the future governor also regularly praised Obama for supporting school choice, straddling the partisan divide. The Democrats have felt no need to do the same with the less popular Trump, whose approval rating was at 36 percent in a recent Washington Post-George Mason University poll of Virginia." http://politi.co/2rjHzYJ

THE LATEST ON HEALTH CARE -- "Fate of Planned Parenthood funding tied to

Senate moderates," by Jen Haberkorn: "Two female Senate Republicans could stop the anti-abortion movement from achieving its most significant win against Planned Parenthood in decades. Most Republicans want to eliminate the group's $555 million in federal funding as part of their bill to repeal Obamacare. But as Majority Leader Mitch McConnell tries to solve the legislative Rubik's Cube of finding 50 votes for repeal, he may have to drop the Planned Parenthood cut to win the support of the two Republican moderates, Sens. Susan Collins of Maine and Lisa Murkowski of Alaska." http://politi.co/2sbbpTf

WHAT SILICON VALLEY IS READING -- "Uber Board to Discuss CEO Travis Kalanick's Possible Leave of Absence: Board also set to vote on recommendations from a report of an investigation into workplace issues," by WSJ's Greg Bensinger: "Uber Technologies Inc. Chief Executive Travis Kalanick will discuss taking a possible leave of absence when the board of directors of the embattled ride-hailing company meets Sunday morning, according to a person familiar with the matter.

"Also on the agenda when the seven-person board convenes is a vote on a series of recommendations from a report prepared by former U.S. Attorney General Eric Holder regarding its workplace. It was uncertain whether Mr. Kalanick would ultimately take the leave or whether the board would approve of such a measure, which would require finding a temporary replacement in short order." http://on.wsj.com/2r7Ram8

THE JUICE ...

-- SPOTTED at Mitt Romney's E2 Summit in Deer Valley, Utah: New Hampshire Gov. Chris Sununu, Spencer Zwick, Matt Waldrip, Corry Bliss, Speaker Paul Ryan, Sen. John McCain (R-Ariz.), Sen. Lindsey Graham (R-S.C.), Kristen Soltis Anderson, Ron Kaufman, Rep. Jason Chaffetz (R-Utah), Anthony Scaramucci, Bianna Golodryga, Will Ritter, Mary Bono Mack, Lanhee Chen, Leah Malone and Andrew Liveris.

RIP -- @SecondLady: "Rest in peace Oreo. You touched a lot of hearts in your little life. Our family will miss you very much." http://bit.ly/2sgQOxR

Playbook Reads

'WORKFORCE DEVELOPMENT WEEK' AT THE WHITE HOUSE -- "Donald and Ivanka Trump head to Wisconsin for jobs push," by ABC News' Jordyn Phelps: "President Donald Trump and his daughter Ivanka Trump are set to travel to Wisconsin Tuesday to join Gov. Scott Walker to tour a technical college, as the administration puts a renewed focus on its goal of job creation. The trip is just one event in a week full of activities built around promoting technical skills training and apprenticeships. [They are d]ubbing it 'workforce development week' ...

"The president is expected to make what the administration is billing as a 'major policy

speech' at the Department of Labor on Wednesday, in which he'll lay out steps the administration will take to encourage workforce development and also call for Congressional action. Ivanka Trump will also lead a roundtable with some 15 CEOs. On Thursday, the president will also host a roundtable discussion, where he will welcome eight governors from states with successful workforce development programs to the White House." http://abcn.ws/2r7tOwT

THE NEW U.K. POLITICAL REALITY -- "For Britain, Political Stability Is a Quaint Relic," by NYT's Steven Erlanger in London: "In a little more than two years, Britain has had two general elections and a nationwide referendum. Each time, the politicians, pollsters, betting markets, political scientists and commentators have got it wrong.

"Once considered one of the most politically stable countries in the world, regularly turning out majority governments, Britain is increasingly confusing and unpredictable, both to its allies and itself. Far from settling the fierce divisions exposed by last year's referendum on Britain's exit from the European Union, or Brexit, the election on Thursday only made them worse." http://nyti.ms/2shhy1i

-- THE POLITICO EUROPE TICK TOCK: "How Theresa May lost it: A reluctance to delegate, hubris and campaigning ineptitude ruined British prime minister's grand plan to secure a mandate," by Tom McTague, Charlie Cooper and Annabelle Dickson in London: "Halfway through Britain's seven-week snap election campaign, some in Theresa May's team came to the conclusion that they had a problem - the candidate. At a gathering of senior staff in Conservative campaign headquarters in central London, one of May's top operatives told the sitting prime minister that she risked crashing and burning like Sarah Palin did in 2008. ... To the operative, May was overly controlling and her inexperience would tell during a short, intense campaign. May listened with good grace ... [but] changed nothing." http://politi.co/2t8VuSG

ACTUAL FAKE NEWS - NYT A22, "A Pro-Trump Conspiracy Theorist, a False Tweet and a Runaway Story," by Jeremy Peters: "A pro-Trump activist notorious for his amateur sleuthing into red herrings like the 'Pizzagate' hoax and a conspiracy theory involving the murder of a Democratic aide, Mr. Posobiec wrote on May 17 that Mr. Comey, the recently ousted F.B.I. director, had 'said under oath that Trump did not ask him to halt any investigation.' ...

"But as the journey of that one tweet shows, misinformed, distorted and false stories are gaining traction far beyond the fringes of the internet. Just 14 words from Mr. Posobiec's Twitter account would spread far enough to provide grist for a prime-time Fox News commentary and a Rush Limbaugh monologue that reached millions of listeners, forging an alternative first draft of history in corners of the conservative media where President Trump's troubles are often explained away as fabrications by his journalist enemies.

"In this fragmented media environment, the spread of false information is accelerated and amplified by a web of allied activist-journalists with large online

followings, a White House that grants them access and, occasionally, a president who validates their work. The right-wing media machine that President Bill Clinton's aides once referred to as 'conspiracy commerce' is now far more mature, extensive and, in the internet age, tough to counter." http://nyti.ms/2sbduPm

****** **A message from Samsung:** Samsung's footprint in the U.S. has been growing for nearly 40 years. Today, we employ more than 18,500 people across the country, covering nearly every state. Samsung Austin Semiconductor (SAS) hosts 6,000+ manufacturing and engineering jobs and has become a $17bn investment - making it one of the largest single FDI's in the U.S. We're also committed to building strong communities through citizenship and support of programs for children's health, STEAM education, veterans and military families. Visit Samsung.com/VisionForTomorrow for more. ******

DEEP DIVES -- NYT A1, "Opioid Dealers Embrace the Dark Web to Send Deadly Drugs by Mail: Anonymous online sales are surging, and people are dying. Despite dozens of arrests, new merchants - many based in Asia - quickly pop up," by Nathaniel Popper (print headline: "Drug Trade Rises in Dark Corners of the Internet"): "As the nation's opioid crisis worsens, the authorities are confronting a resurgent, unruly player in the illicit trade of the deadly drugs, one that threatens to be even more formidable than the cartels. The internet. In a growing number of arrests and overdoses, law enforcement officials say, the drugs are being bought online. Internet sales have allowed powerful synthetic opioids such as fentanyl - the fastest-growing cause of overdoses nationwide - to reach living rooms in nearly every region of the country, as they arrive in small packages in the mail." http://nyti.ms/2t91CdL

--"China's New Bridges: Rising High, but Buried in Debt: China has built hundreds of dazzling new bridges, including the longest and highest, but many have fostered debt and corruption," by NYT's Chris Buckley: "The eye-popping structures have slashed travel times in some areas, made business easier and generated a sizable slice of the country's economy, laying a foundation, in theory at least, for decades of future growth. But as the bridges and the expressways they span keep rising, critics say construction has become an end unto itself. Fueled by government-backed loans and urged on by the big construction companies and officials who profit from them, many of the projects are piling up debt and breeding corruption while producing questionable transportation benefits." http://nyti.ms/2t9er7l

BONUS GREAT WEEKEND READS, curated by Daniel Lippman:

--"Bob Dylan's Nobel Lecture": "Some of these same things have happened to you. You too have had drugs dropped into your wine. You too have shared a bed with the wrong woman. You too have been spellbound by sweet voices with strange melodies. You too have come so far and have been so far blown back." http://bit.ly/2rULMnO

--"How the D-Day Invasion Was Planned" - in the August 1944 issue of Popular Mechanics: "Every one of the thousands of men landed in France required about 10

ship tons of overall equipment, and an additional ship ton every 30 days. The number of separate items needed was about a million. Some of these million items had to be accumulated in millions, resulting in astronomical totals." http://bit.ly/2smaY97

--"Eternal Champions," by Sam Borden in ESPN: "Seven months ago, Brazilian underdogs Chapecoense boarded a plane to play in the game of their lives. Instead, their biggest moment turned into a tragedy no one can forget." http://es.pn/2r9Y3aB (h/t Longform.org)

--"Inside Trump's secretive immigration court: far from scrutiny and legal aid," by The Guardian's Oliver Laughland in Jena, Louisiana: "[T]he remote LaSalle detention facility is part of Trump's attempt to fast-track deportations. A visit reveals a hastily arranged setup beset by flaws." http://bit.ly/2scNvHQ

--"Rolling Stone at 50: How Hunter S. Thompson Became a Legend," by Patrick Doyle in Rolling Stone - per The Browser's description: "Sports Illustrated asked Hunter S. Thompson for 250 words about a Las Vegas motorbike race. He gave them 2,500 words - and when they spiked the piece he took it to Rolling Stone, which wanted more. The result was Fear And Loathing In Las Vegas, published in 1971. Thompson's coverage of the 1972 presidential campaign 'reshaped what it meant to write about politics'. But 'getting work out of him was becoming difficult". Editing him 'was a bit like being a cornerman for Ali.'" http://rol.st/2smiHEk

--"Weddings of the 0.01 Percent," by Julia Rubin in Racked: "Cristal! Caviar! Chris Martin! How the rich (and sometimes famous) get married." http://bit.ly/2smtvCz

--"The truth about tarot," by James McConnachie in Aeon Magazine: "Whether divining ancient wisdoms or elevating the art of cold reading, tarot is a form of therapy, much like psychoanalysis." http://bit.ly/2sL1XDY (h/t ALDaily.com)

--"The Worst Ever First Day on the Job -- Punching In: My Life as a Long Haul Trucker," by Finn Murphy in Literary Hub: "Moving companies perform four categories of moving work: local, commercial, long-distance, and international. Callahan's work was mostly local moving, loading up someone's house in the morning and then unloading in the afternoon at the new house. It takes the greatest toll on the body because you are handling stuff every working day. It's the local stuff that eventually kills you or drives you to drink; more commonly, both." http://bit.ly/2s4Nuoy

--"There Were Once Jews Here," by Lucette Lagnado, author of "The Man in the White Sharkskin Suit: A Jewish Family's Exodus from Old Cairo to the New World," in Tablet Magazine: "During the Six-Day War, some of the Arab countries at war with Israel -- Egypt, Tunisia, Libya -- treated their Jewish populations terribly, causing them to leave en masse." http://bit.ly/2t92OOk ... ***$10.01 on Amazon*** http://amzn.to/2sbmAeT

--"Dear Brazilian Government, Thanks for the Contracts," by Michael Smith, Sabrina Valle, and Blake Schmidt on the cover of Bloomberg Businessweek: "There's graft, and

then there's the graft machine perfected by Odebrecht, one of the world's biggest construction companies." https://bloom.bg/2rOEHqr ... ***The cover*** http://bit.ly/2rjKL6H

--"'Kill them, kill them, kill them': the volunteer army plotting to wipe out Britain's grey squirrels," by Patrick Barkham in The Guardian: "The red squirrel is under threat of extinction across Britain. Their supporters believe the only way to save them is to exterminate their enemy: the greys. But are they just prejudiced against non-native species?" http://bit.ly/2re8OE6

--"This County Switched From Backing Obama to Trump. Here's What Happened," by Josh Siegel in The Daily Signal: "In 1980, manufacturing jobs comprised 38 percent of all jobs in Coos [New Hampshire]. In 2014, only 7 percent of jobs in the county were in manufacturing. Payroll wages from manufacturing have dropped from 49 percent to 9 percent since the mid-1980s." http://bit.ly/2sL2A0v

Playbookers

SPOTTED: Secretary of Homeland Security John Kelly enjoying "DHS Night" Friday night at the Nats game along with members of DHS' workforce - ***pic*** http://bit.ly/2rjyfUM ... Anson Kaye, partner at GMMB, in New Orleans last night, accepting a Gold ADDY award (and also a Mosaic Award) for the ad "Mirrors" (http://bit.ly/2sbAIEM) he created for Hillary for America

SPOTTED at State Department senior White House adviser Matt Mowers' birthday party at Wet Dog Tavern last night (which coincidentally also hosted RNC alum Anna Epstein's birthday party at the same time): Cassie Spodak, Ryan Williams, Zeke Miller, Ben Sparks, Jill Barclay, Phil Elliott, Ethan Zorfas, Ben DeMarzo, Maren Kasper, Michael Kratsios, Kailani Koenig, Tom Dickens, Elise Dietsch Dickens, Eric Jones, Alan He, Andy Polesovsky, Corey Ershow, Kelly Klass, Britt Carter.

SHIELDS/WALSH ENGAGEMENT PARTY -- THE BRITISH EMBASSY hosted an engagement party last night for **Mike Shields,** former RNC chief of staff and founder and partner at Convergence Media and **Katie Walsh** , former WH deputy chief of staff and former RNC chief of staff who is now senior advisor at America First Policies. Amb. Kim Darroch toasted the pair and called them the "ultimate political couple" and told the crowd how the couple got engaged in the Cabinet Room at 10 Downing Street, where the prime minister has met with his or her cabinet every week for 250 years. He also needled Mike, who has a British mother and is a big soccer fan, for supporting Ipswich, who he cast as much inferior to Chelsea in the Premier League. The food at the party included: herb-crusted fillet of lamb, goat's cheese and beetroot, terrine of pork, and chili shrimp while desserts included mini Bakewell tart, strawberry tartlet and passion fruit mousse. ***Pics of the couple*** http://bit.ly/2sbk3Bp ... http://bit.ly/2saWbhk ... ***Reince Priebus taking a pic of the couple as they thanked friends for coming*** http://bit.ly/2rOGmfz ... ***The crowd*** http://bit.ly/2rOzjDs

SPOTTED: Reince and Sally Priebus, Sean and Rebecca Spicer, Steven Mnuchin and his chief of staff Eli Miller chatting on a walk around the gardens of the embassy, Sarah Huckabee Sanders, Rob and Cindy Simms, Cara Mason, Jessica Ditto, Sarah and Dave Armstrong, Tim Pataki, Richard Walters, Rob Jesmer chatting with Sean Cairncross (Sean and Rob have been friends since they were 5 years old growing up in Minnesota), Brian O. Walsh, Josh Pitcock, Mike's 15-year-old son Aidan Shields-Eads, Molly Donlin, Steven Law, Sam Feist, Mike Allen, Andrew Bremberg, Lew Eisenberg, Madeleine Westerhout, Johnny DeStefano, Renee Hudson, Michael Hoare, Lindsay Walters, Vanessa Morrone and Mike Ambrosini, Zach and Mallory Hunter.

ENGAGED -- Andrew Feldman, principal of the progressive communications firm Feldman Strategies, proposed to his longtime girlfriend **Megan Salzman** Saturday night during Country Music Fest in Nashville. Megan is a communications manager at the early education advocacy group The First Five Years Fund. "Andrew and Megan met on OKCupid nearly four and a half years ago. Andrew points out that the ring has extra significant because the center stone was Megan's mother's engagement stone and she is no longer with us." ***Pics*** http://bit.ly/2r7KrIZ ... http://bit.ly/2rOFJTb ... ***The ring*** http://bit.ly/2rjzLGh

-- Jessica Huff, social media director for McClatchy in Dallas and a Politico alum, and **Spenser Walters** , an area sales rep for Duvel USA, got engaged on Friday night in Austin, Texas. She emails us: "We met in college at UT-Austin after he came back from Afghanistan. He was serving in the Marines. We had the same group of friends but I hadn't met him yet since he was overseas. Once he was back, one of our first dates was at a restaurant in the hill country in Texas overlooking the lake, and so while visiting Austin he took me back there and proposed during sunset. It's a very special place to us so it was perfect!" ***Pics*** http://bit.ly/2shqCmX ... ***The ring*** http://bit.ly/2t9rnKO

WEEKEND WEDDINGS -- Travis Considine, communications manager at Uber Texas and a John McCain and Rick Perry alum, married **Morgan Smith,** a reporter with The Texas Tribune, on Saturday evening at the San Antonio Museum of Art. Guests enjoyed a bluegrass band and flawless weather at the outdoor ceremony and reception. ***Pic*** http://bit.ly/2t9jc1c ... ***Travis' speech*** http://bit.ly/2sQLqi2

SPOTTED: Tucker and Alexia Bounds, Brittany Bramell, Trevor Theunissen, Chris Miller, Allie Brandenburger and Ryan Mahoney, Kevin Benacci, Emily Ramshaw, Matt and Jen Hirsch, Evan Smith, Perrylanders Rob Johnson, Mark Miner, and Andy Hemming.

OBAMA ALUMNI - Meredith Carden, head of partnerships at Sidewire, got married this weekend to **Micah Fergenson,** law clerk at U.S. Court of Appeals for the Second Circuit, in a small ceremony at Four Follies Farm in Tiverton, Rhode Island. The couple first met in 2009 when they were working for President Obama. Micah worked in the WH Counsel's Office, and Meredith worked for FLOTUS in the East Wing. They lost touch, but were reintroduced by a mutual friend in 2015. ***Pic*** http://bit.ly/2sb3Plq

--"Lily Rothman, Elihu Dietz" - N.Y. Times: "Ms. Rothman, 31, is the history and archives editor at Time magazine, overseeing its history coverage, Life.com and the magazine's digital archive. She also wrote 'Everything You Need to Ace American History in One Big Fat Notebook.' She graduated magna cum laude from Yale and received a master's degree in journalism from the City University of New York. ... Mr. Dietz, 32, is a candidate for a master's degree in environmental management at the Nicholas School of the Environment at Duke, where he studies the integration of renewable energy into the grid. He graduated from St. John's College in Santa Fe, N.M. ... The groom is a great-great-grandson and a namesake of Elihu Root, who was President Theodore Roosevelt's secretary of state and the winner of the Nobel Peace Prize in 1912. He is also a direct descendant of President Ulysses S. Grant. The couple met on a blind date arranged by friends in Brooklyn in 2011." ***With pic*** http://nyti.ms/2rZpO2N

--"Alison Kenworthy, Michael Koenigs": "The bride and groom work at ABC News in New York, where they met. She is a news producer for 'Good Morning America.' He is a senior coordinating producer, creating content that is used on-air and on the website. He was also the host of 'Election Cycle,' a series in 2016 that featured him bicycling through swing states and interviewing voters along the way. The bride, 33, graduated from Rutgers. ... Mr. Koenigs, 30, graduated cum laude from Harvard." ***With pic*** http://nyti.ms/2t8GB2L

--"Julia Pudlin, David Wishnick": "Ms. Pudlin, 32, worked until earlier this year at the United States Treasury Department as a deputy executive secretary in the chief of staff's office and a senior adviser to the general counsel. On July 10 she is to begin working as the assistant deputy general counsel for government investigations at Comcast in Philadelphia. She graduated summa cum laude from Yale, and received a law degree magna cum laude from the University of Pennsylvania. ... Mr. Wishnick, also 32, was until recently an associate in the Washington office of Jenner & Block, a Chicago law firm. On July 12 he is to begin a fellowship, conducting research in contract law, at the University of Pennsylvania Law School. He graduated magna cum laude from Brown, and received a law degree from Yale. ... The couple met in April 2013 through the dating app Hinge." ***With pic*** http://nyti.ms/2rOZSIV

--"Victoria St. Martin, Richard G. Jones": "The bride, 36, is a general assignment reporter on the local desk of The Washington Post. She graduated from Rutgers and received a master's degree in journalism from American University. ... The groom, 46, is to become the director of the journalism program at Notre Dame. Until recently, he was an associate editor in news administration for The New York Times, as well as the director of the newspaper's Student Journalism Institute. He graduated from the University of Delaware and has a master's degree in journalism from Columbia. ... The couple were introduced in 2006 by a mutual friend in Yardley, Pa." ***With pic*** http://nyti.ms/2rOtYMA

The following news provides a snapshot of what Bloomberg BNA is working on today. Read the full version of all the stories in the final issue, published each night.

Biofuel Subsides Axed in New House Legislation

Posted July 25, 2017, 11:30 A.M. ET

By Brian Dabbs

Biofuel subsidy programs at the Agriculture Department would be axed in a bill set for introduction in the House.

Rep. Andy Biggs (R-Ariz.), an environment subcommittee chairman on the House Science, Space and Technology Committee, plans to introduce the legislation July 26, saying the programs disregard market demand at the expense of taxpayers.

"By continuing to force technologies into the market that are not competitive or in demand, we are doing the American people a disservice," Biggs told a July 25 hearing on advanced biofuels. "The federal government's biofuel policies have had an unintended adverse effect on food costs. The price of corn, soybeans, and related retail food products have all increased."

The programs, Bioenergy Program for Advanced Biofuels and Biomass Crop Assistance Program, aim to boost innovation. Advanced biofuels, which can supplant traditional fuels to provide energy, are made from a wide range of plants and plant waste.

Many lawmakers oppose traditional corn-based ethanol over concerns about corn supply and environmental impacts.

Appalachian States Look Past Coal, Ask Trump to Aid Natural Gas

Posted July 25, 2017, 8:55 A.M. ET

By Ari Natter

Having lost tens of thousands of coal mining jobs to the rise in natural gas, several states have decided if you can't beat them, join them.

A bipartisan group of lawmakers hopes to persuade President Donald Trump to spare a loan program he wants to kill and use it to help a $10 billion gas-storage project in the hard-hit Appalachian region of the eastern U.S. where coal had once dominated. Proponents say it would

help spur new chemical, refining and other manufacturing industries—and give out-of-work miners a new career path.

"We need a more diverse portfolio," said Brian Anderson, director of West Virginia University's Energy Institute, and a member of the project's coordinating committee. "If you have one industry that dominates your economy and that industry sees a decline then it really runs huge ripples through your entire economy." Coal and natural gas compete in the electricity markets and the proliferation of fracking in recent years led to cheaper gas that has displaced coal. Coal had once accounted for more than half of all U.S. electricity generation, but last year natural gas topped coal to become the largest source of power generation. The impact has been felt especially hard in the Appalachian region—which was once largely dependent on coal mining and steel production.

The Appalachian Storage Hub, estimated to cost as much as $10 billion, could encompass underground caverns in Pennsylvania, Ohio or West Virginia, although the final site has yet to be selected. It would have the capacity to hold as much as 100 million barrels of ethane, methane and other products produced in conjunction with natural gas. It would also include a 3,000-mile pipeline network to link up the storage sites with petrochemical plants.

A report by the American Chemistry Council found the project could create more than 100,000 jobs and nearly $36 billion in capital investment. The project would be similar, though smaller, to the Mont Belvieu natural gas liquids hub just outside Houston that has bolstered that area's chemical industry.

Supporters of the project say a lack of pipelines and storage infrastructure has depressed the price of gas produced from the Marcellus shale under Pennsylvania, Ohio and West Virginia. Natural gas prices there are only two-thirds that of the main market rate set in Louisiana.

Southwestern Energy Co., a gas exploration company with operations in the Marcellus, is a top proponent of the storage hub.

Bipartisan Group

A group of lawmakers led by Democrat Joe Manchin and Republican Shelley Moore Capito sent Trump a letter last week asking that he set up a blue ribbon commission to back the construction effort.

The two West Virginia senators also introduced legislation that would allow the Appalachian storage hub to qualify for Energy Department loan guarantees. Trump has proposed killing that program, and a spending bill the House of Representatives is debating this week would do just that.

Even without federal help, there are initial signs that investment is coming to the region. A $6 billion ethane cracker plant, which would make ethylene for plastics and other products, is being considered by PTT Global Chemical America for a site along the Ohio River where a former coal-fired power plant owned by FirstEnergy Corp. once stood. Royal Dutch Shell Plc also has a new chemical complex planned for western Pennsylvania.

Shell's project follows the first wave of North American plants being built along the Gulf of Mexico coast by companies such as Dow Chemical Co. and Chevron Phillips Chemical Co. The factories all use shale gas to gain a cost advantage over producers in Europe and Asia that rely on oil and coal feedstocks.

"We certainly had our struggles in this region," said Steven Hedrick, the president of the Mid-Atlantic

Technology, Research & Innovation Center in South Charleston, West Virginia. "This would be an opportunity for displaced miners to allow them to use the skills they've learned during a lifetime of engagement with coal."

Petronas Drops Plan to Build $27 Billion Canada LNG Terminal

Posted July 25, 2017, 03:02 P.M. ET

By Natalie Obiko Pearson

Malaysia's Petroliam Nasional Bhd abandoned its long-stalled plans to build a $27 billion liquefied natural gas export terminal on Canada's west coast, citing changes in market conditions.

"Prolonged depressed prices and shifts in the energy industry have led us to this decision," Anuar Taib, chairman of the board of the Pacific Northwest LNG project, said in a statement.

Petronas, as the state-owned company is known, won Canadian federal government approval for the project in September following more than three years of regulatory reviews and strident opposition from environmentalists, scientists and indigenous communities. The project also faced economic headwinds, with 18 gas export proposals in the province in limbo amid a global glut and plunging prices.

The long-anticipated decision by Petronas delivers a major blow to plans pushed by the previous Liberal-led government of British Columbia to develop an LNG industry in the Pacific Coast province for export to Asia. It comes shortly after Premier John Horgan took office backed by his ally, Green Party Leader Andrew Weaver, who has mocked the LNG industry as "nonsense" and a "colossal failure."

Petronas and its partners remain committed to developing their natural gas assets in Canada and "will continue to explore all options as part of its long-term investment strategy," according to the statement.

America's Biggest Oil Port Looks to Be Hub for Shale Exports

Posted July 25, 2017, 8:14 A.M. ET

By Hailey Waller and Sheela Tobben

The biggest U.S. oil-import hub wants to grab a piece of surging North American crude exports.

Louisiana Offshore Oil Port, the only terminal along the U.S. Gulf Coast able to handle a fully laden supertanker, is gauging interest from shippers in sending crude overseas on the world's biggest ships by early next year. The port would continue to take in foreign oil, LOOP LLC said in an emailed statement July 24.

Ports are competing to fill the needs of domestic oil producers looking for outlets for their growing supply. At the same time, the boom from U.S. shale fields and Canadian oil-sands mines has

reduced refiners' need for imported oil. LOOP's ability to handle tankers capable of carrying 2 million barrels in their holds would reduce shipping costs for companies looking to send crude to refiners in Asia.

"LOOP is the most obvious place for U.S. crude exports since as a deepwater port it makes it more manageable to load up a large ship such as a VLCC," Sandy Fielden, director of commodities and energy research at Morningstar Inc., said by phone from Austin, Texas. "It makes huge sense from a logistical perspective as it will allow for more efficient cargo shipments."

Currently, shippers have to load oil onto smaller tankers in ports such as Houston or Corpus Christi, Texas, that then transfer their cargoes onto Very Large Crude Carriers sitting offshore. That adds cost and time to the shipments. While Corpus Christi received its first VLCC at the end of May, the port's channel isn't deep enough for a ship that size to load a full cargo.

Nigerian and Saudi Arabian oil will continue being unloaded from massive supertankers at LOOP's marine terminal 17 miles offshore and pumped into storage caverns one-third of a mile under its Clovelly Hub in Louisiana, as it has for over 30 years. But LOOP is turning some of its operations around as exports surge after restrictions were lifted at the end of 2015.

"Today, customers are seeking the optionality to safely and efficiently load or offload, which is a natural request for a port," LOOP President Tom Shaw said in the statement. "This service offers our customers the scalability to fully load a VLCC."

LOOP will be competing with Corpus Christi, which in 2017 became the top oil-export hub for the U.S. Canadian producers are looking for more options for selling their crude to higher-priced markets around the world, lessening their dependence on U.S. refiners.

In recent years, shipping oil overseas has become more economical, thanks to low-cost drilling methods unlocking vast deposits in West Texas and other areas. U.S. production reached 9.6 million barrels a day in April 2015, according to the Energy Information Administration.

Rising Output

Daily U.S. output is hovering at more than 9 million barrels, much of which is lighter than what local refineries are configured to process. The excess is heading overseas, boosting American exports above those from OPEC members Qatar, Libya, Ecuador and Gabon. VLCC shipments to Asia are expected to jump 52-fold this year, shipping analysts at McQuilling Partners Inc. said in a note. That makes a port able to load the huge ships attractive to traders.

The additional capacity at LOOP could add another 300,000 barrels a day of U.S. exports, according to Fielden.

"Professional exporters will be drawn to this as they will want to export more regularly."

House Poised to Add Russia Sanctions With Curbs on Trump's Power

Posted July 25, 2017, 9:18 A.M. ET

By Anna Edgerton

The U.S. House is poised to vote on a bill to strengthen sanctions against Russia and prevent President Donald Trump from unilaterally lifting penalties, after the measure was delayed by procedural concerns and objections from energy companies.

The measure, which was altered to ensure that oil companies can work on certain joint projects overseas, would also impose new sanctions on Iran and North Korea. House leaders expect bipartisan support for the bill in the vote July 25.

The White House has sent mixed messages about whether Trump would sign the legislation and has expressed concern over limiting the president's power to ease sanctions on his own. Trump supports sanctions against the three countries but wants to make sure the U.S. gets "good deals," White House spokeswoman Sarah Huckabee Sanders told reporters aboard Air Force One July 24.

Congressional Rebuke

The measure would then go back to the Senate, where members of both parties have spoken in favor of changes made to the legislation they passed last month, S. 722.

The Russia sanctions measure is a rare rebuke to Trump from congressional Republicans. They say they want to prevent the president from acting on his own to lift punishment from the previous administration for meddling in last year's U.S. election and for aggression in Ukraine. House and Senate committees and the Federal Bureau of Investigation are examining possible ties between the Trump campaign and Russia.

As a bitter fight over health care consumes much of Washington, the sanctions bill is one of the few major legislative efforts uniting members of the fractured Republican Party, along with their Democratic colleagues.

"A nearly united Congress is poised to send President Putin a clear message on behalf of the American people and our allies," said Ben Cardin of Maryland, the top Democrat on the Senate Foreign Relations Committee. "And we need President Trump to help us deliver that message."

Iran Sanctions

The original bill from the Senate Foreign Relations Committee included only sanctions on Iran, modeled on previous executive orders, designed to punish entities that support terrorism, sell weapons to Iran, or help that country's ballistic missile program. The bill would also authorize, but not require, sanctions on human-rights abusers.

The Russia sanctions were added in an amendment on the Senate floor. Sen. Lindsey Graham (R-S.C.) also introduced a provision to reaffirm U.S. commitment to Article 5 of the NATO agreement, which requires members to defend other nations in the alliance.

House leaders flagged procedural concerns with the Senate bill, saying the Constitution requires legislation raising revenue to originate in the lower chamber. In resolving this issue, Republicans also limited the minority party's power to introduce and fast-track a resolution to question administration action on Russia sanctions.

Meanwhile, energy companies stepped up their lobbying in opposition to a prohibition against working on international projects with even a small Russian stake. That rule was changed to apply only to ventures where sanctioned Russian entities have at least a 33 percent interest, which prevents Russian firms from buying into a fraction of a project to keep American competition away.

This new threshold allows ventures like the Shah Deniz project in Azerbaijan, where BP Plc is the main operator and Russia's Lukoil PJSC has a 10 percent stake in an ongoing expansion. The change also appears to give a green light to the Sakhalin 1 oil fields in Russia's far east, where Exxon Neftegas Limited, a subsidiary of Exxon Mobil Corp., is partnering with two Russian companies that have a combined interest of 20 percent.

Few Accomplishments

House Majority leader Kevin McCarthy of California also pushed for the inclusion of North Korea sanctions over its nuclear and ballistic-missile efforts. The House passed such sanctions 419 to 1 in May.

Minority leader Nancy Pelosi of California said in a statement over the weekend that while she supported that initiative, she was concerned that more major changes would result in further delays.

Timing of a new Senate vote is uncertain. The chamber is mired in debate over repealing and replacing Obamacare and plans to stay in Washington for the first two weeks of August. The House is set to begin its five-week recess at the end of this week.

Following through on the promise to be tough on Russia is one of the few accomplishments House members will have to show constituents during the summer break. Their health-care plan remains deeply unpopular, and GOP leaders are working through the main elements of their tax plan, including how to pay for it.

Trump continues to push back against the investigation of possible collusion between his campaign and Moscow. His son-in-law and senior adviser, Jared Kushner, was interviewed in private by the Senate Intelligence Committee July 24 and will appear July 25 before a House panel.

Energy and Climate Report

To: Jackson, Ryan[jackson.ryan@epa.gov]
From: Morning Transportation
Sent: Tue 6/27/2017 2:06:11 PM
Subject: POLITICO's Morning Transportation, presented by Airlines for America: Let's get ready to rumble — Colgan crash families visit the Hill — Supreme Court to hear travel ban

By Lauren Gardner and Tanya Snyder | 06/27/2017 10:00 AM EDT

LET'S GET READY TO RUMBLE: The House Transportation Committee's FAA bill markup kicks off this morning at 10 a.m., and we're packing snacks like it's the last major long run of a marathon training period. Last year's markup clocked in at almost 10 hours, and though the political climate around an air traffic control overhaul has shifted some, we're expecting lots of amendments to be offered by members of both parties. The committee has a running list going here, which by midnight amounted to 81 filed amendments.

What to expect: Ranking Democrat Peter DeFazio will lead the charge to strip the air traffic control overhaul out of the bill, proposing to instead move the Airport and Airway Trust Fund off budget. Rep. Mike Capuano (D-Mass.) will home in on FAA's ability to manage noise complaints under the new ATC system. Democrats may also attempt to slip even more consumer-friendly provisions into the legislation. And Rep. Todd Rokita (R-Ind.), who opposed Chairman Bill Shuster's 2016 go-round on air traffic control, has filed a few amendments, including one to refine the bill's provision intended to protect general aviation's access to the proposed new system. No matter what, we'll probably be like this once it's all over.

A gentle reminder: Last year, Shuster's bill made it through the markup, but never surfaced on the House floor amid all the opposition stacked against it. The bill is likely to again make it through the committee, so the real action is yet to come - likely after the July recess.

Party lines: Not a single Democrat will vote for the bill, according to subcommittee ranking member Rick Larsen (D-Wash.) "We're unified in opposition in the committee," Larsen told Tanya Monday night. The bill was introduced with two Democratic co-sponsors, Reps. Colleen Hanabusa (D-Hawaii) and Kyrsten Sinema (D-Ariz.), but neither of them are on the committee.

Don't miss: While the focus - especially in the House - has been on the prospects of overhauling air traffic control, there are lots of other policy changes in both chambers' reauthorization bills. Your MT co-host breaks down the Senate bill here, and gets an assist from our Brianna Gurciullo on the House measure here.

IT'S TUESDAY: Thanks for tuning in to POLITICO's Morning Transportation, your daily tipsheet on all things trains, planes, automobiles and ports. Brianna will be pinch-hitting today as Tanya's MT co-author, so send your tips, feedback and lyrics to tsnyder@politico.com or @TSnyderDC and bgurciullo@politico.com or @brigurciullo.

"I'm the person / In charge of the aircraft / I'm the pilot / We're hit by a flash / When I tell you to/ Fasten the seat belts / Say a prayer / Cause we're going to crash / Calling air traffic control."

Want to keep up with MT's song picks? Our Spotify playlist has over 100 followers - you can get

listening, too!

THERE'S MORE TO THE BILL THAN CONTROL: Both the House and Senate version included significant changes to drone policy, including a clarification that says all drones need to be registered, despite the ruling of an appeals court last month that said that drones classified as "model aircraft" don't require registration. The House bill also seeks to jumpstart the creation of an air traffic control system for low-altitude airspace.

Study it some more: Neither the House nor the Senate was ready to make a call on federal preemption of state and local laws regulating the operation of drones, instead opting to call for studies of the issue. Industry wants to avoid a patchwork of regulations. Forty states have passed laws regulating drones and three have passed resolutions. State governments insist that they need to maintain the right to legislate the operation of drones, which are officially in "national airspace" and out of their jurisdiction once they're above the tips of the blades of grass.

What drone users really want ... : Is to be able to fly beyond the visual line of sight, at night, and over people. And those issues are all in the hands of the FAA already.

COLGAN FAMILIES STORM THE HILL: The families of passengers who died in a 2009 airline crash will urge lawmakers today to reject any attempts to relax more-stringent qualifications for co-pilots enacted in response to the tragedy - and this week specifically called out Sen. Roy Blunt (R-Mo.) for not personally meeting with one of the families who lives in his state. Gale Saltzgiver, whose daughter died in the Colgan Air crash, said he'd previously met with Blunt's staff and requested a meeting this year with him personally, but that never happened. "I am sure that Senator Blunt has taken many meetings and phone calls from a variety of entities and their lobbyists leading up to the drafting of" the bill, Saltzgiver said. Blunt's office didn't respond to a request for comment.

SIT BACK AND LEAVE THE DRIVING TO US: The House Energy and Commerce Committee meets today to discuss 14 draft bills that they hope will help speed the transition to self-driving vehicles. Alan Morrison, associate dean for public interest and public service law at George Washington University Law School, will recommend that regulators set clear standards by which exemptions from federal motor vehicle safety standards will be granted, if they plan to expand exemptions. He also warned that they need to think seriously about issues like cybersecurity and liability. And he found the provision related to federal preemption of state laws perplexing. "I know of no law in which Congress has attempted to preclude states from acting when neither it nor any federal agency has taken any action in that subject area," he will say, according to his written testimony.

Driving Ms. Latta: Rep. Bob Latta (R-Ohio), chairman of the Subcommittee on Digital Commerce and Consumer Protection, is gung-ho about the promise of self-driving cars to help people like his mom, who has had a visual impairment since 1972. However, when asked whether his 93-year-old mom would actually ride in a driverless car, he demurred.

Senate side: Senators are also "in the final stages of putting together their own legislation on driverless cars," Sen. Gary Peters (D-Mich.) told Tanya Monday night. He said not to expect a

rollout before the July Fourth recess. "If we could do it this summer, I'd be very happy," he said. Commerce Committee members have had "well over 100 meetings with stakeholders," Peters said.

** **A message from Airlines for America:** America invented aviation, yet our global leadership is at risk. Passing FAA reauthorization and modernizing our air traffic control system will bring us into the 21st century. We need reforms without increasing costs for travelers. Ask Congress to support ATC Reform and reject an unnecessary Airport Tax increase. - www.stopairtaxnow.com **

FROM THE SKIES TO THE RAILS: Former Delta CEO Richard Anderson will join Amtrak in July as its next lead executive, fully taking over the reins by the end of the year from Wick Moorman, POLITICO New York's Dana Rubinstein scoops . Moorman was always expected to be a short-term leader for the passenger railroad, a chief who could help the company overhaul its management structure while it searched for someone to take the helm for the long haul. Anderson's hire "is another affirmation of the importance of Amtrak and the fact that people that have been in the transportation business believe that it is important, believe that we can make it better, and believe it will play a more and more important part in the country's transportation processes," Moorman said.

A DATE WITH THE SUPREMES: The Supreme Court will allow aspects of President Donald Trump's travel ban executive order to take effect before the justices hear arguments on the policy in October. For now, POLITICO's Josh Gerstein reports, the court has "limited the directive's impact on foreigners with clear ties to individuals, businesses or organizations in the United States." As of now, it's unclear what the administration needs to do to begin enforcing what it can from the order. Josh delves more into five outstanding questions after the ruling here.

Hello, travelers: DHS said in a statement that it will implement the portions of the order that it can "professionally, with clear and sufficient public notice, particularly to potentially affected travelers, and in coordination with partners in the travel industry." The U.S. Travel Association continued its call for the administration "to draw a brighter line" between "tough talk" against terrorists and welcoming tourists and business travelers to the country.

ALL ROADS LEAD TO THE AIRPORT: The American Road and Transportation Builders Association wants more airport infrastructure funding ahead of this week's FAA bill markups in both chambers. On Monday it circulated an analysis showing that current Airport Improvement Program funding levels provide half the money needed to improve safety and congestion. The solution? Increasing AIP funding and boosting or eliminating the cap on PFCs, per the group.

THE AUTOBAHN:

- "Oscar Mayer Made a Drone to Rain Hot Dogs Down on Humanity." Gizmodo.

- "Alphabet Inks Deal for Avis to Manage Self-Driving Car Fleet." Bloomberg.

- "Judge rejects Maryland's plea to start Purple Line construction during appeal." The

Washington Post.

- Michigan-based company to purchase Takata assets. The Detroit News.

- "With 54 Million to Go, This Airbag Recall Is Never Going To End." The Wall Street Journal.

- "As Uber arrives in Alaska, towns without taxis have new transportation option." KTOO.

- "20-pound live lobster found in luggage at Boston airport." the Associated Press.

THE COUNTDOWN: DOT appropriations run out in 96 days. The FAA reauthorization expires in 96 days. Highway and transit policy is up for renewal in 1,192 days.

**** A message from Airlines for America:** Modernizing our nation's air traffic control system and bringing it into the 21st century is one of our most important infrastructure priorities. Congress now has the opportunity to enhance America's world-leading safety record while reducing flight delays and cancellations. And we must reform our air traffic control system and secure our position as the global leader in aviation without increasing, or uncapping, the Airport Tax. This would further burden consumers with unnecessary levies. Flyers today spend $63 in taxes on a typical $300 airline ticket. Isn't that enough? We can't have a system in which individual airports raise taxes on passengers whenever they want by however much they want. Airports enjoy a variety of funding sources for improvement projects, including nearly $7 billion that is sitting dormant in the airport trust fund. To tell your Members of Congress that we need ATC Reform without a tax hike on passengers, visit www.stopairtaxnow.com. **

The following news provides a snapshot of what Bloomberg BNA is working on today. Read the full version of all the stories in the final issue, published each night.

EPA Regulatory Review Floodgates Open, Leaving Pruitt to Mop Up

Posted May 30, 2017, 7:01 A.M. ET

By Andrew Childers

When asked which EPA regulations stifle economic growth and should be reconsidered or rescinded, industry groups responded, "All of them."

High-profile Obama-era regulations limiting carbon dioxide from power plants or establishing the reach of the Clean Water Act, which Environmental Protection Agency Administrator Scott Pruitt had opposed, will certainly be targeted. However, businesses are left wondering whether the agency, which so far lacks political appointees to run the EPA's water, chemicals and air pollution offices, will have bandwidth to tackle a host of other, less splashy regulatory fixes that could reduce costs or ease burdens.

"We're in new territory. It's a process that has no clear precedent within the federal system," Randall Lutter, a professor of public policy at the University of Virginia and a former senior economist at White House Office of Management and Budget under President Barack Obama, told Bloomberg BNA.

Open the Floodgates

The EPA has received a barrage of requests from regulated industries to open and reconsider regulations from every sector the agency touches. The requests range from drastic changes to the way the agency regulates air pollution—Ameren suggested replacing the agency's ambient air standards with pollution trading programs—to the more targeted—the American Water Works Association recommended that the EPA streamline its application process for loans to improve drinking water systems.

While a host of industries are looking ease their regulatory burdens, chemical manufacturer Chemours Co. actually went to bat for Obama-era rules that approved new chemicals to replace ozone depleting substances and clamped down on leaks from refrigeration equipment. The chemical company recommended that Pruitt retain those rules.

Environmental and public health groups, of course, vow to fight any attempt to weaken EPA protections, with Earthjustice, the Sierra Club, and Clean Air Task Force calling the regulatory

review process "an illegal and arbitrary sham."

The Sierra Club has received funding from Bloomberg Philanthropies, the charitable organization founded by Michael Bloomberg, founder of Bloomberg L.P.Bloomberg BNA is an affiliate of Bloomberg L.P.

The Waterkeeper Alliance also dismissed the process as rushed and opaque, calling on the EPA to provide more details about how it will manage the review process and decide which regulations will be reevaluated.

Who's Driving the Process?

Every new administration takes office vowing to streamline the regulatory process, but Trump has taken that further than ever before, requiring agencies to repeal two regulations for every new directive issued and capping costs that can be imposed on industries. It's an ambitious plan to transform the regulatory state, but seeing that process through will require coordination and planning. Right now the EPA is short of the political appointees necessary to make those decisions.

"In any one of these big rulemakings, there are dozens of intermediate decisions made along the way," Jeffrey Holmstead, a partner at Bracewell LLP in Washington, D.C., who previously served as the EPA's assistant administrator for air pollution in the George W. Bush administration, told Bloomberg BNA. "If you have the administrator sign off on every one, you can only do two or three."

Trump lags behind his predecessors in staffing the EPA, according to data provided by the Center for Presidential Transition. So far only Pruitt has been confirmed, and Susan Parker Bodine, Trump's pick for the agency's enforcement office, is awaiting confirmation. The Trump EPA lacks nominees to head the water, air and chemicals offices who will be central to the regulatory review process.

Unlike past administrations, though, Trump has made easing burdens on businesses central to his domestic priorities.

"The biggest single difference is that Trump has appointed someone to be EPA administrator whose primary focus is on reducing the regulatory burden," Holmstead said.

When President George W. Bush took office, his EPA preferred legislative rather than regulatory approaches, Holmstead said. But when bills such as the Clear Skies Act faltered in Congress, that's when the Bush administration attempted to regulate pollutants such as mercury emissions from power plants.

"In the air office, we were not as ambitious as the Trump administration when it comes to regulatory reform," Holmstead said.

What's unknown is how the EPA will make decisions on which regulations it will target and when that process will get started. An EPA spokesman could not be reached for comment.

Without assistant administrators to guide the process, Pruitt has appointed a regulatory reform task force of Ryan Jackson, the chief of staff; Byron Brown, the deputy chief of staff for policy; and Brittany Bolen, deputy associate administrator of the Office of Policy, to oversee the effort. All three previously served on the Senate Environment and Public Works Committee with past Chairman James Inhofe (R-Okla.), who was a vocal critic of the Obama EPA's regulations.

"They are certainly knowledgeable enough to be looking for more regulations to be going after," Inhofe told Bloomberg BNA. "And they are doing the job pretty well."

While agencies are tasked with implementing the regulatory reform efforts, the White House will still play a significant role in reducing compliance costs through the Office of Information and Regulatory Affairs, which reviews regulations, said Tracy Mehan, executive director of the American Water Works Association's government affairs office.

"No doubt in a Republican administration, OIRA is very much empowered—not that they were pushovers in the Obama administration, but it's fair to say they're going to be more empowered," Mehan, who previously served as the EPA assistant administrator for water under President George W. Bush, told Bloomberg BNA.

However, Neomi Rao, Trump's pick to head that office, also hasn't been confirmed.

Smaller Fixes Have Big Benefits

While rolling back the Clean Power Plan and replacing the Waters of the U.S. rule are top priorities for Pruitt, more modest updates to the EPA's various regulations could provide the biggest long-term boons for businesses. Many industry groups in their comments are targeting smaller adjustments to existing regulations that they say can be quickly updated to reduce costs and make them more efficient.

For example, the Class of '85 Regulatory Response Group, a coalition of 30 utility companies, suggested the agency eliminate unnecessary air pollution monitoring requirements. The Association of Air Pollution Control Agencies recommended streamlining a variety of air pollution permitting provisions to ease burdens on both businesses and state permitting officials.

"Those [smaller fixes] would be valuable investments of time," Megan Berge, a partner at Baker Botts LLP who represents utilities and other industries, told Bloomberg BNA. "Those are the investments that have the possibility of having a lasting good in terms of making these programs efficient."

Taking on the EPA's largest regulations will spark an inevitable battle with environmental groups, which could bog down the entire effort. But tackling some of the smaller changes sought by businesses could be a way for the Trump administration to claim some quick victories.

"The good news is that, at least from EPA and the administration's perspective, these slight deregulatory acts are somewhat quicker than the big rules," Sam Batkins, director of regulatory policy at the American Action Forum, which has argued many EPA regulations have costs that exceed benefits, told Bloomberg BNA. "Maybe to some extent they can prioritize the small, minor tweaks to the rules and generate some savings."

Only Place in America Where Coal Demand Has Risen Is Nebraska

Posted May 30, 2017, 9:21 A.M. ET

By Tim Loh

Looking for a rare bright spot in U.S. coal?

Consider Nebraska, the only state producing more electricity from the fossil fuel than it did a decade ago, according to a Bloomberg analysis of U.S. government data.

While America's slashed its coal-fired electricity generation by more than a third between 2006 and 2016—creating havoc for the coal sector, which once dominated the country's utility space—Nebraska raised its coal-fired power output by 6 percent, according to data from the U.S. Energy Information Administration.

Nebraska's better known for corn. But it's home, too, to some of America's newest coal-fired power plants. In 2009, the Omaha Public Power District opened the almost 700-megawatt Nebraska City Station Unit II coal-fired facility. In 2011, the 220-megawatt Whelan Energy Center Unit 2 plant came online. Meanwhile, the Fort Calhoun nuclear power plant shut down for good last year.

"That will bump up our reliance on coal a little bit," said David Bracht, director of the Nebraska Energy Office, in a phone interview.

While Nebraska doesn't mine its own coal, it's located conveniently close to Wyoming, which is home to the Powder River Basin, America's largest and cheapest coal-producing region. Nebraska is also unique in that all of its utilities are publicly owned—a result of Great Depression-era legislation—which may have slowed its buildout of alternative energy sources, according to Bracht.

That said, Nebraska's love affair with coal may have peaked in 2013, when it generated more than 26,000 gigawatt-hours of electricity from coal, according to the EIA. In 2016, it only generated about 22,000 gigawatt-hours from the mineral. Meanwhile, the state's roughly doubled the electricity it's generating from wind.

"We have significant wind resources to be developed," Bracht said. "We expect that to be increased as well."

World Carbon Price Seen Needing to Increase Sevenfold by 2020

Posted May 30, 2017, 8:51 A.M. ET

By Mathew Carr

Carbon prices need to jump sevenfold by 2020 from current rates in the world's biggest market to meet climate goals cost-effectively, according to a commission of economists and scientists.

A price of about $40 a ton along with adoption of other policies that encourage emission cuts would achieve targets in the 2015 climate deal agreed in Paris, according to a report published May 29 by a commission of economists and scientists. Under the Paris agreement, almost 200 countries will try to limit the global temperature increase to "well below" 2 degrees Celsius (3.6 Fahrenheit) above pre industrial levels.

Costs from the higher carbon prices would not hurt ordinary consumers much, said Joseph Stiglitz from Columbia University, who led the High-Level Commission on Carbon Prices with fellow

economist Nicholas Stern.

"Businesses are already using prices in the range that we're talking about," Stiglitz said on a call with reporters.

New carbon prices in seven jurisdictions including China and South Africa will take the portion of global emissions covered to more than 20 percent in 2017, the World Bank said last week in a separate report. In Europe, which has the world's biggest greenhouse-gas market, lawmakers are meeting May 30 to deal with an accumulated glut that's driven down prices by more than four-fifths in the past decade.

The commission concluded that a $40 to $80 a ton range in 2020, rising to $50 to $100 a ton by 2030, would be consistent with the Paris target.

EU carbon settled Friday at 5.19 euros ($5.80) a ton on ICE Futures Europe in London.

From the report:

"Carbon pricing makes sense in all countries, but low-income countries, which may be more challenged to protect the people vulnerable to the initial economic impacts, may decide to start pricing carbon at a lower level and gradually increase over time": commission member Harald Winkler of the University of Cape Town, South Africa

Commission analyzed national emissions and development pathways, technological road maps and global economic models to reach its conclusions

Eliminating fossil-fuel subsidies would mean lower carbon prices are needed

"A well-designed carbon price is an indispensable part of a strategy for efficiently reducing greenhouse gas emissions while also fostering growth."

Report was put together starting last year by The Carbon Pricing Leadership Coalition, a voluntary partnership of national and sub-national governments, businesses, and civil society organizations that agree to advance carbon pricing through the global economy. It's housed in the Washington-based World Bank Group.

Trump Decides Next Week If He'll Quit Paris Climate Accord

Posted May 27, 2017, 03:06 P.M. ET

By Joe Ryan and Josh Wingrove

Donald Trump continued to distance himself from fellow world leaders over climate change at the G-7 summit, and said he'll determine next week whether to pull the U.S. out of the landmark Paris climate accord.

"I will make my final decision on the Paris Accord next week!" the president told his almost 31 million Twitter followers on Saturday.

Trump, who for months has delayed a decision on the climate agreement, made his announcement at the conclusion of the Group of Seven summit in the resort town of Taormina, Italy.

In an unprecedented step, the U.S. broke from the other six nations in a joint statement issued at the summit's conclusion, saying America is reviewing its climate policies while the G-7 members others remain committed to the Paris Agreement.

Climate was among the most disputed issues separating Trump from other leaders at the two-day meeting on the Sicilian coast. A top White House adviser said the president's views were evolving on the issue, but Trump wasn't immediately swayed by arguments from Chancellor Angela Merkel of Germany, France's President Emmanuel Macron and others to honor the Paris Agreement, brokered in 2015 by almost 200 nations to slash fossil fuel emissions and boost funding to ease impacts of global warming.

"The whole discussion about climate has been difficult, or rather very unsatisfactory," Merkel told reporters after the summit. "Here we have the situation that six members, or even seven if you want to add the EU, stand against one."

'Stark Isolation'

Diplomats spent days trying to hammer out language for the G-7 joint statement. Past communiques, which are painstakingly crafted to reflect common goals and values of all seven nations, have dedicated lengthy sections to climate change. At one point this week, the words "Paris Agreement" were nearly excluded from the statement, underscoring how contentious the issue became in Taormina, said a Canadian government official who spoke on the condition on anonymity to discuss private deliberations.

Trump, who once said the concept of global warming "was created by and for the Chinese in order to make U.S. manufacturing non-competitive," repeatedly vowed to pull out of the Paris deal during his election campaign, but has sidestepped the issue since taking office.

Delaying a decision about the accord provided opportunity for G-7 leaders and Pope Francis to press Trump to honor U.S. environmental commitments. Now the president heads back to Washington, where much of his party is pushing him to do the opposite.

Issue Deadlock

Last week, 22 Republican senators, including Majority Leader Mitch McConnell, sent a letter to Trump urging him to exit the Paris accord. Members of his administration, meanwhile, are deadlocked on the issue. Environmental chief Scott Pruitt and top strategist Steve Bannon are pushing for a pullout. Secretary of State Rex Tillerson, White House adviser Jared Kushner and Ivanka Trump, the president's son-in-law and daughter respectively, have urged the president to stay in the deal.

John Kirton, director of the University of Toronto's G8 Research Group, said Trump's trip home may not bode well for those in favor of Paris. "If you let him go back to the civil war within the White House, Pruitt might win," he said.

Trump has criticized efforts to cut emissions, saying they limit U.S. economic competitiveness. The president's views on the Paris accord, however, are evolving, White House National Economic Council director Gary Cohn told reporters Friday in Italy. Trump may be willing to stay in the agreement, Cohn said, if the U.S. can scale back commitments made by former President Barack

Obama.

"His views are evolving, and he came here to learn," Cohn said. "His basis for decision is ultimately going to be what's best for the United States."

The Paris Agreement is broader than any previous climate accord. It calls for reducing pollution in hopes of limiting global warming to 2 degrees Celsius (3.6 degrees Fahrenheit) above temperatures at the outset of the industrial revolution.

Hundreds of corporations and investors have endorsed the pact, including oil majors Royal Dutch Shell Plc, BP Plc and Exxon Mobil Corp., which was previously led by Tillerson. Alden Meyer, who's followed climate talks for two decades as director of policy at the Union of Concerned Scientists, said Trump's reluctance to support it puts him at odds with much of the world.

"He stands in stark isolation," Meyer said. "The leaders from Europe, Canada, and Japan have made it crystal clear that they intend to fully implement their national commitments under the Paris Agreement."

Subject: EPA proposes two-year delay of oil, gas methane rule

By Alex Guillén

06/13/2017 06:27 PM EDT

EPA today proposed a two-year pause on key methane leak detection and repair requirements for new oil and gas wells, saying it needs the time to reconsider the Obama-era rule.

The Trump administration last month issued a 90-day stay, but EPA has to go through a rulemaking process to finalize the two-year delay. The agency will take public comment for 30 days once the proposal is published in the Federal Register.

The delay also pushes back a provision on pneumatic pumps, as well as a requirement that professional engineers certify closed vent systems. EPA said last month that it also intends to review the rule more broadly than just those requirements.

Environmental groups last week sued over the initial 90-day stay and asked a court to lift it immediately. EPA's response to that request is due June 15.

WHAT'S NEXT: EPA will take public comment on its proposed two-year delay before issuing a final decision that is likely to be challenged in court.

Subject: POLITICO's Morning Transportation, presented by the Association of Equipment Manufacturers: DHS authorization heading to House floor — Self-driving car industry wish list — Metro safety oversight plan inches forward

By Tanya Snyder and Lauren Gardner | 06/15/2017 10:00 AM EDT

With help from Stephanie Beasley

DHS AUTHORIZATION HEADING TO HOUSE FLOOR: A bill to authorize the Department of Homeland Security is expected to reach the House floor by the end of this month, says Rep. Michael McCaul (R-Texas), the chairman of the House Homeland Security Committee. The committee approved a DHS reauthorization bill (H.R. 2825) Wednesday that will now head to the Rules Committee, where it will be consolidated with legislation from seven other committees with jurisdiction over the Department of Homeland who have signed off on the process.

'Unprecedented': It's the first time DHS has been authorized together with its component agencies, including TSA. "This has never been done before," McCaul said. "It's really kind of an unprecedented process." McCaul said that the plan moving forward is to reauthorize DHS on an annual basis. Senators have yet to indicate whether they will launch a similar process, but McCaul said that given the level of support from Homeland Security Secretary John Kelly, he expects Senate leadership will get on board with plans to authorize DHS this year.

Committee tries to shield TSA from Trump: During the markup Democrats doggedly attempted to block President Donald Trump's proposals to slash some TSA programs and were successful in pushing measures through that would ensure TSA continues to staff airport exit lanes, maintain at least 30 VIPR teams and reimburses airports that hire local law enforcement officers. However, an amendment from full committee ranking member Bennie Thompson (D-Miss.) that would allow TSA to keep revenue from passenger security fees currently being diverted to deficit reduction was tossed in the rejection pile.

IT'S THURSDAY: Thanks for tuning in to POLITICO's Morning Transportation, your daily tipsheet on all things trains, planes, automobiles and ports. Lauren and Tanya are sharing MT duties, so please send us tips, feedback and lyrics: tsnyder@politico.com or @TSnyderDC and lgardner@politico.com or @Gardner_LM.

"Take me on a trip / Kiss me on the lips / Love on a blue train, yeah / Locomotive rock me / Nothing's gonna stop me / Love blue train."

Want to keep up with MT's song picks? We only need a few more followers to hit 100 on our Spotify playlist - get listening!

A PERSONAL NOTE: Our thoughts are with House Majority Whip Steve Scalise (R-La.) and the others injured and affected by Wednesday's shooting in Alexandria. Our gratitude goes out to

the Capitol Police officers who put their lives on the line every day.

Off the roster: According to a quote from House Transportation Committee Chairman Bill Shuster's spokesman in the Daily American, Shuster (R-Pa.) "used to play every year in the charity game and would've been at practice, but isn't playing this year."

I'LL GRANT YOU THREE WISHES: At a Senate Commerce Committee hearing Wednesday on driverless cars, industry officials made it clear that they want more exemptions from federal motor vehicle safety standards so they can test and deploy cars without traditionally essential features such as steering wheels and brakes. There also was broad support for a federal framework governing vehicle safety to avoid a "patchwork" of state laws that people need to keep track of as they drive across state lines. And, manufacturers added that they want to be free to meet safety goals using whatever technology or practices they want.

Echo, echo: Those points are also included in a statement of legislative principles committee leaders released ahead of the hearing. They're hoping to introduce a bill in the next few weeks, according to an aide.

Safety groups want regulations: Jackie Gillan of Advocates for Highway and Auto Safety dismissed the idea that voluntary guidelines are faster and as effective as regulating, saying relying on the "good intentions" of manufacturers without imposing legally binding rules is "inadequate to ensure safety and protect the public." And Consumer Watchdog warned that "robot cars operating without mandatory safety, security, privacy and ethical standards will pose unprecedented risks to the American public."

It takes money to make money: Mitch Bainwol of the Auto Alliance said it's important for regulators to put a framework in place before rules can be written, because car companies need to make money by deploying vehicles, not just testing them. "There's a massive economic commitment here," Bainwol said. "This is billions of dollars of R&D. In order to make it economically attractive, to make the math work, you've got to deploy."

You too, Kansas: Lawmakers from rural areas have found themselves playing defense on several big initiatives lately from spinning off air traffic control to financing infrastructure with public-private partnerships, but on self-driving cars they're happy to go with the mainstream. Congestion isn't typically a problem in rural areas, and ridesharing will likely never be widespread there. But Bainwol said the technology will break down barriers for people with physical and visual disabilities in rural and urban areas, and noted the safety benefits from crash avoidance technologies will accrue to everybody, regardless of geography.

Threat to transit: Sen. Cory Gardner (R-Colo.) speculated that with the advent of autonomous technology, "metro systems will end up collapsing" and "become parking stations." That's been the subject of ongoing debate among planners, but Gardner questioned whether it's "worth pursuing appropriations of billions of dollars" for public transit if autonomous vehicles are going to render it obsolete.

LIKE A RUSH-HOUR SPEED RESTRICTION: The process of setting up a federally

compliant state safety oversight agency for WMATA's Metrorail system continued to inch along Wednesday, much like a Yellow (or Blue) Line train traveling between Ronald Reagan Washington National Airport and Old Town Alexandria. The House Judiciary Committee approved two joint resolutions endorsing both the new compact among D.C., Maryland and Virginia standing up the new body; and amendments made to a regional transit agreement specifying that DOT has authority to appoint federal directors to Metro's board.

What's left? Congress' eventual blessing of the new compact is but one step on a checklist FTA will examine before giving its final approval of the safety oversight organization - and before releasing millions in federal funds it's withheld since February from all three jurisdictions (and that's statewide for Maryland and Virginia) because of what regulators say is their foot-dragging on setting up the new agency. Some of the steps remaining before that can happen, per an agency spokeswoman, include: the selection of commissioners for the agency; submission of a certification application to FTA, including documentation proving the agency is independent from Metrorail and has enforcement and investigation powers; and a transitional period where FTA officials work alongside workers at the new agency to ensure they're meeting requirements.

** **A message from the Association of Equipment Manufacturers:** Infrastructure is the backbone of America's economy. The U.S. currently ranks 11th in infrastructure competitiveness. To have the strongest economy in the world, America must have the best infrastructure in the world. It is time to reclaim our Infrastructure Advantage. Learn more: aem.org/Advantage. **

CHAO POPS UP AT FIRST DAUGHTER EVENT: Transportation Secretary Elaine Chao attended a White House event hosted by Ivanka Trump Wednesday as part of Workforce Development Week. The administration has called for a million apprentices in the infrastructure field, in part to address a shortage of construction workers ahead of a planned building spree supported by the Trump administration.

'Transform'-ers: Vanity Fair took a deep dive Wednesday into the White House's Office of American Innovation, which Trump adviser and son-in-law Jared Kushner oversees - and it seems the group has some aggressive infrastructure ideas. The office is focusing on four areas within the infrastructure umbrella, including permitting acceleration and "transformative" projects. On that latter point, those efforts would encompass "cutting-edge solutions that would 'unleash significant amount of economic growth,' [a White House] official explained, such as building an underground high-speed rail system across the Northeast corridor." Is that what would happen if Hyperloop and the Gateway project joined forces as an infrastructure superpower?

Shipbuilders wanted: If Trump's plan to plus up the Navy to 350 ships ever gets funded, the shipbuilding industry will have to figure out where to find 18,000 to 25,000 qualified builders. After "a couple decades of anemic shipbuilding" the workforce has dwindled "to dangerously low numbers of people," said Jim Dolbow, an analyst at the U.S. Naval Institute. "The chickens are coming home to roost." Jacqueline Klimas has much more for Pros.

TODAY IS 'DUMP THE PUMP' DAY: It's the American Public Transportation Association annual day to encourage people to "Dump the Pump" by riding transit. According to the June

APTA Transit Savings Report, a two-person household can save more than $9,700 a year by downsizing to one car and using public transit instead.

THE AUTOBAHN:

- "Gasoline prices likely to remain low - for now at least." The Washington Post.

- "Trump set to unveil new Cuba policy after promising to reverse Obama's 'bad deal.'" The Washington Post.

- "Europe's aviation safety chief warns U.S. on expanding laptop ban without research." The Wall Street Journal.

- "Auto dealers join NEC Director Gary Cohn in conversation on tax reform." Dealer Marketing.

- "0 for 2: Senate hearings on autonomous vehicles so far ignore aftermarket role." Repairer Driven News.

- "New York speeds up road projects ahead of Penn Station work." Bloomberg.

- "Tesla should brace for 'serious competition' from Apple in driverless cars: Morgan Stanley." Marketwatch.

- "Mobile ATCs mounted on trucks to be deployed at small airports in India." NDTV.

- "Renault called sexist for hawking paint to women for nails, cars." Bloomberg.

THE COUNTDOWN: DOT appropriations run out in 108 days. The FAA reauthorization expires in 108 days. Highway and transit policy is up for renewal in 1,204 days.

** **A message from the Association of Equipment Manufacturers:** America's infrastructure used to be the envy of the world, but decades of chronic underinvestment and neglect has left us on the verge of losing that advantage. The Association of Equipment Manufacturers believes it is time for the United States to reclaim its Infrastructure Advantage.
To effectively compete in the global marketplace, America's infrastructure must be number one in the world. That's the Infrastructure Advantage. So how do we reclaim it? Here are five key steps. Focus on network and systems. Maximize the use of smart technology. Ensure rural-urban connectivity. Expedite project delivery. Provide adequate and reliable resources. Now is the time to act. It is time to prioritize America's roads and canals, railroads and highways, locks and dams, pipelines and broadband. Learn more about The U.S. Infrastructure Advantage™: aem.org/Advantage. **

Highlights

Leading the News

Modest Progress Seen in Bonn Toward Global Emissions Trading

By *Dean Scott*

Negotiators at U.N. climate talks in Bonn are on the verge of scoring a modest victory toward international trading of emissions credits, which may be crucial if the world is to take the kind of actions needed to halt global temperatures' rapid rise.

European Union Wants to Change the Ink in Your Tattoo

By *Adam Allington*

Tattooing has been around for thousands of years, but its popularity is bigger than ever. Once considered an act of rebellion against cultural norms, today nearly one in three Americans and nearly one in six Europeans have a tattoo.

Eastern States' Carbon-Trading Program Set to Expand

By *Gerald B. Silverman*

The Regional Greenhouse Gas Initiative (RGGI) is poised to expand to two large Eastern states as soon as next year, marking the biggest expansion of the cap-and-trade program since it was created almost a decade ago.

Chemical Plants Face New Reality in Natural Disaster Preparation

By *Nushin Huq*

As tropical storms in the Gulf Coast increase in frequency and intensity, it's imperative that facilities reassess operation plans and worst-case scenario assumptions, Chemical Safety Board Chairwoman Vanessa Sutherland said Nov. 15.

Arctic Refuge Drilling Measure Approved by Senate Committee

By Jennifer A. Dlouhy (Bloomberg) and *David Schultz* (Bloomberg Environment)

Alaskan lawmakers are one step closer to opening up the Arctic National Wildlife Refuge to oil and gas drilling, a goal of the state's Republicans for decades.

Today's News

EPA Remains Mum on Timeline for Ozone Designations

By *Jennifer Lu*

EPA's much-awaited announcement of ozone non-attainment designations was not made at the Ozone Transport Commission fall meeting Nov. 15 in Washington.

Four Air Pollution Bills Move Through House Panel

By *Stephen Lee* and *Jennifer Lu*

A House environment panel voted Nov. 15 to move forward four bills aimed at easing clean air regulations for coal refuse plants, brick kilns, wood heaters, and race cars.

California's Housing Policy Is Holding Back Its Climate Policy

By *Esmé E Deprez*

The high cost of housing in California isn't just hurting the state's economy, fueling homelessness, and exacerbating economic inequality. It's imperiling its reputation as a global leader in emissions reductions, too.

Trump Isn't Helping Us, Says Advocate of 'Clean'

Fossil Fuel Use

By *Jessica Shankleman*

U.S. President Donald Trump's efforts to promote the use of "clean coal" may actually be undermining the industry he's seeking to save.

Puerto Rico Hit by New Blackout Just as Governor Touts Recovery

By Jonathan Levin

A new power outage hit Puerto Rico on Nov. 15, immobilizing parts of the San Juan area just hours after the governor heralded a major accomplishment on the path to recovery.

EPA's Timeline to Rewrite Water Rule May Be Tough to Meet

By *Amena H. Saiyid*

The Trump administration's "aggressive timeline" to rewrite a regulation clarifying the geographic reach of the Clean Water Act by the end of 2018 will be hard to meet, according to an agency official.

No Fines for Water Utilities Taking Over Failed Systems: EPA

By *Amena H. Saiyid*

Water utilities that take over failing treatment plants to upgrade or maintain infrastructure critical to providing safe water may see enforcement actions and penalties waived by the federal government, the EPA's top water official said Nov. 15.

Pilgrim's Pride to Pay $1.4 Million for Chicken Plant Pollution

By *David Schultz*

Chicken producer Pilgrim's Pride agreed to pay more than $1 million dollars over water pollution violations at one of its processing plants in central Florida.

Cheese and Bourbon Face Risk of Backlash from U.S. Solar Tariff

By *Joe Ryan*

If President Donald Trump imposes tariffs on solar panels, Wisconsin cheese and Kentucky whiskey may pay the price.

Trudeau Sees 'Challenge' in Balancing Fossil Fuels, Climate

By *Lien Hoang*

Prime Minister Justin Trudeau sees Canada's vast carbon resources as an environmental "challenge" for his country—the world's No. 4 oil exporter—but also said pitting economic prosperity against the environment is a false choice.

Merkel Defends Coal Use as Macron Calls for Carbon Price Floor

By *Gregory Viscusi*, *Arne Delfs* and *Brian Parkin*

French President Emmanuel Macron called for a minimum price on carbon

pollution while German Chancellor Angela Merkel defended her country's use of coal as they opened the final stage of two weeks of talks on global warming organized by the United Nations.

Trump's Mine Safety Pick Confirmed by Senate

By *Stephen Lee*

David Zatezalo, a longtime coal executive and the Trump administration's pick to lead federal mine safety, won Senate confirmation Nov. 15.

Polish Government Behind in Addressing Smog, Vows New Action

By *Bogdan Turek*

Polish government officials say improving air quality is a priority and have earmarked $2.2 billion in funding by 2020 to ease the nation's smog situation, one of the worst in Europe.

Mexico's Power Needs Make It Vulnerable to U.S. Gas Flows

By *Emily Pickrell*

Mexico's growing demand for power could be hurt by any disruption of natural gas from the U.S., on which it is increasingly relying, presenters said at an energy conference in Mexico City on Nov. 14.

A Tiny Island Prepares the World for a Climate Refugee Crisis

By *Jessica Shankleman*

As rising sea levels threaten to leave millions homeless, a South Pacific island paradise is upstaging wealthier nations in forging a response to the unfolding crisis.

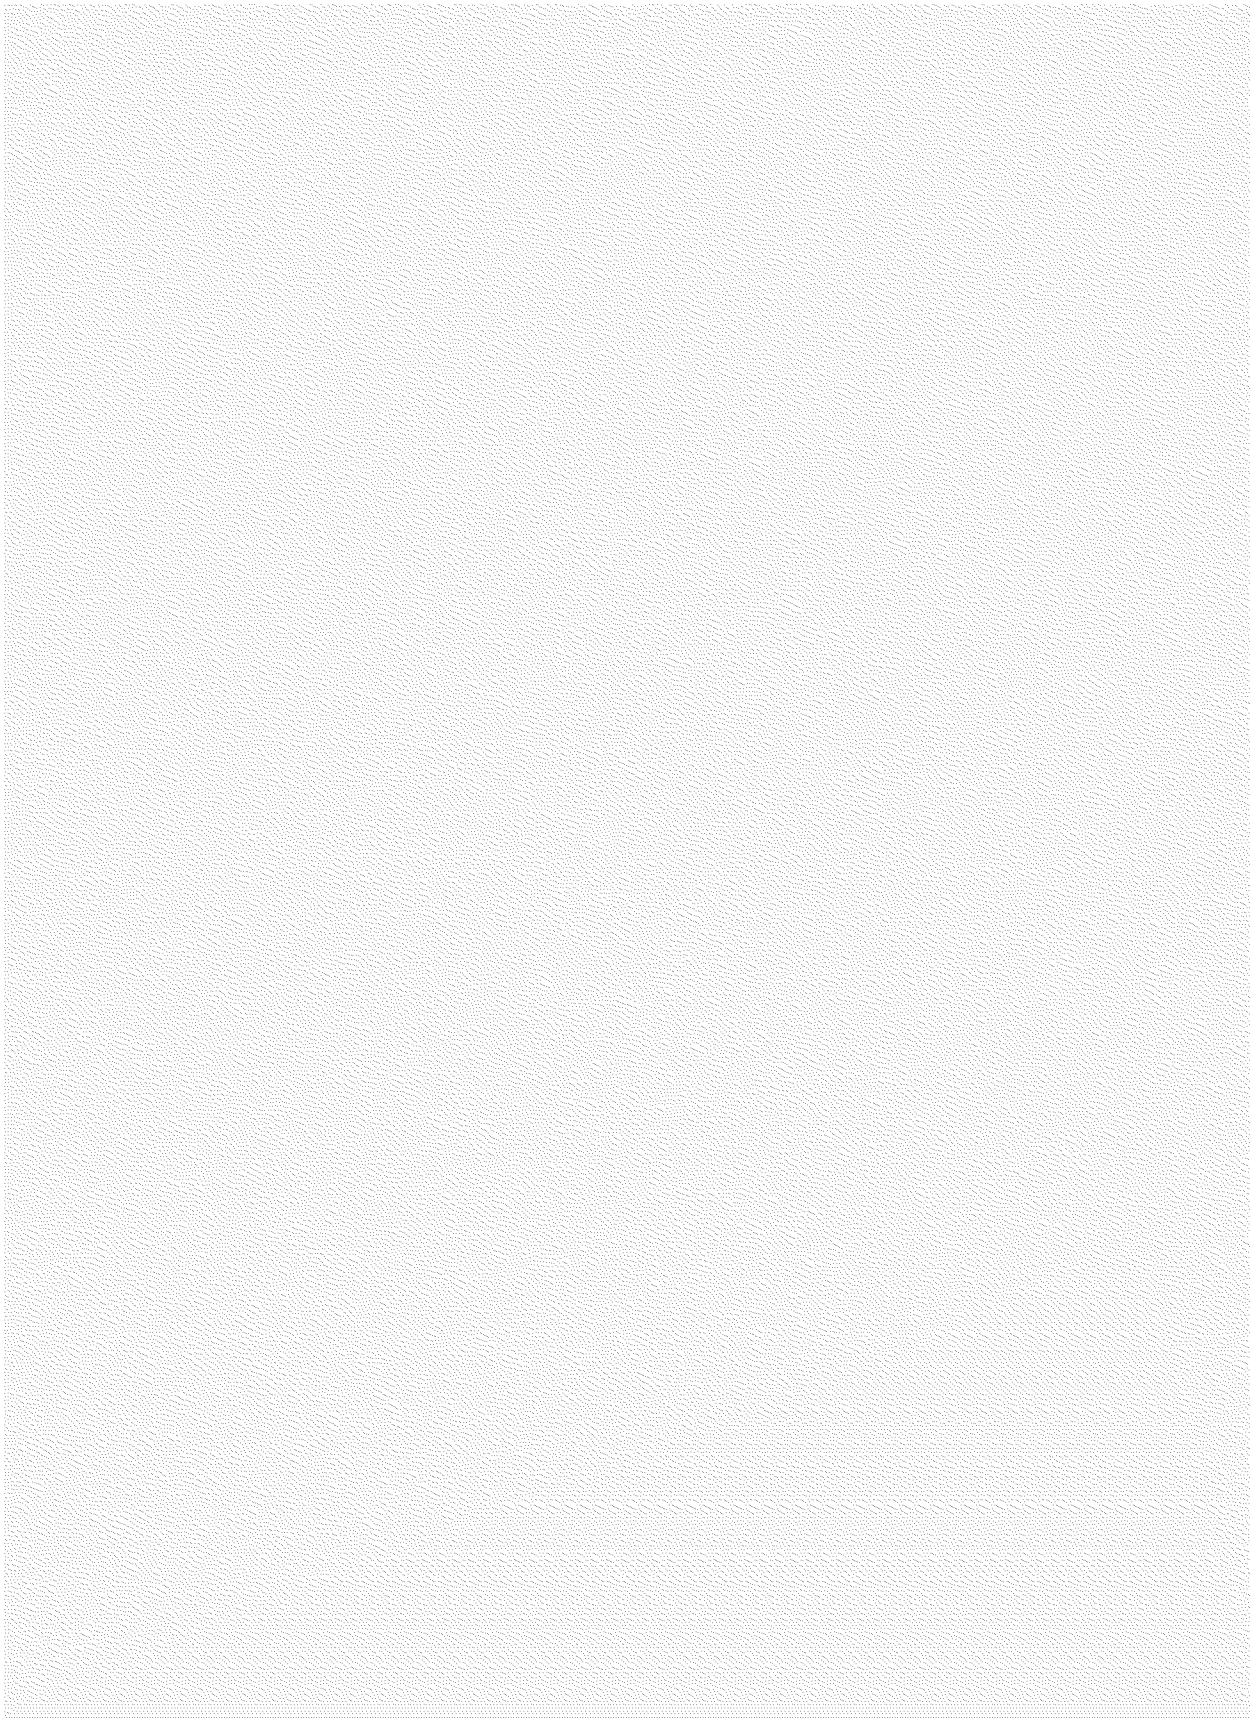
Tuesday Night Wrapup

House-Passed Flood Insurance Bill Faces Senate Hurdles

By *Brandon Ross*

A House-passed bill reauthorizing the National Flood Insurance Program is considered likely to encounter headwinds in the Senate on both sides of the aisle, a Senate committee chairman said.

Defense Bill Backs Health Study of Chemicals in Drinking Water



By *Pat Rizzuto*

The House on Nov. 14 approved a defense spending blueprint that would support a $7 million national study of people exposed to a group of chemicals widely used to make many consumer and military products.

Brazil's BHP-Vale Mine Could Get Key Vote This Month

By *R.T. Watson*

BHP Billiton Ltd. and Vale SA's Brazilian iron-ore venture just had its biggest breakthrough on the licensing front since being shut down in the wake of a deadly dam spill two years ago.

Subject: BREAKING NEWS: Trump to nominate Christopher Wray to head FBI

President Donald Trump will nominate Christopher Wray to be the next director of the FBI, he announced on Twitter Wednesday morning.

"I will be nominating Christopher A. Wray, a man of impeccable credentials, to be the new Director of the FBI. Details to follow," the president wrote online.

Wray served as an assistant attorney general from 2003 to 2005 during the tenure of former President George W. Bush. He is currently a partner at the law firm King & Spalding, where he chairs its special matters and government investigations practice group.

Trump has been in search of a new head for the FBI since last month, when he fired then-Director James Comey.

View online version | Add politicoplaybook@politico.com to your address book.

Today's Playbook Power Briefing presented by BP

By JAKE SHERMAN (sherman@politico.com; @JakeSherman), ANNA PALMER (anna@politico.com; @apalmerdc), DANIEL LIPPMAN (daniel@politico.com; @dlippman), ZACH MONTELLARO (zmontellaro@politico.com; @ZachMontellaro)

Good Monday afternoon. WE'RE GOING TO DENVER! Join us on Aug. 1 for a live Playbook Exchange event with Colorado Gov. John Hickenlooper in Denver. http://bit.ly/PBDenver

JARED KUSHNER SPEAKS -- "Let me be very clear: I did not collude with Russia, nor do I know of anyone else in the campaign who did so. I had no improper contacts. I have not relied on Russian funds for my businesses. And I have been fully transparent in providing all requested information. Donald Trump had a better message and ran a smarter campaign, and that is why he won. Suggesting otherwise ridicules those who voted for him."

-- @ChuckGrassley: "Bipartisan wrk being done by JudicComm Intrvws just beginning&transcripts hold acctble Any future public testimony&subpeonas always on table"

THE MOOCH SPEAKS -- GOOD CALL! -- @Scaramucci: "The TV Cameras are back on."

CNN's JOHN KING -- TILLERSON on the way out?: "For weeks, conversations with Tillerson friends outside of Washington have left the impression that he, despite his frustrations, was determined to stay on the job at least through the end of the year. That would allow time to continue efforts to reorganize the State Department and would mean he could claim to have put in a year as America's top diplomat. But two sources who spoke to CNN on condition of anonymity over the weekend said they would not be surprised if there was a 'Rexit' from Foggy Bottom sooner that that.

"Both of these sources are familiar with Tillerson conversations with friends outside Washington. Both said there was a noticeable increase in the secretary's frustration and his doubts that the tug-of-war with the White House would subside anytime soon. They also acknowledged it could have been venting after a tough week, a suggestion several DC-based sources made when asked if they saw evidence Tillerson was looking for an

exit strategy." http://cnn.it/2tDkuXc

-- FLASHBACK: Tillerson bought a $5.6 million home in DC in February. http://bit.ly/2lyZMR1

INTERESTING -- Joe Nocera (@NoceraBV): "Stop the presses: Just saw Rudy (and his muscle) at the Delta shuttle terminal. Got on the flight to...Washington." ***Mike Allen's story on Trump considering Giuliani for attorney general*** http://bit.ly/2tDX8Ax

THIS HAPPENED AT THE WHITE HOUSE THIS MORNING -- From George Condon of National Journal -- today's pooler: "The interns were standing in five tiered rows of about 25 in each row. The president was in the middle of the interns, standing in the third tier. Two questions shouted by the pool drew giggles and laughter from the interns and no answers from the president. Asked 'should Jeff Sessions resign,' he did not answer but told the interns, 'They're not supposed to do that.' At the second question of whether he had any message on health care, he responded, 'Be quiet,' triggering more laughter as the pool was ushered out."

****** **A message from BP: Over the past 10 years, no energy company has invested more in the U.S. than BP - $90 billion in total.** *Take 60 seconds to see what we're doing to help keep America moving forward.* ******

FROM THE PRESIDENT ... -- @realDonaldTrump at 6:40 a.m.: "Drain the Swamp should be changed to Drain the Sewer - it's actually much worse than anyone ever thought, and it begins with the Fake News!" ... **at 6:52 a.m.:** "After 1 year of investigation with Zero evidence being found, Chuck Schumer just stated that 'Democrats should blame ourselves,not Russia.'" ... **at 8:49 a.m.:** "So why aren't the Committees and investigators, and of course our beleaguered A.G., looking into Crooked Hillarys crimes & Russia relations?" ... **at 9:12 a.m.:** "Sleazy Adam Schiff, the totally biased Congressman looking into 'Russia,' spends all of his time on television pushing the Dem loss excuse!" ... **at 9:18 a.m.:** "Republicans have a last chance to do the right thing on Repeal & Replace after years of talking & campaigning on it."

-- @RepAdamSchiff: "With respect Mr. President, the problem is how often you watch TV, and that your comments and actions are beneath the dignity of the office." ... **@sahilkapur:** "No joke: Is this the first time in US history the president has publicly called his own AG beleaguered?"

-- ALSO: Congressional committees spent a good deal of time and energy probing Hillary Clinton. Oh, and also: Trump's party controls Congress!

2020 WATCH -- BEN TERRIS in WaPo, "Sherrod Brown thinks he could have helped Democrats win in 2016. But what about 2020?": "In an alternate universe where Hillary Clinton picked Sherrod Brown as her vice-presidential candidate, which she almost did, the Democratic ticket could have won Ohio, Wisconsin, Michigan, and the White House. At least that's what Brown thinks. 'I mean, if I had gone to Wisconsin

and Michigan a lot, anything would have changed those two states,' he said in an interview with The Washington Post. 'My wife thinks we would have won. She thinks we would have won Ohio.'

"But instead of settling in to the Eisenhower Executive Office Building, Brown finds himself up for reelection in a state redder than the president's face during an anti-CNN tweetstorm. His party, desperate to figure out a way to win back Rust Belt voters, will be scrutinizing this race like a laboratory experiment. If Brown pulls it off - well, perhaps they aren't as doomed as some think." http://wapo.st/2tDNOg3

****** **A message from BP: Over the past year alone, we've invested $5 billion more to expand our U.S operations.** *Check out our latest investment.* ******

AFTERNOON READ -- "The Moneyman behind the alt-right," by BuzzFeed's Aram Roston and Joel Anderson: "How did explicit racism move from a taboo to an open, unabashed force in American politics? A loose but sprawling internet army, often called the alt-right, gave white supremacy a massive megaphone. And with the rise of Donald Trump's candidacy, it suddenly seemed to be everywhere at once. In fact, that movement had an infrastructure - organizations, journals, conferences, money - that had been laid down years before. It was in large part funded by one person: a secretive and aging multimillionaire named William H. Regnery II, the most influential racist you've never heard of.

"Despite inheriting immense wealth, having grown up in a prominent family in the conservative movement, he had managed to chalk up virtually no public success in his first six decades of life. He never graduated from college, and he floundered in his attempt at running the family business. But starting in 1999 - when he convened a dozen other middle-aged white nationalists at an ornate seaside hotel nicknamed the Pink Palace - he has poured hundreds of thousands of dollars into the quest to transform America and create what he calls a white 'ethnostate.'" http://bzfd.it/2tDNKNe

HMM -- "Brooks ad uses Scalise shooting," by Daniel Strauss: "A new ad for GOP Rep. Mo Brooks' Alabama Senate campaign uses footage from the aftermath of the congressional baseball practice shooting that wounded House Majority Whip Steve Scalise and others. The ad, titled 'Second Amendment,' includes audio of a gun firing and starts out with text that reads 'June 14: A Bernie Sanders supporter fires on Republican congressman.'

"'Mo Brooks gives his belt as a tourniquet to help the wounded,' the next text segment reads. The ad then shows a clip of Brooks being interviewed by reporters on whether the shooting changed his views on gun control. 'The Second Amendment, the right to bear arms is to ensure that we always have a republic, so no I'm not changing my position on any of the rights that we enjoy as Americans,' Brooks says in the footage." ***More for Pros*** http://politico.pro/2tDXbfy ... ***The ad*** http://bit.ly/2tDVnU8

NORTH KOREA STRATEGY -- "How to Take Down Kim Jong Un," by Tom

Malinowski in POLITICO Magazine: "No one can predict when and how Kim's hold will weaken, and it would be foolish to think we can force change from the outside. So if anyone reading this has fantasies about setting up governments in exile or fomenting coups or calling for uprisings, please put them aside - that kind of talk will only get people inside North Korea killed. There are, however, forces in play within North Korea that will probably lead to the end of its regime and its reason to exist as a country. Political change in Pyongyang and the reunification of Korea, as hard as it may be to imagine, is actually much more likely than the denuclearization of the present regime. The central aim of our strategy should be to foster conditions that enable this natural, internal process to move faster, while preparing ourselves, our allies and the North Korean people for the challenges we will face when change comes." http://politi.co/2tDRnCP

TODAY'S BEYOND THE BELTWAY -- De Blasio bashes the MTA -- Illinois gubernatorial candidate lays out criminal justice reform platform http://politi.co/2tDQABS

Colorado Vows Carbon Cuts in Support of Paris Climate Deal

Posted July 11, 2017, 02:29 P.M. ET

By Tripp Baltz

Colorado vowed to slash statewide greenhouse gas emissions by a quarter from 2005 levels by 2025 as Gov. John Hickenlooper (D) announced plans to join a multi-state alliance to meet the goals of the international Paris climate change agreement.

The governor's July 11 executive order aims to reduce statewide greenhouse gas emissions more than 26 percent by 2025, cut carbon dioxide emissions from the electricity sector by 25 percent by 2025, and achieve electricity savings of two percent of total electricity sales per year by 2020.

The order includes strategies to:

• work with interested utilities and electric cooperatives on a voluntary basis to maximize use of renewable energy without increasing costs to taxpayers,

• create a statewide electric vehicle plan by Jan. 1, 2018, and

• develop a greenhouse gas emissions tracking rule through the Colorado Department of Public Health and Environment.

EU Panel Backs 'Stop-the-Clock' Emissions Exemption for Airlines

Posted July 11, 2017, 01:29 P.M. ET

By Stephen Gardner

Long-haul flights that arrive in or leave European Union airports would continue to be exempted from a requirement to participate in the bloc's greenhouse gas emissions trading system, under a legislative proposal backed by the European Parliament's environment committee July 11.

However, the exemption would run only until the end of 2020, and the possibility of re-including intercontinental flights in the EU emissions trading system should be kept open if the International Civil Aviation Organization's emissions-capping scheme falls short, according to the committee's

vote.

Aviation industry representatives criticized the environment committee's position July 11, saying that it could lead to double regulation and an overlap with the ICAO scheme, which is known as CORSIA (Carbon Offsetting and Reduction Scheme for International Aviation).

Aage Dunhaupt, spokesman for Airlines For Europe, which represents the main European carriers including Air France-KLM and Lufthansa, told Bloomberg BNA July 11 that EU lawmakers had a skeptical view of CORSIA that "we do not share."

It was a "united position of all our airlines" that "when CORSIA kicks in, we make sure we do not have a double-charge system," Dunhaupt said.

Sylviane Lust, director general of Airlines International Representation in Europe, which represents holiday operators such as Monarch Airlines and Thomson Airways, told Bloomberg BNA July 11 that "we would like to be part of the CORSIA agreement and nothing else. We can't afford to have regional systems duplicating the global system."

Lufthansa and International Airlines Group, the holding company for Aer Lingus, British Airways and Iberia, did not respond to requests for comment July 11.

Carbon-Neutral CORSIA

Under CORSIA—which ICAO agreed to in October 2016—any emissions from aviation above the 2019–2020 level will after 2020 be compensated for by credits from projects that reduce emissions in other sectors, making growth in flights between countries theoretically carbon-neutral.

Until 2027, participation in CORSIA is voluntary, but many of the main aviation countries—including the EU countries and the United States—will take part. Some large countries, including India and Russia, will not participate in the voluntary stage, however.

Currently, because of CORSIA, intercontinental flights are exempted from the EU emissions trading system (ETS) under an arrangement known as "stop-the-clock." However, Intra-EU flights are included in the ETS.

The stop-the-clock exemption expires at the end of 2017. The European Commission, the EU's executive, proposed in February to extend the exemption at least until the details of CORSIA become clear. If CORSIA is seen to be failing to prevent rising global warming emissions from aviation, the EU could act to bring intercontinental flights into the ETS, meaning airlines' emissions would be subject to a cap, and airlines would have to buy carbon credits for any emissions above the cap.

Julie Girling, a British center-right lawmaker who is responsible for preparing the European Parliament's position on the stop-the-clock continuation, said in a statement July 11 that the exemption for intercontinental flights should be continued only through the end of 2020.

"I believe this exemption must be time-limited so that we can be sure that the CORSIA will deliver its objectives," Girling said.

'Fair Contribution'

Andrew Murphy, aviation manager at environment group Transport & Environment, said in a July 11 statement that aviation "must make a fair contribution to global climate efforts," and until more detail about CORSIA is available, lawmakers' "skepticism is well justified."

Environment committee lawmakers backed the draft EU regulation by which the continuation of the stop-the-clock exemption would be implemented on a 57-3 vote, with 6 abstentions.

The full European Parliament will vote on the measure during a Sept. 11-14 session. To be finalized, it must then be agreed to between the parliament and the Council of the EU, which represents the governments of the bloc's member countries.

If no agreement is reached on the extension of the stop-the-clock measure after the end of 2017, all airlines flying into and out of EU airports would be required during spring 2018 to surrender carbon allowances to cover their emissions during 2017.

China Likely to Extend Tax Break on Electric Cars, Auto Group Says

Posted July 11, 2017, 9:35 A.M. ET

By Yan Zhang and Tian Ying

China is likely to extend a purchase-tax exemption on electric cars to promote the vehicles, whose sales have outpaced broader industrywide deliveries, according to the state-backed auto association.

The exemption on the 10 percent purchase tax is due to expire at the end of this year and is "highly likely" to be renewed, Xu Yanhua, deputy secretary-general of the China Association of Automobile Manufacturers, said at a briefing in Beijing July 11. An extension to a levy exemption would probably benefit electric-car manufacturers like BYD Co. and BAIC Motor Corp., which produce some models qualifying for the exemption.

Sales of passenger new-energy vehicles, including plug-in hybrids and battery-electric cars, rose 36 percent to 164,000 units in the first six months of this year. That compares with a 1.6 percent gain in overall auto sales, according to data released by CAAM. A separate set of figures from the China Passenger Car Association July 11 showed first-half retail sales of vehicles falling for the first time since 2005.

China has given subsidies for companies and consumers to promote the development and sale of electric vehicles as part of its strategy to reduce a reliance on imported oil and cut air pollution. The country is the biggest electric-car market, accounting for more than 40 percent of such cars sold in the world, according to a report by the International Energy Agency.

London's Iconic Black Cabs Go Electric; Bound for Amsterdam

Posted July 11, 2017, 9:32 A.M. ET

By Jessica Shankleman

Hundreds of London's black cabs will start appearing on the roads of Amsterdam next year,

powered by batteries instead of diesel fuel, marking the first international sale for Geely Automobile Holdings Ltd.'s new electric taxi.

Rotterdam Mobility Center agreed a 225-vehicle deal for the new all-electric hackney cab that will meet new pollution rules in the Dutch capital. It will be delivered from a factory near Coventry, England, in the first quarter of 2018, the companies said Tuesday.

The sale marks a new phase for London Taxi Co., which is planning to expand its reach beyond the U.K. with its new battery powered model called the TX that was designed in Barcelona and unveiled July 11.

From September, LTC will be renamed London EV Co. to reflect the 325 million-pound ($419 million) electrification investment by its Chinese owner Geely. That's paid for new manufacturing equipment for taxis and vans that will meet pollution rules being introduced in London and other cities worldwide.

The cab's trademark turning circle and roomy interior suits the narrow streets of Amsterdam as well as requirements for wheelchair users, said Albert Donlou, director of services at RMC, in an interview.

Designers were keen to ensure the "face" of the new cab conveyed a message that the driver was reliable and serious yet friendly, and was neither too cute nor too aggressive or retro, said David Ancona, managing director of Geely Design Barcelona. The interior can fit six passengers compared to five of the current model and features a large sunroof, as well as a large touch screen for driver navigation.

Geely wants to tap into the global market for low emissions vehicles. More than half of new cars sold globally will come with a plug by 2040, led by cities in Europe, China and the U.S., according to Bloomberg New Energy Finance.

"The launch of LEVC marks Britain's leadership as a first mover in creating the world's only dedicated electric vehicle company for the urban commercial market," Chief Executive Officer Chris Gubbey said a statement July 11.

LEVC unveiled the first version of the new cab, named TX. It retains key elements of the classic model, including doors that open backwards to 90 degree angles and will be powered by a battery and a small gasoline generator, known as a range extender. That will allow drivers to travel from London to Edinburgh, or even Paris, without needing to refuel, according to the statement.

The price tag of the new TX model will be announced on Aug. 1, when order books open for individual drivers, a spokesman for LEVC said by email. The new taxi will go on sale in London in the fourth quarter, and in the first quarter of 2018 in the rest of the world. Steep declines in the cost of batteries, that account for about a third of the cost of the vehicle, stopped the company from determining the price earlier.

London's Mayor Sadiq Khan decreed that all new taxis in the city need to be capable of operating with zero emissions from 2018, either by pure electric or hybrid motors. As well as targeting London's 23,000 diesel-powered taxis, Geely has toured European cities from Paris to Berlin, seeking to drum up interest for a potential export market.

Tesla's Australian Battery Fix Comes at 'Big Price,' Analyst Says

Posted July 11, 2017, 8:59 A.M. ET

By Perry Williams

Billionaire Elon Musk's plan to install a giant battery to help fix a power crisis in South Australia will come at a "big price" with installation costing 60 percent more than alternative open cycle gas plants, according to Wood Mackenzie Ltd.

Musk's Tesla Inc. won a tender July 7 to build what the entrepreneur said is the world's largest lithium-ion battery system capable of providing enough power for more than 30,000 homes. Little guidance or estimates were given on the cost of supplying the unit, sparking debate over the appropriate mix of power generation in the mainland state with the highest levels of clean energy.

Given current costs "the reality is South Australians are paying a big price to stabilise their energy supply, after a rapid build-up in solar and wind power generation," Wood Mackenzie analyst Saul Kavonic said in an email. Solar and wind account for about 40 percent of the state's power generation.

A spokesman from Tesla's Australian office declined to comment.

Batteries will be cost-competitive around 2025, according to Wood Mackenzie. The consultancy estimates the fixed cost of batteries in 2017 at $81 a megawatt-hour compared with fixed costs of $9 a megawatt-hour for an open-cycle gas plant. The charging cost for batteries is estimated at $57 a megawatt-hour compared with the cheapest gas seen at about $59 a megawatt-hour. By 2025 gas could be more expensive than batteries given the rising cost of the fuel.

More Diesel Generation

Tesla's battery plan will still leave the state's blackout-plagued power grid vulnerable, Bloomberg New Energy Finance analysts led by Kobad Bhavnagri said in a July 10 report. While the 100 megawatt battery storage project would reduce its import dependency at peak energy use to 126 megawatts, the resulting shortfall will still need to be met by electricity interconnectors with neighboring Victoria, BNEF said.

A plan by the South Australian government to procure 200 megawatts of diesel generators for the 2018 summer and a 250-megawatt gas-fired generator will ultimately be needed to shore up supply, BNEF said.

Tesla's battery plan "is a lot of sizzle for very little sausage," Federal Resources Minister Josh Frydenberg said in an interview with Sky News July 11. "Let's focus not necessarily on celebrity. Let's focus on what is needed to stabilize South Australia's system which unfortunately today has not had a very good record."

The state's search for new forms of energy storage started after a severe thunderstorm triggered a state-wide blackout last September raising questions over the stability of its electricity supply. South Australia's power market disconnected from Victoria with transmission towers and lines badly damaged, sparking calls for a second interconnector to be built with the state of New South Wales.

Musk has promised to build the battery and get it working within 100 days of a contract being signed or the California-based company would provide it for free.

Subject: Playbook Power Briefing, presented by BP: TRUMP says military will 'not accept or allow' transgender troops -- STEVE SCALISE discharged from hospital -- REPEAL AND DELAY vote scheduled for 3:30 -- Budget vote in September

View online version | Add politicoplaybook@politico.com to your address book.

Today's Playbook Power Briefing presented by BP

By JAKE SHERMAN (sherman@politico.com; @JakeSherman), ANNA PALMER (anna@politico.com; @apalmerdc), DANIEL LIPPMAN (daniel@politico.com; @dlippman), ZACH MONTELLARO (zmontellaro@politico.com; @ZachMontellaro)

GOOD NEWS -- House Majority Whip Steve Scalise (R-La.) was discharged from the hospital today and will begin "a period of intensive inpatient rehabilitation," according to a statement from MedStar Washington Hospital. ***Full statement*** http://bit.ly/2h33jlJ

Good Wednesday afternoon and happy hump day.

DRIVING TODAY -- NON-HEALTH CARE NEWS -- TRANSGENDER INDIVIDUALS BANNED FROM MILITARY SERVICE -- @realDonaldTrump on Twitter, in three separate tweets: "After consultation with my Generals and military experts, please be advised that the United States Government will not accept or allow Transgender individuals to serve in any capacity in the U.S. Military. Our military must be focused on decisive and overwhelming victory and cannot be burdened with the tremendous medical costs and disruption that transgender [sic] in the military would entail. Thank you". ***Story from Louis Nelson*** http://politi.co/2h3gqcQ

SIREN -- REPUBLICAN LEADERSHIP in the Capitol had no idea this policy change was coming. They did not get a heads up from the White House.

DEFENSE SECRETARY JIM MATTIS is on vacation.

-- MATTIS announced a six-month delay on allowing openly transgender individuals from joining the military at the end of last month **(*story from Jacqueline Klimas*** http://politi.co/2tYTpsv).

THE BIG QUESTION: Will Trump kick transgender people out of the military if they are already serving?

ONE CONSERVATIVE HILL REPUBLICAN GCHATS US ABOUT THE WHITE HOUSE -- "I swear their every instinct is wrong."

-- A 2016 STUDY from the RAND Corporation, a nonprofit research organization that

gets the majority of its funding from the Defense department, national security agencies and the U.S. military, estimated the "costs of gender transition-related health care treatment are relatively low," increasing costs by "between $2.4 million and $8.4 million annually, representing a 0.04- to 0.13-percent increase in active-component health care expenditures." ***Key findings*** http://bit.ly/2tZcWcu ... ***Full report*** http://bit.ly/2tYX9dJ

FROM REPUBLICANS -- @JohnBerman: "JUST NOW: GOP Sen.Richard Shelby responded to new transgender policy. He said (roughly) 'I think everybody should be able to serve.'" ... **@jasonnobleDMR:** "'Americans who are qualified and can meet the standards to serve in the military should be afforded that opportunity,' @SenJoniErnst says." ... **@yashar:** "McCain on trans ban: 'No reason to force service members who are able to fight, to leave military, regardless of their gender identity'"

WHY THIS MATTERS FOR D.C. -- THIS ISSUE is incredibly divisive on Capitol Hill. We saw that last week, when a similar amendment was offered on the House floor, and it failed. **THE GOP "SECURITYBUS" SPENDING BILL** is on the floor, and we hear Democrats are going to try to attach language to it to overturn this ban.

STATEMENT FROM THE PENTAGON: Navy Cpt. Jeff Davis, a DoD spokesman: "We refer all questions about the President's statements to the White House. We will continue to work closely with the White House to address the new guidance provided by the Commander-in-Chief on transgender individuals serving the military. We will provide revised guidance to the Department in the near future."

-- IN OTHER WORDS: Ask the guys on Pennsylvania Avenue.

GET SMART FAST -- Quick facts from Jacqueline Klimas, Matt Nussbaum and Connor O'Brien on transgender service members and existing Pentagon policy. http://politi.co/2eNvNW9

****** **A message from BP: We employ more than 14,000 people in the U.S. and support another 130,000 jobs all across the country.** *See how this impacts your community.* ******

FASCINATING COMMENT, from **HOUSE MAJORITY LEADER KEVIN MCCARTHY (R-CALIF.)** about **TRUMP** on David Brody's "Faith Nation" on CBN: "When you give [Trump] all the information, he usually makes the right decision. But sometimes I find some people don't give him the opportunity to give him all the information and steer him in one direction or another." http://bit.ly/2eO9vDL

SPOTTED -- EPA Administrator Scott Pruitt, dining at Le Diplomate Tuesday night... again! Reminder: he went there after the U.S. withdrew from the Paris climate accords.

THE NEXT HEALTH CARE VOTES -- THE SENATE will vote at 3:30 p.m. on repeal and delay. It is expected to fail.

CLICKER -- *From the Senate Budget Committee:* "In order to assist people following the action on the floor this week, the Senate Budget Committee will be posting amendments and floor alerts during the health care debate on our budget blog". http://bit.ly/2uZdXFN

****** **A message from BP: From coast to coast, we spent $16 billion with local businesses last year.** *Take 30 seconds to see how we're supporting jobs across the U.S.* ******

ON THE HORIZON ON OBAMACARE REPEAL -- From **BURGESS EVERETT, JEN HABERKORN** and **SEUNG MIN KIM:** "Now the Senate GOP is aiming for what Health and Human Services Secretary Tom Price called the 'lowest common denominator' as its likely end game: repealing Obamacare's individual and employer mandates as well as its tax on medical devices. Though the contents of that so-called 'skinny repeal' could still change, but those three elements may be all the Senate can pass at this point. Sen. Lindsey Graham (R-S.C.) on Tuesday called the possibility of a skeletal plan a 'political punt,' but it may be that that can clear the narrowly divided chamber.

"'We'll see at the end of the day what's in it but overall I think I'd support it,' said Sen. Dean Heller of Nevada, the most vulnerable GOP incumbent. He said slashing Obamacare's Medicaid expansion or its growth rate should be a non-starter. At the other end of the GOP spectrum, Sen. Rand Paul (R-Ky.) also signaled he could live with the minimalist approach. ... That would leave out the divisive issues of future cuts to Medicaid spending and efforts to create a new tax credit system for the individual markets. Republicans can only lose two votes on whatever they pass in the end. ...

"Republicans need a score on any proposal from the Congressional Budget Office to vote at a 50-vote threshold. They are aiming for a vote on Friday on their final plan after the unlimited amendment process on the 'vote-a-rama,' expected sometime Thursday. In the final bill designed by Republicans at the end of the process, Republicans could try to add in more elements than repealing the mandates and device tax, but that could complicate efforts to get a quick CBO score." http://politi.co/2eNTldi

-- AND ... Remember how hard it was for the House to figure out something to pass? A negotiation between the House and Senate will be tricky. Then both chambers have to pass whatever comes out of that negotiation.

COMING ATTRACTIONS -- "Republican Study Committee chief: Ryan promises budget vote in September," by Sarah Ferris: "The House GOP budget resolution is finally headed to the floor - just not until September. Republican Study Committee Chairman Mark Walker says he has struck a deal with House Speaker Paul Ryan to revive the fiscal blueprint, in exchange for dropping demands for a full GOP omnibus this week. The legislation, which is crucial to unlocking the Republican plans for a tax overhaul this fall, has been stalled for months amid Republican infighting." http://politi.co/2h35yM2

ELAINA PLOTT in **WASHINGTONIAN -- "Eric Cantor: 'If You've Got That Anger Working for You, You're Gonna Let It Be'":** "If you hang around Twitter on a day when President Trump does something especially head-turning and Paul Ryan goes especially quiet, you'll likely encounter some quip about how blissful John Boehner must be. ... There's no such narrative around Eric Cantor, the former Republican House majority leader from Richmond who was spectacularly ousted in his 2014 primary by a no-name economics professor. 'There's no denying that he misses all of it,' says Cantor's former deputy chief of staff, John Murray -- a sentiment the ex-congressman himself confirms. When he talks to Boehner, Cantor tells me, Boehner will say something to the effect of 'I am so glad I'm not there dealing with those mm-mm-mms' -- those pesky Freedom Caucus members whom many in the GOP hold responsible for sparking the party's new populist flavor and egging on the anger that led to Trump's election. Not Cantor. 'I never felt like that,' he says. ...

"Cantor is still painstakingly abreast of what's going on in the Capitol, texting often with members such as Kevin McCarthy, his successor, and Patrick McHenry, chief deputy whip, to offer advice and then popping up on cable news to reassure Republicans that the party is just going through 'growing pains.' ...

"Asked if he feels partly responsible for [the Republican party's] current predicament [with struggling to repeal Obamacare], Cantor is unequivocal. 'Oh,' he says, '100 percent.' He goes further: 'To give the impression that if Republicans were in control of the House and Senate, that we could do that when Obama was still in office ...' His voice trails off and he shakes his head. 'I never believed it.'" http://bit.ly/2h2J6CD

OTHER TRUMP TWEETS -- @realDonaldTrump at 6:49 a.m.: "The crowd in Ohio was amazing last night - broke all records. We all had a great time in a great State. Will be back soon!" ... **at 7:13 a.m.:** "Senator @lisamurkowski of the Great State of Alaska really let the Republicans, and our country, down yesterday. Too bad!" ... **at 9:48 a.m.:** "Why didn't A.G. Sessions replace Acting FBI Director Andrew McCabe, a Comey friend who was in charge of Clinton investigation but got...." ... **at 9:52 a.m.:** "...big dollars ($700,000) for his wife's political run from Hillary Clinton and her representatives. Drain the Swamp!"

-- TRUMP seems to be referring to money Andrew McCabe's wife Jill got in political contributions from groups linked to Virginia Gov. Terry McAuliffe, who is friends with the Clintons.

REINCE SURVIVAL WATCH -- NYT's Peter Baker, Jeremy Peters, and Rebecca R. Ruiz: "Reince Priebus, the chief of staff, is still on the bubble and said to be looking for a graceful exit of his own." http://nyti.ms/2eNCMhN

FOR TRUMP'S WIN BOARD -- "Trump to Announce Apple Supplier Foxconn Opening Wisconsin Plant," by Bloomberg's Justin Sink: "President Donald Trump will announce Wednesday that Foxconn Technology Group plans a new factory in Wisconsin, fulfilling the Taiwanese manufacturing giant's promise to invest in the U.S.

The factory will open in the home district of House Speaker Paul Ryan, a Wisconsin Republican, who personally lobbied Trump and White House chief of staff Reince Priebus to help secure the plant. It's expected to employ about 3,000 people at first and, after an initial $10 billion investment, the facility is scheduled to expand over a 2 1/2-year period ...

"Foxconn chairman Terry Gou plans to join Trump, Ryan, Wisconsin Governor Scott Walker, and Vice President Mike Pence at the White House to make the announcement. The decision to place the plant in Ryan's southeastern Wisconsin district is a political win for the speaker ... [and] Priebus ... Both were personally involved in securing the factory for Wisconsin. Ryan met with Foxconn executives on June 20 in Washington to pitch them on the state, and three weeks later, held a dinner along with Walker for company officials." https://bloom.bg/2uZBfuV

WHAT LANGLEY IS READING -- "Director Pompeo Details How the CIA Is Changing Under President Trump" -- Washington Free Beacon's Bill Gertz: http://bit.ly/2uC4u4G

THE HILL'S ANNUAL 50 Most Beautiful list: http://bit.ly/2uXw674

WHAT THEY'RE READING AT CRAIG'S -- "Bill Clinton, James Patterson Courting Spielberg, Clooney to Adapt 'President' Book," by the Hollywood Reporter's Rebecca Ford and Kim Masters: "Hollywood will be getting a visit from one of the most high-profile names in politics this week as a battle begins to brew for the film rights to one of the biggest literary properties of the year. Former President Bill Clinton and best-selling author James Patterson will be meeting producers to talk about an adaptation of their novel The President Is Missing, due out in June 2018.

"CAA's Richard Lovett is handling the rights to the project, which is being treated as a top-secret property. Sources say a 10-page proposal was sent out to buyers and top producers on Monday. It was sent via an expiring link and watermarked. Not everyone who received the proposal will be invited to have a meeting with Clinton and Patterson, however. Sources say that Clinton and Patterson themselves will meet with interested producers this week. J.J. Abrams, Steven Spielberg and George Clooney are among those who will be taking in-person meetings with the pair. Producer Steve Bing, known to be a close friend of Clinton, is also said to be getting a meeting." http://bit.ly/2tZ5Zbq

SPOTTED: Heather Podesta and Joan Nathan at separate tables last night at the Watergate Hotel's Kingbird restaurant at the 50th anniversary dinner celebrating the opening of the hotel and honoring the hotel's former chef Jean-Louis Palladin ... Corey Lewandowski, Jonathan Karl and John Santucci having breakfast at 7:30 a.m. this morning at the Hay Adams ... at the Trump Hotel last night: Anthony Scaramucci, Kellyanne Conway, Corey Lewandowski, and Rep. Peter King (R-N.Y.).

TRANSITIONS -- Lauren Fritts has started as director of WeWork public affairs, based

in the company's HQ on 18th Street in Chelsea. For the past year, she has been consulting for various non profit and media companies and before that spent five years with Chris Christie, including as digital director on his presidential campaign. ... **Mike Godwin** has joined the Niskanen Center as a senior fellow. He was most recently the director of innovation policy at the R Street Institute.

Driving the Day

NEIL KING, former Wall Street Journal reporter **(@NKingofDC):** "Ran into John Boehner at Trattoria Alberto, his DC hang out. 'The nation needs you.' 'Oh God no,' he said, radiantly sipping his merlot." HHS Secretary Tom Price was at a separate table at the restaurant.

BULLETIN -- JONATHAN MARTIN and **ALEX BURNS** on **A1** of the Saturday NYT: "[R]epublicans [fear] a wave of retirements going into next year. Representative Dave Trott of Michigan is considering retiring, and another Michigan Republican, Fred Upton, may retire or run for the Senate, according to multiple party officials." http://nyti.ms/2xW3R7t

Good Saturday morning. THE NEW NARRATIVE -- "GOP struggles to control its own agenda," by Burgess Everett, Seung Min Kim and Kyle Cheney: "President Donald Trump's flirtations with Democrats and fixation on divisive campaign promises have paved the way for hazardous, rolling deadlines over the next six months on spending, the debt ceiling and immigration.

"The debt and spending bill approved by Capitol Hill on Friday averted imminent fiscal disaster, but it's added more misery for a Republican Party whose agenda has floundered even with unified control of Washington for the first time in a decade. It's also given Democrats significant leverage to imperil tax reform, the GOP's best hope at a major legislative victory.

"Rather than dictating the agenda of Capitol Hill, Republican lawmakers oftentimes find themselves at the whims of a capricious White House, Democrats in the minority and a calendar that's getting increasingly packed ahead of campaign season next

spring. Speaker Paul Ryan predicted in January that tax reform, Obamacare repeal and a border wall would all be done by now. Instead, Obamacare repeal may be completely dead at month's end, there are just broad strokes on tax reform and many Republicans oppose the border wall being pushed by their own president." http://politi.co/2xcx548

LOST IN THE SHUFFLE of this week: OMB Director Mick Mulvaney was thrashed by his former House Republican colleagues yesterday in a closed door meeting, GOP lawmakers called Treasury Secretary Steven Mnuchin a Democrat and scoffed at his requests and Gary Cohn is still on the outs with President Donald Trump. Those are the three people most intricately involved in tax reform, which the White House wants done by the end of the year.

PRESIDENT TRUMP is at Camp David this weekend. He has a cabinet meeting this afternoon.

-- @realDonaldTrump at 8:56 p.m.: "Churches in Texas should be entitled to reimbursement from FEMA Relief Funds for helping victims of Hurricane Harvey (just like others)."

AP at 8:45 a.m. -- "MIAMI (AP) - Weather forecasters say eye of powerful Hurricane Irma likely to hit Florida Keys, SW Florida, and Tampa area on Sunday."

FRONT PAGE SATURDAY -- FLORIDA EDITION -- SUN SENTINEL: "WE'RE WAITING: South Floridians braced for impact of powerful storm heading our way" http://bit.ly/2wOmE70 ... **NAPLES DAILY NEWS:** "PREPARE OR EVACUATE" http://bit.ly/2xcXn63 ... **THE VILLAGES DAILY:** "It's Decision Time" http://bit.ly/2gSkWuO ... **MIAMI HERALD:** "Despite Irma leaning left, S. Fla. still at 'extreme' risk" http://bit.ly/2tWCScR

IRMA HEADS TO FLORIDA -- "After raking Caribbean, dangerous Irma targets Florida," by AP's Anika Kentish and Michael Weissenstein in St. John's, Antigua: "After battering Cuba early Saturday and leaving more than 20 dead across the Caribbean, a dangerous Irma is taking aim at south Florida with winds nearing 160 mph (257 kph) as another hurricane follows close behind. Irma regained Category 5 status overnight, then dropped back to Category 4 early Saturday as thousands of people in the Caribbean fought desperately to find shelter or escape their storm-blasted islands and more than 6 million people in Florida and Georgia were warned to leave their homes. Wind speeds early Saturday were about 155 mph." http://bit.ly/2jcjkx0

-- MIAMI HERALD: "The Lower Keys will likely take a direct hit from Hurricane Irma, one of the most powerful hurricanes on record, Sunday morning before the ferocious storm roars up Florida's west coast. Where Irma ultimately makes landfall on the mainland remains uncertain because of the storm's angle to the coast, National Hurricane Center forecasters said in their early Saturday update. But Irma's fierce center could near Tampa Bay, which has not been struck by a major hurricane since October 1921, when the population was about 10,000, said hurricane center spokesman

Dennis Feltgen. About 4 million people now live in the low-lying area." http://hrld.us/2faXt4G

-- "Jose, nearing Category 5 status, threatens second blow to islands already ravaged by Irma," by WaPo's Anthony Faiola in Cabaret, Haiti, and Lindsey Bever and Andrew deGrandpre in Washington: "Hurricane Jose, a powerhouse tropical cyclone barreling northwest toward the Caribbean islands already hammered by Irma, is now 'almost a Category 5' storm, officials said. ... A hurricane warning is in effect for Barbuda and St. Martin, both of which were obliterated by Irma, as well as for Anguilla and St. Barthelemy, also known as St. Barts. The island of Antigua is under a hurricane watch. Once it passes the northern Leeward Islands, Jose is projected to hook north and steadily lose muscle. It will, however, likely throw off tropical-storm strength weather felt Saturday night in the British and U.S. Virgin Islands, which also sustained heavy damage during Irma." http://wapo.st/2wRuTN8

THE PROBLEM THAT WON'T GO AWAY -- **"Trump Team Prepping Aggressive Options for North Korea,"** by NBC News' Carol Lee and Courtney Kube: "The Trump administration is readying a package of diplomatic and military moves against North Korea, including cyberattacks and increased surveillance and intelligence operations, after the nation's sixth and largest nuclear test, according to senior White House and Pentagon officials. The U.S. may also propose a U.N. Security Council resolution mandating the inspection of ships arriving or leaving the reclusive state ...

"President Trump is also seriously considering adopting diplomatically risky sanctions on Chinese banks doing business with Pyongyang and upgrading missile defense systems in the region ... In addition, the administration is not ruling out moving tactical nuclear weapons to South Korea should Seoul request them ... though many consider such a move a nonstarter. It would break with nearly three decades of U.S. policy of denuclearizing the Korean Peninsula." http://nbcnews.to/2eU5ZrJ

-- **"Fuji TV: Trump calls President Moon a 'beggar' during phone call with Japanese PM":** "U.S. President Donald Trump allegedly disparaged South Korean President Moon Jae-in as acting 'like a beggar' with his calls for dialogue with North Korea. The remarks were supposedly made in a telephone conversation with Japanese Prime Minister Shinzo Abe, the Japanese network Fuji TV reported on Sept. 7. According to the network, Trump made the disparaging remarks about Moon to Abe in a telephone conversation on Aug. 29, after North Korea test-launched a missile that passed through Japanese airspace. Trump was also quoted as asking Abe 'not to tell anyone' about the need for military pressure on North Korea." http://bit.ly/2wgrNAk

-- "Trump review leans toward proposing mini-nuke," by Bryan Bender: "The Trump administration is considering proposing smaller, more tactical nuclear weapons that would cause less damage than traditional thermonuclear bombs - a move that would give military commanders more options but could also make the use of atomic arms more likely. A high-level panel created by President Donald Trump to evaluate the nuclear arsenal is reviewing various options for adding a more modern 'low-yield' bomb,

according to sources involved in the review to further deter Russia, North Korea or other potential nuclear adversaries." http://politi.co/2wPcVgL

****** **A message from Hewlett Packard Enterprise**: How are Hewlett Packard Enterprise's supercomputers helping create the future in science, medicine and national security? Learn more: hpe.com/supercomputing ******

INSIDE THE WEST WING -- "Kelly's deputy annoys Trump aides with rigid style," by Annie Karni: "Chief of staff John Kelly's no-nonsense deputy, Kirstjen Nielsen, has been working in the White House for only five weeks. But in her short tenure, the new sheriff's No. 2 has already helped set a new tone in the West Wing that was described by more than 10 senior administration officials and outside advisers to the president as one that can be dismissive and lacking in collegiality. These people worry that Nielsen - who now occupies former chief strategist Steve Bannon's old office - is at risk of squandering the morale boost that accompanied the arrival of the four-star general and the hope for a fresh start.

"Nielsen, who served as Kelly's chief of staff at the Department of Homeland Security before moving with him to the West Wing, routinely cancels meetings with senior officials if someone shows up late, multiple aides said. Phone calls often go unreturned. ... Nielsen has been greeted by an especially vociferous backlash from a group of people who say they are not simply bridling at a new structure. Some Trump loyalists even refer to Nielsen behind her back as 'Nurse Ratched,' a reference to the malevolent head nurse in 'One Flew Over the Cuckoo's Nest,' who coldly presides over a mental hospital." http://politi.co/2jckljc

-- MAGGIE HABERMAN and **GLENN THRUSH:** "It is Ms. Nielsen who sends out the emails announcing internal policy and planning meetings that now contain a clipped addendum - 'principals only' - with a stern warning that any subordinates who wander in will be immediately ejected. She is also responsible for keeping Mr. Kelly's no-fly list of aides he deems to be unfit to attend serious meetings, the most prominent of whom is Omarosa Manigault, the former "Apprentice" star with an ill-defined job and a penchant for dropping into meetings where she was not invited.

"Throughout the White House, the circle of decision-making is shrinking, leaving staff members accustomed to wandering in and out of meetings - and the Oval Office - in a sour mood. And the feelings are not confined by the gates of the executive compound. Outside Trump advisers, accustomed to getting their calls briskly returned, are complaining that their phones have gone silent since Mr. Kelly took over six weeks ago." http://nyti.ms/2eN1dZs

-- "Cohn doubles down on tax reform as rumors swirl about his West Wing status," by Nancy Cook, Ben White, Josh Dawsey and Daniel Lippman: "Rumors of Gary Cohn's demise in Donald Trump's White House have swirled for weeks. But Cohn is intent on remaining with the administration to finish tax reform - though it's unclear how long he would stay beyond its passage ... He's aware that he may have killed his

chances for Fed chair with critical comments after Charlottesville. ... A Cohn friend who spoke to him at a party in D.C. on Thursday night said he was 'in a great mood' and 'highflying' after the president cut a deal on Wednesday with Senate Minority Leader Chuck Schumer and House Minority Leader Nancy Pelosi to raise the debt ceiling.

"Cohn has long advocated for the president to work more closely with Schumer, one New York source who knows both men said, since they're both New Yorkers who aren't fierce ideologues and like to make deals. ... Cohn's reaction [to Charlottesville] irritated the president and created distance between them. They haven't spoken privately since then. Cohn also made some disparaging remarks about the way the White House functions under the president to friends in the Hamptons in August that found their way back to Trump and further exacerbated their working relationship." http://politi.co/2wgssSi

THE LATEST ON THE RUSSIA PROBE -- "Mueller gives White House names of 6 aides he expects to question in Russia probe," by WaPo's Carol D. Leonnig, Ros Helderman and Ashley Parker: "Special counsel Robert S. Mueller III has alerted the White House that his team will probably seek to interview six top current and former advisers to President Trump who were witnesses to several episodes relevant to the investigation of Russia's meddling in the 2016 election, according to people familiar with the request.

"Mueller's interest in the aides, including trusted adviser Hope Hicks, former press secretary Sean Spicer and former chief of staff Reince Priebus, reflects how the probe that has dogged Trump's presidency is starting to penetrate a closer circle of aides around the president. ...

"Mueller has notified the White House he will probably seek to question White House counsel Don McGahn and one of his deputies, James Burnham. Mueller's office has also told the White House that investigators may want to interview Josh Raffel, a White House spokesman who works closely with Trump son-in-law Jared Kushner. White House officials are expecting that Mueller will seek additional interviews, possibly with family members, including Kushner, who is a West Wing senior adviser, according to the people familiar with Mueller's inquiry." http://wapo.st/2jcLuYw

-- "White House communications director Hope Hicks retains lawyer in Russia probe," by Annie Karni and Eliana Johnson: "White House communications director Hope Hicks has retained a personal attorney, as the special counsel's investigation into the Trump campaign's ties to Russia is expected to heat up this fall. Hicks, 28, has hired Robert Trout, a highly regarded attorney and founder of the firm Trout Cacheris & Janis, according to multiple sources familiar with the hire. Trout is a veteran of the Justice Department. He is also a former assistant U.S. attorney in Baltimore." http://politi.co/2xjfWXa

PENCE BACK TO THE HOOSIER STATE -- "Pence to travel to Indiana to push tax reform, pressure Sen. Joe Donnelly," by Matt Nussbaum: "Vice President Mike

Pence will travel to his home state of Indiana later this month to make the case for tax reform and put pressure on Democratic Sen. Joe Donnelly, who is up for reelection in 2018 in the deeply conservative state. Pence is slated to make the trip on Sept. 22, according to a senior administration official." http://politi.co/2xSFd6P

MEDIAWATCH -- "Eric Bolling Out at Fox News ," by Yashar Ali in HuffPost: "Fox News has parted ways with host Eric Bolling, the network confirmed Friday, just over a month after an exclusive HuffPost report revealed Bolling sent inappropriate text messages to current and former female colleagues. News of the departure comes after two HuffPost reports revealed a pattern of inappropriate behavior by Bolling, who co-hosts 'Fox News Specialists.' Fox News will cancel the program, it said in a statement. 'Eric Bolling and Fox have agreed to part ways amicably,' the network said. 'We thank Eric for his ten years of service to our loyal viewers and wish him the best of luck.'" http://bit.ly/2gRZVk3

-- "Chris Christie in talks to be cable news contributor after leaving office," by CNN's Hadas Gold and Oliver Darcy: "New Jersey Gov. Chris Christie's possible career as a sports broadcaster may not have panned out, but he might still have a shot at a television gig. Christie has had conversations with both MSNBC and CNN about possible contributor deals after his term ends, according to three sources with knowledge of the talks. ... Christie is not in talks with Fox News." http://cnnmon.ie/2vMzwXC

Playbook Reads

WALL STREET-WASHINGTON AXIS -- "Jamie Dimon ventures beyond Wall Street to have a say in Washington," by Reuters' Pete Schroeder and David Henry: "JPMorgan Chase & Co Chief Executive Jamie Dimon is starting to look like Corporate America's shadow president. The 61-year-old banker has made more than a dozen trips to Washington so far this year to press a broad agenda with a range of influential policymakers, people who attended the meetings or are familiar with his schedule said. Dimon has already visited the nation's capital four times as much as he does in a typical year. His ramped-up presence comes after taking the helm of the Business Roundtable, a lobbying group that represents CEOs of large U.S. companies, in December. ...

"The frequency of his trips, and the wide range of policies he has been discussing, have started chatter among power brokers in Washington and on Wall Street about how much energy Dimon is devoting to issues beyond JPMorgan. At times, they said, Dimon carries himself more like someone running the country than someone running a bank." http://reut.rs/2wPD3YU

STEVE BANNON TO CHINA -- NYT'S MARK LANDER : "Next week, he plans to travel to Hong Kong to deliver a keynote address at an investor conference, where he will articulate his call for a much tougher American policy toward China. CLSA, the Hong Kong brokerage firm that invited Mr. Bannon, is owned by a politically connected Chinese investment bank, Citic Securities. People close to Mr. Bannon said he met recently with Henry A. Kissinger, the elder statesman who opened a diplomatic channel to China in 1972, to exchange views about the relationship with Beijing. Mr. Bannon said he admires Mr. Kissinger and has read all his books, but none of that swayed him from his preference for confrontation over diplomacy." http://nyti.ms/2wPpIQt

MOSCOW WATCH -- "New Russian envoy describes 'warm' meeting with Trump: agencies" -- Reuters: "Russia's newly installed ambassador to Washington said on Friday that he had a warm and constructive meeting with U.S. President Donald Trump, Russian news agencies reported. 'I was received by President Trump, I presented my credentials. For my part I said that we are looking forward to an improvement in the relations between our two countries,' Tass news agency quoted the ambassador, Anatoly Antonov, as saying. 'President Trump received me in a warm and friendly way ... The atmosphere was very genial, constructive and welcoming. At least, that was my personal feeling,' Russia's RIA news agency quoted Antonov as saying." http://reut.rs/2eUlAqh

-- "Document details scrapped deal for Trump Tower Moscow," by CNN's Gloria Borger and Marshall Cohen: "Around the time presidential candidate Donald Trump was touting his real estate dealings at a Republican primary debate, a proposal was in the works to build a Trump Tower in Russia that would have given his company a $4 million upfront fee, no upfront costs, a percentage of the sales, and control over marketing and design. ... [T]he deal [also] included the opportunity to name the hotel spa after his daughter Ivanka. An internal Trump Organization document from October 2015, obtained by CNN on Thursday, reveals the details of a 17-page letter of intent that set the stage for Trump's attorney to negotiate a promising branding venture for Trump condominiums, a hotel and commercial property in the heart of Moscow.

"Trump signed the document later that month, according to Michael Cohen, his corporate attorney at the time. The document CNN obtained does not have Trump's signature because it is a copy of the deal that Cohen brought to Trump to sign. Cohen pulled out of the arrangement three months later as the project failed to get off the ground." http://cnn.it/2jaQuwI ... ***See the document*** http://cnn.it/2wfDLtZ

Subject: POLITICO's Morning Energy: Trump's final Paris decision comes today at 3 p.m. — States, cities look at filling climate void — Dakota Access begins shipping today

By Anthony Adragna | 06/01/2017 10:00 AM EDT

With help from Esther Whieldon

DECISION DAY: In a scene that could come straight from reality TV, President Donald Trump today will announce his decision on whether to abandon the 2015 landmark Paris climate agreement today at 3 p.m. in the Rose Garden, he tweeted Wednesday night. Withdrawing from the pact would honor his campaign pledge to "cancel" the deal, but go against the wishes of vast swathes of the U.S. business community, many of his own aides and the international community. Three officials tell POLITICO's Andrew Restuccia and Josh Dawsey that Trump plans to pull out of the deal, though they noted he could still change his mind at the last minute.

Trump's decision comes after months of internal clashes between Trump's warring factions of advisers spilled into the open with a rush of leaks Wednesday, Andrew and Josh report. And if Trump follows through and withdraws, as expected, opponents of the agreement will have to thank the months-long effort by White House strategist Steve Bannon and EPA Administrator Scott Pruitt to play to his populist instincts and publicly push the narrative the accord was effectively dead. One White House official said the president's team was furiously working on an announcement of the withdrawal on Wednesday.

Some aides were still clinging to hope late Wednesday that Trump may change course and stay in the deal, while drastically scaling back the Obama administration's non-binding carbon cleanup promises, in line with a plan they had previously pushed. Trump had not officially told his entire team of senior aides he was considering leaving the agreement Wednesday when news leaked out, and administration officials cautioned against definitive reporting, warning that the president is notoriously fickle.

Takeaway from one former U.S. official: "Will global leaders trust the U.S. to negotiate a climate treaty ever again? After Kyoto and Paris, who will trust us to keep our word as a nation? Our credibility is gone."

Meanwhile, cities and states aren't waiting: Talks are just getting off the ground but several states, municipalities, and business leaders are in early discussions to create a carbon reduction agreement to replace the cuts that Trump is expected to eliminate, Pro's Eric Wolff reports. Potentially modeled after the "Nationally Determined Contributions" nations submitted to join the Paris agreement, the possible reduction pledge would help show the international community that climate action continues in the U.S. "It is really important to the international community to understand to avoid a knock-on effect of U.S. withdrawal on the actions of other countries," a source working to facilitate the conversations told Eric. Meanwhile, a group of West Coast Democratic lawmakers urged the governors of California, Washington and Oregon to keep pursuing climate policies to "send a signal" to the international community absent federal action.

California not pleased: Gov. Jerry Brown didn't mince words in calling Trump's intent to withdraw from the Paris accord "outrageous" while predicting its effects would be short-lived, POLITICO California's David Siders reports. "I think Trump, paradoxically, is giving climate denial such a bad name that he's actually building the very movement that he is [purporting] to undermine," Brown said in an interview. "You can't fight reality with a tweet."

More European reverberations: European Commission President Jean-Claude Juncker warned Trump about the consequences of following through on withdrawing from the Paris deal, POLITICO Europe's Kalina Oroschakoff reports . "I am a trans-Atlanticist, but if the American president said in the next hours or days that he wants to get out of the Paris climate deal, then it is the duty of Europe to say, 'No, that's not how it works,'" Juncker said at an event in Berlin. "Eighty-three countries run into danger of disappearing from the surface of the Earth if we don't resolutely start the fight against climate change."

Clinton weighs in too: Trump's election rival, Hillary Clinton, said it would be "really stupid" and "totally incomprehensible" to squander the economic opportunities that arise from addressing climate change if the administration withdraws from the pact. "The President is a very impulsive, reactive personality," she said at the Code Conference in California. "So if we all like the Paris Agreement, he may decide to get out of it. Not even understanding one bit about what that means."

But it's worth taking a step back to remember that regardless of the fate of Paris, Trump has been busy chipping away at Obama's climate policies. Your Pro Energy team looks at all the ways he's already taken shots at Obama's green legacy here.

Carper invokes Exxon vote: Top Senate EPW Democrat Tom Carper urged Trump to look at the fact that more than 62 percent of Exxon Mobil shareholders on Wednesday called for the company to assess how climate change and global efforts to limit temperature increases will affect its business as he mulls the fate of the Paris deal. "President Trump should take note of what happened today as he decides the fate of our country's participation in the Paris Climate Agreement," he said in a statement. "We should seize the economic opportunities that come from combating climate change, not cede our role as a global leader."

Greens gather today: Environmental groups, including 350.org, Sierra Club, Natural Resources Defense Council, Peoples Climate Movement, NextGen Climate and the Center for American Progress Action Fund, are holding a rally outside the White House today at 5 p.m. in support of the Paris accord. The Sierra Club said more than 20,000 people have already called the White House to voice their opposition to withdrawal.

WELCOME TO THURSDAY! I'm your host Anthony Adragna, and congrats to Van Ness Feldman's Jonathan Simon for being first out of the box to correctly guess there are six non-voting members of the House (D.C., Guam, Puerto Rico, U.S. Virgin Islands, Northern Mariana Islands and American Samoa). For today: Who was D.C.'s first modern delegate in Congress? Send your tips, energy gossip and comments to aadragna@politico.com, or follow us on Twitter @AnthonyAdragna, @Morning_Energy , and @POLITICOPro.

CATANZARO GIVEN ETHICS WAIVER: The White House has granted an ethics waiver for energy aide Mike Catanzaro, a former partner at CGCN Group LLC, to participate in matters related to EPA's Clean Power Plan, waters of the U.S. rule and methane regulations. His past clients include Devon Energy, an Oklahoma oil and gas company close to Pruitt, and he has lobbied on behalf of the American Fuel and Petrochemical Manufacturers and the American Chemistry Council, among others. Catanzaro's is one of more than a dozen waivers quietly released Wednesday night after a dust up between the Office of Government Ethics and White House, which initially refused to disclose them.

DAKOTA ACCESS BEGINS SHIPPING TODAY: The hotly-contested Dakota Access pipeline is expected to begin shipping North Dakota oil today to a distribution point in Illinois, the Associated Press reports. That comes even as the North Dakota Public Service Commission plans to look later this summer at whether the pipeline's developer, Energy Transfer Partners, violated state rules during its construction.

GROUP SEEKS REVIEW OF HARLEY SETTLEMENT: The free-market Cause of Action Institute is taking aim at a settlement the Obama administration reached with Harley-Davidson over after-market "super tuner" devices the company sold to boost motorcycles' performance that allegedly led to Clean Air Act Violations. The August 2016 settlement with EPA required the motorcycle manufacturer to fund a program to replace or retrofit wood-burning stoves with cleaner appliances. But Cause of Action says that approach violates the agency's own guidance, and the group says Pruitt ought to take another look at the settlement. "EPA is overstepping its authority by requiring Harley-Davidson to implement an emissions mitigation project that lacks such a sufficient nexus to the underlying violation," the group wrote today in a letter to Pruitt, along with a FOIA request for documents related to the settlement negotiations.

ORDER AIMS AT BOOSTING ALASKAN ENERGY PRODUCTION: Interior Secretary Ryan Zinke signed an order Wednesday calling for a review of opportunities to increase oil drilling in Alaska. He directed Interior to examine whether oil production can increase in the National Petroleum Reserve in Alaska and assess how much oil and gas could be extracted from a piece of the Arctic National Wildlife Refuge, Pro's Ben Lefebvre reports. Officials have 31 days to develop a plan to implement his order. Zinke signed the order following a speech at an Alaska Oil and Gas Association conference in Anchorage. "Rules should be based on science and best practice not on arbitrariness," he said.

Alaska's congressional delegation hailed the move. "This Secretarial Order is exactly the type of announcement that so many Alaskans have been asking for: a smart, timely step to restore access to our lands, throughput to our Trans-Alaska Pipeline, and growth to our economy under reasonable regulations that do not sacrifice environmental protections," Senate Energy Chairman Lisa Murkowski said in a statement.

As for Paris, Zinke sidestepped a question on the climate change agreement that's on everyone's mind this week. Zinke told reporters in Alaska that he has "yet to read what the actual Paris agreement is," and declined to weigh in without having a chance to "sit down and read" it, the Associated Press reports.

RUSSIA LATEST COMPLICATION IN FILLING VACANCIES: Some potential federal appointees are having second thoughts about executive branch appointments given the ongoing investigations into the Trump campaign's ties with Russia, POLITICO's Andrew Restuccia and Josh Dawsey report. "You're going to have a situation where they're going to have trouble getting A-list or even B-list people to sign up," one lawyer advising potential appointees said. The administration has announced nominees for just 117 of the 559 most-important Senate-confirmed positions.

CASSIDY DOWNPLAYS PROPOSED EPA CUTS: Louisiana Sen. Bill Cassidy told attendees of a Covington, La. town hall meeting Tuesday that "EPA is not being dismantled" despite Trump's proposed cut of one-third of the agency's budget and efforts to roll back landmark Obama-era regulations addressing climate change and water quality, among other issues. "Certainly there are regulations being rolled back," Cassidy said. "But the Clean Water Act is still in place. There will not be mercury spewing out. All those regulations are still in place." (h/t Pro Health Care's Jennifer Haberkorn)

PERRY'S MOVE TOWARD JAPAN: Energy Secretary Rick Perry kicks off a week-long trip to Asia today. He'll stop in Japan and China. Stops include a trip to the Fukushima Daiichi nuclear site where Perry will look at efforts to recover from the 2011 earthquake and participation in the 8th Annual Clean Energy and Mission Innovation Ministerials in Beijing where energy ministers from around the world discuss clean energy efforts.

EPA BOOSTS EAST CHICAGO EFFORTS: Fresh off a visit to the East Chicago, Ind., Superfund site, Pruitt ordered a dedicated community coordinator deployed to the area of the contaminated site and vowed the agency would monthly community meetings to provide updates on cleanup progress. "We will take a more hands-on approach to ensure proper oversight and attention to the Superfund program at the highest levels of the agency," he said in a statement. More information is available here.

ZINKE TO FOCUS ON FOREST FIRES FRIDAY: Zinke and Agriculture Secretary Sonny Perdue will spend Friday in Boise, Idaho - the home of the National Interagency Fire Center - where the two will likely talk about forest fires and prevention techniques. The secretaries will also speak at Boise State University in the morning.

WATCHDOG QUESTIONS IF TILLERSON VIOLATED ETHICS PLEDGE: A nonprofit watchdog group launched to track the Trump administration's activities is questioning whether Secretary of State Rex Tillerson violated his ethics pledge. The group, American Oversight, is raising questions over reports Tillerson appeared at a signing ceremony between his former employer, Exxon Mobil, and the Saudi Basic Industries Corporation concerning a proposed petrochemical complex slated for Texas. American Oversight filed FOIA requests seeking any guidance or waivers issued to Tillerson regarding the signing ceremony, as well as photos of the event and his calendar. Tillerson pledged during his confirmation process not to participate in any matters related to Exxon for one year.

MAIL CALL! STRENGTHEN ENVIRONMENTAL JUSTICE PROGRAM: Democratic

Reps. Donald McEachin, Nanette Diaz Barragán and Pramila Jayapal released a letter to Pruitt urging him to build upon and strengthen EPA's environmental justice program. "We must act on climate change, recognizing that frontline communities have continually been most impacted by the effects of climate change," the letter, signed by 43 other congressmen, said. Their calls are likely to fall on deaf ears, though, given Trump's budget zeroed out the program.

MOVE THOSE FERC NOMS ALONG: The U.S. Chamber of Commerce sent a letter to the top Republican and Democrat on the Senate Energy Committee Wednesday, urging them to swiftly advance the nominations Robert Powelson and Neil Chatterjee for open slots on the quorumless FERC. "Mr. Powelson and Mr. Chatterjee have demonstrated a solid grasp on the subject matter within FERC's overview and have a demonstrated record of advocating policy over partisanship," Neil Bradley, chief policy officer for the Chamber, wrote.

PERRIELLO NABS McKIBBEN ENDORSEMENT: Two weeks ahead of the Virginia gubernatorial primary election, Tom Perriello picked up the endorsement of prominent environmentalist Bill McKibben on Wednesday. "Tom Perriello, for the first time in Virginia's political history, has stood up to Dominion Energy," McKibben said. "That's a smart move - what the politically connected utility wants to do is lock the Commonwealth into a future of pipelines and power plants, even as the energy landscape is changing fast in the direction of renewables."

NEEDS IMPROVEMENT: EPA needs to do better at tracking spending on contracts and grants to small businesses to develop and commercialize innovative technologies, GAO said in a report released Wednesday.

EDF PLANS CHALLENGE TO PRUITT METHANE ACTION: Joining the Natural Resources Defense Council, the Environmental Defense Fund announced Wednesday it would challenge Pruitt's decision to stay additional components of the agency's 2016 rule setting methane emissions limits for new oil and gas industry sources. "Colorado, Wyoming and Ohio, already have similar protections in place, which demonstrate the reasonableness of these clean air measures," Peter Zalzal, lead attorney for the group, said in a statement.

The American Petroleum Institute praised Pruitt's decision in its own statement. "As demonstrated through previous regulatory efforts, EPA's focus should be on cost-effective regulations that target emissions of volatile organic compounds, providing the co-benefit of methane emission reductions," the group said in statement.

EPA Chief Pushes for Accountability Over Speed at Waste Sites

Posted July 25, 2017, 12:08 P.M. ET

By Sylvia Carignan

EPA Administrator Scott Pruitt wants accountability over speed to get potentially responsible parties and the agency itself to move languishing Superfund sites forward.

"It's the responsibility and job of this agency to get accountability with these companies," Pruitt said at a roundtable media briefing July 25.

Superfund sites that have spent years without a cleanup decision may see changes as a result of a new agency plan, he said.

"If you're a [potentially responsible party] and you're in that situation, guess what? We're going to be talking to you very soon," he said.

Pruitt's Superfund task force—convened in May—specifically focused on making changes to the Superfund program that don't require legislation. The task force's 42 recommendations focus on administrative ways the agency can ensure accountability, accelerate cleanup, and prepare sites for reuse, according to a memo accompanying a summary of the recommendations.

Scientists Say They Were Left Out of Pesticide Drift Research

Posted July 25, 2017, 12:30 P.M. ET

By Tiffany Stecker

Farmers could have had better information on handling a new herbicide linked to widespread crop damage in the South and Midwest, but Monsanto Co. limited the scope of research on the pesticide, according to a pair of agricultural scientists.

The scientists told Bloomberg BNA that academic researchers were contracted to measure the effectiveness of a new formulation of dicamba, a 1960s-era chemical that has been updated to handle tough-to-kill weeds. However, they didn't have the opportunity to look at the potential of the herbicide to evaporate and settle on another farm, where it can damage crops, until the products were available for sale, Kevin Bradley, a weed scientist at the University of Missouri, said.

"I feel like many of my colleagues would have liked to do volatility research and were not allowed," Bradley said.

Bradley and another scientist, Tom Mueller at the University of Tennessee's Institute of Agriculture, both conducted independent research on the new dicamba products after they were on the market. Their research is now being cited in a class-action that alleges Monsanto Co., BASF Corp., and Dupont encouraged growers to buy dicamba-based products despite concerns they could drift to nearby farms and damage soybeans, fruit orchards and other "off-target" crops.

Monsanto, in a statement to Bloomberg BNA, dismissed assertions that it didn't prioritize experiments on the pesticide's drift potential. The company said it performed extensive studies on volatility for its XtendiMax herbicide, which includes new technology to prevent the formation of dicamba acid and make it less prone to leaving the field. The Environmental Protection Agency requires that only the new, low-volatility pesticides be used with Monsanto's genetically-engineered crops and that the pesticide can't be sprayed in wind speeds over 15 miles per hour.

"We have expanded our university partnerships and are collaborating with numerous academics and extension agents who are testing the Roundup Ready 2 Xtend Crop System," Monsanto spokeswoman Charla Lord said, referring to the combination of dicamba-resistant seeds and the herbicide. "We look forward to continuing these partnerships in the future."

Hundreds of Damage Reports

Farmers throughout the country are struggling to control weeds that no longer die when sprayed with glyphosate, the world's most-used herbicide that is the main ingredient in Monsanto's Roundup. These weeds lead to big crop losses: palmer amaranth—also called pigweed—can impinge on up to 91 percent in corn yields and up to 79 percent of soybean yields, according to Purdue University Extension.

To meet farmers' needs, companies have developed new formulations of pesticides with decades-old chemicals like dicamba, 2,4-D, and glufosinate. The new tools are popular, and have given farmers hope for combating weeds for the first time in years.

"We're the cleanest from a weed control standpoint than we've been in a decade," Larry Steckel, a plant sciences professor at the University of Tennessee, told Bloomberg BNA.

Growers in the South and the West are now using dicamba on Monsanto's Roundup Ready 2 Xtend cotton and soybeans, genetically-engineered crops that don't die when sprayed with the herbicide. BASF and Dupont also both market herbicides that could be used on dicamba-resistant crops.

However, the lawsuit argues that the companies didn't tell farmers that volatility of the dicamba products could develop over several days, carrying the chemical from one field to the next. Temperature inversions, which trap air in specific locations, can serve as a conduit for dicamba to remain at ground level and eventually travel miles away from a pesticide sprayer's fields, according to the lawsuit.

"They just don't know what's going on in their fields," Paul Lesko, an attorney with St. Louis-based Peiffer Rosca Wolf who represents six Arkansas farms in the class action case, told Bloomberg BNA.

More than 700 Arkansas farmers have filed reports of damage with the state agriculture department from the pesticide. In neighboring Missouri, nearly 200 growers, most of them soybean farmers, have complained. Calls to the Tennessee Department of Agriculture led to restrictions on spraying in the state.

The concerns hit as two of the three companies are seeking regulatory approval for big mergers: Bayer AG is expected to buy Monsanto for $66 billion and Dupont will join Dow Chemical Co. in a $79 billion partnership.

The dicamba woes likely won't affect the companies' earnings in the short term said Jason Miner, an analyst with Bloomberg Intelligence said, but could play into longer-term strategic changes.

Research Cited in Lawsuits

Bradley said that universities are often called on to investigate all aspects of a new product in order to advise farmers. However, Monsanto didn't provide its new products to researchers unless the experiments were limited to certain data, according to Bradley.

"There's a strong stipulation," Bradley, added, "about what we can research and what we can't."

Bradley undertook preliminary research on his own, once the products were on the market. His findings, showcased in a July 6 Powerpoint presentation, are part of the class-action, which collects studies, testimony and other warnings dating back several years.

"Initial results [with] air samples and indicator plants suggest that both [XtendiMax and BASF's Engenia] can be detected in air after application," Bradley said, according to court records. "Indicator plants suggest volatization is still occurring at least 24 hours after treatment."

Mueller of the University of Tennessee told Bloomberg BNA he was unable to get the new formulations for testing until they came on the market in 2016. Like Bradley, Mueller also presented findings this month indicating that Engenia, a BASF dicamba product, "is moving from the site of application into the air immediately about the treated field."

"Soybean injury in adjacent areas should be expected from vapor movement of dicamba after application," Mueller wrote on the Powerpoint slide from a presentation on his findings. Mueller's research, funded by the Tennessee Soybean Promotion Board, is part of the plaintiffs' case against the manufacturers.

"I'm disappointed in what's happening," Mueller told Bloomberg BNA.

Based on company data, the new formulations were supposed to be far less prone to drift than earlier versions. State agencies and agricultural extensions also put in extra work to ensure that farmers would use the new products correctly, he said.

Monsanto Disputes Cause

Monsanto's U.S. commercial operations lead Brian Naber said in a July 21 blog post the company's

preliminary findings indicate that volatility of the approved products is not the major source of the off-target movement. Pesticide applicators are not following label instructions and spraying older products not allowed for use on the genetically-engineered seeds, he said.

Laura Svec, a spokeswoman for Dupont, said that thousands of growers have used the products properly and successfully to address resistant weeds and boost productivity. Dupont has licensed Xtend soybean seeds from Monsanto and manufactures FeXapan dicamba herbicide.

The Agriculture Department approved the sale of Monsanto's Xtend soybeans and cotton in 2015. The EPA, however, didn't approve the new herbicides until nearly two years after USDA made its decision.

In the two summers in between, growers bought the new seeds but had only old, more volatile dicamba available. Complaints of crop damage in Missouri soared in 2016. In one instance, a dispute over drift led to the shooting death of a farmer.

The lawsuit alleges that groups and farmers have warned about the drift problem for years. In 2014 a coalition of farmers named Save Our Crops warned Monsanto that the premature release of dicamba resistant traits would pose a risk to crops. In 2015, a farmer who had purchased XTendFlex cotton testified that a seed representative told him to spray dicamba over his crops, even though it was illegal at that time.

"He was just doing what somebody told him," the farmer, Don Masters, told the Arkansas Plant Board, according to the lawsuit. With penalties were as low as $1 per acre for the average cotton farm, growers were willing to risk using an outdated product in violation of the EPA's rules to solve their weeds problems, the plaintiffs argue.

This year, cases of dicamba drift have centered in Missouri's bootheel region and the northern Mississippi Delta. But reports also have been filed in Illinois, Indiana and Nebraska.

Mueller of the University of Tennessee doesn't deny the need for effective pesticides for farmers, but said that the agricultural community is going to have to answer some "really difficult questions" for 2018.

"It's a very complicated situation," he said. "At the end of the day the most important issue for the farmer is to grow a crop, make money and feed people."

Saint-Gobain to Fund $20 Million Water Line in Vermont

Posted July 25, 2017, 01:21 P.M. ET

By Aaron Nicodemus

Saint-Gobain Performance Plastics Corp. will fund a $20 million water line extension for approximately 200 Vermont homes, settling claims that a shuttered factory leached a chemical into area wells.

The agreement, to be filed in state court in Bennington, Vt., July 26, will settle some of the claims made by Vermont regarding chemical contamination emanating from the former ChemFab Corp. factory. The factory was found to have contaminated about 200 private drinking water wells with perfluorooctanoic acid (PFOA) in Bennington and North Bennington. Now owned by Saint-Gobain,

the plant, which closed in 2002, is also suspected of contaminating wells in nearby Hoosick Falls, N.Y.

Construction of water lines in Bennington and North Bennington will begin in the fall, according to a statement from Vermont Attorney General T.J. Donovan's office.

"Clean drinking water is a human right," Donovan said in a statement, calling the agreement "a good first step."

Additional Investigations Ongoing

The agreement will address drinking water remedies for a portion of the contaminated area. Saint-Gobain will continue to investigate PFOA contamination throughout the region.

"Providing potable drinking water to citizens of Bennington and North Bennington has always been our shared goal," Tom Kinisky, president and chief executive officer of Saint-Gobain Performance Plastics, said in a statement.

PFOA can be harmful to the thyroid gland and is suspected of causing testicular and kidney cancer, according to the American Cancer Society. It was widely used as a non-stick coating, and ChemFab used it to coat fabrics. Tests in 2016 found PFOA at levels greater than the state limit of 20 parts per trillion in Bennington private wells, and it was traced to the ChemFab plant.

The state will host several community meetings, and the agreement will be open for a 30-day public comment period once it is filed in state court.

Little Change in Rates Expected as China Implements Green Tax

Posted July 25, 2017, 01:52 P.M. ET

By Michael Standaert

Tax rates aren't likely to see much change as China moves to fully implement its Environmental Protection Tax Law, which will go into effect Jan. 1, 2018. Major changes are not expected at first in the amount of taxes companies will have to pay for emissions compared to a previous fee-based system, analysts said, although the exact rates have not been released.

"We expect that the tax rates won't change dramatically overnight," Josephine Jiang, tax partner at KPMG in Beijing told Bloomberg BNA.

Local People's Congresses will be in charge of setting the rates, but no information has been released on when that will happen, Jiang said. Public comments are due by July 26 on the draft guidelines the Ministry of Environmental Protection (MEP) announced July 18 for implementing the tax.

China's Environmental Protection Tax Law, officially approved at the end of 2016, is the country's first "green tax" and essentially replaces a pollutant discharge fee system that had evolved during the past 30 years. It is the fifth official tax law in China.

Under the law, provincial People's Congresses and some municipal People's Congresses will be able to set the tax rates within a band above or below the national levels after consultation with

central government-level tax and environmental authorities.

"[This] will require unprecedented coordination between local environmental protection officials who will monitor and measure discharges and tax officials who will collect and administer the tax," Scott Silverman, special counsel on environmental law in China at Baker & McKenzie law offices in Beijing, told Bloomberg BNA. "I am sure there will be implementation challenges as local governments put the new system in place."

Tax Incentives

The new tax system, which covers companies with direct air emissions and wastewater discharges, as well as solid waste and noise levels from construction sites, will give various levels of incentives depending on the amount they reduce their pollution below provincial and national standards.

Jiang said the overall trend in China is for companies to do self-assessments for their taxes, and tax authorities will step when concerns arise.

"This is another aspect that companies will need to watch out for," she said.

Another difference from the pollutant discharge system is that environmental taxes will be collected by tax authorities, not by environmental protection departments as the previous pollution fees were.

The previous policy had led to exploitation of loopholes, incidences of bribery and corruption related to the fees, or cases where environmental bureaus simply ignored the fees if a company was very important to the local economy.

"The most difficult challenge [for implementation] is that [pollutant discharge] fees were collected by local governments and now they'll be collected by state tax authorities," Jiang said. "There will not be much room for negotiation [for companies] or for them to run away from the environmental tax."

Environmental bureaus will still be responsible for monitoring emissions levels under the law, however.

America's Biggest Oil Port Looks to Be Hub for Shale Exports

Posted July 25, 2017, 8:14 A.M. ET

By Hailey Waller and Sheela Tobben

The biggest U.S. oil-import hub wants to grab a piece of surging North American crude exports.

Louisiana Offshore Oil Port, the only terminal along the U.S. Gulf Coast able to handle a fully laden supertanker, is gauging interest from shippers in sending crude overseas on the world's biggest ships by early next year. The port would continue to take in foreign oil, LOOP LLC said in an emailed statement July 24.

Ports are competing to fill the needs of domestic oil producers looking for outlets for their growing supply. At the same time, the boom from U.S. shale fields and Canadian oil-sands mines has reduced refiners' need for imported oil. LOOP's ability to handle tankers capable of carrying 2 million barrels in their holds would reduce shipping costs for companies looking to send crude to refiners in Asia.

"LOOP is the most obvious place for U.S. crude exports since as a deepwater port it makes it more manageable to load up a large ship such as a VLCC," Sandy Fielden, director of commodities and energy research at Morningstar Inc., said by phone from Austin, Texas. "It makes huge sense from a logistical perspective as it will allow for more efficient cargo shipments."

Currently, shippers have to load oil onto smaller tankers in ports such as Houston or Corpus Christi, Texas, that then transfer their cargoes onto Very Large Crude Carriers sitting offshore. That adds cost and time to the shipments. While Corpus Christi received its first VLCC at the end of May, the port's channel isn't deep enough for a ship that size to load a full cargo.

Nigerian and Saudi Arabian oil will continue being unloaded from massive supertankers at LOOP's marine terminal 17 miles offshore and pumped into storage caverns one-third of a mile under its Clovelly Hub in Louisiana, as it has for over 30 years. But LOOP is turning some of its operations around as exports surge after restrictions were lifted at the end of 2015.

"Today, customers are seeking the optionality to safely and efficiently load or offload, which is a natural request for a port," LOOP President Tom Shaw said in the statement. "This service offers our customers the scalability to fully load a VLCC."

LOOP will be competing with Corpus Christi, which in 2017 became the top oil-export hub for the U.S. Canadian producers are looking for more options for selling their crude to higher-priced markets around the world, lessening their dependence on U.S. refiners.

In recent years, shipping oil overseas has become more economical, thanks to low-cost drilling methods unlocking vast deposits in West Texas and other areas. U.S. production reached 9.6 million barrels a day in April 2015, according to the Energy Information Administration.

Rising Output

Daily U.S. output is hovering at more than 9 million barrels, much of which is lighter than what local refineries are configured to process. The excess is heading overseas, boosting American exports above those from OPEC members Qatar, Libya, Ecuador and Gabon. VLCC shipments to Asia are expected to jump 52-fold this year, shipping analysts at McQuilling Partners Inc. said in a note. That makes a port able to load the huge ships attractive to traders.

The additional capacity at LOOP could add another 300,000 barrels a day of U.S. exports, according to Fielden.

"Professional exporters will be drawn to this as they will want to export more regularly."

—With assistance from Laura Blewitt.

Biofuel Subsides Axed in New House Legislation

Posted July 25, 2017, 11:30 A.M. ET

By Brian Dabbs

Biofuel subsidy programs at the Agriculture Department would be axed in a bill set for introduction in the House.

Rep. Andy Biggs (R-Ariz.), an environment subcommittee chairman on the House Science, Space and Technology Committee, plans to introduce the legislation July 26, saying the programs disregard market demand at the expense of taxpayers.

"By continuing to force technologies into the market that are not competitive or in demand, we are doing the American people a disservice," Biggs told a July 25 hearing on advanced biofuels. "The federal government's biofuel policies have had an unintended adverse effect on food costs. The price of corn, soybeans, and related retail food products have all increased."

The programs, Bioenergy Program for Advanced Biofuels and Biomass Crop Assistance Program, aim to boost innovation. Advanced biofuels, which can supplant traditional fuels to provide energy, are made from a wide range of plants and plant waste.

Many lawmakers oppose traditional corn-based ethanol over concerns about corn supply and environmental impacts.

Petronas Drops Plan to Build $27 Billion Canada LNG Terminal

Posted July 25, 2017, 03:02 P.M. ET

By Natalie Obiko Pearson

Malaysia's Petroliam Nasional Bhd abandoned its long-stalled plans to build a $27 billion liquefied natural gas export terminal on Canada's west coast, citing changes in market conditions.

"Prolonged depressed prices and shifts in the energy industry have led us to this decision," Anuar Taib, chairman of the board of the Pacific Northwest LNG project, said in a statement.

Petronas, as the state-owned company is known, won Canadian federal government approval for the project in September following more than three years of regulatory reviews and strident opposition from environmentalists, scientists and indigenous communities. The project also faced economic headwinds, with 18 gas export proposals in the province in limbo amid a global glut and plunging prices.

The long-anticipated decision by Petronas delivers a major blow to plans pushed by the previous Liberal-led government of British Columbia to develop an LNG industry in the Pacific Coast province for export to Asia. It comes shortly after Premier John Horgan took office backed by his ally, Green Party Leader Andrew Weaver, who has mocked the LNG industry as "nonsense" and a "colossal failure."

Petronas and its partners remain committed to developing their natural gas assets in Canada and "will continue to explore all options as part of its long-term investment strategy," according to the statement.

Appalachian States Look Past Coal, Ask Trump to Aid Natural Gas

Posted July 25, 2017, 8:55 A.M. ET

By Ari Natter

Having lost tens of thousands of coal mining jobs to the rise in natural gas, several states have decided if you can't beat them, join them.

A bipartisan group of lawmakers hopes to persuade President Donald Trump to spare a loan program he wants to kill and use it to help a $10 billion gas-storage project in the hard-hit Appalachian region of the eastern U.S. where coal had once dominated. Proponents say it would help spur new chemical, refining and other manufacturing industries—and give out-of-work miners a new career path.

"We need a more diverse portfolio," said Brian Anderson, director of West Virginia University's Energy Institute, and a member of the project's coordinating committee. "If you have one industry that dominates your economy and that industry sees a decline then it really runs huge ripples through your entire economy." Coal and natural gas compete in the electricity markets and the proliferation of fracking in recent years led to cheaper gas that has displaced coal. Coal had once accounted for more than half of all U.S. electricity generation, but last year natural gas topped coal to become the largest source of power generation. The impact has been felt especially hard in the Appalachian region—which was once largely dependent on coal mining and steel production.

The Appalachian Storage Hub, estimated to cost as much as $10 billion, could encompass underground caverns in Pennsylvania, Ohio or West Virginia, although the final site has yet to be selected. It would have the capacity to hold as much as 100 million barrels of ethane, methane and other products produced in conjunction with natural gas. It would also include a 3,000-mile pipeline network to link up the storage sites with petrochemical plants.

A report by the American Chemistry Council found the project could create more than 100,000 jobs and nearly $36 billion in capital investment. The project would be similar, though smaller, to the Mont Belvieu natural gas liquids hub just outside Houston that has bolstered that area's chemical industry.

Supporters of the project say a lack of pipelines and storage infrastructure has depressed the price of gas produced from the Marcellus shale under Pennsylvania, Ohio and West Virginia. Natural gas prices there are only two-thirds that of the main market rate set in Louisiana.

Southwestern Energy Co., a gas exploration company with operations in the Marcellus, is a top proponent of the storage hub.

Bipartisan Group

A group of lawmakers led by Democrat Joe Manchin and Republican Shelley Moore Capito sent Trump a letter last week asking that he set up a blue ribbon commission to back the construction effort.

The two West Virginia senators also introduced legislation that would allow the Appalachian storage hub to qualify for Energy Department loan guarantees. Trump has proposed killing that program, and a spending bill the House of Representatives is debating this week would do just that.

Even without federal help, there are initial signs that investment is coming to the region. A $6 billion ethane cracker plant, which would make ethylene for plastics and other products, is being

considered by PTT Global Chemical America for a site along the Ohio River where a former coal-fired power plant owned by FirstEnergy Corp. once stood. Royal Dutch Shell Plc also has a new chemical complex planned for western Pennsylvania.

Shell's project follows the first wave of North American plants being built along the Gulf of Mexico coast by companies such as Dow Chemical Co. and Chevron Phillips Chemical Co. The factories all use shale gas to gain a cost advantage over producers in Europe and Asia that rely on oil and coal feedstocks.

"We certainly had our struggles in this region," said Steven Hedrick, the president of the Mid-Atlantic Technology, Research & Innovation Center in South Charleston, West Virginia. "This would be an opportunity for displaced miners to allow them to use the skills they've learned during a lifetime of engagement with coal."

Canada Business Warns Trudeau on Rising Costs, Regulations

Posted July 25, 2017, 02:37 P.M. ET

By Josh Wingrove and Erik Hertzberg

Canada's climate-change plan and other government measures are heaping costs on businesses and pushing them to a breaking point, the Chamber of Commerce says in a warning to Prime Minister Justin Trudeau.

Chamber President Perrin Beatty, in a letter July 25, asked Trudeau to find ways to cut business costs to offset the impact of an emissions plan that includes a minimum carbon price beginning next year. Failure to do so could mean "seriously undermining Canada's competitiveness," he said.

"The cost of doing business in Canada is rising," Beatty said in the letter, which was also sent to the country's provincial premiers. "Our members are deeply worried about their ability to both grow their businesses within Canada or compete for investment and customers from abroad."

Speaking July 25 in New Brunswick, Finance Minister Bill Morneau said competitiveness is a focus of his department. "My job is to make sure Canada keeps the edge that we have, maintains its competitive advantage," he said. He didn't respond directly to Beatty's letter.

'Serious Cumulative Impact'

A cocktail of new regulations, taxes, climate measures and pension changes are having a "serious cumulative impact," Beatty said. The business community supports measures to tackle climate change but argues they should be accompanied by cutting costs elsewhere, he said.

High labor costs, low productivity growth, electricity rates and employment insurance changes are also raising costs. "If we don't give Canadian businesses breathing room, many will suffocate," Beatty added in a news release.

In Ontario, where the government recently announced a proposed increase of the minimum wage to C$15 per hour by 2019, the self-assurance of smaller firms has already been shaken. June data from the Canadian Federation of Independent Business shows the barometer index, a measure of

business confidence, fell 10.2 points to 58, the biggest monthly decline since 2008. Nationally, the index dropped 5.2 points, the most in almost six years.

The proposed changes in Ontario drove the decrease in business sentiment across Canada, and are "adding considerable uncertainty over future operating conditions," Ted Mallet, chief economist at the CFIB, said in the report.

Climate, Trade

The Chamber's warning comes ahead of upcoming negotiations on the North American Free Trade Agreement and amid U.S. President Donald Trump's plans to cut taxes and regulations. Canadian "concern becomes even more substantial when we see the determination of the U.S. administration to dramatically cut both regulation and business taxes in that country," Beatty wrote.

Climate change is one of the foremost policy differences between Trump and Trudeau. The president pulled the U.S. out of the Paris agreement last month, while Trudeau continues to champion it at home and abroad.

"The solution is not to ignore climate change, but to proceed in a way that makes sense for Canada's economy," Beatty said. "We believe that the negative impact of carbon pricing mechanisms on competitiveness can be minimized if they are designed with competitiveness in mind and offset by cost reductions in other areas."

Trudeau's climate plan kicks in next year, though Canada's most populous provinces already have either a cap-and-trade regime or a carbon tax. Beatty urged Trudeau and the premiers to discuss competitiveness at their next meeting.

Dead Bodies Piling Up as Mexico's Stolen-Fuel Market Booms

Posted July 25, 2017, 04:13 P.M. ET

By Amy Stillman

Buying stolen gasoline in the central Mexican state of Puebla is easy. Pull off the main highway into a busy parking lot, and the black marketeers are waiting in pickup trucks loaded with jerrycans. They'll siphon the fuel into your tank—boasting as they do that unlike a lot of the country's regular gas stations, they don't cheat customers.

While this illegal curbside commerce has been going on for decades, it has exploded in the past few years and now costs Pemex, Mexico's state oil company, more than 20 billion pesos ($1.1 billion) a year. The huachicoleros, as the fuel thieves are known in Mexico, dig up pipelines and hijack tanker trucks. These techniques have made Puebla, with its heavy vehicular traffic and extensive pipeline system, a target for organized crime looking to diversify its profit streams. The country's drug cartels have muscled their way in, with predictable mayhem. Nine people died in a July 2 shootout between rival gangs of robbers in Puebla. And at least 15 people have died in military operations to take out fuel theft rings over the past several months in an area of the state known as the Red Triangle.

The government has started cracking down because it needs to draw foreign capital into the energy sector, where oil output has been sagging because of a combination of underinvestment in exploration and production, aging wells, and deficient infrastructure. The country has a population

about five times that of Texas, yet the U.S. state's fuel pipeline grid is 35 times larger. Potential investors who already look askance at the steady drip-drip of losses from theft and smuggling are even more likely to be deterred by drug gang violence.

Mexico Courts Investment

"For potential participants in the fuel business, whether they're importing gasoline and diesel or they're looking to construct terminals, it's a reality check," says John Padilla, managing director of energy consulting firm IPD Latin America LLC. Exxon Mobil Corp., Glencore Plc, and BP Plc have all announced plans to set up or supply gas stations in Mexico. Commodity trader Trafigura Group has applied for fuel import permits. And as much as $2.3 billion in investment has been pledged for pipelines as well as terminals for storage and transport, according to the industry regulator. "We take theft very seriously," ExxonMobil spokeswoman Charlotte Huffaker said in an email, adding that the company remains "committed to opening Mobil-branded service stations in Mexico," but will not directly own or operate the stations.

Foreign capital and know-how is exactly what Mexico's reform-minded legislators wanted when they voted in 2013 to end the state's 76-year-long monopoly in the oil and electricity sectors. The liberalizers have scored some wins: This month private companies announced oil finds in the Gulf of Mexico that may hold as much as 3 billion barrels (Mexico's oil production averaged 2.5 million barrels per day last year). Households, however, haven't seen their energy bills shrink, and political opposition to the creeping privatization remains vigorous, with one of the leading contenders in next year's presidential election promising to reverse the reforms.

Especially unpopular was the government's move to scrap fuel subsidies at the start of this year. Prices at the pump immediately jumped about 20 percent. Theft grew even faster: Illegal pipeline taps in the first five months of 2017 were up almost 70 percent from a year earlier, according to Pemex.

Fernando Chavala, a truck driver, says he was out of work for six months last year when the company he was working for had one of its 62,000-liter trucks stolen and stopped sending out deliveries. "When you're on the highway, you never know what could happen," he says, as he waits to fill up at a Pemex terminal in Puebla's state capital. "We don't have any security."

Violence in the Red Triangle

The aptly dubbed Red Triangle, which comprises a cluster of rural municipalities in the state, has seen two massacres due to government efforts to take down fuel thieves. Ten people were killed in the town of Palmarito Tochapan on May 3 when the military was deployed to round up suspects, and five died on July 21 in the Vicente Guerrero township in an attempt to capture the alleged leader of the state's main fuel theft gang, Roberto de los Santos de Jesus, alias "El Bukanas."

Investors will likely stay clear of places like the Red Triangle. "They are going to start in areas less vulnerable to fuel theft," says Alejandro Schtulmann, president of Empra, a risk consulting firm in Mexico City. "They will only invest more when they see that the situation is safer."

Schtulmann says 30 percent of the consumer fuel trade is controlled by "petty criminals" operating solo. But as much as 20 percent of the commerce is run by the country's biggest crime conglomerates, the drug cartels.

There are echoes of the drug war in the deployment of federal troops to Puebla and in the government's more than decade-long "decapitation" strategy to break up the cartels by targeting

their leaders. Also reminiscent are the gang-on-gang clashes that broke out in July in the Puebla municipality of Huehuetlan el Grande. Nine people were killed allegedly for their involvement in the fuel trade and failure to pay an extortion fee to a rival group; authorities said five of them were kidnapped and their bodies found burned.

Jose Aguilar, a local resident, watched the procession of caskets, stooping under a tree to shield himself from the afternoon sun. As the line of mourners wound its way uphill to the cemetery, flanked by state police trucks, Aguilar said the best way to halt the violence was for townspeople to form a vigilante group. He approvingly cited similar efforts in states such as Michoacan, where self-defense militias have sprung up in farming communities and clashed with drug cartels and government forces. In Huehuetlan, "no one leaves their homes now after 6 or 7 in the evening," Aguilar says. "They shut the curtains, and the town is lifeless."

Buyers Beware Too

Officials say they're pursuing buyers as well as sellers. Pemex has canceled contracts with seven gas stations in Puebla that are under investigation for receiving stolen fuel. Pemex Chief Executive Officer Jose Antonio Gonzalez Anaya has said that the company is attacking the demand side of the market. This month, the attorney general's office arrested a mayor in the Red Triangle for alleged involvement in the trade.

The squeeze is having some impact, judging by the price of black-market gasoline. Residents of the Red Triangle say they pay from 13 pesos to 14 pesos for a liter of illegal fuel, compared with 9 pesos last year. But Mexican drivers can still save about 20 percent by filling up at places like the parking lot in the market of San Salvador Huixcolotla.

The attendants there don't have pumps. They carry plastic hoses and use their mouths to create suction so they can siphon the gas into customers' tanks. Some wear surgical masks to protect against the fumes. "How many liters?" one shouted to the driver of a red Honda with a baby napping in the back seat. He dispensed the fuel, then shook the empty 20-liter can at the car window to demonstrate there'd been no scrimping.

Consultant Padilla says the entire supply chain—from the complicit worker at a Pemex oil terminal all the way down to locals acting as lookouts while huachicoleros milk a pipeline—is worth about $1.5 billion and is set to expand. "That's a lot of money, and it ends up involving a lot of people," he says.

And despite the government's efforts, there remains public backing in Puebla for the black marketeers—and scorn for the federal troops sent in to catch them. "They're only trying to survive," says Dulce Rosario Martes, a taxi dispatcher in Palmarito. "There's no other work."

House Poised to Add Russia Sanctions With Curbs on Trump's Power

Posted July 25, 2017, 9:18 A.M. ET

By Anna Edgerton

The U.S. House is poised to vote on a bill to strengthen sanctions against Russia and prevent President Donald Trump from unilaterally lifting penalties, after the measure was delayed by procedural concerns and objections from energy companies.

The measure, which was altered to ensure that oil companies can work on certain joint projects overseas, would also impose new sanctions on Iran and North Korea. House leaders expect bipartisan support for the bill in the vote July 25.

The White House has sent mixed messages about whether Trump would sign the legislation and has expressed concern over limiting the president's power to ease sanctions on his own. Trump supports sanctions against the three countries but wants to make sure the U.S. gets "good deals," White House spokeswoman Sarah Huckabee Sanders told reporters aboard Air Force One July 24.

Congressional Rebuke

The measure would then go back to the Senate, where members of both parties have spoken in favor of changes made to the legislation they passed last month, S. 722.

The Russia sanctions measure is a rare rebuke to Trump from congressional Republicans. They say they want to prevent the president from acting on his own to lift punishment from the previous administration for meddling in last year's U.S. election and for aggression in Ukraine. House and Senate committees and the Federal Bureau of Investigation are examining possible ties between the Trump campaign and Russia.

As a bitter fight over health care consumes much of Washington, the sanctions bill is one of the few major legislative efforts uniting members of the fractured Republican Party, along with their Democratic colleagues.

"A nearly united Congress is poised to send President Putin a clear message on behalf of the American people and our allies," said Ben Cardin of Maryland, the top Democrat on the Senate Foreign Relations Committee. "And we need President Trump to help us deliver that message."

Iran Sanctions

The original bill from the Senate Foreign Relations Committee included only sanctions on Iran, modeled on previous executive orders, designed to punish entities that support terrorism, sell weapons to Iran, or help that country's ballistic missile program. The bill would also authorize, but not require, sanctions on human-rights abusers.

The Russia sanctions were added in an amendment on the Senate floor. Sen. Lindsey Graham (R-S.C.) also introduced a provision to reaffirm U.S. commitment to Article 5 of the NATO agreement, which requires members to defend other nations in the alliance.

House leaders flagged procedural concerns with the Senate bill, saying the Constitution requires legislation raising revenue to originate in the lower chamber. In resolving this issue, Republicans also limited the minority party's power to introduce and fast-track a resolution to question administration action on Russia sanctions.

Meanwhile, energy companies stepped up their lobbying in opposition to a prohibition against working on international projects with even a small Russian stake. That rule was changed to apply only to ventures where sanctioned Russian entities have at least a 33 percent interest, which prevents Russian firms from buying into a fraction of a project to keep American competition away.

This new threshold allows ventures like the Shah Deniz project in Azerbaijan, where BP Plc is the

main operator and Russia's Lukoil PJSC has a 10 percent stake in an ongoing expansion. The change also appears to give a green light to the Sakhalin 1 oil fields in Russia's far east, where Exxon Neftegas Limited, a subsidiary of Exxon Mobil Corp., is partnering with two Russian companies that have a combined interest of 20 percent.

Few Accomplishments

House Majority leader Kevin McCarthy of California also pushed for the inclusion of North Korea sanctions over its nuclear and ballistic-missile efforts. The House passed such sanctions 419 to 1 in May.

Minority leader Nancy Pelosi of California said in a statement over the weekend that while she supported that initiative, she was concerned that more major changes would result in further delays.

Timing of a new Senate vote is uncertain. The chamber is mired in debate over repealing and replacing Obamacare and plans to stay in Washington for the first two weeks of August. The House is set to begin its five-week recess at the end of this week.

Following through on the promise to be tough on Russia is one of the few accomplishments House members will have to show constituents during the summer break. Their health-care plan remains deeply unpopular, and GOP leaders are working through the main elements of their tax plan, including how to pay for it.

Trump continues to push back against the investigation of possible collusion between his campaign and Moscow. His son-in-law and senior adviser, Jared Kushner, was interviewed in private by the Senate Intelligence Committee July 24 and will appear July 25 before a House panel.

Government Shutdown Odds Grow With Border Wall Funding Bill

Posted July 25, 2017, 8:50 A.M. ET

By Erik Wasson (Bloomberg) and Roxana Tiron (Bloomberg Government)

House Republicans this week are increasing the possibility of a government shutdown in October by moving forward with a $788 billion spending bill that complies with President Donald Trump's demands to boost the military, reduce clean-energy programs and fund a wall on the U.S.-Mexico border.

Those priorities, especially the $1.6 billion in wall funding, guarantee House and Senate Democratic leaders will oppose the bill. Trump has urged his Republican supporters in Congress to fight, saying in May that a "good" shutdown may be needed to advance his agenda.

Republicans are trying to demonstrate unity after months of division over major legislation, including a repeal of Obamacare. Adding the wall funding is intended to attract enough conservative support to spare House Speaker Paul Ryan (R-Wis.) an embarrassing defeat on the House floor. The Trump administration said it strongly supports the measure (H.R. 3219).

But if an agreement can't be reached with the Senate, Republicans run the risk of turning off voters with a government shutdown ahead of next year's congressional elections. Four years ago, Republicans tried and failed to use a government shutdown to end Obamacare, resulting in a deep dip in the polls for the party that GOP leaders don't want to repeat.

Senate Opposition

The House measure "isn't going to go anywhere" in the Senate, said Sen. Patrick Leahy (D-Vt.), the top Democrat on the Senate Appropriations panel.

Democrats are demanding that Republicans negotiate a bipartisan deal that combines defense increases with more money for domestic agencies such as the departments of Health and Human Services, Commerce, and Education. They argue Republicans are trying to distract from the GOP's halting efforts to repeal Obamacare or agree on a tax overhaul.

Rep. Ruben Gallego (D-Ariz.) said he could have supported the GOP bill without the wall funding. "Nobody likes to be held hostage," he said in an interview. "There is a risk of a shutdown and it is going to be entirely led by the Republicans and the president."

With a recess in August and just three House working weeks in September, there's little time for lawmakers to complete their work on the spending measure. If they don't, leaders likely would resort to a stopgap spending bill that maintains current funding levels to keep the government operating after Oct. 1. Trump hasn't said whether he'd sign such a measure that doesn't include new money for the wall.

Debate is set to start July 26 on the House floor on a package of four of the 12 spending bills needed to keep the government open after Oct. 1. The bill would fund the departments of Defense, Energy, and Veterans Affairs, along with the U.S. Army Corps of Engineers and the legislative branch. The $1.6 billion for the wall is being added to the measure in an effort to attract conservative votes.

Conservative Rebuff

Republican leaders had tried to get their members on board with a larger 12-bill package, only to be rebuffed. Some conservatives weren't willing to commit to the other domestic bills, which eschew most of Trump's request for deep spending cuts. Moderate Republicans said passing $8 billion in cuts to domestic priorities now would make it harder for their party to agree to spend more money after the Senate rejects the bill.

Leaders assembled the least controversial of the 12 spending bills to reduce the risk of failure.

It's difficult to oppose giving troops a 2.4 percent pay raise and boosting spending on veterans by $6 billion. The same goes for the increased nuclear weapons funding in the Energy part of the bill and security upgrades for members of Congress after the June shooting of Rep. Steve Scalise (R-La.) at a congressional baseball practice.

"The highest priority of Congress is to ensure the safety and security of our nation and to guarantee the future of our great democracy—this critical national security legislation needs to head to the floor," Rep. Rodney Frelinghuysen (R-N.J.), the chairman of the House spending panel, said in a statement.

Some conservatives say they may still rebel against the spending bill because the $72 billion in

increased defense spending isn't fully offset by spending cuts and because it would allow transgender troops to receive medical care related to their gender transition.

"There are some things that would have to be fixed before we can support it," said Rep. Jim Jordan (R-Ohio) a member of the conservative House Freedom Caucus.

Conservative Rep. Tom McClintock (R-Calif.) said he would be uneasy voting for the spending package without prior approval of a budget resolution containing cuts to entitlement programs.

Meanwhile, Democrats plan to use the floor debate to try to embarrass Trump by forcing a vote on a spending ban by federal employees at Trump hotels.

Defense Boost

Voting on the defense spending measure is a clear sign that congressional Republicans are making a priority out of lifting the defense spending cap put in law in 2011. They can't do that without Senate Democrats, who want similar increases for domestic spending.

Last week, Senate Democrats proposed a deal in which military spending would increase by $54 billion in exchange for an equal increase for domestic agencies. Their proposal was defeated along party lines in a committee vote.

The House bill would provide $9.5 billion for 84 Lockheed Martin Corp.'s F-35 aircraft, while the Pentagon requested 70. The measure proposes $1.8 billion for 24 Boeing Co. F/A-18E/F Super Hornet aircraft, an increase of 10 planes over the Trump budget. It also includes funding for three Littoral Combat Ships, made in competing versions by Lockheed Martin and Austal USA.

The $37.6 billion energy part of the spending bill cuts the non-military part of the Energy Department by $1.7 billion. That level is still $2.3 billion more than Trump requested in his budget. The bill would cut the Energy Department's clean-energy research division and kills off the agency's loan-guarantee program for energy companies.

Hopes Rest on Private Firms for Legacy Coal Cleanup

Posted July 25, 2017, 7:15 A.M. ET

By Stephen Lee

The defining landmark in Hazleton, Pa., when John Quigley was growing up in the 1960s was a giant pile of black, crumbly coal waste that had been there for as long as anyone could remember. Taller than a 20-story building, the heap covered an area the size of four football fields and even had its own name: the Jeansville Coal Bank.

"It was the Mount Everest of Hazleton," Quigley, who later became the city's mayor and then head of the state Department of Environmental Protection (DEP), told Bloomberg BNA. "It loomed over the city, which was a pretty interesting metaphor because Hazleton's whole history is interwoven with mining, and its decline was because of mining."

Now, specialty power companies such as Olympus Power LLC, Northern Star Generation LLC, Robindale Energy Services Inc., and the Rich Family of Companies are cleaning up those piles, pitching their efforts as a win-win: They get free scrap coal to burn for power, and the community gets free cleanup of their polluted land and water. The enthusiasm for such efforts is an acknowledgment that government efforts to clean up befouled lands can only go so far. (Click here for a slideshow on Pennsylvania's coal refuse situation)

More than just eyesores, coal refuse piles leach acid mine drainage into streams, occasionally catch on fire—sometimes smoldering underground for decades and emitting volatile organic compounds—and pose a safety hazard for children who play on the unstable banks, said Vincent Brisini, former deputy secretary at Pennsylvania DEP's Office of Waste, Air, Radiation, and Remediation.

But now the companies say they might only be able to survive a few more years, thanks to growing pressure from cheap natural gas and environmental regulations. One coal refuse plant already has gone down: Piney Creek Power Plant, of Clarion, Pa., stopped operations in 2013, a victim of bruising energy markets. If the nation's 18 remaining refuse plants also shut down, the 800 coal refuse piles scattered throughout Pennsylvania—to say nothing of the hundreds more in West Virginia, Kentucky, and other Appalachian states—will remain in place indefinitely, because neither the federal government nor the states have the money to clean them up, said John Stefanko, deputy secretary for the Office of Active and Abandoned Mine Operations at the Pennsylvania DEP.

A Win-Win?

That's why so many environmental groups, in an unlikely pairing, have given the coal refuse industry their stamp of approval. Their reasoning is that, even though the companies do burn coal, the environmental benefits of cleaning up the refuse piles outweigh the costs.

"We're very interested in partnering with the waste coal industry," Anne Daymut, watershed coordinator at the Western Pennsylvania Coalition for Abandoned Mine Reclamation, told Bloomberg BNA. "We do view it as a win-win."

The cost/benefit claims can't be precisely measured because much of the data has never been collected, largely due to a lack of funding, said George Ellis, executive director of the Anthracite Region Independent Power Producers Association, an industry trade group.

For example, no one knows which or how many toxins are released from the 48 pile fires currently smoldering throughout the state, some of which have been burning for decades, said Ellis, former president of the Pennsylvania Coal Association.

Fourteen facilities capable of burning coal refuse for power now operate in Pennsylvania, with two more in West Virginia, another in Wyoming, and one more in Utah. The industry is strongest in Pennsylvania because the state offers a more hospitable climate for independent power companies than most other states, said Sean Lane, Olympus Power's executive vice president of governmental affairs.

The industry hasn't taken off more broadly, Lane said, because environmental permitting regulations make it "extremely difficult and costly" to site new power plants. Economic forces are at play, too: energy and capacity pricing in the current marketplace run by PJM Interconnection LLC, operator of the nation's largest power grid, wouldn't sustain a new coal refuse plant, Lane said.

Corporate investors in the sector include General Electric Capital Corp., Energy Capital Partners, Dynegy Inc., and CalPERS, the largest public pension fund in the U.S. based in California.

Benefits to Local Economies

Even given the incomplete data about the technology's costs and benefits, the industry's supporters seem to far outnumber its detractors. In addition to Daymut, representatives from the Eastern Pennsylvania Coalition for Abandoned Mine Reclamation, Schuylkill Conservation District, and Earth Conservancy, a group dedicated to reclamation of former coal mining lands, also told Bloomberg BNA that they support the industry.

Some environmentalists, such as Carol Parenzan, executive director of the Middle Susquehanna Riverkeeper Association Inc., point to the economic and environmental justice benefits brought on by the coal refuse industry.

"Take a drive to Shamokin," Parenzan told Bloomberg BNA, referring to a struggling coal town an hour and a half north of Harrisburg, Pa. "This was once a thriving city of 20,000 people plus. Now you drive through the city and there's boarded-up houses, closed businesses, and an orange stream running through the center of town. It's a fine line between what's best for the environment and what's best for business.

"But you can't say no to this, no to that. You have to find benefits for everyone so it can be a win-win."

Bipartisan Support

Other supporters of the industry include Joseph Pizarchik, who headed the Office of Surface Mining Reclamation and Enforcement under President Barack Obama, and both Republican and Democratic lawmakers in the Pennsylvania statehouse.

"These slag piles will be there in perpetuity," state Rep. Peter Schweyer (D) told Bloomberg BNA. "As a liberal Democrat, I am not of the opinion that [EPA chief Scott] Pruitt will do anything to help our slag piles. So we can either clean them ourselves or not. Yes, this is still a carbon-based fuel; it's going to have costs on the clean air side. But it helps so much in other ways that those benefits outweigh the costs."

Similarly, Pennsylvania House Majority Leader Dave Reed (R) told Bloomberg BNA that the coal refuse industry is "really a public-private partnership that cleans up those piles. Government doesn't have the funds to do it themselves. Those piles are going to sit there for generations. Jobs are going to leave and you're going to continue to have the environment being polluted."

A Low-Ranking Priority

In 1988, Quigley was elected mayor of Hazleton. Immediately he busied himself with the state's abandoned mine land problem. Including the coal refuse piles, Pennsylvania's overall reclamation bill has been pegged at $15 billion.

But the Office of Surface Mining Reclamation and Enforcement deems refuse piles such as the Jeansville Coal Bank as the lowest-priority sites. That meant Quigley couldn't spend federal dollars to clean them up until the higher-priority sites were addressed.

"I tried to develop plans to turn [the abandoned mine land sites] into productive use," Quigley said.

"But that's a very long-term proposition, and I was only there for eight years. The whole problem of AML was well beyond the capacity of a city with a $6 million budget. So we didn't get much further than conceptual plans and aspirations."

The Jeansville Coal Bank remained in place. It caught fire underground in 2012; the fire is still burning today.

Fighting for Survival

In addition to the fires at coal refuse piles, dust laced with heavy metals can blow off the piles and into the water and soil, according to Brisini, who now serves as director of environmental affairs at Olympus Power.

The piles, often dangerously unstable and surrounded by physical hazards, also attract dirt bikers and all-terrain vehicle drivers. Most recently, Isael Ramirez died July 7 when he struck a gate outside a coal refuse pile while operating an ATV in Hughestown, Pa., the chief of police told Bloomberg BNA.

To keep the coal refuse industry afloat, its lobbyists want both a regulatory fix and an economic fix.

On the regulatory side, the industry is backing a bill in Congress known as the Satisfying Energy Needs and Saving the Environment (SENSE) Act (H.R. 1119), which would allocate additional sulfur dioxide emissions credits to coal refuse power plants under the Cross-State Air Pollution Rule. That would effectively ease pollution control requirements by allowing the plants to increase their emissions.

The SENSE Act would also change the compliance obligations for coal refuse plants under the EPA's Mercury and Air Toxics Standards rule.

The bill passed the House last year, but was never introduced in the Senate. Rep. Keith Rothfus (R-Pa.), the SENSE Act's sponsor, told Bloomberg BNA that he plans on pushing for the bill "very aggressively" again in this session of Congress. A Republican spokesman for the House Energy and Commerce Committee said the panel is considering moving the bill this year, although it's not yet on the schedule. The bill was re-introduced in the House in February.

Rothfus also said he met recently with EPA officials to seek "administrative relief" for coal refuse plants. So far, agency officials haven't signaled their willingness to comply, he said. Liz Bowman, an EPA spokeswoman, told Bloomberg BNA that the EPA was talking to elected officials, but declined to say specifically what it planned to do about administrative relief for coal-refuse-fired power plants.

A Tax Lifeline?

Meanwhile, to help coal refuse plants stay competitive with other, cheaper forms of energy, Pennsylvania lawmakers inserted a tax credit for the industry into last year's state budget.

The tax credit, which was worth $7.5 million last year and $10 million per year for 10 years, won't come close to saving the industry on its own, according to Olympus Power's Lane. The industry had initially asked for $45 million.

Nevertheless, the credit "serves as an important statement in the public record of Pennsylvania's support, and as a potential model solution, as we engage Congress in a dialogue regarding the

preservation of this industry," Lane said.

The legislature passed a $32 billion budget June 30, but the revenue package isn't expected to be finished until later this month at the earliest. Lane said all sources of revenue and spending, including tax credits, are "under great scrutiny" in the state legislature.

However, state House Majority Leader Reed told Bloomberg BNA he was confident the tax credit would be renewed this year.

Some Stakeholders Push Back

But not everyone supports the idea of burning coal refuse. Rep. Frank Pallone (D-N.J.), ranking member on the Energy and Commerce Committee, opposed the SENSE Act last year, saying it would be "absurd" to give coal refuse plants a "free pass" under EPA air standards.

After the bill passed the House last year, the Obama White House said it would veto it.

Further, coal refuse carries higher levels of toxic heavy metals per pound than regular coal, according to Tom Schuster, senior campaign representative with the Sierra Club's Pennsylvania chapter.

Seven of the nation's 18 coal refuse-fired power plants are also unable to satisfy the acid gas portion of the MATS rule for hydrogen chloride or sulfur dioxide, acknowledged Brisini, the former Pennsylvania DEP official. The state has granted the industry an extension until 2019 to comply with the rule.

"If you're going to claim that what you're doing has environmental benefits, at a bare minimum, you have to comply with the existing [MATS] limits," Schuster said. "And they're not."

In Schuster's view, a better solution to cleaning up the piles is the Revitalizing the Economy of Coal Communities by Leveraging Local Activities and Investing More (RECLAIM) Act (H.R. 1731, S. 728, S. 738), a bill in Congress that would speed the delivery of $1 billion to coal states for land remediation. The bill passed a House committee June 27 and is expected to start moving in the Senate shortly.

The House version could move forward as part of a larger bill, such as the pending infrastructure bill, Democratic aides say. In the Senate, the chief difference between the two bills, one sponsored by Senate Majority Leader Mitch McConnell (R-Ky.) and the other by Sen. Joe Manchin (D-W.Va.), is that Manchin's places greater emphasis on economic development. Proponents on both sides of the aisle say they're confident the bill will pass.

Industry Rejects Charges

The coal refuse industry flatly rebuffs Schuster's claims about environmental harms. Brisini said that, during the combustion process, chemical reactions occur that capture the pollutants in the ash. He also said fabric filters at the plants are "extremely effective" at capturing non-mercury metals.

The ash that remains after combustion is tested and certified for leachates, then brought to a reclamation site, Brisini said. There, the material is set in place, where it hardens like concrete and releases no metals into the soil, he said.

Further, in developing the MATS rule, the EPA should have considered the special characteristics of coal refuse plants, which may exceed the acid gas rules but still deliver net benefits, Gary Merritt, former director of Pennsylvania's now-defunct Office of Environmental Energy Management, told Bloomberg BNA.

The high cost of additional control equipment to comply with MATS would "inevitably result in the closure of these facilities," Brisini said.

As for the RECLAIM Act, even if it were to pass, Pennsylvania alone has an inventory of $13 billion to $14 billion in higher-priority mine sites that must be cleaned up before the state can use federal funds on waste piles, Merritt said. Because the bill only releases $1 billion nationwide, it wouldn't come close to delivering enough money to clean up the piles.

'A Good-News Story'

The Pennsylvania DEP also recently found impressive reductions in water discharges after coal refuse piles were cleaned up. DEP found that, post cleanup of coal refuse piles, iron flowing into the Blacklick Creek watershed had been reduced by 99 percent, acidity by 96 percent, aluminum by 94 percent, manganese by 87 percent, and sulfate by 82 percent.

"We've got fish in the water now," Cambria County Commissioner Tom Chernisky told Bloomberg BNA. "People weren't fishing here before. This is a good-news story."

The 14 coal refuse plants in Pennsylvania have removed more than 200 million tons of coal waste, restored or improved more than 1,200 miles of streams and reclaimed more than 7,000 acres of abandoned mine lands, according to the Anthracite Region Independent Power Producers Association. Currently, the industry removes about 10 million tons of waste per year, the group said.

Still Burning

John Quigley became secretary of the Pennsylvania DEP in 2015. Last year, working with the Obama administration, he helped steer $30 million in federal funding toward the cleanup of a large coal refuse pile in Ehrenfeld, Pa.

"That was one of the things I was most proud of," Quigley said. "And in the back of my mind, I was thinking, 'Can we do that in Hazleton?'"

The money ran dry before that could happen: The $30 million influx of federal funding was only a one-time infusion. President Donald Trump proposed canceling the funding altogether in his maiden budget request.

"There are hundreds of communities that are dealing with these issues, and there's nowhere near enough public funding available to solve the problem," Quigley said. "Ultimately there's no substitute for public sector involvement in remediating these problems, but you have to take the long view. Private companies might be our only hope to reclaim these lands."

June 13, 2017

Today on Climate Beat . . .

. . . we went out on the wires, reporting that one clean energy group is criticizing a pending Energy Department electricity grid study as too focused on supporting baseload coal and nuclear plants, with the group instead calling for a focus on technologies to make the grid more "flexible" and able to handle more clean power.

Out West, the California Air Resources Board is further delaying a decision on its proposed greenhouse gas regulatory "scoping plan" to achieve the state's 2030 GHG target, in response to a request from nearly two dozen lawmakers who are still deliberating over legislation to extend the state's cap-and-trade program beyond 2020.

Speaking of California, it teamed up with New York and nine other states to file a lawsuit over DOE's failure to publish final energy efficiency standards for five products – rules that were finalized shortly before the Trump administration took office.

And in other legal news, our news roundup said that EPA plans to argue in its pending Clean Power Plan rollback proposal that the Obama-era GHG rule illegally regulated "outside the fence" of power plants.

HAZARDOUS WASTE MANAGEMENT
Hazardous Waste Management
Arkansas HAZARDOUS WASTE MANAGEMENT

Proposed rule of the Department of Environmental Quality, Pollution Control and Ecology Commission, amends Regulation 23 regarding hazardous waste management. The rule incorporates federal hazardous waste management standards as of April 15, 2015, regarding the definition of solid waste, the vacatur of the comparable fuels and gasification rules, and disposal of coal combustion residuals from electric utilities. The rule also incorporates federal hazardous waste standards under 40 CFR 261 that were not previously adopted in full, including financial requirements for the management of excluded hazardous secondary materials, containers, tank systems, emergency preparedness and response for management of excluded hazardous secondary materials, and various air emission standards. A hearing is scheduled for July 13, 2017, in Little Rock. Comments are due July 27, 2017. Contact: Kelly Robinson; DEQ; 501-682-0916; reg-comment@adeq.state.ar.us

North Carolina

AIR
Air Pollution Control
North Carolina AIR

Proposed rule of Department of Environmental Quality, Environmental Management Commission, amends regulations 15A NCAC 02D.0101 through .2205 (nonconsecutive) regarding air pollution control. The rule incorporates federal standards for ozone and deletes obsolete pollutant levels and provisions regarding the use of gasoline with certain oxygen content in carbon monoxide nonattainment or maintenance areas. The rule also specifies who proclaims air quality alerts and warnings and declarations of emergency at various pollutant levels requiring abatement actions. In addition, the rule clarifies the duration of applicability to maintenance areas. A hearing is

scheduled for Aug. 3, 2017, in Charlotte. Comments are due Aug. 14, 2017. Contact: Joelle Burleson; DEQ; 919-707-8720; daq.publiccomments@ncdenr.gov

Regulatory Update

HAZARDOUS WASTE MANAGEMENT
State Hazardous Waste Management Program
North Carolina HAZARDOUS WASTE MANAGEMENT

Temporary rule of the Department of Environmental Quality amends regulations under 15A NCAC 13A.0101 through .0119 (nonconsecutive) regarding the hazardous waste program. The rule updates the incorporation by reference of federal hazardous waste program standards under 40 CFR 260 through 279. The rule also updates terminology, requires that facilities provide a biennial report, and adds personnel training requirements for facilities that generate hazardous secondary materials. In addition, the rule adds waste determination and marking requirements for pre-transportation and deletes provisions concerning notification, biennial reports, small-quantity generator tanks, and small- and large-quantity generators. Finally, the rule deletes references that would have become effective May 30, 2017, to allow the current provisions to remain in effect until permanent rulemaking is completed for the federal regulations. The rule is effective May 30, 2017. Contact: Jenny Patterson; DEQ; 336-767-0031; jenny.patterson@ncdenr.gov

Regulatory Update

WATER
Livestock Facility Siting
Wisconsin WATER

Proposed rule of the Department of Agriculture, Trade and Consumer Protection amends regulations under WAC ATCP 51.01 through .34 (nonconsecutive) and Appendices A, B, and C regarding livestock facility siting. The rule updates water quality standards and related Natural Resources Conservation Service technical standards, including standards for nutrient management, cropland performance, wastewater storage structures, waste treatment, and vegetated treatment areas. The rule also modifies siting standards, including setback and odor standards for manure storage structures and livestock housing. In addition, the rule revises local government permit issuance procedures and local permit application forms and clarifies that local governments may require operators with siting permits to submit documentation related to annual nutrient management plan updates and monitor plan compliance. Finally, the rule clarifies how concentrated animal feeding operations can demonstrate compliance with siting standards based on a state pollutant discharge elimination system permit. A hearing will be scheduled at a later date. Comments are requested, but a due date is not specified. Contact: Chris Clayton; DATCP; 608-224-4630; Christopher.Clayton@Wisconsin.gov

TRUMP'S EPA: Agency at a crossroads -- Complete coverage

June 7, 2017

Latest News

Coalitions Redouble Paris Support But Face Challenge To Achieve GHG Pledge

In the wake of President Donald Trump's decision to pull the United States from the Paris Agreement, several new coalitions of state, city, corporate and university leaders are underscoring support for meeting the goals of the global climate deal, though they likely will struggle to achieve the Obama administration's greenhouse gas target.

Carper Queries Whether Trump EPA Will Limit Bodine's Enforcement Power

Updated at 3:54 pm EST on 6/6/2017: Ahead of the Senate environment committee's postponed confirmation hearing on Susan Bodine's nomination to head EPA's enforcement office, the panel's ranking Democrat says the nominee's past experience at EPA and in Congress would be "helpful" if she wins confirmation but he questions whether the administration will allow her to pursue adequate enforcement.

State Attorneys General Challenge EPA's Reversal On Chlorpyrifos Ban

A coalition of seven Democratic state attorneys general (AGs) is challenging EPA Administrator Scott Pruitt's reversal of an Obama-era plan to ban the use of the pesticide chlorpyrifos on food, arguing that the decision violates federal law and also an appeals court order requiring the agency to take final action on a proposed ban.

FY18 Cuts To EPA CompTox Research Could Hinder TSCA Implementation

Significant cuts to EPA's computational toxicology research efforts could stymie the agency's ongoing efforts to implement sweeping revisions to the Toxic Substances Control Act (TSCA), which include mandates for the agency to reduce animal testing and craft a strategy to adopt non-animal toxicity testing methods.

Pruitt's Superfund Initiative Draws Concern, Praise From Industry Experts

Some industry observers are criticizing the short time frame EPA Administrator Scott Pruitt has given for a task force to produce recommendations on streamlining the Superfund program, but at least one industry source is generally applauding the effort
